Until such time as the mercantile marine of Corea is in a condition to carry on satisfactorily the coastwise trade of Corea, all Japanese vessels may transport goods of any country whatever from one open port to another in Corea; but when a Japanese merchant desires to transport Korean articles, bought at one open port in Corea, to another open port, he shall deposit at the Custom House an amount of money equal to the export duty payable thereon, or lodge in the hands of Customs officers a bond signed by himself and a surety to be approved by Customs authorities conditioned to pay an amount equal to the export duty. On landing the said goods (without the payment of any import duty) at the port of destination within six months from the date of exportation, the importer shall receive a certificate from the Customs of such port, stating the fact that such goods have been landed. This certificate being produced to the Customs of the port from whence the goods were exported, the amount deposited or the bond lodged as aforesaid shall be returned to the said merchant. If, however, the vessel in which the said goods were shipped be wrecked while engaged in transporting such goods from one open port to another, a report of the case signed by the Japanese Consular officer shall, within one year from the date of exportation, be presented to the Customs in place of the certificate above specified. When the Korean Mercantile Marine shall have become sufficient for the coasting trade of Corea no foreign vessels shall be employed in transporting the Korean produce from one port to another.

This is reasonable. Opinions differ very largely with regard to the advisability of admitting foreign competition into the coasting trade of a country. Submitted to theoretical tests, the question appears to be governed by the same principles which underlie free trade. Other considerations apart, it is the interest of every mercantile community to secure the cheapest and most expeditious means of maritime transport for its commodities. But the first postulate of free trade is that a nation must not attempt to do for itself what others can do for it on better and more reasonable terms, and there never yet has been any nation which consented to apply that postulate to its shipping industry. England not excepted, all the leading states of the Western world elected to tax themselves for the purpose of obtaining a mercantile marine, and it is a little too much to expect that an Oriental Kingdom should become the practical exponent of a different policy. Korean ambition, however, seems to be more patient. Until she can procure a mercantile marine of her own, she means to

employ foreign ships. In her case the choice seems to lie between getting her produce carried at all and consenting to commit it to Japanese bottoms—an alternative which does not admit of much hesitation.

But there is more than this. The thirty-second article provides that, subject to the condition of obtaining a license from the Government, Korean subjects may charter Japanese vessels to convey cargo, &c., to the non-opened ports of the peninsula. This is an important point. Regarded as a concession it seems to place Japan in the position of receiving from her neighbour more than she is willing to grant to others herself. But, before accepting such a conclusion it would be necessary to know what special arrangements have been made by the two Governments in this context. We need scarcely remind our readers that the admission of foreign ships to her non-opened ports is one of the changes which Japan is resolved not to sanction until some efficient machinery shall have been provided for the control of foreign sailors so admitted. Her experience of the working of exterritoriality within treaty limits is not of a nature to warrant her in extending that system to places where even the judicial makeshifts of the open ports are wanting. It remains to be seen how this difficulty has been surmounted in Korea's case, and whether the terms of the arrangement are such as the exceedingly jealous conservatism and race prejudice of Western States would permit them to accept for themselves.

It is pleasant to see that, in the matter of tonnage dues, Japan does not attempt to treat Korea with the same injustice of which she has herself been made the victim. Merchant vessels entering at a Korean Custom House are to pay at the rate of 125 mon (about 42 *sen* Japanese) per ton, and in return to receive a certificate exempting them from all further payment on account of tonnage dues for a period of four months. Had a similar rule been in force in this country since 1867, Japan would have collected more than four and a half million dollars from foreign ships—a sum which would have materially helped to recoup her heavy expenditure on account of light-houses.

Care has also been taken to remove another anomaly which exists in Japan's case. Import duties payable *ad-valorem* are to be calculated on the actual cost of the goods at the place of production together with the addition of the cost of transportation, insurance, commission and all other charges from the place of production to the

port of discharge. This is the fashion of reckoning adopted everywhere but in Japan, where the Customs returns show, not the price of the imports as laid down here, but their cost at the other side of the water.

The latter part of the last article is worthy of notice. Its wording suggests the idea that Japan is resolved, as far as possible, to save her neighbour from the ambiguity which has proved so inconvenient in her own case. It is distinctly provided that the Regulations shall terminate after five years from the day on which they come into force. Before the expiration of that term the two Governments are to enter into negotiations with the view of framing new regulations, but Korea is secured against the danger of having her efforts to obtain a revision paralysed by the extraordinary subterfuge which Japan has found so fatally obstructive. On the whole it may be said that, if Korea has been the last to enter the comity of nations, her loss in this respect is to some extent compensated by the comparative liberality of the terms on which she is admitted.

SPORTSMEN.

OUR correspondent, "One of the Unlicensed," is doubtless right when he says that his remonstrances against the cruelties practised by sportsmen will not be respected by many. But we feel convinced that he does not speak less truly when he predicts that a hundred years hence the sporting habits of this nineteenth century will be looked upon with aversion and surprise by our descendants. Within the memory of the present generation there have been expunged from the list of so-called sports many items about which public opinion, fifty years ago, if not wholly acquiescent, was, at any rate, apathetic. It is true that the opponents of cock-fighting, bull-baiting, and similar pastimes, based their arguments, for the most part, less on the cruelty of these amusements than on their brutalizing influence, and on the various immoralities they promote. It was by reasoning of this sort that a majority of votes was secured to the cause of humane principles. Men were readier to think of the injury they might possibly inflict on themselves than of the sufferings they certainly inflicted on dumb animals. But not ten persons in a million will be found to admit that shooting, fishing, and hunting possess any dehumanizing tendencies. A glamour of refinement has been thrown round these amusements, partly by the science and skill which their pursuit demands, partly by the status and

circumstances of their pursuers. Nevertheless, no subtle analysis is needed to show that the fox-hunter, the angler, and their *confrères* have ceased to be consistent with the spirit of the times in which they live and of the laws they pretend to respect. The question may be brought within the range of a simple comparison. Suppose a man were to take two animals by nature enemies to one another, put them into an enclosed space and set the stronger to pursue the weaker until the latter dropped from exhaustion or otherwise fell into the jaws of its foe; and suppose that fifty or sixty persons were to assemble for the purpose of witnessing this chase, and to cheer loudly as the smaller animal was torn limb from limb by the larger—what would the public say? Would not the Society for the Prevention of Cruelty to Animals interfere at once, and at its instance, would not any tribunal in a civilized land punish the participators in this barbarity? Yet their crime would have been fox-hunting in miniature. Suppose, again, that one of those refined gentlemen who expend large sums of money upon gouse-moors and pheasant-preserves, were required, in the absence of his cook, to wring a chicken's neck.

Would he not evince the greatest possible repugnance to the job, and after performing it, feel that he had done something which had better be concealed from his acquaintances? Yet the same man will take up a wounded woodcock, and without the least reluctance tap its head against the butt of his gun or the heel of his boot until the bird's life is artistically extinguished. No distortion of logic can satisfactorily explain the difference of sentiment in the two cases. Reason it out how we may, we always come back to the conclusion that shooting, hunting, and such pastimes cannot be defended on any grounds recognised by the principles of humanity, and that civilization will sooner or later appreciate the disgrace of making the slaughter of dumb animals a source of amusement to human beings. Already, indeed, indications are not wanting that public opinion is tending in this direction. The protest of the Princess of WALES against pigeon-shooting, though it failed to influence their conservative lordships of the Upper House, elicited a significant meed of applause from all the best English journals, and has unquestionably produced a lasting effect. In this instance we can sympathize with the reluctance of the Peers to sanction a measure the limits of which it was not easy to distinguish. For surely if the law once consents to class with misdeemeanours the trapping and shooting of

pigeons, it will be logically forced to take a similar view of the preserving and slaughtering of pheasants or grouse. Another sign of the times is the growing verdict of sportsmen against digging out foxes. The most ardent hunters are beginning to feel that when an unfortunate reynard has reached a harbor of refuge in spite of the terrible odds against him, it is better to run the risk of blunting the future keenness of the pack than to dig him out and have him torn to pieces after all his gallant efforts to escape. The sentiment underlying this conviction will inevitably expand until it prompts a step much too radical to be calmly contemplated as yet. For it must be frankly acknowledged that at present we are in the position of men who "know the right and do it not." Our correspondent writes from a lofty stand-point of insensibility to the intoxicating delights of the sports he condemns, and since it is not within the compass of our weak pen to limn even the outlines of these vistas of enjoyment, we will refrain from the irreverent attempt. But if he is a just man; if he really desires to judge the question on its merits and to arrive at some faint perception of the sportsman's enjoyments, let him read BROMLEY DAVENPORT'S essays on fox-hunting and salmon-fishing in the June and September numbers of the *Nineteenth Century*. He will then possess a glimmering, but only a glimmering, idea of the reality, and will understand that civilized minds are still the slaves of emotions too powerful to acknowledge the restraints of cold morality.

FARNSWORTH V. WHITE.

IT is to be hoped that the social annals of Yokohama will never again be disfigured by such a scandalous event as that which formed the subject of a recent trial in Her Majesty's Court for Japan. The main facts of the story can be told in a very few words. A resident of Yokohama, Mr. FORD, was engaged to be married to Miss RUTH FARNSWORTH, who had come to Yokohama a short time before in a ship commanded by her father. The engagement had been more or less promoted by the Consular Constable, WHITE, and his wife, with whom FORD was very intimate, and who had also contracted a tolerably familiar acquaintance in a brief period with Captain and Mrs. FARNSWORTH. One afternoon Mr. and Mrs. WHITE met and talked with a certain GEORGE WAIGHTMAN, formerly steward of Captain FARNSWORTH'S ship. The conversation turned upon Miss RUTH

FARNSWORTH'S approaching marriage, and WIGHTMAN, according to his own subsequent admission, used defamatory expressions which were at best of ambiguous application; while, according to the statement of the WHITES, he uttered a foul and disgusting slander about the young lady, embellishing it with circumstances and confirming it with almost malicious reiteration. The WHITES, without a moment's hesitation, hastened off and repeated this slander to FORD. With regard to their manner of repeating it, the accounts conflict. FORD, and his friend CLARK, who was present, declared that the communication was made by Mrs. WHITE in presence of both, and Captain FARNSWORTH'S evidence showed that this was the version of the affair conveyed to him an hour or two afterwards by the two men. The WHITES, on the contrary, assert that WHITE called FORD aside and spoke to him privately, whereupon FORD, becoming excited, blurted out the whole matter in the presence of CLARK. However this may be, FORD and WHITE immediately went off and questioned WIGHTMAN, as well as his pretended authority for a portion of the slander. But these two men emphatically denied having said anything to Miss RUTH FARNSWORTH'S prejudice. They spoke, indeed, in the highest terms of her character, and said they knew nothing against her. After this, FORD, who from the first had stoutly refused to credit the slander, went off with CLARK to Captain FARNSWORTH'S ship and told him what they had heard. It had been originally arranged that WHITE was to accompany them on this visit, but for a reason not explained, though easily conjectured, they avoided any further association with him. Captain FARNSWORTH was naturally indignant and excited. He seems to have satisfied or persuaded himself that WIGHTMAN did not really originate the slander, and that WHITE alone was to blame. Against the latter, therefore, legal proceedings were commenced, the damages being laid at ten thousand dollars. Beyond the facts we have stated, nothing material was elicited at the trial. The Judge ruled that the occasion of the WHITES' visit to FORD was privileged, and directed the jury to consider, first, whether the alleged statements were made at all, and if so, which of the two versions as to the method of making them was correct; secondly, whether they were made with malice; thirdly, whether the marriage was broken off; fourthly, whether it was broken off on account of the slander; and fifthly, the damages. Upon every one of these points the jury, after three and a half hours'

deliberation, declared themselves unable to agree. Juries are fearful and wonderful things. Modern analysis of their peculiar functions shows that their chief use is to enable criminals to escape the legal consequences of their crimes. But the jury in this case out-justified itself. Three out of the five points submitted for their verdict were not susceptible of a shadow of doubt. There was not a shadow of doubt that the defendants uttered the slander: they admitted it themselves. Whether they believed it to be true, and in repeating it were prompted wholly by an honest solicitude on behalf of their friend FORD, or whether they wilfully and maliciously magnified a fragment of loose talk into a cruel and brutal libel, was another question. There was not a shadow of doubt that the marriage was broken off. Whether temporarily or permanently was another question. It might very well be that FORD himself only awaited the issue of the suit to renew his proposals, but whether Miss FARNSWORTH could then have accepted them; whether any virtuous and delicately nurtured lady could consent to settle in a place where her name had been thus publicly dragged through the dirt, or to take for her husband a man whose love for her had not survived so slight an ordeal—these are points about which the gentlemen of the jury might have been expected to consult their individual standards of ethics. But that the marriage was actually broken off, and that it was broken off on account of the libel confessedly repeated by the WHITES, the evidence permitted no second opinion. Yet even upon these counts the jury could not agree. Conjecture fails to account for their confusion. We are compelled to hope, and expected to believe, that they truly tried and determined the case according to the evidence, without bias, prejudice, or partiality. But thus hoping, and thus essaying to believe, how are we to explain their diffidence? The truth appears to be that they were too much alarmed to express an opinion. They had been told by the Judge—if we may credit the published reports—that “whatever their finding might be, it could not fail to be terrible to one of the two parties,” and to escape this dilemma they had recourse to the expedient of finding nothing at all. Yet the Judge's prediction was none the less fulfilled. For this disagreement of the jury was terrible to some one. It was terrible to the person who of all others deserved most consideration—the unfortunate young lady whose fair name had been foully and falsely slandered. It is

true the Judge, in his charge, took occasion to declare that “the character of Miss RUTH FARNSWORTH had been triumphantly freed, not merely from any accusation, but from the faintest breath of slander.” This was well and wisely said, but how much of it will be remembered five years hence? If the story of this savage libel is talked of then, will not its outlines alone survive, and will not those outlines be the three facts—that the young lady was made the subject of a most evil report; that her accuser was arraigned before a British Court of Justice, and that the Jury could not agree. Who will be careful or competent to look beyond these facts, and how will Miss FARNSWORTH'S reputation appear after such a cursory inspection? Truly the institution of trial by Jury is little worthy of the innermost niche it occupies in English affections.

It is, perhaps, a profitless task to discuss the conduct of the principals in this suit. Every man has a right to his own idea of the obligations imposed by friendship. Mr. F. E. WHITE'S experiences of life may have taught him that the wanton tittle-tattle of a ship's steward deserves to be credited without query or confirmation. They may also have taught him that the kindest and most honorable use to which a brutally defamatory story can be put is to retail it, without loss of time, to the person whose happiness it can most effectually blast. These may be his honest convictions. We have no right, and certainly no wish, to question the integrity of his motives. But we may be permitted to hope that his example is not infectious. We may be permitted to hope that there are few persons in any society who would hasten to mar the peace of two lives without taking the commonest precautions to assure themselves that they are not the unwitting instruments of a malicious, incredible, and barbarous slander. There is happily another view of friendship besides that which seems to have presented itself in this case—a view which needs no definition at our hands.

Everyday life is a matter-of-fact sort of business. It is, perhaps, romantic to wish that this libel—as it was at once proved to be—did not serve to hasten rather than to impede the marriage, and that, after the ceremony, both WIGHTMAN and WHITE were not arraigned on a criminal charge. Even five Yokohama jurors could scarcely have disagreed as to the fact that one or other of these men was guilty of circulating a malicious slander. If WHITE'S motives were honest—and we see no valid reason to doubt it—he would certainly have left the Court with a re-established character, whatever opinion the public might have formed of his discretion. But as things stand now, nothing is thoroughly demonstrated, except, perhaps, that trial by jury is often a travesty of justice.

PENAL CODE AND CODE OF CRIMINAL PROCEDURE IN JAPAN.

By PROFESSOR DR. S. MAYER, VIENNA.

No apology will be needed for the following attempt at presenting a sketch of the above code of laws which came into force on the first of January of this year in the Empire of Japan. Berner, whose assistance was given in the preparation of the Penal Code¹ a fact which in itself should command respect for the Laws—declares² that the draught, upon which his opinion was asked; showed great progress. "The penal system is rationally constructed, the definitions of crimes are given in simple clear outlines, the penalties attached are proportionate and humane, and the experience of the cultured world as well as the progress of European science has been regarded throughout." With this view in his mind Berner gives the Japanese regulations regarding police supervision as well as the instructions of the Japanese Penal Code regarding confiscation, and conditional discharge, in the French translation of the draught. These codes now lie before me in their Japanese—official French translation;³ but I have reproduced them in a (German) translation so as to show their exact connection and give their most essential regulations, because I thought this the only way to give a faithful picture of the important reforms which have been accomplished in the field of penal legislation in this remarkable land which strides with gigantic steps along the path of civilization.⁴ Of course we are now dealing with a presentation, and not with a criticism of these laws. The peculiar circumstances of Japan and her people are too far removed from us to allow us to judge in every particular as to the adaptability of this or that regulation. The fact that Japan has undertaken so notable a reform at all is remarkable enough, and from the standpoint of international intercourse should be hailed with joy. On this account it seems proper to direct the attention of foreign nations to these results of penal legislation. Considered from the higher and more general standpoint of human progress, one would not be justified in undertaking either a criticism or a comparative treatment: we must take these laws as a whole and compare them with other codes as a whole. What Montesquieu well says with regard to the comparison of French and English legislation⁵ is equally applicable here: "Ainsi pour juger lesquelles de ces lois sont les plus conformes à la raison, il ne faut pas comparer chacune de ces lois à chacune, il faut les prendre toutes ensemble, et les comparer toutes ensemble."

Nevertheless it may be well, in a few introductory remarks, to give the characteristics of these two Codes. We draw a distinction between the Penal Code and the Code of Criminal Procedure. The first seems to excel the second in

importance and essential value, for the criminal procedure, much more than the Penal Code, confines itself to the inherited rut of French Legislation. As regards the judiciary and a great part of the regulations for criminal procedure, we find on the one hand a close connection with the *Code d'instruction criminelle*, and on the other, frequently successful attempts to break through the numerous hard and unnatural formalities of French legislation; or at least to lighten them and bring them into harmony with later procedure, and thus to realize, in well-digested regulations, at least some of those great principles which constitute the legal acquisitions of late decades.

The principle of evidence lies at the basis of the code: no sort of judicial presumption to the disadvantage of the accused is allowed to result from preliminary examinations; on the other hand the preliminary examination is allowed to exert a great influence, at least formally, on the actual trial, since documents of considerable range may be presented and read. This is seen especially in those regulations which allow in the trial the reading of the declarations of witnesses in the preliminary examination. Otherwise the procedure abides strictly by the principles of oral and direct evidence. Although not always with perfect success, the law endeavours to maintain the principle of complaint, and to realize it in a far greater degree than the formal concession which the French *Code d'instruction criminelle* makes to the same principle. The *procureur-général* and the examining justice are placed together as mutually perfectly independent persons; the *procureur-général* presents his charges, the examining justice decides regarding them. The commencement and continuation of procedure depend essentially on the determination of the complainant; on the other hand, in order to bring out the truth, a considerable amount of official activity is expected of the Court, which at times is binding on the complainant.—The principle of publicity is strictly maintained. A judge of the realm must decide in all criminal cases.—One very pleasant feature is the favour which the law extends to the defence, the liberty of which is preserved and protected in every possible way, and in court procedure with extraordinary vigor, indeed a number of these regulations might well be recommended for incorporation into the latest legislation (of Europe). The code recognizes also the right of compensation in case of a legal cessation of procedure or of acquittal; it is true this is only as regards the complainant, informer, or prosecutor, but at the same time Art. 16, of the Criminal Procedure is a modest beginning in the application of a principle, which is estimable and justifiable from a theoretical standpoint, but the practicability of which can be shown only by experience. The humane instructions regarding the treatment of the accused in the preliminary examination, so entirely in harmony with the regulations which aim at securing a substantial defence, are worthy of special notice; on the other hand as a correlative may be mentioned the rigor of those regulations which fix the punishment of a magistrate who may exceed his duty (*excès de pouvoir*). The system of legal remedy which rests somewhat on the same principle is rather complicated: there seems to be here almost too much of the good thing for the realization of the largest justice. The legislators of this code were not willing to reject the regulations of the French *Code d'instruction*, which amid many defects has been shown by the experience of more than seven decades, to possess undoubted advantages, but on the other hand they wished to go beyond the narrow limits of the French system, and thus without precedent, particularly in the matter of authoritative overcoming of informalities by means of the court

of cassation, while preserving the apparently cramping forms of French justice, they have admitted a freedom for the criminal procedure of Japan which many a later Code might well envy.

Altogether, we have before us in this Criminal Procedure a work which, without dealing particularly with its various excellencies and defects, places upon Japanese Courts of Justice a task which is as grand as it is responsible. For if the Criminal Procedure is to be in a position to accomplish the object of the same, namely to restore the true order of justice by punishing the really guilty, there is need of a great expenditure of intellectual and material resources of this energetic land to produce cultivated judges and courts which, in their composite character, can claim perfect confidence, so as to accustom the Japanese people to the course of a well ordered administration of penal justice, to facilitate the almost sudden transition out of the undeveloped uncoded conditions of justice which had previously prevailed, and to adjust the law itself to the needs of the land, which for the time being it seems to exceed. But for those nations who have come into more active intercourse with Japan there cannot but arise a pleasure in the consciousness of the fact that the prosecution and decision of punishable offences are regulated according to European models, and that thereby a still stronger and surer foundation has been laid for the cordial relations which already exist between us and that Empire now developing in so remarkable a manner.

As a matter of course the Criminal Procedure can show whether it is successful or not only in connection with the penal Code.

In this connection the whole matter has a more favorable aspect. Although it is true that, in consequence of copying too closely the model of the French *Code d'instruction criminelle*, the Criminal Procedure of Japan does not always deserve unlimited praise, on the other hand we cannot withhold from the Penal Code the unreserved admiration which has already been expressed by an authority so generally acknowledged in the field of penal legislation.⁶ We have here to do with a really remarkable phenomenon, and although from the nature of the case the Code is not an independent one, and no new ideas of penal justice are evolved, it is nevertheless in many respects original legislation. We may appreciate its value by considering first of all the difficulties to be overcome, in a land where penal legislation was still in its childhood, in adjusting a Penal Code which should on the one hand correspond with modern views, and on the other still remain in harmony with the peculiar traditions of the country. All the penal justice of Japan hitherto had been unwritten custom. This Code is well thought out, systematically arranged, and the penal system harmoniously and rationally elaborated. That the results of German legislation could not have been ignored is evident from the influence which no less a man than Berner had on the formation of the Code. The regard shown to the latest Italian penal legislation is seen in the carrying out of the rather problematical system of grades in penalties, in which too much is left to the discretion of the judge. The influence of the latest penal laws of the Netherlands and of Hungary are also in many places very apparent. The Penal Code, certainly in fundamentals, but in a far less degree than in the Criminal Procedure, follows the model of the French *Code Pénal* and the improved edition of the Belgian Revision of 1867; still it is, as may be easily seen, more in a technical than in a material sense, for even where penalties in exact conformity with the *Code Pénal* are

(1) Berner speaks of this in his essay "Japan" in *Gerichtssaal* Vol. XXVIII, p. 393. "with two intelligent and cultivated Japanese, the Secretary of the Japanese Senate Mr. Murata, and the attaché of the Japanese Embassy Mr. Guri." (2) Tanahashi, I have had weekly consultations of several hours duration, for three whole months with respect to a Japanese Penal Code, the draught of which was laid before me in a French translation on the 4th of January, 1881; the results of which will now be in the hands of the Japanese Senate."

(3) *Gerichtssaal*, loc. cit.

(4) *Code pénal*, promulgué par le Décret No. 36, le 7 août de la 13^{ème} année de Meiji (13th year of the present Emperor of Japan) Tokyo Imprimerie Impériale 2 mois, 14 année de Meiji. *Code de procédure criminelle* promulgué par le Décret No. 37, le 7 août de la 13^{ème} année de Meiji, Tokyo, Imprimerie Impériale 3 mois 14 année de Meiji.

(5) See Berner in *Gerichtssaal*, on the report of the Japanese Government presented at the Penitentiary Congress in Stockholm, which the president Dr. Wines declared to be the most elaborate, the most important, and the most perfect. In this report it is seen that Japan has advanced with real discretion in the way of penitentiary reform. With regard to the reform of penal legislation then under way, Dr. Wines expresses himself "that it would place the penal administration in harmony with the spirit and culture of modern days."

(6) Berner, *Gerichtssaal* loc. cit.

denounced, great care has been shown in the fixing of the gravity of the offence, so as to replace the somewhat elastic indefiniteness of the French Code with clear and definite ideas of punishable acts, and to diminish the severity of a penalty where, in spite of a general effort after lenient penal sentences, the severity of the French law cannot be denied, particularly in the matter of accessory penalties and those involving loss of rank which reflect no great honour on the (French) law.

The Death Penalty is pronounced in comparatively rare cases.

Penal offences, which, in the French laws and European laws modelled after the French, are stamped as crimes, are here declared to be delicts, in order to avoid the severity of criminal penalties, and, in case of delicts, in order to lessen as far as possible penalties affecting personal liberty, considerable use is made of fines, such as is seen in scarcely any other code. There are very few delicts where, besides imprisonment (cumulative), there is not also a fine levied; perhaps there is in this case a little too much of a good thing, as often punishable offences entail both imprisonment and a fine, for which, from their nature and motive, the latter would seem to be hardly an appropriate penalty. The comparatively very high *minima* of penalties, are to be explained only by their connection with the system of gradation of penalties, already noticed, the numerous causes for exemption and the so-called *excuses légales* arranged according to the French model. The code borrows from German penal law the system of delicts which must be prosecuted by private complainants and enlarges the same. This is seen particularly in the gravest crimes against morality, as rape, violation, the prosecution of which depends on the complaint of the injured party. The legislator thought this respect for the injured party and his family to be necessary.

The law aims at furthering the culture-development of the Japanese people, and at removing by means of penal regulations many of those barriers which separate the habits and customs of Orientals from Europeans. The Draco-like severe penal regulations with regard to the production and use of opium must be noticed.—(Penal Servitude for a term and confinement: mere smoking of opium entails a penalty of at least 2 years of major imprisonment) which would indeed be inexplicable to us, if we did not seek the reason in the justifiable intention of the legislator to exclude by exemplary severity an enervating vice, alike destructive of mind and body, so that the devastations caused elsewhere by the use of opium, dulling as it does all noble ambition, and laming the energy of the people, may be hindered in time.⁽¹⁾ The penalties against tattooing, although comparatively lenient are founded upon the recognition of the fact that every step towards European civilization should be furthered by removing capricious marks of distinction, so far as national peculiarities and the demands of piety do not hinder the action of the legislator. That the legislator had full regard for the sentiments of the people, is proved by the numerous delicts incorporated in the penal code which entail a penalty directly upon all who insult these sentiments of piety, whether towards the living to whom devotion is due, or towards the dead, and even their tombstones and monuments. The Section: "*Crimes against the bodies of the dead and their tombstones*," gives expression to this, and no less earnest and unmistakable is that other section: "*Crimes and delicts of descendants against their ancestors*," which bears

witness to the beautiful relationship existing in Japan between parents and children. Japanese family life is well known to be quite exemplary, and the mutual relation of the married has greatly improved since Japan emancipated herself from the exclusiveness of Oriental states. Japanese women, though they do not enjoy the liberty of European women, have no longer a life of exclusion; they are rather united to their husbands in true domestic relationship, and the husband makes every effort to show full respect to his wife—whence it comes that the children owe the mother no less respect than the father.—Altogether it is evident, in the section relative to Crimes against morality (which, as we are informed, very rarely occur); in the severe penalties against adultery, which also does not often occur (one-sided as the French Code); in the penalty for bigamy⁽²⁾ &c., &c., that the legislator on the one hand, in many of his penal regulations, starts with the idea of furthering the purity of family life and the morality of the home, and that he aims on the other hand, to educate and incite the people to nobler moral ideas above and beyond the narrow domestic circle.

The beneficial influence of this penal code will not be confined to Japanese territory and the present stage of actual culture-development. Intercourse with other nations will be advanced by the numerous and admirable penal regulations which directly aim at giving security and stability to this intercourse. There are severe penalties against counterfeiting coins and banknotes, even foreign ones, falsification of trade marks, counterfeiting weights, measures, forging commercial paper, bills of exchange, checks to order, and other instruments circulated by endorsement. The principal delicts are given in the outline which follows. A matter of considerable importance to commercial intercourse with Japan is provided for, though in a somewhat imperfect manner, in the penal regulations of articles 388 and 389, regarding bankruptcy. We may also mention the severe penalties against swindling, Art. 390 et. seq., on account of failure to execute contracts &c. As working in the same direction we may mention the admirable tolerance towards alien creeds which is seen in manifold penal regulations; (particularly in penalties against disturbance of sacred service &c., Cap. VI., Art. 258 et seq.) These regulations stand in splendid contrast to the spirit of intolerance in which so many oriental nations are sunk; this facilitates intercourse with the people and residence in the country.

A list of beneficial regulations which would do honour to any European penal code, guard the sanitary interests of the people, aim at removing anything prejudicial to health, and before all things preservation of the purity of that indispensable article, potable water. All disturbances which result in sanitary dangers are treated as crimes. Of course climatic conditions demand special legal protection against the introduction of diseases, &c.

The awakening political life of the people finds expression also in the severe penalties against falsification at elections, &c. (Cap. VI., Art. 288 et seq.). The intention to educate the people gives rise also to the severe penalties against gamblers. The care for defenceless and helpless persons is repeatedly made evident in this penal code. The legislator extends his protection first of all to the aged and the young, and then also to the helpless prisoner, whose ill-treatment the Criminal Procedure strongly prohibits, and the Penal Code punishes with heavy penalties. Nothing here to remind one of the barbaric severity of the Orient: everywhere the

milder spirit of humanity prevails, and promotes conciliation even where the legislator must speak to the people in tones of severity.

Following these introductory remarks we give a sketch first of the Penal Code and then of the Criminal Procedure. We shall rejoice if both Codes in practice answer the admirable intention of the legislator. Japan may take to herself the credit of having, by this codification, advanced an important stage towards European civilization nothing helps to establish bonds of friendship between alien peoples so much as legislative deeds. And Japan, by means of these two Codes has really accomplished a deed—a feat, in the fullest sense of the word—a feat in the field of intellectual, moral, and scientific effort, which ensures for her the undivided admiration of Europe.

BOOK I.—GENERAL PROVISIONS.

CHAPTER I.—ON THE APPLICATION OF THE PENAL LAW IN GENERAL.

Art. 1.—The offences punishable according to the law are:

1. Crimes.
2. Delicts.
3. Contraventions.

Art. 2.—No one can be subjected to a penalty excepting in virtue of an express provision of the law.

Art. 3.—This law is not retroactive upon offences committed before it came into force.

In case of a difference of law at the time of the commission of a crime and the trial of the same, the mildest law is to be applied.

Art. 4.—The Provisions of the Penal Code are not applicable to persons amenable to military or maritime law.

Art. 5.—The particular penalties prescribed by special penal laws and regulations remain in force in so far as they are not otherwise determined by the present law.

CHAPTER II.—ON PENALTIES.

SECTION I.—ON THE DIFFERENT CHARACTER OF PENALTIES.

Art. 6.—Penalties are principal or accessory. Principal Penalties are to be pronounced in open Court.

As to accessory penalties the law prescribes which shall and which shall not be so pronounced.

Art. 7.—The principal penalties for crimes are:—

1. Death.
2. Penal servitude for life.
3. Penal servitude for a term.
4. Transportation for life.
5. Transportation for a term.
6. Major confinement.
7. Minor confinement.
8. Major detention.
9. Minor detention.

Art. 8.—The principal penalties for delicts are:—

1. Major imprisonment.
2. Minor imprisonment.
3. Correctional fine.

Art. 9.—The principal penalties for contraventions are:

1. Attachment.
2. Fine by the police.

Art. 10.—Accessory punishments are:

1. Deprivation of civic rights.
2. Suspension of civic rights.
3. Prohibition of private rights.
4. Special police supervision.
5. Fine.
6. Special confiscation.

Art. 11.—A general order will regulate the mode of punishment, the details of the execution of each penalty, and the disciplinary treatment of the condemned.

(1) Opium Smoking has not yet been introduced into Japan, the fear however is reasonable that the vice may be imported from China. The Japanese on the whole are a temperate people.

(2) According to Japanese custom bigamy was already punishable; the legislator only expresses the voice of the people in his penal regulations.

SECTION II.—ON THE PRINCIPAL PENALTIES.

Art. 12.—The penalty of death is executed by hanging. The execution takes place inside the prison, in presence of persons designated by the general order.

Art. 13.—The penalty of death cannot be executed until after the receipt of a formal order from the Minister of Justice.

Art. 14.—The death penalty must not be executed on a national or legal holiday.

Art. 15.—If a woman condemned to death is *enroute*, the execution shall be delayed, and cannot take place within 100 days after her delivery.

Art. 16.—The corpse of the executed criminal shall be given to his relations or friends, on condition that they bury the same without external pomp.

Art. 17.—Men condemned to penal servitude, whether for life or temporarily, undergo their punishment on an island, where they shall be kept at such employments as shall be determined by the regulations.

Penal servitude for a term shall have a duration of from 12 to 15 years.

Art. 18.—Women and girls, condemned to penal servitude, undergo their punishment in a penitentiary in the interior of the country, and are there to be kept at work according to the regulations.

Art. 19.—All persons condemned to penal servitude, over 60 years of age, are to be kept at only such work as is commensurate with their strength.

Art. 20.—Those who are condemned to transportation whether for life or for a definite time, shall be brought to an island, where they shall be confined in a special prison without compulsory labour. Transportation for a term has a duration of from 16 to 20 years.

Art. 21.—After undergoing their penalty for five years, criminals, condemned to transportation for life, may by a decree of the Government be released from prison and be allowed to settle in an allotted part of the same island; the same favor may be extended to those condemned to temporary servitude after the expiration of three years.

Art. 22.—Confinement takes place in a penitentiary in the interior of the country, and is accompanied by compulsory labour according to the regulations. Art. 19, applies to those who are over 60 years of age. The maximum of the penalty of major confinement is 11 years, the minimum, 9 years; minor confinement, maximum 8 years, minimum 6 years.

Art. 23.—The penalty of detention is undergone, without compulsory labour, in a particular prison in the interior of the country. Maximum duration of major detention is 11 years, minimum 9 years; minor detention, maximum 8 years, minimum 6 years.

Art. 24.—Imprisonment is undergone in a house of correction (*Maison de correction*). Major imprisonment entails compulsory labor, minor imprisonment does not. The law fixes for every offence the minimum and the maximum of both grades of imprisonment, between eleven days and five years.

Art. 25.—In all cases in which the penalty entails compulsory labor a part of the proceeds of this work shall be applied to the expenses, and the rest kept for the condemned according to the proportion laid down by the regulations. He receives this latter sum, however, only in case he has wrought more than 100 days.

Art. 26.—The fine (for delicts) is *2 yen* and upwards. The law lays down the minimum and maximum for every punishable offence.

Art. 27.—The correctional fine must be paid within a month from the day on which sentence is passed. If not fully paid within that time it

shall be converted into simple imprisonment at the rate of one day for a *yen* or portion thereof.

The conversion of such imprisonment cannot, however, exceed 2 years. The condemned can regain his freedom by paying the balance of his fine not yet cancelled by his time in prison. His family or any third party can do this service for him.

Art. 28.—The penalty of attachment consists in a simple deprivation of liberty by confinement in a jail appointed for that purpose. The law determines the minimum and maximum of arrest for every contravention at from 1 to 10 days.

Art. 29.—The fine in cases of contraventions is a minimum of *5 sen* to a maximum of *1 yen 95 sen*. The law fixes the minimum and maximum for every offence.

Art. 30.—The fines imposed in cases of contraventions are to be paid inside of ten days after the sentence is passed, and in case of non-payment shall be converted into attachment at the rate given in Art. 27.

SECTION III.—ON ACCESSORY PENALTIES.

Art. 31.—Deprivation of civil rights entails on the condemned:—

1. The loss of those rights which belong exclusively to Japanese subjects.
2. Removal and exclusion from every position in the service of the Government and from every public office.
3. Loss of every pension, every nobiliary or honorary title and every national decoration.
4. The prohibition to wear foreign decorations.
5. The incapacity to serve in the land or marine forces of Japan.
6. The incapacity to give evidence in Court (excepting to be used as a means of obtaining information.)
7. The incapacity to become guardians or trustees, excepting in cases of descendants where the consent of relatives is given.
8. The incapacity to be assignee or administrator of a bankrupt, of a society, corporation, or of collective of any interests whatever.
9. The incapacity to be the principal of any institute of learning, or to have any position in such as teacher or warden.

Art. 32.—Any sentence on account of crime entails *ipsi facto* the forfeiture of all civil rights for life.

Art. 33.—The sentence to imprisonment for a misdemeanor entails *ipsi facto* the forfeiture of all public functions and offices, with which the condemned was invested, and the prohibition of the exercise of all other civil rights during the period of his imprisonment.

Art. 34.—The condemnation to a penalty on account of a delict, which entails police supervision carries with it *ipsi facto* the prohibition of the exercise of all civil rights during the term of police surveillance.

Art. 35.—Every condemnation on account of crime entails with it, during the term of the penalty, the prohibition of the exercise of all private rights.

Art. 36.—Persons condemned to transportation for life or for a term, who have undergone the period of their detention prescribed in Art. 21 may be admitted by an administrative enactment, to the exercise of all their private rights, or at least to a part of them.

Art. 37.—The condemnation to a criminal penalty entails *ipsi facto* the being placed under police surveillance for a time which shall be

equal to at least one third of the minimum of the penalty prescribed by the law.

Art. 38.—The sentence of police surveillance resulting from a condemnation for a delict, shall be pronounced only in cases prescribed by the law, or by a special judicial decision.

Art. 39.—Those condemned to death or to imprisonment for life, whose punishment has been commuted are *ipsi facto* to be subjected to police surveillance for a term of five years.

Art. 40.—Police surveillance begins on the day on which the principal punishment has ceased: in case the principal penalty should have lapsed, it begins with the day of the arrest of the criminal.

Whenever police surveillance is the only penalty incurred, and no principal penalty is undergone, it begins on the day on which the sentence is pronounced.

Art. 41.—Police surveillance may be suspended in accordance with an administrative decision, according to circumstances and the conduct of the condemned.

Art. 42.—Fine as an accessory penalty must be pronounced in open court. If not paid within one month, it is to be changed (in the same way as in Art. 27) into simple imprisonment, and must be undergone after the principal penalty.

Art. 43.—The Court pronounces the sentence of special confiscation:—

1. Respecting articles prohibited by law.
2. Respecting articles which were made use of in the commission of punishable acts.
3. And such articles obtained or produced by punishable acts.

Everything, apart from special confiscations, that shall be prescribed by special laws or regulations.

Art. 44.—Articles prohibited by law shall be confiscated without respect to their owners; Articles, which have been used for the commission of offences, or which have been obtained or produced by punishable acts, can be confiscated only when they are the property of the condemned, or their owner cannot be found.

SECTION IV.—OF COSTS OF COURT AND CLAIMS FOR DAMAGES.

Art. 45.—In every penal case, the condemned may be charged with the whole or with a part of the costs.

Art. 46.—Penal condemnations and acquittals are to affect in no wise the claims in civil law of the injured party.

Art. 47.—All persons, condemned as co-actors or accomplices in one and the same offence, are held, conjointly, responsible for payment of costs and for the satisfaction of claims in civil law.

Art. 48.—On the demand of the injured party, the penal Courts may determine the costs of Court, the restitutions, and the civil indemnifications; and if the articles illegally taken are in the possession of the condemned, may order the restoration of the same, even without the demand of the injured party.

SECTION V.

Contains the necessary regulations for calculating the duration of penalties conformably to the new law (Art. 49-52). If the condemned makes an appeal and is successful, the time of the penalty is reckoned from the day on which the first sentence was pronounced: if the appeal be rejected, from the day of the decision of rejection. If the public administration files an appeal, the penalty always begins on the day of the first sentence, irrespective of the result of the appeal—Any time during which the accused enjoyed provisional personal freedom as well as such as may have expired during a temporary flight is not reckoned in as a part of the duration of the penalty.

SECTION VI.

Treats of *conditional discharge (Arts. 53-59) Persons who have been sentenced for a crime or for crimes, who have undergone three fourths of their penalty, and who by their good conduct have given proof of amendment, may, by an administrative decision, be conditionally discharged.

Persons condemned to penal servitude for life may claim the same favour after fifteen years servitude; those condemned to penal servitude must, even when conditionally discharged, remain in the island to which they have been sent. Persons thus conditionally discharged, may be allowed the exercise of the whole or a part of their private rights, as determined by administrative decision. During this time however they are subjected to police surveillance. Should the person thus conditionally discharged commit a new crime or delict, the conditional discharge will be at once annulled, and the time thus spent up to the second committal shall not be reckoned as a part of the fixed duration of the penalty. Those who commit a new crime or delict during the course of their penalty have no claim to the privilege of conditional discharge.

SECTION VII.

Treats of the prescription of penalties (Arts. 58-62). The regulations regarding the prescription of criminal charges are contained in the Criminal Procedure (General Regulations Arts. 11-15). The length of time which entails prescription of principal penalties are: 30 years for the death penalty, 25 years for penal servitude for life and transportation for life, 20 years for penal servitude for a time or for transportation for a time, 15 years for major confinement and major detention, 10 years for minor confinement and minor detention, 7 years for imprisonment with or without compulsory labour and for correctional fines in case of delicts, 1 year for attachment and for fines in cases of contraventions. There is no prescription for loss or suspension of civic rights and police surveillance. Fines, as accessory penalties, cease by prescription with the principal penalty; special confiscation is prescribed in five years; confiscation of articles forbidden by law however is not affected by any prescription. The prescription begins on the day on which the condemned withdraws himself from the execution of the penalty. It ceases with his re-arrest. If he escapes again a new term for prescription begins.

SECTION.—VIII.

Treats of Rehabilitation (Arts. 63-65). Rehabilitation may be granted to persons condemned to the loss of civic rights, according to the circumstances of the case, in five years after the principal penalty has been undergone. Amnesty entails *ipso facto*, rehabilitation: pardon, only rehabilitation when rehabilitation is expressly granted. The Emperor only can grant the favour of rehabilitation.

CHAPTER III.

Treats of the raising or lowering of penalties by gradations (Arts. 66-73).

The following is the order of gradation for ordinary criminal penalties: 1 death, 2 penal servitude for life, 3 penal servitude for a term, 4 major confinement, 5 minor confinement. For penalties on account of political crimes 1 death, 2 penal servitude for life, 3 penal servitude for a term, 4 major detention, 5 minor detention.

When the penalty of confinement or imprisonment is to be lowered one or more degrees, the Court shall pronounce (for lowering one degree) for the former, imprisonment with compulsory

labour, for the latter, simple imprisonment, both for from two to five years.

In cases of lowering or raising the penalties of imprisonment and correctional fines by gradation, &c. the calculation is made in the proportion of a quarter of the legal penalty to one degree, to which extent the legal maximum or minimum shall be lowered or raised. In this case the imprisonment penalty may run to 7 years. If all gradations of diminution are exhausted, sentence for attachment and police fines may be passed, and endured, under the legal minimum, down to one day or five *sen*.

CHAPTER IV.

Treats of the *Reasons for exemption or diminution of penalties*. The first section gives the reasons for exemption and the so-called legal excuses. (Arts. 75-84).

No penalty is imposed upon those who act under the influence of irresistible compulsion. The same holds good for cases of peril in which the offender or his relatives are placed.—Any person acting in accordance with the command of a lawful superior and within the jurisdiction of the same, is exempt from penalty. Those are also exempt who commit a breach without criminal intent; with the exception of cases where the law by express regulations punishes negligence. Persons ignorant of the constitutive circumstances of the breach are free from penalty. If the ignorance is limited to the aggravating circumstances of the act, the aggravating circumstances are overlooked.

Persons deprived of their reason at the time of the offence are exempt from punishment (*privé de raison*. Art. 78).

Persons who at the time of the offence had not reached the 12th year of their age are exempt. Nevertheless the court can, according to circumstances, and the gravity of the offence, order that a child over eight years of age shall be placed in a house of correction (*emprisonnement de garde*) until his 16th year.

If the accused at the time of the deed was between 12 and 16 years of age, the court must specially decide whether he acted with or without power of discrimination. In the latter case there is no penalty; still the accused may be placed in a house of correction until the end of his 20th year. If he has acted with discernment he has the benefit of a legal excuse and his punishment is lowered two degrees. If, at the time of the offence the accused is between 16 and 20 years of age he has the benefit of a legal excuse, and his penalty is lowered one degree.

Deaf-mutes are always exempt, but they may, according to circumstances be placed in an asylum for 5 years.

Minors between 16 and 20 years, who commit a contravention, undergo the full penalty of the same, a lowering of one degree is allowed only in case of those between 12 and 16. If they have not yet reached the age of 12 years they are exempt as deaf-mutes.

Other cases of exemption and legal excuse, are laid down in special parts of the law.

In one special section (II. Art. 85-88) the lowering of penalties on account of voluntary denunciation is explained. Voluntary denunciation to the authorities before these have become aware of his guilt benefits the offender by lowering his penalty one degree, excepting in cases of murder or assassination. A lowering of two degrees is effected in cases of delicts against the goods of another, if the offender voluntarily denounces his act, and restores voluntarily and wholly the stolen property, or makes ample restitution. In cases of delicts against property the denunciation to the injured party has the same effect as to the authorities.

SECTION III. recognizes the extenuating cir-

cumstances, the existence of which, in any penal case, the judges may hold as an extenuation for the accused, and which are admissible even when the accused has had the benefit of one or more legal excuses, or when there are aggravating circumstances. The admission of extenuating circumstances has the effect of lowering the penalty at least one degree and at most two degrees (Art. 89 and 90).

The repetition of an offence, according to Chapter V. (Art. 91-98) entails a special augmentation of the penalty; the law makes a difference in cases of crimes, delicts, and contraventions. Whoever, having once been condemned to a criminal penalty, again commits a crime, suffers one degree greater punishment, so also any one who has once been condemned for a crime or delict, and again commits a delict.

Repetition of a contravention entails an increase of one degree in the penalty, whenever the second offence occurs in the same year and within the jurisdiction of the same police court. Every application of a penalty for repetition presupposes the legal continuance of the first penalty at the time of the commission of the new offence. If the repetition occurs while the first penalty is being undergone, the various penalties are to be undergone successively. Augmentation of penalty for repetition does not occur when the first offence is pardoned. These regulations have the same force for a second repetition. If aggravating and extenuating circumstances which are specially given in the general regulations occur simultaneously, the calculation of the penalty shall be made in the following order:—1. Aggravation for repetition. 2. Application of legal excuses. 3. Diminution on account of voluntary denunciation. 4. Extenuating circumstances (Art. 99 of Chap. VI.)

Chapter VIII (Art. 100-103) treats of cases of concurrence, that is the concurrence of several offences committed by the same person. Only one process is presupposed for all. In cases of concurrence of crimes or delicts the principle of absorption of the French *code pénal* is followed, i.e. the severest punishment alone is inflicted, and is reckoned according to length; in cases of equal duration, that is considered the severest to which compulsory labour is attached.

In cases of the concurrence of several contraventions, the principle of cumulation is followed; if contraventions concur with crimes or delicts the absorption principle is again followed. If an offender, against whom a penal sentence has already been pronounced, is found guilty of another offence committed before the aforesaid penal sentence was pronounced, no fresh penalty is added if the newly discovered offence is less than the first; and only in so far as the second offence is greater than the first, is there any penalty inflicted and then only the excess over the penalty already inflicted.

Chapter VIII treats of Participation of several persons in one and the same offence. Section I. deals with the authors, intellectual as well as physical, including the idea of co-actors (Art. 104-108), and Section II. deals with accomplices.

If two or more persons with common consent directly participate in the accomplishment of a punishable offence, each one is considered co-actor of the same, and incurs that usual penalty for such delict.

Persons, who in any way instigate another to the commission of a crime or a delict are considered co-actors. If the law on account of personal character or circumstances, augments the penalty of the perpetrator, these special circumstances are not to be reckoned against co-actors, accomplices, or instigators.

In case the instigation was intended for a definitely fixed offence, and the perpetrator, under the influence of this instigation commits a

* *Eri Shingoku*.

different offence, the instigator is not responsible for the excess over and above his instigation, and, if the actual offence is greater, is to undergo only the penalty of the offence to which he had given the instigation. On the other hand, if the offence which he had instigated is greater than the one actually committed, he incurs only the penalty of the latter.

Persons who impart instructions to a perpetrator, procure tools or any other means which serve to accomplish or to facilitate the perpetration of the offence, and those who have knowingly aided or facilitated the commission of the deed by preparatory acts, are considered accomplices and receive the penalty for the perpetration of the offence, diminished by one degree. (Art. 109).

Personal character or circumstances, which procure exemption or extenuation for the perpetrator, do not affect the accomplices.

Chapter IX, Art. 111-113, defines the matter of punishable infractions not consummated.

The mere intention to commit a breach and acts simply preparatory thereto are punishable only in cases provided by the law.

The attempt to commit an offence, which is discovered by means of the beginning of the undertaking, if the failure to accomplish the offence result from accident or from circumstances independent of the will of the perpetrator, entails the same penalty as that for the actual crime with an abatement of one or two degrees. All the principles relative to attempt are applicable also to attempted delicts. (*Delit manqué*) Attempts, whether finished or not, entail a penalty only in cases of such delicts as are expressly provided for by the law.

The attempt to commit a contravention is never punishable.

The last Chapter of Book I. gives a list of the persons who, in the eyes of the law, are considered relatives and allied, and describes in minutize the degrees of relationship (Art. 114 and 115).

The Second Book deals with crimes and delicts against the Commonwealth. Chapter I refers to crimes and delicts against the Emperor and his family (Art. 116-120).

Every assault, accomplished or attempted, on the person of the Emperor, the Empress, the Empress Mother, or Imperial Prince, or Heir-presumptive to the throne, entails the death penalty; every insult offered his Imperial Majesty or the Imperial Heir, entails imprisonment with compulsory labour for from 3 months to 2 years, and a fine of from 20 to 200 yen. Insults offered to Imperial tombs are punishable with the same penalty. Every assault against the person of members of the Imperial family entails the death penalty: an attempt entails penal servitude for life. Insults against the same entail a penalty of major imprisonment for from 2 months to 4 years and a fine of from 10 to 100 yen. The second chapter treats of "crimes and delicts against public security," the first section of which deals with crimes and delicts against the internal safety of the State (Art. 121-129). The highest degree of guilt in this regard attaches to persons who are proved to have participated in a civil war, an insurrection or armed sedition, having for its object the overturning of the Government, or the removal from imperial control of any part of the Empire of Japan or her colonies, or to diminish the rights and prerogatives of the Emperor in the government of the country. These crimes entail, according to the degree of guilt, penalties ranging from the highest, death, down to imprisonment for a term of years. In these cases the penalty of confinement in State prisons is inflicted as well as transportation. Simple conspiracy to

undertake the afore-mentioned crimes entails a penalty diminished by two degrees.

Section II treats of crimes and delicts against the external security of the State (Art. 129-135). The death penalty is inflicted on all Japanese subjects who bear arms along with the enemy against Japan or her allies in a foreign war. The death penalty is inflicted in cases of treason in time of war by opening to the enemy the territories of Japan, or her cities, fortresses, armaments, munitions of war, ships of war, &c., &c. The betrayal of military secrets in time of war is punishable with transportation for life. Transportation for a term of years is inflicted on a Japanese subject who, conniving with the enemy or on account of a bribe, fails to furnish the army with supplies or works which he had undertaken to provide.—A Japanese who, in time of war between subject foreign states, in regard to which Japan has declared herself neutral, commits a breach of the neutrality, is punishable with a penalty of simple imprisonment for from 6 months to 3 years and with a fine of from 10 to 100 yen.

Chapter III. treats "Of crimes and delicts against the public peace." Section I. treats of rebellion (Art. 136-138), Section II. with "Resistance against public functionaries."

The penalty is the same, whether the insult be offered in the absence of the official, by means of the press, or in public addresses. A penalty of major imprisonment from 4 months to 4 years and a fine of from 5 to 50 yen is inflicted on any one who offers resistance, by force or by severe threats, to any official who is called upon to execute laws, regulations of the authorities, or the sentences and judgments of Courts of Justice, presupposing the official to have acted in the legitimate exercise of his functions. Contempt and insult towards an official in the exercise of his functions or on account of the same, even if committed by gestures only, are punished with major imprisonment for from 1 month to 1 year, and a fine of from 5 to 50 yen.

Section III.: "Of the escape of prisoners and the concealment of offenders" (Art. 142-153). A criminal who shall set himself at liberty incurs a penalty of imprisonment for from 1 month to 6 months: if accomplished by force or with acts of violence, the penalty is imprisonment for from 3 months to 3 years.

The punishment is augmented in case of escape by the conspiracy of several persons. Whoever assists a prisoner to escape, by furnishing him with weapons or other means, incurs, with differences noted above, a penalty of imprisonment for from 3 months to 3 years and a fine of from 2 to 20 yen, and in certain cases an augmentation of one degree. Whoever, by means of force or threats, sets a prisoner at liberty or abets his escape, incurs a penalty of imprisonment for from 1 to 5 years and a fine of from 5 to 50 yen, and minor confinement if the prisoner had been sentenced to a criminal penalty. Negligence resulting in the escape of a prisoner entails a fine of from 2 to 20 yen. Whoever knowingly receives or hides an offender or an escaped prisoner, incurs a penalty of imprisonment for from 11 days to 1 year and a fine of from 2 to 10 yen, which penalty will be augmented one degree if the offender has been sentenced to a criminal penalty. A penalty of imprisonment for from 11 days to 6 months and a fine of from 2 to 20 yen is inflicted upon any one who, with the purpose of shielding an offender from punishment, conceals evidences of his crime. Relatives of and those allied to the offender are not affected by the provisions of the last two articles.

Section IV. (Art. 154-156) details the penalties to be inflicted on persons who withdraw from the execution of accessory penalties.

Whoever, in face of the fact that he has incurred deprivation or suspension of civic rights, fraudulently exercises one or more of the same, incurs major imprisonment for from 1 month to 1 year and a fine of from 2 to 10 yen.

The manufacture and illegal possession of weapons and munitions of war are treated of in Section V. (Art. 157-161). The penalty varies between major imprisonment of 1 month to 1 year with a fine of 10 to 100 yen and imprisonment for 2 months to 2 years with a fine of 20 to 200 yen.

Section VI. treats "of the Destruction and Injury of Means of Communication" (Art. 162-170) in the same way as the impeding or interrupting of the postal service, telegraph communication, endangering of railway trains ships, &c. If these acts result in the death or injury of persons, the penalties fixed for these crimes in so far as they are more or less serious are here applied. Running of trains off the track, or shipwreck entails a penalty of penal servitude for life; and the death penalty is inflicted if the act entails loss of life.

Section VII. treats "of breach of security of habitations" (Art. 171-173). Illegal intrusion into another's house is punished with major imprisonment from 11 days to 6 months, and the penalty is augmented one degree if the intrusion is accomplished by force or by means of weapons, or is accompanied by acts of violence against persons, or if committed by several persons acting in concert. Intrusion by night is punished with imprisonment for from 1 month to 1 year: the penalty is augmented by one degree whenever the intrusion is in Imperial residences or tombs.

The illegal breaking of an official seal incurs also heavy penalties (Imprisonment from 1 month to 2 years. Section VIII. Art. 174-176). So also the refusal to fulfil official or legal duties (Section XI. Art. 177-181). Self-mutilation in order to avoid military service, or the use of other means for the same purpose, is punishable with imprisonment for from 1 month to 1 year, or a fine of from 3 to 30 yen. Any physician, chemist or other person summoned by the authorities on account of their calling, who shall, without legitimate excuse, refuse to undertake *post mortem* examinations, an *expertise* or any other examination whatsoever, incurs a fine of between 4 and 40 yen. The same penalty is inflicted on such as are summoned as witnesses in Court, and refuse to give evidence without legal excuse. Physicians are fined 5 to 50 yen who in case of epidemic refuse their assistance without legitimate cause.

Chapter IV deals with crimes and delicts against public trust, and first of all (Section I, Art. 182-193) monetary crimes and delicts. Penal servitude for life is the penalty for the counterfeiting and uttering in Japan of Japanese coin or paper currency. The simple debasing of genuine money and circulating the same is punished with only minor confinement.

Foreign gold and silver coins, current in Japan, are also placed under protection by the provisions of this Code, and so also are banknotes, considered as money, which are issued by legalized Japanese or foreign banks.—Acts merely preparatory to counterfeiting, such as the providing of plates, forms, &c., are also placed under a penalty.

Exemption from penalty is promised to such counterfeiters as voluntarily give notice to the authorities before the counterfeited coin or paper money has been put into circulation. Whoever accepts counterfeit or falsified money as genuine, and after knowing it to be false again circulates the same, incurs a fine of double its pretended value.

Section II. contains the penalties for falsi-

fication of official seals, stamps, and marks. Counterfeit or fraudulent use of the seal of the Emperor or of the Empire is punished with penal servitude for life; that of a public authority, with major confinement. The law favours international exchange of merchandise, and furthers the interests of commerce in Japan by inflicting the severe penalty of minor confinement (6 to 8 years) upon those who counterfeit official stamps, trade-marks, or other marks of merchandise and industrial products, or who simply make a fraudulent use of the same. This notable protection is also seen in the fact that the severe penalty of imprisonment for from 1 to 3 years is imposed upon any one who counterfeits or fraudulently uses trade marks or stamps on books and other articles.

The counterfeiting of stamped papers, postage, and other stamps of the State or the public administration, as well as the intentional use of the same, entails the penalty of major imprisonment for from 1 to 5 years, and a fine of from 5 to 50 *yen*. The use of stamps, &c., that have already been used entails a fine of from 2 to 20 *yen*.

Section III. treats of the falsification of public documents. The counterfeiting or falsification of an imperial document is punishable with penal servitude for life; falsification (or destruction) of other public documents, with minor confinement. The same penalty is inflicted on any one who falsifies and makes fraudulent use of title-deeds, of treasury bonds, title-deeds of landed property, or other authentic documents. A particular anxiety to protect the interests of commerce is seen in the fact that the penalty is augmented one degree when the bonds issued from the treasury are not payable to order.

Section IV. treats "of the falsification of private seals or documents" (Art. 208-212). A forger who makes fraudulent use of these articles is punishable with major imprisonment for from 6 months to 5 years and a fine of from 5 to 50 *yen*. The use of the real seal of another person is considered an extenuating cause and diminishes the penalty.

The forgery of a bill of exchange, a bill payable to order, or by some other endorsement, or payable to bearer, as well as the fraudulent use of the same, is punishable with minor confinement. Forgery or falsification of any other private document of commercial or civic intercourse, which relate to sale, loan, gift, exchange, or other legal obligations, if knowingly used, is punishable with major imprisonment for from 4 months to 4 years, and a fine of from 4 to 40 *yen*. The attempt is also punishable.

Section V. (Art. 213-217) contains penalties against the use of forged passports, &c., and forged certificates of sickness. A severe penalty (imprisonment for from 1 month to 1 year, and a fine of from 3 to 30 *yen*) is inflicted upon any one who, by the use of a forged certificate of illness, attempts to release himself or another from any legitimate service. The penalty is augmented one degree in the case of a physician, and also for the use of a forged certificate in order to escape military service.

Forgery and falsification are everywhere reckoned to be equal offences.

Section VI treats of *Perjury* (Art. 218-226). Here certain distinctions are observed (a) between criminal and civil cases: (b) in criminal cases the penal regulations are arranged according to the gravity of the offence with regard to which the perjury is committed; and lastly (c) regard is had to the fact whether the perjury is in favour of the accused or to his injury. The law punishes with exceptional lenity perjury in penal cases in favour of the accused, in criminal cases major imprisonment for from 2 months to 2 years and a fine of from 4 to 40 *yen*, in cases of delicts major imprisonment for from 3 months

to 2 years, and a fine of from 2 to 20 *yen*; in cases of contravention simple police penalties (attachment or fine). These penalties are augmented one degree only in case the accused, in virtue of the false testimony, escapes a legitimate penalty. On the other hand if the testimony is given to the disadvantage of the accused, the penalty is disproportionately severer, without however being raised to a criminal penalty; even in these cases it does not exceed major imprisonment (in criminal cases 2 to 5 years and fine of from 10 to 50 *yen*; in delicts, 6 months to 2 years and a fine of from 4 to 40 *yen*; in contraventions from 1 to 3 months and fine of 2 to 10 *yen*). It is here evident how in this Code the fine is used as a cumulative penalty for delicts, as indeed is the case with nearly all delicts in this penal code, to a greater extent than is the case in any other penal legislation. It is also seen that in many cases of delicts the deprivation of personal liberty is remarkably small, the often unnecessary severity of the excessive duration of a penalty being exchanged for a fine of considerable magnitude. If however an accused person, in consequence of perjury, be condemned to a penalty severer than stated above, and if his innocence be established only after having undergone the punishment, the perjurer incurs the same penalty (as the accused) which, in case of partial infliction of the penalty on the condemned, may be diminished in accordance with the proportion of the same. With regard to the death penalty only the law makes an exception. If the penalty of death has been inflicted on the unhappy victim of perjury, the perjurer has the benefit of a diminution in his penalty of one degree; if the sentence had not yet been executed, the perjurer has a diminution of two degrees. If the perjurer, however, is proved to have intentionally brought about the condemnation of the accused, to the penalty of death, he suffers the same penalty.

A person who is guilty of perjury in a civil, commercial or administrative case, is, strange to say, punished with only major imprisonment for from 1 month to 1 year, and a fine of from 5 to 50 *yen*. These penal regulations are applicable to experts and interpreters, and also to persons guilty of causing others to commit perjury:—If the perjury be recalled before sentence be pronounced the perjurer is exempt from penalty. —Proportionately severer penalties are inflicted on persons who counterfeit weights and measures, or falsify the same, and bring them into use (Section VII Art. 227-230), imprisonment for from 2 to 5 years and fine from 10 to 50 *yen*.

Section VIII (Art. 231-232) contains the penalties against the use of fictitious names, the unlicensed wearing of orders, &c., and Section IX (Art. 233-236) against falsification at a public election (imprisonment for from 1 month to 1 year, and a fine of from 2 to 20 *yen*). Whosoever in a public election buys or sells a vote, is punished with imprisonment for from 2 months to 2 years and a fine. Heavier penalties are inflicted on persons entrusted with the gathering of ballots or votes, and the announcing of the results, if they are guilty of falsification of the returns. (Imprisonment for from 1 to 5 years and a fine of from 5 to 50 *yen*).

Chapter V. deals with crimes and delicts against the public health. Section I, with the trade in opium and the use of the same. (Art. 237-247). The production, importation, or commercial use of opium intended for smoking, within the limits of the Empire of Japan is punishable with penal servitude for a term; persons guilty of making or introducing into Japan or selling apparatus for the smoking of opium, are punishable with minor confinement.

The afore-mentioned penalties will be augmented one degree in cases of agents or Custom

House officers who in the exercise of their functions connive at the introduction of opium or opium-smoking apparatus. Minor confinement awaits anyone who provides a place for opium-smoking and receives profit therefrom, or who incites another to the use of opium.

The opium smoker himself incurs a penalty of major imprisonment for from 2 to 3 years; and even the mere possession of smoking opium or the appropriate apparatus for the same entails imprisonment for from 1 month to 1 year.

Section II contains severe penalties against the adulteration of potable waters, (Art. 243-245) pollution or the addition of injurious substances. Section III (Art. 246-249) lays down the penalties for offences against sanitary regulations, in particular the breaking of quarantine regulations in time of an epidemic. Section IV (Art. 250-252) treats of "breaches of the regulations for dangerous or unhealthy industries," Section V (Art. 253-255) of the sale of food or drinks injurious to health, and Section VI (Art. 256-257) of the illegal practice of medicine.

Chapter VI deals with delicts against good morals (Art. 258-263).

Public commission of acts contrary to decency is punished with a fine of from 3 to 30 *yen*. The sale of obscene books and pictures, a fine of from 4 to 40 *yen*. The keeping of a gambling hell entails imprisonment for from 3 months to 1 year and a fine of from 10 to 100 *yen*; persons caught in the act of gambling incur a penalty of imprisonment for from 1 to 6 months and a fine of from 5 to 50 *yen*. Exception is made in favour of games of chance in which the stakes are articles for immediate use.

The organization of a lottery for gain is also placed under the ban of a penalty.

Finally—and the lenity of this regulation is in striking contrast with those of the continent. A simple fine of from 2 to 20 *yen* is inflicted on any person who shall have been guilty of publicly insulting the exercise of religious services in a temple, a grave-yard, or any other sacred place, and the penalty shall be augmented to from 4 to 40 *yen* if the service has been disturbed thereby.

Chapter VII lays down the penalties for delicts against the bodies of the dead and against tombs. (Art. 264-266), mutilation of a corpse, or the abandonment of the same before burial, destruction or injury of tomb-stones, entail suitable punishments of imprisonment and fines.

Chapter VIII contains the penalties incurred by offences against commercial liberty, and the freedom of industrial and agricultural labour (Art. 267-272). Whoever by stratagem or force hinders the sale of rice or other necessary articles of food incurs a penalty of major imprisonment for from 1 to 6 months and a fine of from 3 to 30 *yen*.

Labourers who, in order to raise their wages or improve the conditions of their contracts, by stratagem or force compel other labourers to strike, and employers who, with the same object, by stratagem or force hinder their labourers or other employers in their work, incur relatively severe penalties.

Fictitious causing of fluctuations in the price of indispensable articles of food is punished with a fine.

Chapter IX treats of crimes and delicts of officials in public service. And, first of all, in so far as these crimes affect the public welfare (Art. 273-275) the refusal to execute the service required by law or regulation, the intentional disregard of the call of the armed power for the suppression of an insurrection, a mutiny in the army, or a rising against the Government, incur various penalties of minor imprisonment for from 2 or 3 months to 6 months or 3 years and fines.

The regulation in Art. 275 is peculiar, which

threatens with a fine of between 20 and 500 yen the official who shall, contrary to his instructions, engage in commercial transactions.

These delicts of officials include also those against the person (Art. 276-288). And first, misuse of his official power in illegally compelling another to do, suffer or cease from an act. The penalty is strikingly lenient; minor imprisonment for from 11 days to (only!) 2 months and fines of 2 to 20 yen. An official (magistrate, state prosecutor, police officer) who by virtue of his office is bound to assist in the execution of the penal code, is punished with imprisonment for from 15 days to 3 months, and a fine of from 2 to 20 yen, if he neglects to prosecute for a punishable offence, with the intention of allowing any one to escape illegally from a legal penalty. A police officer, who, without observing the legal formalities, or without just cause, undertakes an arrest, incurs a penalty of imprisonment for from 15 days to 3 months and a fine of from 2 to 20 yen, which penalty is augmented one degree for every ten days during which the illegal detention continued. The same penalty holds good for illegal detention by a director of a House of Correction. Ill-treatment of prisoners, the denial to them of food or clothing entails a penalty of imprisonment for from 9 months to 3 years and a fine of from 4 to 40 yen.

This admirable care for the welfare of helpless and defenceless prisoners is seen also in Art. 281, according to which officials, who neglect to release their prisoners in case of flood, conflagration, or earthquake, and thereby occasion their death or injury, incur the penalties for intentional wounding augmented one degree. Judges, procurers, and police officials, who are guilty of acts of violence or abuse against an accused person with the intention to extort from him confessions or declarations incur a severe penalty of imprisonment for from 4 months to 4 years and a fine of from 5 to 50 yen.

Further the refusal to admit a declaration or a complaint, without legal cause, or neglecting to make a decision thereon in Civil and Penal cases is also punishable. Art. 284 gives the comparatively lenient penalty for passive bribery, of imprisonment for from 1 month to 1 year and a fine, and augments the penalty by one degree only when the official is influenced by the gift to commit an act contrary to regulation or law. The penalty is suitably augmented where judges in civil cases accept bribes or where judges, officials, procurer, or police accept a bribe in penal cases. And yet the penalty is only imprisonment for from 3 months to 3 years with fine of from 10 to 100 yen, if the decision effected by the bribe is illegal and to the advantage of the accused.

If it is to the disadvantage of the accused, the penalty of imprisonment is considerably augmented (2 to 5 years and fine of 20 to 200 yen). If the penalty to which the accused was condemned is greater than that above mentioned, the guilty officials incur the penalties described in Art. 221 and 222 (in cases of condemnations caused by perjury). The same penalties are inflicted where justice is perverted from other causes besides bribery.

In all cases of bribery the accepted gifts or the value of the same must be declared in the sentence to be confiscated for the State.

Section II. punishes official crimes and delicts against property, (Art. 289-291). Official embezzlement entails the severe penalty of minor confinement, which in case of concurrence of falsification of documents is augmented by one degree. Intentional and illegal collecting of imposts, taxes &c., which are not due, entails the penalty of imprisonment from 2 months to 4 years and a fine.

THE REGULATIONS UNDER WHICH JAPANESE TRADE IS TO BE CONDUCTED IN COREA.

I.

On the arrival of any Japanese merchant vessel at an open port of Corea, officers of the Customs may be sent on board and may lock or seal the vessel's hold, and all other places where cargo is stowed. The Customs officers shall be treated with civility and be furnished with a suitable room; but in case there be no such room, said officers may either remain in a Custom's boat, or on land, as may best suit their convenience; all their expenses shall be paid by the Custom House. They shall not be allowed to secretly receive any sum of money from the master or commander.

Regulations relative to the securing or sealing of merchandise transported in sailing vessels of Japanese form of construction, shall be hereafter made by the Japanese Consul and the Superintendent of Customs.

II.

The master or commander of a Japanese vessel arriving at an open port of Corea will lodge the ship's papers i.e. the register and ship's bills of lading, in the hands of the Japanese Consul who will deliver to him a receipt therefor. The master or commander will, within forty-eight hours after anchoring (Sunday and other holidays excepted), present to the Custom House such receipt, the entry report and import manifest of the vessel's cargo, and also a list of the ship's stores and all other articles not being merchandise. If the master or commander fail to enter his vessel at the Custom House within the time prescribed above, he shall pay a fine of 30,000 mon copper cash; and should such neglect be continued, he shall pay a fine of the same sum for each period of twenty-four hours during which he shall fail to make entry; but in any case, the total amount of such fines shall not exceed 100,000 mon.

The entry report shall set forth the name of the ship, tonnage, the name of the master, the names and number of the crew, the names and number of passengers, the name of the port from which the vessel sailed, the dates of departure and arrival, and shall be signed by the master or commander. The import manifest shall set forth the marks and number of packages, descriptions of the goods therein contained and the names of the owners, and shall contain in addition a declaration signed by the master or commander setting forth that such statement is true. The list of the ship's stores and other articles not being merchandise shall also be signed by the master or commander.

All reports and other documents shall be written in Japanese and need not be accompanied by translations.

III.

If any omission or error be found in the manifest, it may be supplied or corrected within twenty-four hours (Sunday and other holidays excepted) after entry inwards, but, for any alteration or correction of the manifest after that time, a fee of 7,000 mon shall be paid. If the goods in the manifest of which there was any omission or error, be landed, double the duty shall be imposed upon them.

IV.

When a vessel has been duly entered inwards, the Superintendent of Customs shall issue a permit to open hatches. The master or commander shall exhibit this permit to the Customs' officer on board, and shall request him to unfasten the hatches and other places containing cargo. Should the hatches, &c., be improperly opened or unfastened, the master, without regard to the person committing the offence, shall pay a fine of 30,000 mon, copper cash.

V.

Any person desiring to land or ship cargo shall make entry of the same at the Custom House, presenting at the same time invoices thereof (the invoice shall set forth date on which, and the place where the goods were purchased, the actual cost, the packing expenses, commission, insurance, and other miscellaneous charges; and shall be signed by the purchaser, owner, shipper, or agent), and the Custom House officers shall thereupon issue a permit to land or ship the cargo. Such permit

shall be presented to the Customs officer on board, before unloading or shipping the cargo. Any person desiring to tranship cargo shall likewise obtain a permit from the Custom House for that purpose, before so doing.

The entry shall be in writing, and shall set forth the name of the ship, the marks and numbers of the packages, and descriptions, quantity and value of the goods contained therein as described in the invoices, and declaring that nothing has been concealed whereby the Customs of Corea would be defrauded, and the applicant or his agent shall sign his name to such entry.

VI.

No cargo shall be unladen, shipped or transhipped between sunset and sunrise, except by special permission of the Customs' authorities, and the entrances to the hold and other places where cargo is stowed, may be secured by the Customs' officer between sunset and sunrise, by fixing seals or locks. If any person shall open or break any such lock or other fastenings, without permission of the Customs' authorities, the master of the vessel shall pay a fine of 30,000 mon.

VII.

If any person shall unload, ship, or tranship any goods, without permission from the Customs' authorities, or shall land or ship any goods at any other places than those fixed by agreement between the two contracting parties, such goods shall be confiscated.

VIII.

Any Japanese subject may hire Korean boats, vehicles and coolies to convey goods or passengers in the open ports of Corea, without any intervention of the Korean Government officers. No restrictions shall be placed upon the number or class of boats, vehicles or coolies for such conveyance. In case, however, Japanese subjects have any difficulty in the hiring of boats &c., the Customs' authorities shall, on request, render them proper assistance.

IX.

Goods intended for importation or exportation shall, on passing through the Custom House, pay duties according to the Tariff annexed to these Regulations. Goods intended for ships' use shall pay proper duties if landed and sold. Import duties payable ad valorem shall be calculated on the actual cost of the goods at the place of production or fabrication, with the addition of the cost of transportation, insurance, commission and all other charges from the place of production or fabrication to the port of discharge. The sum thus obtained shall be regarded as the original value of the goods, upon which the rate of duty provided in the Tariff shall be levied.

X.

In case of any deficiency or surplus in payments of duties, the Customs may enforce the payment of such deficiency, or the party making payment may claim the refund of such surplus, as the case may be, at any time within thirty days from the date of payment, but no refund of surplus shall be allowed in respect of any deficiency in quantity or damage discovered in goods, after they have once been passed through the Custom House.

XI.

Customs' officers may examine the whole or any part of any goods intended for exportation or importation, and for this purpose may take them to the Customs shed; but the expense of transporting thither shall be paid by the owner of goods. If the examination takes place at any other place, then the expense of transferring thither shall be paid by the Customs. Customs' officers shall be careful to cause no injury to such goods, and, after examination, they shall return the goods as much as possible to their original condition in the packages, and such examination shall be made without unreasonable delay. Any damage to the goods caused by the carelessness in such examination shall be made good by the Customs.

XII.

If the Customs officers are dissatisfied with the value placed by an importer or exporter on any of his goods, they shall call upon the importer or exporter to pay duty on the value determined by an appraisement to be made by the Customs appraiser; but should the importer or exporter be dissatisfied with this appraisement, he shall, within twenty-four hours (Sunday and other holidays ex-

cepted, report his reasons for such dissatisfaction to the Superintendent of Customs, and shall appoint an appraiser of his own to make a reappraisal, and declare the value of the goods as determined by such reappraisal. The Superintendent of Customs will then, at his option, either assess the duty on the value determined by such reappraisal, or elect to purchase the goods from the importer or exporter at the price thus determined, with the addition of five per cent. In the latter case, the purchase-money shall be paid to the importer or exporter within five days from the date, on which he may declare the value determined by his own appraiser.

XIII.

If any goods are damaged on the voyage of importation, the importer of such goods may report the facts of the case to the Custom House, and he may have the damaged goods appraised by two or more competent and disinterested persons, who, after due examination, shall deliver a certificate, setting forth the amount per cent. of damage on each package, describing the packages by marks and numbers. The certificate shall be signed by the appraisers. The importer may present the certificate to the Custom House with his entry, and request a corresponding reduction in the duty. But such certificate will not prevent the Customs authorities from appraising the goods in the manner provided in Regulation XII.

XIV.

If any dutiable articles not set forth in the entry shall be found concealed in any package of goods, with intent to evade the payment of duty, such articles shall be forfeited.

Any person who shall present at the Custom House any document containing a false description or quantity of goods, or shall insert any dutiable articles in the list of goods which are not subject to duties, with the intent of evading the payment of duty or any portion thereof, shall, in addition to paying the regular duty, be liable to pay five times the amount of the duty sought to be evaded.

XV.

No application for a permit is required for landing or shipping passengers' baggage. But the Customs officers may examine such baggage, and if any dutiable goods are found amongst such baggage deemed by the Customs officers unnecessary for the journey, the proper duty shall be levied on the same, according to the Tariff, and should any prohibited articles be found concealed among such baggage, the same shall be confiscated, and in case of opium the penalty shall be the same as provided in Article XXXVI.

XVI.

No duty shall be levied on any Articles or goods imported for the use of the Japanese Legation, and the same shall be allowed to pass the Custom-house without examination.

XVII.

Goods of an explosive or otherwise dangerous nature shall not be allowed to be landed or shipped, except at places designated for that purpose.

XVIII.

All goods imported into one of the open ports of Corea, on which the duties have been paid, may be transported into any part of Corea, without the payment of any tax or transit duty whatever. And all Articles of Corean production may be conveyed, for exportation, from any part of Corea to any of the open ports, without being liable to any tax or transit duty.

XIX.

When any person who may have imported merchandise into any of the open ports, and paid the duty thereon, desires to re-export the same to another open port, the Customs authorities shall deliver to him a certificate stating the fact that the duty has been already paid on such merchandise, provided it shall be found on examination, that the packages have not been opened, or any goods substituted for, or concealed in, the original articles. The Customs authorities of the port of destination of such goods shall not levy any additional duty thereon, if they find that the goods correspond with the certificate. In case, however, any goods have been substituted for the original goods, or been concealed therein, in addition to the proper duty payable for the goods so substituted or concealed, a fine equal to five times the amount of such duty may be imposed.

XX.

Should it be desired to re-export any imported goods, which have already been delivered to the consignee, the Customs authorities shall allow them to pass duty free, provided such goods shall be proved to be imported goods.

XXI.

Corean productions re-imported by Japanese merchant vessels into any of the open ports in Corea shall be allowed to pass duty free, provided the quality and condition of such goods remain the same as at the time of exportation from Corea, and provided such re-importation shall be made within three years from the date of exportation, and provided further that the importer shall produce the shipping permit received at the time of exportation, and shall prove that such goods are of Corean production.

XXII.

Until such time as the mercantile marine of Corea is in a condition to carry on satisfactorily the coastwise trade of Corea, all Japanese vessels may transport goods of any country whatever from one open port to another in Corea: but when a Japanese merchant desires to transport Corean articles, bought at one open port in Corea, to another open port, he shall deposit at the Custom House an amount of money equal to the export duty payable thereon, or lodge in the hands of Customs officers a bond signed by himself and a surety to be approved by Customs authorities conditioned to pay an amount equal to the export duty. On landing the said goods (without the payment of any import duty) at the port of destination within six months from the date of exportation, the importer shall receive a certificate from the Customs of such port, stating the fact that such goods have been landed. This certificate being produced to the Customs of the port from whence the goods were exported, the amount deposited or the bond lodged as aforesaid shall be returned to the said merchant. If, however, the vessel in which the said goods were shipped be wrecked while engaged in transporting such goods from one open port to another, a report of the case signed by the Japanese Consular officer shall, within one year from the date of exportation, be presented to the Customs in place of the certificate above specified. When the Corean Mercantile Marine shall have become sufficient for the coasting trade of Corea no foreign vessels shall be employed in transporting the Corean produce from one port to another.

XXIII.

The Corean Government engages to erect in all the open ports sheds, under which goods intended for exportation or importation may be placed, and warehouses, in which they may be stored. The rate of storage charges, as well as the regulations necessary for the management of the said warehouses will hereafter be established by mutual agreement.

XXIV.

Should it be desired to store imported goods in the Customs warehouses without paying the import duty a special permit must be obtained from the Superintendent of Customs, in accordance with the warehouse regulations, and such goods may be freely re-exported to Japan. The duties paid on goods remaining stored in the Customs warehouses shall be refunded to the exporter on the re-exportation of such goods direct from the warehouse, but all goods that have once been taken delivery of by the importer, shall be treated in accordance with Regulations XX. Until such time as warehouses are established by the Corean Government, all goods that have once been taken delivery of by the importer, may be freely re-exported, upon such re-exportation the duties paid shall be refunded, provided the goods are in the same condition as when imported, unless such re-exportation shall take place after one year from the date of importation, in which case, they shall be treated in accordance with Article XX.

XXV.

Vessels needing repairs may land their cargo for that purpose, without the payment of duty. All goods so landed shall remain in the Customs shed or warehouse (all charges for storage and other expenses being defrayed by the ship's master). But if any portion of such cargo be sold, the prescribed duties shall be paid on the portion so disposed of. Old timber and other materials

belonging to any vessel wrecked off the Corean coast shall be exempted from the payment of import duty.

XXVI.

The master or commander of any Japanese vessel wishing to clear shall make outward entry, and shall produce the export manifest at the Custom-House, before leaving the anchorage: the Customs authorities will, then, return to the master or commander the Consul's receipt for ship's papers deposited at the Custom-House, and the vessel shall leave the port after obtaining her clearance permit.

XXVII.

Should it be desired to ship or unload cargo after a ship has been entered outwards according to the preceding regulation, the vessel must be again duly entered inwards, and when ready to clear, must again be entered outwards. When a ship which has been entered outwards is unable to leave the anchorage at such time as shall have been reported to the Customs, the master or Commander shall report the circumstance at the Custom House, and obtain the consent of the Superintendent to remain in port.

XXVIII.

Should a master apply for a clearance permit, while a case involving a charge of violation of the Customs Regulations is pending the Customs authorities may refuse to grant such permit, but if the Superintendent shall be informed officially by the Consular officer that sufficient security, either personal or by deposit, has been given to the said officer, the Superintendent shall grant a clearance permit.

XXIX.

Mail steamers may both enter and clear at the Custom House on the same day or at the same time. In the import manifest of such mail steamers it will be sufficient to mention only such articles as are to be landed or transhipped. When the master is unable to present the export manifest to the Custom House, the agent of the mail company may do so within three days.

XXX.

A Japanese merchant vessel or fishing boat compelled to put into one of the open ports in Corea, in order to obtain necessary supplies, or to take refuge, need not be entered or cleared at the Custom House. But, if such vessel shall remain in port over twenty-four hours, the master shall make a report thereof, setting forth the cause and circumstance of such necessity to the Custom House. Nevertheless, should such vessel or boat subsequently engage in trade, the rules set forth in Regulation II. shall be observed.

XXXI.

The Corean Government engage for the future to keep all the open ports in proper condition, and to construct lighthouses, beacons and buoys. In order to meet the necessary expenses of maintenance of such works, all Japanese merchant vessels entering at a Corean Custom House in accordance with the Regulations shall pay tonnage dues at the rate of one hundred and twenty-five mon per ton (in vessels of koku designation, Japanese 6 koku 5 tō and 5 sho are equal to 1 ton). On the payment of tonnage dues by a vessel, the Customs authorities shall issue a special certificate, on exhibition of which the vessel, in respect of which the certificate shall have been issued, shall be exempt from all further payment of tonnage dues in any open port of Corea for a period of four months. If a merchant vessel arriving at a port departs therefrom within two days after arrival without breaking bulk, such vessel shall not be required to pay tonnage dues. If, on account of stormy or foggy weather, etc., such vessel cannot depart within the specified time, the master or commander shall report the fact to the Custom House. Fishing boats are exempted from the payment of tonnage dues. The tonnage dues herein stipulated shall be revised by a general convention, when the tonnage of the foreign shipping other than Japanese in Corea shall have increased to such an extent as to equal the tonnage of Japanese vessels.

XXXII.

Men-of-war and other vessels belonging to, or in the use of, the Japanese Government, having no merchandise on board, shall not be required to enter or clear at the Custom House, nor to pay

tonnage dues in any open port of Corea; no Custom officer shall be deputed to guard such vessels; nevertheless, should condemned articles belonging to such vessels be landed and sold, the purchaser of such articles shall report the fact to the Custom House and pay the proper duty.

XXXIII.

If a Japanese vessel shall smuggle or attempt to smuggle any goods at any of the non-opened harbours of Corea, all such goods together with all other commodities on board such vessel shall be forfeited to the Corean Government, and the master of such ship shall pay a fine of 50,000 mon. But this article shall not be held to apply to vessels entering any non-opened harbours on account of stress of weather, purchasing food, water, and fire-wood.

XXXIV.

Any Japanese merchant vessel may be chartered by the Corean Government, or by any Corean subjects to convey goods, persons, etc. to any of the non-opened harbours in Corea; but in the latter case, the charterer shall first obtain a license from the Government.

XXXV.

Any case involving a penalty, confiscation or other punishments set forth in these regulations shall be decided by the Japanese Consular officers on the complaint of the Custom's authorities. Every penalty enforced or goods confiscated under these regulations by such consular officers shall be handed over to the Corean Government.

Goods which are seized by the Corean authorities shall be put under seals in the presence of both the Japanese consular officer and said authorities, and shall be kept in the Custom House, until the decision of the same shall have been given.

If such decision shall be in favour of the owner of the goods, they shall be immediately delivered to the owner through the consular officer; but should the Corean authorities be dissatisfied with the decision, they may appeal to the proper Japanese courts. In which case, the owner shall be bound to deposit the value of the goods at the Japanese Consulate, which deposit shall remain until the final decision is pronounced. Should the seized goods be of a perishable, changeable, or dangerous nature, they shall be handed over to the owner on his lodging the amount of their value at the Japanese Consulate.

XXXVI.

The importation of opium is strictly prohibited. All opium smuggled or attempted to be smuggled shall be forfeited, and in addition to this forfeiture, a fine of 70,000 mon shall be paid for every catty so smuggled or attempted to be smuggled. Opium imported under the guarantee of the Japanese Consul for the use of the Corean Government, or for the medical purposes of Japanese residents in Corea, is not included in this regulation.

XXXVII.

When the Corean Government shall have reason to apprehend a scarcity of food within the limits of the kingdom, in any case of emergency, such as an inundation, drought, war, &c., they may, by decree, temporarily prohibit the exportation of all bread-stuffs, but the Corean local authorities shall give one month's previous notice of such prohibition to the Japanese subjects in Corea through the Japanese Consular officers. Although bread-stuffs, upon importation and exportation, are usually subject to five per cent. duty, nevertheless in case of scarcity occasioned by any national calamity either in Corea or in Japan, the importation into or exportation from Corea of those articles may be made free of duty, provided notice of the existence of any cause which may render the measure necessary is officially given.

XXXVIII.

The purchase of cannon, fire-arms, bullets and shells, gunpowder, percussion caps, and all other munitions of war by Corean subjects is prohibited, and the Corean Government reserving to itself the sole right to make such purchases, and to authorize individuals to make such purchases on account of the Government, any such articles smuggled into Corea shall be liable to confiscation.

XXXIX.

Any violation of any of the provisions of these regulations, to which no penalty is specially attached herein, may be punished by a fine not exceeding 15,000 mon.

XLI.

Until such time as gold or silver coins shall be minted and issued by the Corean Government, all payments of duties and fines set forth in these regulations, shall be made in Corean copper cash, or in Japanese silver coins at the market rates, or in Mexican dollars which are equivalent in value to Japanese silver coins. The amounts of fees and fines mentioned in regulations II., III., IV., VI., and XXXIII. shall be reduced by one half for vessels under five hundred tons, and by three-fourths for vessels under fifty tons.

XLI.

Fishing vessels belonging to both countries shall be permitted to frequent the coast of Zenra-do, Keisho-do, Kogen-do, and Kankio-do in Corea, and the coasts of Hizen, Chikuzen, Nagato, (opposite coast of Corea) Iwami, Idzumo, and Tsushima in Japan, to catch fish; but such vessels shall not carry on any commercial dealings. In case of a violation of this prohibition, all articles purchased or sold shall be confiscated; but such vessels may sell the fish and shells taken by them. The dues to be paid by the fishing vessels of the two contracting parties shall be determined by mutual agreement, after the expiration of two years from the date the present regulations go into operation.

XLII.

These Regulations shall be approved by the Government of Japan and Corea, within 100 days from the date hereof, and shall take effect immediately after the expiration of such 100 days, to the exclusion of the existing Trade Regulations and all other agreements, so far as they may be contrary thereto.

Any right, privilege, or favour which the Corean Government has actually granted, or may hereafter grant to the Government or subjects of any other State shall be extended to the Government or subjects of Japan without delay.

These Regulations shall terminate after 5 years from the day on which they come into force; nevertheless before the expiration of such term, the Governments of Japan and Corea shall enter into negotiations, with the view to make new regulations which shall take the place of the present Regulations.

If, however, the term should expire while new regulations be under negotiation, the present regulations shall remain in force until the conclusion of such negotiation.

The officers of both countries are entitled, from time to time, to enter into negotiations which are not herein contained, if such shall be deemed necessary.

In witness whereof, we, the undersigned Plenipotentiaries, have concluded and signed, in virtue of our respective full Powers, the present Trade Regulations and have sealed them with our seals.

Done at Seoul, Corea, this 25th day of 7th month (July), 16th year of Meiji (1883), corresponding by the Corea calendar to the 22nd day of the 6th month in the year 492 since the foundation of Corea.

CORRESPONDENCE.**WERE THEY SPORTSMEN?****TO THE EDITOR OF THE "JAPAN MAIL."**

SIR,—Yesterday afternoon, a member of my
family, while walking beside one of the moats in
Tsukiji, observed a group of small boys, foreign
and native, amusing themselves with a cat. They
had stoned the wretched creature from a neighbor-
ing roof, and were now tossing her into the water,
over and again, sometimes beating her back with
sticks, as she crawled with desperate effort up the
stone walls of the canal. Her escape was care-
fully prevented by two dogs, which guarded a
considerable stretch of the water side. The tor-
mented beast was at once rescued, not without
some remonstrance at this invasion of juvenile pri-

vileges, and was helped back to life with decent
care. Gratitude is a sentiment not commonly at-
tributed to cats, and whether they possess it in a
lasting degree, or not, I am unprepared to say;
but the evidence of trustfulness and hope which
this poor animal showed by crouching near its pre-
server, following her in every direction, refusing
food from any other, lifting its bleeding paws for
inspection to her alone, and hiding its wounds from
all besides, was a sight that might have touched
the feelings even of its recent torturers if they could
have witnessed it.

You will not be altogether surprised to learn
that I firmly believed a meritorious action had
been performed in saving this "harmless, ne-
cessary" quadruped. Such, at any rate, was
my conviction; nor was it shaken until I acci-
dentally remarked, in this day's newspaper, that
the "sporting season" had set in. Being a per-
son of quiet habits, I am not fully aware of
all that may be meant by that phrase. I do
at least know, however, that it signifies a period
during which men and women and children may
go about armed with weapons destructive to ani-
mal life, and cheer themselves and one another
by an exhilarating rivalry in the infliction of in-
jury and death upon Nature's helpless creatures.
I know that this must be "sport," because it is
called so by those who practice it. Although not
skilled in the technicalities of such proceedings, I
am not so simple as to believe that any part of the
"sport" is found in the eating of the animals after
they are slain, for other people who buy them in
the market and use them as food are not considered
sportsmen; nor in the fatiguing process of tramp-
ing about in swamps or on difficult ground,
weighed down with implements of carnage, be-
cause healthful exercise can be obtained under
much more sensible conditions. The "sport" is,
in truth, synonymous with success in maiming or
slaughtering little birds. The individual who kills
the largest number in a given time is the best
"sportsman"—an object of envy and adulation
among his fellows.

Reflecting upon these indisputable facts, I have
begun to ask myself whether yesterday's inter-
ference with the moat-side performance was not
unwarranted and perhaps illegal. For ought I
know, the small boys concerned may have had
licenses in their pockets, procured for them by
parents who, as ardent followers of "sport,"
desire to instil into their offspring, at an early age,
the principles which they themselves profess.
Possibly the licenses would have been produced,
but for the arbitrary dispersal of the crowd by the
advent of an intrusive adult. I do not know what
animals are included in the official authorizations
to kill and wound. I do not suppose that cats are
expressly excluded. And I have not the slightest
doubt that these urchins took nearly if not quite as
much delight in their attempts to destroy their
special victim as the seniors take in mutilating;
lacerating, or even slaying outright, the feathered
objects of their pursuit. It is true that the former
had only stones and sticks in their hands, but I
dare say they would be glad enough to use the
finest results of Western mechanical ingenuity, if
they could get them. The accuracy of aim which
hits a cat with a pebble, at twenty yards, would
rejoice to further distinguish itself with a shot-gun
at twenty rods.

On broad and general principles, I do not clearly
discover any justification for breaking up the hunt
in the Tsukiji thoroughfare, which might not
equally apply to an interruption of the field sports
guaranteed by annual license. I may be ridiculed
for obtuseness, or hooted at for squeamish and
affected sensibility, or—still more crushing contin-
gency—may not be noticed at all, in any way.
But if a fair-minded and honest advocate of bird-
shooting were to deem it worth his while, he would
probably remind me that my attempt to demon-
strate a resemblance, in the two cases, is entirely
upset by a reference to the motive, on either side.
The boys he would say, are actuated by sheer
cruelty—solely by the passion for inflicting suffer-
ing; while the sportsmen go forth with no such
savage impulse in their hearts, notwithstanding
that their pastime necessitates death and pangs
worse than death. The birds are indeed killed, or
laid with broken legs and wings, he would argue,
but not from any barbarous desire to give pain;
whereas the cat is harried out of pure viciousness

and brutality. I might, at this stage, suggest that there is another point of view from which the question may be regarded,—that of the animals themselves. It does not much matter to them, I presume, whether they are sacrificed to the requirements of sport without cruelty or sport with cruelty. But apart from that, I utterly reject the convenient theory above referred to, which I have heard a hundred times, without finding in it anything substantial or valid. Boys may be more reckless than men as to the consequences of their acts, but it does not follow that their motives are totally dissimilar. When half-a-dozen young scamps are throwing stones at a cat on a roof, and one happens to hit her, do you suppose that the shout of exultation which follows is because the cat is more or less hurt? Nothing of the sort. It is the reward of the clever marksman's dexterity. The injury inflicted does not enter into the calculation. When they combine to toss her overboard, it is because her awkward struggles amuse them, and her grotesque gaspings and futile scramblings excite their sense of the ridiculous, or awaken curiosity as to her power of prolonged resistance. They know, of course, that she suffers, and they doubtless suppose that she will die; but in nine cases out of ten it is not the suffering or the death which they aim at. Show me a boy who will take a cat, alone, and without companions, into a garret, and there crush its head with a hammer, and I will admit, then, an exceptional instance of unmixed satisfaction in the infliction of torture and death. But in the vast majority of cases, children seek merely to divert themselves; and if they plunge their victims into misery, or plague the life out of them, those are results which are inevitable, perhaps lamentable, but the consideration of which is not permitted to disturb their enjoyment. And I maintain their position is precisely the same as that of the children of larger growth who go abroad with weapons of exquisite workmanship, attended by beaters, searchers, and dogs (I acknowledge to an ignorant confusion as regards the nomenclature) knowing that their "sport" can be accomplished only by the killing of small birds, and regarding that solely as an incidental circumstance of their entertainment. Therefore I say that quite as good and sound a moral argument could be framed against the dispersal of the cat-killers, yesterday, in Tsukiji, as against the endeavour of any "enthusiast" or "fanatic" to check the revels of the licensed sportsman.

I have not the slightest expectation, Mr. Editor, that this communication will affect the judgment, or even more the sympathy, of a single reader; and I fear it will be with reluctance that you give it a place in your columns, if you do so at all. Not that you will suppose it particularly harmful, but you may grudge the space it will occupy, which might be devoted to matters of current importance. But I hope that your evident willingness to allow a hearing for all voices, when they speak in earnest, may obtain me the desired favour. I am well enough aware that nothing but derision is now the portion of any writer who ventures thus to criticize what may be called one of the cherished "institutions" of English Society; but I am as thoroughly persuaded as I am of my existence, that, among other advancements of humanity, the world of a hundred years hence will look back, not with anger, perhaps, but with a scornful incredulity upon the pretence of civilization which, in the nineteenth century, reckoned among its choicest recreations, to be extolled in poetry and glorified in song, the habitual, organized, and legally encouraged practice of waging war for pleasure, by intelligent, educated men—and women, too,—against the pretty, harmless, helpless beings of a weaker grade of animal life. The protests of a few who believe that the world was made to be peopled with gentle men and women may be sneered at for years to come, but not forever; and there is prophetic force in the words of my Quaker countryman, even if applied to the humblest and most imperfect efforts to hasten the wished for consummation:—

Never yet
Share of Truth was vainly set
In the world's wide fallow;
After hands shall sow the seed,
After hands, from bill and mead,
Reap the harvest yellow.

I am, Sir, your obedient servant,
ONE OF THE UNLICENSED.
Tokyo, October 29th, 1883.

LATEST SHIPPING.

FREIGHTS.

The steamship *Selambria* was dispatched on the 25th instant, for New York, via Amoy, taking 1,400 tons wheat for the latter port; that berth is now occupied by the steamships *Venice* and *Cairnsmuir*, both with quick despatch. For New York direct, the Norwegian bark *Gilead* is now loading at Kobe, and there is a possibility of another vessel loading at this port during November for same destination. For Havre and London, the bark *Sagitta* is still loading having been much retarded by the recent inclement weather; for same destination, via Japan, and China ports, the steamship *Flintshire*, which arrived on the 4th instant, is now loading. Coastwise, the bark *Bride* was chartered for Amoy with wheat, and sailed on the 24th instant; in other directions, nothing is doing, and rates of freight do not improve.

PASSENGERS.

ARRIVED.

Per British steamer *Coptic*, from San Francisco:—Sir Sydney and Lady Waterlow and 3 servants, Rev. and Mrs. C. M. Fisher, Mr. and Mrs. Hannen, daughter, and servant, Mr. and Mrs. Henry W. Lucy, Mrs. B. A. Valentine and 2 children, Miss Hattie Crocker, Miss Annie B. Wets, Miss J. Mitsui Flanders, Messrs. L. Zabiskie, T. W. Strong, G. S. Wheaton, R. W. Irvine, George Arbuthnot Burns, H. Von Siebold, N. Okabe, and J. Hayashi in cabin. For Nagasaki: Rev. and Mrs. W. H. Demorest in cabin. For Shanghai: Dr. and Mrs. J. B. Neale, and Mrs. A. Winsor and 2 children in cabin. For Hongkong: Hon. John F. Swift, and Mr. Harry M. Rose in cabin: 1 European and 1,050 Chinese in steerage.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—Governor Sakai, Governor Watanabe, Governor Kishira, Mr. and Mrs. Jas. C. Buck and 2 children, Mr. and Mrs. Nagashima and child, Mr. and Mrs. Maruyama, Mr. and Mrs. Motono, Mrs. Chas. O'Neil, Master O'Neil, Madame Boudon, Messrs. J. D. Carroll, M. H. Robertson, R. H. Powers, McKeige, Deakin, O. Reimers, Munch, Winckler, H. Kern, Hojo, and Nakagawa in cabin; and 10 Europeans, 2 Chinese and 235 Japanese in steerage. For San Francisco: Dr. H. R. Platt in cabin.

Per French steamer *Tunais*, from Hongkong:—The Count Zaluski, Austrian Minister, Mr. and Mrs. Carratus and infant in cabin.

Per Japanese steamer *Yoshino Maru*, from Yokkaichi:—14 Japanese in steerage.

Per British steamer *Arabic*, from Hongkong:—For Calicut: Mr. W. J. Forsyth in cabin; and 5 Europeans and 127 Chinese in steerage.

LATEST COMMERCIAL.

IMPORTS.

Since last report we have but little business to chronicle for all staples, sales of Yarns and Shirtings being of a retail character. In Fancy Goods, there has been a slight improvement, Turkey Reds having been somewhat in demand. Metals are quiet, a small demand being made for railroad iron.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |
| Nos. 16 to 24, Good to Best - | 29.25 to 30.00 |
| Bombay, No. 20, Good to Best - | 25.25 to 28.50 |
| Nos. 28 to 32, Common to Medium- | 30.50 to 31.50 |
| Nos. 28 to 32, Good to Best - | 32.00 to 35.00 |
| Nos. 35 to 42 | 35.00 to 37.50 |

COTTON PIECE GOODS.

| | PER PIECE. |
|------------------------------------------------|----------------|
| Grey Shirtings—8½, 38½ to 39 inches - | \$1.70 to 2.15 |
| Grey Shirtings—9½, 38½ to 45 inches - | 1.92½ to 2.40 |
| T. Cloth—7½, 24 yards, 32 inches - | 1.42½ to 1.50 |
| Indigo Shirting—12 yards, 44 inches - | 1.35 to 1.70 |
| Prints—Assorted, 24 yards, 30 inches - | 1.10 to 2.40 |
| Cotton—Italians and Sateens Black, 32 inches - | 0.07 to 0.09 |
| Turkey Reds—2 to 2½, 24 yards, 30 inches - | 1.15 to 1.35 |
| Turkey Reds—2½ to 2½, 24 yards, 30 inches - | 1.35 to 1.55 |
| Turkey Reds—3½, 24 yards, 30 inches - | 1.70 to 1.82½ |
| Velvets—Black, 35 yards, 22 inches - | 5.00 to 6.75 |
| Victoria Lawns, 12 yards, 42½ inches - | 0.65 to 0.75 |
| Taffetas, 12 yards, 43 inches - | 1.75 to 2.05 |

WOOLLENS.

| | PER PICUL. |
|----------------------------------------------------|----------------|
| Plain Orleans, 40-42 yards, 32 inches - | \$3.80 to 5.25 |
| Figured Orleans, 30-31 yards, 31 inches - | 3.15 to 4.00 |
| Italian Cloth, 30 yards, 32 inches - | 0.18 to 0.23 |
| Mousseline de Laine—Crape, 24 yards, 31 inches - | 0.15½ to 0.16½ |
| Mousseline de Laine—Itajime, 24 yards, 31 inches - | 0.18½ to 0.26 |
| Mousseline de Laine—Yuzen, 24 yards, 31 inches - | 0.30 to 0.37½ |
| Cloths—Pilots, 54 @ 56 inches - | 0.30 to 0.40 |
| Cloths—Presidents, 54 @ 56 inches - | 0.40 to 0.50 |
| Cloths—Union, 54 @ 56 inches - | 0.30 to 0.55 |

IRON.

| | PER PICUL. |
|---------------------------------|----------------|
| Flat Bars, ½ inch - | \$2.50 to 2.90 |
| Flat Bars, ¾ inch - | 2.80 to 3.00 |
| Round and square up to ½ inch - | 2.80 to 3.00 |
| Nailrod, assorted - | 2.35 to 2.60 |
| Nailrod, small size - | 2.85 to 3.15 |

KEROSENE.

The Market is unchanged, dealers endeavouring to establish lower prices, and holders are doubtful in their firmness. Sales have amounted to 12,000 cases only, and deliveries to 18,500 cases. We quote:—

| | PER CASE. |
|----------|----------------|
| Devos - | \$1.68 to 1.70 |
| Comet - | 1.65 to 1.66 |
| Stella - | 1.53 to 1.55 |

SUGAR.

The small Stock on hand is held firmly for the prices tabulated below, but, as buyers want easier terms, they are holding off, and transactions consequently have only been on a small scale for immediate requirements.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$3.40 to 8.50 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.60 to 4.65 |

EXPORTS.

SILK.

During the week business has continued on much the same scale as last advised. Settlements reaching 800 piculs for the period under review. Quotations for some kinds are again reduced, although the sharp rise in Sterling exchange (which at one time partially stopped buying) makes the lay down cost more than equal to that by last mail. Export to date is now 13,217 bales, against 11,024 bales at 4th November, last year, and the outgoing English and American mails will take a good quantity.

Hanks.—Some largest parcels of Shiushu have found buyers at from \$495 to \$465 according to quality. We note Shimonita (best) \$510, Tomiyoka \$500, Chichibu \$465, and Hachioji \$425.

Filatures.—Considerable business in these on basis of quotations, Medium kinds being most in demand, Shin-shu fetching \$600 for sorts like Tokosha tailing off to \$550 for No. 3.

Re-reels.—These are in much the same position as Filatures. Good Medium have been done at \$570, and some Yechigo from \$540 to \$515 according to grade.

Kakedas.—Not so much done in these. Best and Extra are not available at the moment, but some business has transpired in Medium to Good at a trifle under late rates.

Oshu and Taysaam Kinds freely taken, at closing a parcel of Nagahama marked at \$350.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$500 to 510 |
| Hanks—No. 2 (Shinshu) - | 485 to 490 |
| Hanks—No. 2 (Maibash) - | 480 to 485 |
| Hanks—No. 2½ (Shinshu) - | 470 to 475 |
| Hanks—No. 2½ (Maibash) - | 460 to 465 |
| Hanks—No. 3 - | 435 to 445 |
| Hanks—No. 3½ - | 420 to 430 |
| Filatures—Extra - | 620 to 630 |
| Filatures—No. 1, 10/13 deniers - | 600 to 610 |
| Filatures—No. 1, 14/16 deniers - | 600 to 605 |
| Filatures—No. 1½, 14/17 deniers - | 570 to 590 |
| Filatures—No. 2, 10/15 deniers - | 580 to 590 |
| Filatures—No. 2, 14/18 deniers - | 565 to 575 |
| Filatures—No. 3, 14/20 deniers - | 550 to 560 |
| Re-reels—No. 1, 14/16 deniers - | 550 to 560 |
| Re-reels—No. 1½, 14/17 deniers - | 570 to 580 |
| Re-reels—No. 2, 14/18 deniers - | 560 to 570 |
| Re-reels—No. 3, 14/20 deniers - | 530 to 540 |
| Kakedas—Extra - | 610 nom'l |
| Kakedas—No. 1 - | 575 to 585 |
| Kakedas—No. 2 - | 535 to 545 |
| Oshu Sendai—No. 2½ - | 500 to 510 |
| Hamatsuki—No. 1, 2 - | 490 to 500 |
| Hamatsuki—No. 3, 4 - | 440 to 460 |
| Sodai—No. 2½ - | 440 to 450 |

TEA.

During the six days of the interval, there was no material change to note in the position of our Market; a quiet tone prevailed and a tendency to easier rates; but on the 1st inst. a large business amounting to 990 piculs was transacted (principally by one firm). The Market at the close has a strong upward tendency for Tea grading above Medium. The aggregate Settlements since last Report are 1,675 piculs. Supplies from the country continue meagre. Tea in Stock in Yokohama is estimated about 4,000 piculs. The British steamer *Selembrina*, which sailed on the 25th ultimo, took 404,244 lbs. Tea from this port, viz:—388,919 lbs. for New York, and 15,325 lbs. for Canada. The British steamers *Cairnsmuir* and *Venice* (both to arrive) are advertised for New York, via ports, but the rates of freight is at present unknown.

QUOTATIONS.

| | |
|---------------|--------------|
| Common - | \$10 & under |
| Good Common - | 11 to 12 |
| Medium - | 14 to 16 |
| Good Medium - | 17 to 19 |
| Fine - | 22 to 26 |
| Finest - | 23 & up'ds |

EXCHANGE.

There has been only a limited business transacted during the week owing to the continued scarceness of Money, and also to the fact that holders of Private Bills are not disposed to settle their Exchange at the present high rates now ruling. There appears to be little or no demand for Bank Paper, and quotations at the close are firm.

| | |
|-------------------------------------------|-------------|
| Sterling—Bank Bills on demand - | 3/0 |

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 10TH, 1883.

BIRTH.

At 103, Bluff, on the 9th November, the wife of P. S. SMYER, of a daughter (stillborn).

DEATH.

On the 7th instant, on board the P. & O. S.S. *Khiva*, in the Inland Sea, LILLIAN MARJORIE, daughter of Charles H. Dallas, aged one year and nine months.

WEEKLY NOTES.

JAPANESE journalists have recently bestowed a great deal of thought on the development of certain social conditions which some of them are disposed to regard as indications of an anti-progressive tendency. The *Jiji Shimpō*, if we remember rightly, was the first to discuss this subject, and the theme having been thus suggested, was taken up readily on all sides. Unfortunately the pen which opened the debate, that of Mr. Fukuzawa, the celebrated scholar and author, was momentarily arrested, but its latest contribution was sufficiently unequivocal to attract a great deal of attention. Mr. Fukuzawa thinks that Japan has dropped out of the sympathetic notice of the Western World, partly because the direct benefits to be derived by patronizing her are either exhausted or within measurable distance of exhaustion, and

partly because the Japanese, by turning their attention to old fashions and observances, are showing themselves unworthy of the interest they formerly excited. The evidences he adduces of this retrogressive tendency are numerous. Utensils appertaining to the *Cha-no-yu* ceremonials, paintings of the old masters, ancient musical instruments, and such like, are eagerly sought after: fencing, as it was practised in the days of Araki and Minamoto, is again all the rage, and swords by the great makers command fabulous prices: Confucianism is once more asserting its ascendancy, and books until recently obsolete are restored to their old places on the reading desk: finally, a certain class of the people are so much startled by the violent radicalism of reckless students that in their efforts to check their impetuosity they run into the other extreme. It must be confessed that this list of causes does not betray great perspicuity on the part of its compiler. Mr. Fukuzawa's estimate of the attention bestowed on his country by Occidentals is a little exaggerated. Probably not one of the important facts he cites has yet been noticed even in Yokohama, still less beyond the limits of Japan. It would be well, indeed, for this people if their affairs were so keenly watched that every change in the furniture of their alcoves or the complexion of their recreations provoked discussion in Europe and America. Such accurate observation could not long co-exist with the shortsighted policy which is rapidly converting Western justice and liberality into terms of derision. But the reality is far different. Among all the foreigners residing in Japan there are probably not half-a-dozen who know that a taste for the art productions of former times is reviving throughout the country, or that the philosophy of Confucius is beginning to reclaim some of its disciples. And if the foreigners under whose very ken these things are taking place fail to observe them, what shall be said of foreigners in Europe and America, the majority of whom have not yet learned to distinguish accurately between China and Japan? Mr. Fukuzawa and his fellow-thinkers may rest assured that trifles such as he has enumerated exercise, in general, no perceptible influence on the reputation of a nation, while in Japan's particular case, the world has not begun to think about them at all. From another point of view, too, the apprehensions of these progressionists are shown to be baseless. What thoughtful men found most deserving of criticism in Japan's recent history was the apparent recklessness of her taste for

innovations. She threw away the good as lightly as the bad; plucked up the wheat and the tares together, and in her imitative mania, turned her back upon those very phases of her own civilization which had elicited enthusiastic admiration in the Occident. This precipitancy argued a lack of discretion, which, in its turn, inspired not unreasonable doubts of the nation's steadfastness of purpose—suggested a misgiving that the new civilization might one day be laid aside as readily as the old. So far, then, from endorsing the progressionists' complaint, what foreigners see in Japan's present mood is a revival of instincts whose activity every true Japanese ought to desire. A people without any monuments worthy of preservation scarcely deserves to be itself preserved. Fortunately that is not Japan's case. Her past has bequeathed to her heir-looms admirable enough to afford a new inspiration to the world of art. She need not be at all ashamed though affection for these treasures becomes an active factor of her national character.

The discussion of these social changes has called into the field a somewhat bizarre logician. His essay will be found among our translations from the vernacular journals. Its apparent purpose is to show that confusion and shiftiness are the invariable characteristics of all systems, whether devised by man or by nature; and being itself constructed so as to furnish a notable illustration of these qualities, his thesis must be pronounced a literary work of art. Whether the writer is a very subtle satirist or a very matter-of-fact person, we are unable to determine. His method of dealing with the pro-Chinese party warrants either interpretation. He takes the system of Chinese divination—that curious arrangement of dots and lines which nobody pretends to understand—and shows that the only thing it predicts with certainty is change. Nothing is permanent on this side of heaven. Therefore the Chinese party are desired to remember that even if they do succeed, their triumph will be short-lived. We could accept this argument with greater comfort if its application were shown to be limited. But in the hands of the Japanese essayist it acts like a boomerang. For he applies it to everything, from the shapes which the clouds assume under the impulse of the winds to the transformations recorded in the social and political histories of nations. Everything that the sun surveys is mutable and ephemeral. Under these circumstances it is difficult to perceive how the systems

of Western civilization which this writer defends are exempted from the application of the universal law he enunciates. Perhaps the pro-Chinese party will be too polite to employ the evident *tu-quoque* retort.

THE action taken by the Municipal Council in Shanghai sometimes conveys a startling impression to outsiders. On the 22nd of last month H.E. T'so T'sung-tang, Grand Secretary of State, Senior Guardian of the Heir Apparent, Marquis of the Second Degree, Governor General of the Liang!Kiang, and Imperial Commissioner of Trade for the Southern Ports, passed through the foreign Settlement escorted by a body of soldiers. These braves appear to have conducted themselves somewhat arrogantly. They "obstructed the police in the execution of their duty; almost completely stopped the traffic in the streets through which they passed; roughly pushed people out of their way, and forced carriages on to the side walks." The next day, the Chairman of the Municipal Council addressed the Senior Consul on the subject, requesting him "to represent to the proper native authorities the grave inconveniences which may arise from bringing into the foreign Settlement such an unnecessarily large number of armed men, and ask them to take steps in order to prevent this again being done." This despatch probably gave its author very little trouble to write, but it might have perplexed him had he reflected seriously on the import of his request. What he asks is simply this—that a Chinese official of any rank, no matter how high, shall dispense with the forms and ceremonies prescribed for that rank whenever he desires to pass through a portion of Chinese territory where foreigners have the privilege of residing. Chinese soldiers, and indeed Japanese also, have peculiar notions about the rule of the road. When they pass through the streets, their formation seems specially designed to impede traffic. But then China is China. To ask a Mandarin to move without an escort simply because his road happens to take him into a part of his country where there is a foreign Settlement, has the sound of a slightly cool request. To the query "why do you pass the places where we live with a number of armed soldiers?" the Mandarin might not inaptly reply, "why do you live in places where I pass with a number of armed soldiers?"

THE Autumn Races have been the event of the week in more senses than one. They are always a pleasant event on account of the excuse they furnish to holiday seekers, but on the whole the interest they excite is not in the ascendant. In a small community like Yokohama, where competition on the turf is necessarily limited, it is possible to elevate horse-racing to the rank of a sober business offering quite as few risks as any other commercial pursuit with, at least, a corresponding number of favorable chances. Of course there is no valid reason why anybody who fancies such an occupation should not pursue it with whatever capital and energy he can com-

mand. Still, if he succeeds, as he is tolerably certain to succeed, the result is apt to have a damping effect upon the spirits of his competitors. Something of this kind has to be recorded of our Settlement in recent years, and it must be confessed that the sportsmen who found themselves outside the ring bore their extrusion with considerable equanimity. Racing, they probably argued, like everything else in Yokohama, can easily be over-done. As inelastic as the commerce from which we all toil to nibble off a pittance, it refuses to expand with the pressure put upon it. There is comfortable standing room for one magnate, or, perhaps, two, but beyond that number everybody must be prepared to pay a high price for his footing. This autumn, however, a new element has been introduced. Of the nine races run on the first day, four were for Japanese, four for Chinese, and one for half-bred, ponies. The Chinese events were contested entirely by horses belonging to foreigners, while of the ponies that competed for the five Japanese events all were Japanese-owned with one exception—"Buckeye," who ran second for the War Department Cup. The record of the second day's racing was exactly the same, the total result being that not one of the ten races for Japanese ponies was won by a foreign stable. The explanation of this is easy enough. Since the central cavalry depot was established in Tokiyo, all the best horses in the country find their way to the Remount Bureau. Foreign buyers are out of the running altogether. Something must be said, too, for the keenness of Japanese racing men. They seem to appreciate the sport thoroughly, and such of them as take part in it are for the most part independent of circumstances which cannot but weaken foreign competition. One can easily foresee what will be the end of this. If foreign owners are to be virtually excluded from all the races for Japanese ponies—i.e. from more than half the whole number of events—their active share in the sport will soon cease altogether, and the next step will be the transformation of the course at Nigishi into a sheep pasture.

Kinsatsu have reclaimed to the position they occupied before the rebellion of 1877. During the days of their degradation they were made the basis of a host of theories most of which could never have lived in the higher latitudes of intelligence. A mathematician, whose contributions to the science of education have no parallel in England, devoted seemingly disproportionate spaces in some of his manuals to the discussion of standards and units. Experience had taught him that these problems and their corollaries, not the equality of the angles at the base of an isosceles triangle, are the true *pons asinorum* of the youthful scientist; and in the days when, as a public examiner, it was his business to devise tests of intelligence, candidates used to whisper to one another that foremost among the "crucials" on his paper there would surely be a question involving the re-statement of sundry formulæ or equations in

terms of some unheard-of unit. If the spirit of this great man could have visited our Settlement in the times when the currency was in such sorry plight that everybody with a Bonnamy Price and a thesaurus was emboldened to throw theses at it, he would assuredly have lifted his hands to heaven in despairing horror of the ignorance he had toiled so hard and so fruitlessly to enlighten. "Young men," he would have exclaimed to some of the essayists, deriving the adjective from the greenness of their knowledge rather than the greyiness of their hair, "Young men, consult my manuals, and when you have acquired a rudimentary familiarity with the properties of a standard, you will be in a position partially to appreciate the revolting bewilderment betrayed in your propositions about rice and other commodities of variable value." Let us congratulate ourselves, however, that we are no longer subjected to these moral shocks. *Kinsatsu* have baffled even the most daring sciolist. They have soared to regions out of range of the longest bow in this community—though there are some pretty long ones—and any shots now taken at them have a hopeless, furtive sort of sound. Never was there such a miracle of market-rigging. Mr. Okuma spent nearly all the hard money in the Treasury trying to give these paper tokens a fillip, but if he succeeded in raising them two or three per cent. one day, they made haste to descend four or five the next, until the final result resembled the fate of the bedevilled individual in the parable. The present Minister of Finance has done, say the bewildered essayists, exactly what Mr. Okuma did, with one exception: he, too, has rigged the market but without using any hard money in the operation. It is a feat of necromancy. The specie value of the paper money circulating in Japan has been raised from 100, to 150, millions in about a year and a half, solely by means of occult operations which the bewildered essayists themselves have never attempted to describe except in terms of mysteriously general abuse. How have Mr. Matsukata and his colleagues accomplished it? If half what their revilers say of them be true, they are nothing short of financial alchemists. Miracles, however, lose their miraculous character in some eyes. There are people in this Settlement who attribute the appreciation of *Kinsatsu* to simpler causes, and who, seeing those causes at work a year ago, predicted that the natural consequences would ensue. They were greatly laughed at, these sanguine persons, and still keener ridicule was lavished on the notion that the Government were really taking steps to reduce the bulk of the currency or the Finance Minister honestly abstaining from transactions in the money market. Nevertheless these and other measures have certainly been in progress, and if the appreciation of the paper money is a mere coincidence, one is curious to know why it has appreciated. It will be easier to find a satisfactory explanation of these things when we agree to admit that Japan is subject to the common economical principles which obtain all over the world.

NOTES.

Nobody will have been much surprised by the telegram which we published on the 2nd inst. to the effect that the tone of the French journals exhibits great and increasing bitterness against China. As a general rule the opinions ventilated by any particular French newspaper do not exercise extensive influence. The conditions of journalistic existence in Paris render the daily sheets exponents, not of public, but of party, sentiment, and, moreover, of party sentiment comprised within very narrow limits. For this very reason, however, any consensus of journalistic opinion in France assumes special significance, and we are persuaded that Chinese diplomats will not underrate the importance of the feeling their demands are now said to have evoked. It is not difficult to follow, at least in outline, the course of recent events at the scene of negotiations. One of the most perplexing elements has been the unexpected firmness of China's attitude throughout. Repeated experiences have taught men to believe that the Government of Peking chooses any alternative save that of war, and with France as a prospective enemy these pacific tendencies might have been expected to attain their maximum development. But it is an established metaphysical fact that the man who does not mean to fight becomes aggressive and even truculent in proportion as he is persuaded that his own reluctance is exceeded by that of his *vis-à-vis*, and into this mood China appears to have drifted gradually. Not that she could ever have suspected France of any uneasiness about the issue of a struggle with her ill-disciplined and half-armed forces, but that she accredited the Ferry Cabinet with designs which were not shared, and could never be endorsed, by the French people. There were reasons, apparently valid, for this idea. Half the Western, and all the Eastern, world believes that France's position in Europe forbids her to assume any serious responsibilities abroad. She may send two or three thousand men to fight against a nerveless State like Annam; she may vote a credit of a million dollars to secure the occupation of a fertile territory like the delta of the Red River, and she may even allow her Cochinchinese undertaking to develop unanticipated dimensions; but to engage deliberately in a struggle with the Middle Kingdom, and to face all the embarrassments and complications such a struggle would involve, is an issue she may be expected to avoid by every possible expedient. This is the faith which has inspired China's unusual firmness, and we may conjecture that it was considerably strengthened by the apparent reluctance of M. Ferry to convoke a special session of the Chamber, though perpetually urged to take that step, rather than leave a handful of troops in Tonquin without efficient support. The Marquis Tseng believed, in short, that by prolonging the negotiations until the Chamber met on the 24th of October, he could count on a vote which would place the negotiations on a basis favourable to his country's claims. To a certain extent he was

probably right in his conjecture, but it seems that he has over-estimated the situation. When the Chambers were opened the Yellow Book told them that China required France to abandon or largely modify her treaties with Annam, and to withdraw her troops from the whole of Tonquin north of the Red River. An exceedingly careless report forwarded by Reuter ascribes a still more arrogant character to China's demands, but even the above interpretation embodies pretensions which must have been exceedingly unpalatable to France. Whatever China's rights may be, her spasmodic method of asserting them is not calculated to conciliate public opinion. She might have counted on the good sense and forbearance of the French nation so long as her demands left room for the exercise of these qualities, but it cannot be supposed that France is in a particularly happy humour just at present, and the Peking Government has over-taxed her patience. The friends of peace will find it difficult to control a situation complicated by Chinese unreasonableness as well as by Parisian jingoism.

Meanwhile the recently reported retreat of the Black Flags from Sontai seems to have been a *canard*. They appear to be stronger than ever, especially at Sontai and Bac-ninh, which latter place was recently reconnoitred and found strongly fortified, with a numerous garrison and Krupp guns in position. If the Chinese allies of the Black Flags were formerly in the pay of Annam, whence do they draw their stipends at present?

We note the arrival, by the last American mail, of His Excellency Count Charles Zaluski, His Imperial Austrian Majesty's Envoy Extraordinary and Minister Plenipotentiary to Japan. The Count is accompanied Mr. H. Von Siebold, whose appointment to the post of Secretary of Legation was Gazetted some months ago.

SATURDAY the 3rd instant, being the anniversary of His Majesty the Mikado's birthday, was celebrated in the Capital with all the usual pomp. In the morning the troops in garrison, to the number of about seven thousand, paraded at Hibiya for Imperial inspection. The march-past, which was performed in excellent style, was witnessed by the Emperor and a numerous Staff, as well as by the Foreign Representatives and other visitors. Those who have had an opportunity of observing the Japanese troops at reviews of this nature during the past seven or eight years, were unanimously of opinion that the manoeuvres on Saturday bore renewed testimony to the constantly increasing proficiency of the men. The appearance of the cavalry was specially noteworthy. They handled their horses in a way that left nothing to be desired, and exhibited the bearing of smart, well disciplined soldiers. After the review the Foreign Representatives proceeded to the Palace, where a *déjeuner* was served entirely in Japanese fashion. In the evening His Excellency the Minister for Foreign Affairs held a reception, which was attended by more

than a thousand guests, Japanese and Foreign. His Excellency's official residence was beautifully decorated for the occasion, and the illuminations and fireworks showed, if possible, more richness and originality than on previous celebrations.

THE correspondent of the *Egyptian Gazette* gives an account as follows of a visit paid by him to the Bedlam in Cairo. He says that, after visiting the Cholera Hospital, he went, in the short time at his disposal, to the Lunatic Asylum, situated in the desert to the right of the Abbassiah road towards the last slopes of the heights of Mokattam. The Doctor in charge was absent, celebrating the feast of Bairam in town; but his representative was there—a big fellow fifty years of age, white-bearded, yellow-robed, girt with a red sash, and wearing enormous white pantaloons and a tarboosh. This person led the visitor and his companions along a gloomy vestibule into the courtyard of the Asylum, where some madmen were walking "without any apparent object." By order of the gentleman in the yellow robe all these promenaders were driven to their quarters. The first incident was provided by a youngster, fourteen years of age, who asked for "backshish," as most Egyptians do. There was some method in this lad's madness. At last the correspondent arrived at a corridor which was only lighted by little windows level with the ceiling, and all barred with iron. Along this corridor, at the bottom of the wall at the left, were the madmen sitting on their haunches, and forming a row which appeared interminable. They seemed to be a lot of miserable, quiet, and inoffensive creatures. They were literally clothed with sackcloth. All that was wanting to complete their resemblance to Job at his worst was the ashes and the sores. Their only garment consisted of a sack, in place of a shirt, which came to their knees, with a hole for the head, and sleeves reaching to the elbows. They wore not the least bit of linen.

To the right were the dormitories: immense dark chambers into which the only entrance was through low doors, and ventilated only by means of little windows close to the ceiling and looking upon the arcade surrounding the courtyard. The rooms were floored with stone: were full of holes and rifts, and the plaster of the walls was falling in big pieces. It was evident that no repairs had been effected for years, that even the mean expense of whitewash had been dispensed with. The beds were similar to those employed in the native hospitals and barracks—iron frames and wooden bottoms. Bedding and bed-clothes were inconceivably dirty and covered with vermin. Each room was crowded with beds only a foot apart. The stench in rooms and corridors was unbearable; and the most elementary notions of propriety were disregarded. It is impossible to translate the narrator's description of the filthiness that he saw, and that witnesses with him can vouch for. Among them was a gallant cavalry officer, hero of several campaigns; and even he was unable

to restrain the revulsion of his stomach. Some of the lunatics were reposing on their filthy beds or standing beside them and indulging in the attitudes generally affected by madmen. Here and there was a lunatic chained hand and foot groping along the corridor: further on was an old man of quiet and respectable appearance, who saluted the visitors with his hands crossed over his breast. At many points were observed doors strongly barred and bolted which the servants refused to open on the pretext either that no-one was inside the cell or that the key was missing. On one occasion the visitors were allowed to look through a little opening about four inches square into what was really nothing but a black hole, where for some time they could distinguish nothing, although they heard the wail, often lapsing into sobs, of the unhappy inmate, who when at last seen in the darkness, was observed to be more like an empty sack than a human being.

One room is described, "as the Chamber of Horrors." It is that where intractable patients are "mastered and treated." It is a big spacious and well-lighted room. The walls, however, are perforated with holes about two feet high with bars of iron at each end to which violent madmen are bound by the extremities.

A certain implement of torture or restraint, and the condition of a patient who was put in it, are vividly portrayed. The operation is not so horrible as that of keel-hauling as described in a London paper during the Egyptian war, but its torture must be more enduring. Even the kitchen appears to be so arranged as to afford no comfort to the unhappy objects, who thence derive the food that keeps their miserable souls and bodies together. It was both dirty and dark. Half-a-dozen idiots, growling between their teeth, were helping a muscular Arab cook. The madmen's dinner was getting ready; and as this was the first day of the Bairam, they had, presumably, better food than usual. On the ground were four big dishes, each about a foot and a half in diameter: two contained rice: the other two, mutton broth. Near them, squatting on the ground, was an idiot slicing vegetables into a bowl. At the end of the room, upon a stone, was a heap of scraps, not very inviting, of the mutton which had served to make the broth. The visitors did not explore the rooms on the upper story, which they were told were not occupied in the daytime on account of the heat. Some of the patients, however, slept there by night.

The women's quarter was even dirtier than the men's. The poor madwomen were crowded together, and the filth beggars description. This division has no upper story and comprises only five rooms on the ground floor, opening upon a very small yard. The stink which rose from the bedding, and from the unwashed, and even unswept, floor was insupportable. Many of the women were hysteric and two were in a complete state of nudity. In the last room but one, a

dark hole to which light and air were admitted only through the door,—a dungeon, for that is the sole word whereby to describe it—without a single piece of furniture, two unhappy women were stretched upon the ground on planks. The hands of one were perfectly cold; and presented every symptom of those of a person seized by a violent access of cholera. And at this moment the doctor was celebrating the Bairam in town! The other woman lay at the head of the room, but as the writer's military companion could not bear the effluvia of the den, the visitors did not examine her. The people who accompanied them did all they could to prevent them from entering that room.

The gentleman who was kind enough to induce them to visit this infamous establishment informed them that the Abbassieh Asylum contains about three hundred lunatics, including eighty women and one or two children; and that there is no classification whatsoever except that between men and women. Raging madmen and those who are only slightly affected live together higgledy-piggledy. The only remedy that is deemed efficacious in the case of violent madness is the cold douche.

The visitors asked their guide several times if any cases of cholera had occurred, and were invariably answered in the negative; but while crossing the court-yard they perceived the well-known funeral box borne by two men—truly a suspicious circumstance.

On Monday, the 6th of August, the day after the chronicler's visit to the mad-house, the Board of Health deemed it well to publish in its daily bulletin that, between the 30th of July and the 3rd of August, thirty-two deaths from cholera had occurred in the establishment.

AFTER a truce of several weeks with the official world, the *Maru Maru Shimbun* has in a recent issue returned to the assault upon what it deems abuses. We are shown a horse-fair, and stables over which is inscribed *Roba-in*, or "Hospital for Agged Horses," an allusion evidently to the *Genro-in* or Senate. Far in the distance are the towers of Fukushima and Saitama. Close to the stable a groom with pliant features wreathed in smiles holds a tranquil steed, while at a short distance a fractious horse is with difficulty held in by his attendants. The following dialogue takes place among the crowd:—"This is the animal that could not be induced to work on the roads in Fukushima!" "That is so, and now he is assigned to the Old-horse Hospital." The jest is directed against Mr. Mishima, Prefect of Fukushima, who was a prominent figure in the recent prosecution of the Fukushima rioters, and is now recommended for promotion to the ranks of the *Genro-in* refuge where that superannuated and other officers can be kept out of trouble and danger.

THE Italian *Gazette Ufficiale* of September the 15th contains the following:—"His Majesty

the Emperor of Japan has telegraphed to His Majesty the King to express the emotion he felt at the news of the catastrophe of Ischia and to convey his sympathy for the survivors and the people of Italy in general. The King replied immediately, also by telegraph, thanking the Emperor for having taken part, at so great a distance, in the mourning of Italy, and for having manifested his august benevolence. His Majesty's telegram adds that in Italy, the King, the Government, and the whole country are animated by an equal feeling of sympathy for the Japanese people."

WE read in American newspapers that General Roger A. Pryor, once of the entire Southern half of the United States, and now of New York, has sailed for England to take part in the defence of O'Donnell, charged with the murder of James Carey, the informer. Although regularly retained as counsel, it is not absolutely certain that he will appear in the proceedings, the Crown having the obvious right to object, on the ground that he is not an English barrister. It is thought probable, however, that no protest will be made, and that his services will be added to those of Messrs. Guy and Sullivan, the solicitor and barrister engaged on O'Donnell's behalf. In that event, the trial will be enlivened by the presence of a figure of considerable personal, and some slight historical, interest. General Pryor, "in the days before the war," was the incarnation of Southern sound and fury, and the embodiment of all the hatreds cherished by the defenders of slavery against the people of the North. He came before the public at an early period of life, in the character of proprietor and editor of a Richmond newspaper, which had its beginning and its end before he was twenty years old. It was a remarkable publication, unlike most of its Southern contemporaries in the fact that it was truly brilliant in its incessant blaze of anti-Northern ferocity,—like the endless chain-lightning of the Caribbean Sea. Humour it had none, but an electric vivacity of invective which made it invariably entertaining, if not logically convincing. As soon as Pryor's age would permit—some said sooner—he was sent to the House of Representatives at Washington, and there distinguished himself by various freaks of juvenile indiscretion. One of his first assaults was upon the *New York Herald*, in the course of which he fell into the error of alluding too freely to certain incidents in the career of Mrs. James Gordon Bennett, mother of the present possessor of *Heraldic* honors; and the manner of the elder Bennett's retaliation will never be forgotten. For several successive days, the Congressional columns of the great New York journal contained, in addition to the reports of what actually occurred, some twenty or thirty interspersed paragraphs, of the following character:—

"Roger A. Pryor, the shameless liar and libeller, from Virginia, was silent."
"Roger A. Pryor, the filthy slanderer of woman, from Virginia, said not a word."

For obvious reasons, we submit specimens of only the milder of these eruptions; but the

effect of upwards of a score of such, and worse, scattered over the pages of a newspaper, day after day, may be imagined. An "arrangement" was effected, by which the *Herald* presently ceased to torment the soul of Pryor, while the over zealous orator abstained from further allusion to the *Herald* or its family. The stream of venom thus choked, found a new outlet, however, in onslaughts upon fellow-congressmen, a speedy result of which was the memorable "affair" with Potter, of Wisconsin, which budded as prettily as any quarrel on record, but never reached the blossoming stage. This was one of a succession of similar incidents, the unvarying termination of which produced upon the Northern mind a totally erroneous impression that the Southern heart had very little fire in it, after all, and that bluster and bravado, rather than genuine grit and pluck, were the characteristics of the slave-holding community. The expected duels between Burlingame and Brooks, Grow and Keitt, Potter and Pryor, and others, all came to an ignominious end, and in most instances by the withdrawal of the Southern adversary, at a critical moment. In the last-named dispute, Potter was the challenged party, and, having never handled sword or pistol, elected to fight with bowie-knives, these being weapons equally unfamiliar to both sides. Pryor's friends refused to allow him to proceed, on the pretext that the arms proposed were "ungentlemanly." This was an unfortunate decision for their principal, who, if left to himself, would probably have fought with anything, but who never cleared himself from the suspicion of cowardice until the opportunity was afterward given him on the battle-field. His course through the war was creditable enough, though not distinguished in any way, and he surprised everybody who knew him by breaking off all his old associations as soon as peace was declared, going to the North, and settling in New York as a hard working, studious lawyer. A more complete metamorphosis was never witnessed. All the wild flamboyance of his early years was dropped like a suit of worn-out clothing, and in a remarkably short time he was worthily admitted to the bar of which he is now a prominent and highly respected member. It is somewhat curious that notwithstanding the various disciplinary changes he has gone through, his appearance continues the same as it was when he entered Congress, twenty-five years ago. With his long black hair, swarthy complexion, flashing eye, and mobile features, he is one of the few remaining types of what used to be called the "youthful chivalry" of the South. But he will not court notoriety in that character. To him, the civil war of America is as completely an event of the past as that of England; which latter, by the bye, he might well recall in *tableaux vivants*, by personating Charles the Second, of the youthful portrait of whom he is a living image.

The proposal to open the grave of Shakespeare, reference to which has been made in these columns, will not be carried into effect. It

appears that the suggestion originated with Dr. Ingleby, a life trustee of the birthplace of Shakespeare, and was approved by Mr. Arbuthnot, the vicar of Stratford. But, upon inquiry as to the proper authority by which the exhumation could be ordered, it was found that the consent of the Mayor and officers of the corporation must be obtained. The Mayor, however, has refused to sanction the proceeding, and the poet's remains will continue to rest undisturbed.

THE *China Mail* says that it may be news to some persons, but it is probably true, that few days pass without a lost Chinese child being taken to the Police Station in Hongkong by the constables. Almost as frequently the mother, or some other relation, goes to the Station, dissolved in tears, to report the loss. "The child is produced, enthusiastically recognised, and taken home, to receive a good sound spanking for the trouble it has given." The Hongkong paper adds:—"It would save mothers, children, and police a great deal of trouble if the Chinese would take a lesson from Japan. There each toddling little urchin has a small wooden ticket fastened to its clothing, with the child's name, sex, and age, and the father's name and address upon it. The Japanese name for this label is *maigo fuda* or *lost child ticket*, which sufficiently explains its purpose. Such a system might even prove useful in some European cities."

THE scheme for importing twenty thousand Chinese laborers into Brazil is spoken of by several American newspapers as a new and strange development of enterprise on the part of the South American empire. This, however, is not the case. It is probable, on the contrary, that Brazil was in advance of all other Western countries, in endeavoring to introduce settlers from the overflowing population of the great Asiatic nation. A moment's consideration would suggest the naturalness of such attempt at colonization, in view of the historical associations of China and Portugal,—which latter kingdom once included Brazil among its dominions. When the Court of Portugal was driven to Rio Janeiro by the French, in 1807, the improvement of the royal revenues became a matter of the first necessity, and the advisers of the Regent, afterward Joam VI., proposed to devote a large amount of unoccupied territory to the cultivation of tea, the value of which product was well-known through importations from Macao, that island being a centre of Portuguese operations in the Far East. In 1810, several hundred Chinese were carried to Brazil and set to work upon the new industry. Portuguese writers aver that these emigrants were selected from the tea-growing regions, as being thoroughly qualified for the projected enterprise, and it is recorded that the soil and climate of Southern Brazil were found in every way suitable to the plant; but the undertaking nevertheless languished. Negro slaves were largely employed, and the Chinese gradually turned to more profitable occupations, leaving the tea plantations in unthrifty and incompetent hands. By the middle of

the century, the Mongols had almost entirely disappeared, although tea continued to be produced in quantities sufficient to meet the needs of the locality. In 1850 the Emperor Pedro II. abolished the slave trade, and from that time immigration for agricultural purposes was found requisite. Numerous ship-loads of Chinamen were imported, among others, but great difficulty was experienced in persuading them to work in the interior, particularly after the infamous cruelties practised upon them by their so called employers became generally known. At the present time they are hardly to be seen in Brazil, excepting at the coast ports. The introduction of so large a number as twenty thousand seems rather an extravagant proceeding, supposing that it can be successfully carried out; but there is no doubt that abundant fields of labor would await all of them, if they could be induced to serve where required. The tea industry will probably not be stimulated to any great extent, but other products, especially coffee, can be developed to much advantage. The difficult questions are, first, how to get these heavy agricultural reinforcements into Brazil, and next, how to keep them employed at the only kind of work that can be beneficial to the country.

MR. ERNEST SATOW has given us another proof of his indefatigable industry in the form of a map of Korea, which, having regard to the still rudimentary nature of our acquaintance with the peninsula, appears to be a work of wonderful accuracy. It is not, of course, the outcome of original survey, but is compiled, chiefly, from a chart prepared in 1875 by the Intelligence Bureau (*Sambo-Kiyoku*) of the War Department, Tokyo. On comparing the two maps, however, we observe that Mr. Satow's contains considerably the larger number of places, especially along the coast line—from which fact we conclude that he has availed himself of the information procured by recent naval surveys. The Korean names are spelled after the phonetic system devised by Messrs. Satow, Aston, and Chamberlain. A short explanation of the system is given on the face of the map, accompanied by a reference, for further particulars, to a work by the same authors which is now in the press and will shortly be published under the title "*A Manual of Korean Geographical and other Proper Names Romanized*." The map is on a scale of 26½ miles to an inch and measures 11 inches by 20 inches. It thus combines handiness with typographical distinctness, and is in every respect a most valuable and timely production.

IN a final note to his last six monthly report addressed to the Chinese Imperial Maritime Customs on the Health of Shanghai, Dr. Jamieson draws attention to the opinion of the celebrated German expert Dr. Von Pettenkofer in the *Neueste Nachrichten und Münchener Anzeiger*, 14th-17th July, 1883, on the subject of quarantine, which he is emphatic in denouncing as extravagant and useless, adducing the remarkable instance of Malta in 1865, where, in

spite of the most stringent precautions under the most favourable circumstances, an outbreak of cholera was not prevented. This outbreak and others under more or less similar conditions he attributes to the fructification of germs long before imported, and lying latent perhaps for months. The moral of this is, according to the German scientist, that quarantine regulations are always and inevitably enforced too late. In this article attention is drawn to the facts of individual predisposition and immunity, which are striking phenomena in every epidemic, and which can be only partially explained, if at all, by visible external conditions. Finally, the vast importance of general hygienic measures, and the absolutely essential need of prompt attention to the first warning given by diarrhoea, are most urgently inculcated.

"ONE of the Unlicensed," who in a recent letter to this journal pleaded the cause of the unfortunate birds and beasts which so many civilized beings love to shatter and slaughter, confessed that, in a majority of cases, he did not expect to excite any feeling but ridicule by his remonstrances. His expectation is probably the more likely to be fulfilled in that he acknowledged himself to be without any practical experience of the pleasures he censured. But he is not without allies. Among them is included the celebrated Russian author Tourgueneff, whose last literary effort, published quite recently by the *Revue Politique et Littéraire*, has reference to this very subject. Tourgueneff, when a boy of ten, used to accompany his father on almost daily excursions against partridge and quail. He derived the keenest delight from the sport, knew no chagrin save that caused by the escape of a too wary plover, nor felt the smallest sensation of pity when a wounded bird fell struggling on the grass or into the jaws of his father's dog "Treasure." One summer, on the eve of St. Peter's Day, the father and son set out to enjoy an afternoon's amusement. "Treasure" came to a dead set among some grass at the end of an oak copse, and presently a quail rose from under the dog's very nose. But the bird flew strangely, with a fluttering, uncertain motion, and finally fell as though it were wounded. The dog, contrary to his wont, followed at full speed, and by an extraordinary exercise of nimbleness managed to seize the quail, which it carried to Tourgueneff's father. "What is it?" cried the child, running up breathlessly. "Is the bird wounded?" "No," was the reply, "but doubtless she has her nest near at hand, and flew in that strange way to make the dog follow her so as to entice him away from the neighbourhood of her young ones." But she played the comedy too well, as "Treasure" has demonstrated. "Then she is not wounded?" "No, but she will not live. 'Treasure's' teeth have been too much for her." And in fact the little bird died a few minutes afterwards. This incident had a wonderful effect upon the child. Searching about with the aid of the dog, he found the nest of young quails, and then, by his father's permission, buried their mother beside them. But he never again could

derive any sincere pleasure from shooting. He did not, indeed, immediately give up the sport, but pursued it with little interest for some years until another incident finally rendered it quite intolerable. Shooting one day with a friend, the latter wounded a grouse as she was flying off followed by her brood. She did not fall, however, but struggled on, and Tourgueneff's companion, making signs that they should lie down in the grass, began to imitate the cry of the grouse so skilfully that the voices of the young ones were presently heard replying. In a few minutes the whole brood would have been persuaded to return, when suddenly the sportsmen's attention was attracted by the cry of the hen grouse close at hand. Looking round, they saw the wounded bird, with her breast all bloody, struggling towards them though the grass. "It was evident," says Tourgueneff, "that the mother's heart could no longer resist. She came to sacrifice her own life in the hope of diverting pursuit from her young ones. I felt like a monster of cruelty. Springing to my feet, I clapped my hands loudly, and the cries of the young grouse ceasing immediately, the mother flew away." That was the end of Tourgueneff's shooting experiences.

WE hear from Korea that the mono-metallic plan will shortly become a tale of the past. Korea, the unassuming and apparently impecunious vassal of the Celestial Kingdom, is about to indulge in a paroxysm of silver coinage. This is the more interesting, as there is no Mint either in China or Korea, and so all the coins must be struck off by the tedious process of hand-press. A short time ago—only a few months—over twenty thousand taels' worth of silver coins were minted, but only a small amount of these was put into circulation, as the movement had not received the condign approval of the Korean autocrat, Mr. P. G. von Möllendorff. These coins were made of pure silver—said to have come from the Government mines, but we have our doubts. There were four different sizes, ranging from one to four mace of silver; or from 15 to 60 cents. They were not milled and were very rough, the reverse bearing the inscription *Dai Chosen Koku*, while the obverse was plain, with the exception of a small circle of blue enamel in the centre. This enamel gives the coin a rather pretty appearance, despite its roughness. The process of enamelling cannot have been at all easy on account of the primitive machinery used, especially as we understand that the small circle of enamel was attached *by hand* to the coin while the silver was still unpleasantly warm.

But Mr. P. G. von Möllendorff is not satisfied with the coins, and has recommended the Government to redeem those already in circulation, remelt them, and issue a new coinage containing a ten *per cent.* alloy of copper. Not very much will be circulated after all, as the original issue of \$20,000 will in all probability be adhered to, not unwisely. The redemption

of the silver in circulation may very possibly have given occasion to the sudden great depreciation of copper, as the *Choya Shinbun* notes a fall of 25 per cent. in exchange. A few specimens of the late issue have found their way into the hands of Europeans, and will be a regular treasure-trove to ardent numismatists. Some have already been sent to Europe and America by keen-eyed speculators, who had themselves to pay twice the face-value in order to obtain specimens. We congratulate Korea on this decided step towards civilization, but we should really like to know where those nice silver mines are.

WE regret to hear of the death of the wife of H.E. J. R. Young, U.S. Minister to China. Mrs. Young, who is not unknown in Yokohama, died at the early age of twenty-four, barely eighteen months after her marriage.

OF the Meeting of the British Association, which was held a few weeks ago, *The Times* says, ironically, that it "is the great scientific festival of the year. For the initiated and the elect there are, of course, the inner mysteries of St. Andrew's Day and other less public occasions; but when the British Association meets, the worship of science is conducted *coram populo* according to such rites and ceremonies as are more or less intelligible to the uninitiated world. The President, who is the hierophant of the occasion, is generally a man who possesses the faculty of presenting scientific ideas in a fashion not too abstruse to be popular. Sometimes, perhaps, he is too strictly scientific to be generally popular, and sometimes he is almost too popular to be really scientific; but, on an average, a fair balance is preserved," and so on, ridiculing, as most of the exponents of public opinion at home have done, the fact that an association whose avowed object and *raison d'être* is the advancement of general science should have devoted all the time of its recent reunion to the President's pet theme of pure mathematics. Sardonicly, and in very few words, the *Pall Mall Gazette* condenses the proceedings thus:—"There is a story told of the late Professor Henry Smith that, when explaining some new discovery in the theory of numbers to his Oxford pupils he added the remark, 'and the great beauty of the thing is that it cannot possibly ever be of the slightest practical use to anybody.' Something of the same uncompromising enthusiasm for mathematics for mathematics' sake ran through Professor Cayley's presidential address to the members of the British Association, and lends additional poignancy to the regret for Professor Smith's untimely death, with which both the Secretary and the President prefaced their remarks. It seems clear from the announcements which Professor Bonney made for next year that the visit of the British Association to Canada will be rather like a gigantic picnic; and it was perhaps all the more desirable, therefore, that the proceedings this year should have been dedicated, so far as the President's address at least was concerned, to the interests of pure

science. But although Professor Cayley deliberately forbore to speak of the utility of mathematics in common life or physical science, he gave, on the other hand, a very interesting historical survey to show how practical or physical questions have always connected themselves with the development of mathematical theory."

HUMAN lives, like everything else under the sun, the atmosphere excepted, are capable of appraisal. There might be a difficulty in expressing the exact value of any given life in any given unit, but when a comparative statement alone is required, the problem becomes much simpler. The *Saturday Review* appeals to the commonest orders of intelligence when it says, "we must bear in mind the difference in value between the life of a burglar and that of an efficient constable. If a housebreaker is shot, it is a good riddance; but if a capable policeman loses his life, society also loses something of no small value." The question which elicited these fragments of common-sense, was the propriety of arming the London police, or some of them at any rate, with a more efficient weapon than a club. London burglars have recently developed a new means of eluding pursuit. They shoot their pursuers. The latter have clubs, to be sure, but experience goes to show that a difference exists in the effective ranges of clubs and revolvers. An expert housebreaker, provided with a revolver, can generally make himself felt by a club-bearing official before the latter brings his weapon fairly into action. Clubs, too, are not successful as means of warding off pistol bullets, and, altogether, the combination of disadvantages they present, appears to be receiving unusual demonstration at the hands of English housebreakers. Under these circumstances the advisability of enabling a policeman to arrest a ruffian without absolutely placing his life at the latter's mercy was discussed at a meeting of the twenty divisional superintendents of the London Metropolitan Police on September the 12th. But only six of the Superintendents were distinctly in favour of arming the constables with revolvers. The rest desired to avoid the experiment "if possible." They thought it better to wait and see whether these murderous propensities of burglars were likely to be further developed. "It might be dangerous to put revolvers in the hands of men who might rashly use them." Whether the burglars will furnish the developments without which these fourteen gentlemen decline to be convinced, is an open question. If they do—if a few more constables are maimed or murdered—then, no doubt, the survivors will be supplied with revolvers, and expected to exercise the utmost moderation in using them, since it will have been unequivocally demonstrated that by their use only can the blood-thirsty propensities of malefactors be checked. The shooting of constables by burglars being sometimes an unavoidable necessity from the latter's point of view, it is of course much better to run the risk of that occurrence than to expose burglars to the

danger of being unnecessarily shot by constables. English policemen cannot always be depended on to refrain from using their revolvers until the inevitable alternative is death, but English housebreakers can always be depended on not to shoot policemen until the probable alternative is capture. These are not exactly the views entertained by Americans and Frenchmen. They give their constables revolvers and, strange to say, the result is that neither burglars nor constables get shot. Japan has adopted a similar course, substituting swords for revolvers, but in her case the proceeding is quite wrong, since it is not English.

• • •

Constable Banman of New York is an officer who might be advantageously engaged to give his English *confrères* lessons in the use of the club. He employs it to promote sociability. On the 27th of August Mr. O'Neil, a citizen of that metropolis, had just collected two bills from his customers when Banman came along and required him to "stand something." O'Neil preferred to postpone the hospitality, whereupon Banman recommended him to get away for a "sucker" and without delay clubbed him in the neck. O'Neil became curious to know the reason of this assault, and, preferring an enquiry, received a blow on the forehead and another under the ear, so that when he presented himself at the station three weeks later to lodge a complaint, his head was embellished by some "ugly red scars." Another constable, called Jennings, had been practising a few days previously on the person of a youth of eighteen. Chrystie—that was the latter's name—was standing near an Italian fruit-stand eating a slice of water melon, when Jennings, happening to come within sight of this vulgar proceeding, clubbed its perpetrator into the gutter. The lad's arm was broken in two places, but Jennings picked him up and wiped the mud from his clothes, thereby showing that the strongest sense of duty is not inconsistent with the exercise of gentler sentiments. If eating water melons in the streets and refusing to stand cock-tails to constables are clubbable offences, it is surely a little thin-skinned to hesitate about shooting burglars and pick-pockets.

SOME of the London journals are beginning to reflect on the quaint problems offered by the present conditions of foreign residence in the East. The *Spectator* says:—

The continued vitality of international jealousies is in nothing better illustrated than in the difficulty of appointing Stipendiaries in Eastern cities whom all Europeans will trust. The white settlers will not submit, often with good reason, to native Judges, but they will not support the supersession of the conflicting Consular jurisdiction by trustworthy Magistrates, who could make justice regular and uniform. Either they declare for mixed Tribunals, which are exceedingly cumbersome, or for the Consuls, each of whom has a different idea of justice. Even at Shanghai, where the Europeans are coerced into unity by a common danger, and do elect a cosmopolitan municipality, the police are obliged to take the villains they catch—and there are no villains like bad foreigners in China—before a dozen different and conflicting authorities. With the slightest willingness to agree, the Powers could appoint Stipendiaries who could be trusted to do indifferent justice, and reduce the legal chaos into the simplest

order. Either the Indian Code or the Code Napoléon would do for law, and the Stipendiary might always be a Dutchman or a Dane. The nationalities, however, as yet will not trust one another.

The *Spectator* might find in Japan even a better illustration of the "continued vitality of international jealousies." Here there is a Code which is not the Indian Code or the Code Napoléon, but is better than either; while to administer it, the Government proposes to appoint European and American Judges—not stipendiary Magistrates, but skilled Judges. But the Treaty Powers, or rather their Representatives, prefer an agglomeration of sixteen conflicting tribunals, many of them presided over by Consuls who are no more competent by training to administer law than to conduct a military campaign. And what is the reason of this bizarre preference? Simply that Englishmen will not trust French Judges, and Frenchmen will not trust English Judges, while Germans will trust neither, and so on throughout the whole list. One of the pleasant results of civilization is that it inspires every national with a wholesome doubt of every other national's integrity. Japan ought to benefit largely by being made the common battle-field of these doubts.

WE understand that His Excellency Inouye, Minister for Foreign Affairs, has graciously placed a train at the disposal of Tokijo residents who visit Yokohama to witness the performance of "The Ladies' Battle" at the Gaiety Theatre on Monday evening next, given in aid of the sufferers by the earthquake at Ischia.

WE learn that Mr. Plunkett proposes to leave England for Japan in January. He will come *via* America, and as it is his intention to spend some time in the United States, his arrival in Japan cannot be looked for before the end of March.

THE semi-official papers in Austria are silent on the meaning of Mr. Gladstone's journey, but the independent organs are less reserved. The *Neue Freie Presse*, for instance, talks of the trip as a demonstration of unquestionable political significance—an interesting addition to the political pilgrimages of recent years, the more interesting, in fact, as it is not a reigning Sovereign, but a simple Statesman, who has gone to interview the Czar. A Swedish politician of high position asserted to the writer that King Oscar, who has just met the Czar and the other Kings and Princes now guests of the Court of Denmark, entered into no political discussion with them at all, knowing the great dislike of his subjects to be mixed up in any questions of European politics. At the same time Sweden is completing her new army organisation and system of defence, in order to be able to remain perfectly neutral in the European quarrels of the future. On the other hand, an ominous threat has appeared in the official *Petersburger Zeitung* to the effect that the Congress of Princes and Statesmen assembled round King Christian, and representing hundreds of millions of people, may sooner

or later revenge Denmark on Germany. Finally it may be added that, according to the *Presse*, the Russian Procurator-General, M. Pobedonosteff, recently made a stay of several days in Vienna, but as to the object of his journey we are left in ignorance.

THE *Paris* states that the French Government is determined to enforce the stipulations of the Hué Treaty in relation to the Red River delta. The same journal, in other notes, which have an inspired appearance, says that the troops which are to be sent out to Tonquin are mere reinforcements, and that "no European or Asiatic Government could possibly represent them as an army corps intended for operations of a menacing nature." Furthermore, it confirms the statement made by the *Temps*, to the effect that there has never been any idea of convoking Parliament before the date originally decided upon. "If," continues the *Paris*, "the negotiations with China fall through, and if a rupture result from their interruption, or even if there be any reason to fear that we may be driven into a war with the Celestial Empire, the Ministry is quite determined to consult Parliament before taking any definite step. But such eventualities are so little to be feared, that any assertion to the contrary can only be attributed to pure malevolence. The Ministry, satisfied with the conclusion of the Hué Treaty, which it regards as a thoroughly valid arrangement, is engaged in assuring its execution, in conformity with the mandate that it has received from the Chambers."

AN English paper, commenting upon the paper-making industry of Egypt, says that, before the thirteenth century, "there was imported from Syria paper fabricated from *silken* as well as cotton material, which is known to have been in use as early as the beginning of the twelfth century. Arab historians, however, state that similar paper was made in Mecca early in the eighth century. This certainly adds something to the common knowledge of paper materials; and when American millionaires hunger after some new thing on which to lavish money, they might make silk paper." It also adds: "knowledge would have been a long time spreading, and civilization would have made slow progress if we had to depend only on silken paper."

WE take these notes on Indian financial matters from the latest issues of the *Englishman*.—The amount of remittances to the Home Treasury by means of Council Bills from the 1st of April to the 22nd of September has been £7,656,800, which leaves £8,643,200 to be remitted during the remainder of the financial year. The actual receipts from six sales of Bengal opium have amounted to Rs. 3,48,21,305, which is Rs. 15,81,305 better than the estimate, whilst those from five months pass duty on opium exported from Bombay have been Rs. 76,88,000, which is Rs. 3,12,000 below the estimate. The net Indian sea and land customs revenue, exclusive of the salt revenue for the first five months of the

current financial year, has amounted to Rs. 46,50,000 as compared with Rs. 50,68,000 during the corresponding period of last year.

IN the *Rising Sun and Nagasaki Express* we read that a troupe of Korean acrobats have recently arrived in the port and that arrangements are being made for them to perform at the Yenokidzu-machi Theatre.—The celebration of the festival in honour of the soldiers slain in recent wars, has recently been concluded at Kumamoto on a magnificent scale. The ground chosen was Hanoka Hill, where the Satsuma rebels took their stand and connoated the Castle. While the festivities lasted a general holiday was observed.—The U.S. S. *Monocacy* has arrived from Chefoo and been docked for a general overhauling. The frigate *Pensacola* arrived from Kobe, and shortly afterwards saluted the port, it being her first appearance in the harbour. The *Essex* and the *Palos* are also still in harbour.

THE French cruiser *Hamelin*, Commandant Roustan, which arrived in Hongkong on the 15th, from Halong Bay, and left on the 18th, of October brought, says the *China Mail*, late intelligence from Haiphong. Upon receipt of a telegram from Europe, Admiral Courbet, who had previously declined to take the command of the forces in Tonquin until the receipt of more definite instructions, assumed the supreme control, and at once issued orders for a contingent of marines and sailors from the large vessels of the squadron under his command to be despatched to Haiphong. These men will probably be sent up to Hanoi to reinforce the troops there. The Black Flags, and their allies, are still in great force at Sontai, although most of the fortified positions between that place and Hanoi have been abandoned by them.

A REPRESENTATIVE of the *North China Daily News* recently paid a visit to Si Yung, the imprisoned detective who is confined in one of the cells in the upper story of one of the prisons at the District Magistrate's in Shanghai. Fourteen other prisoners were there. From a Chinese point of view the inmates appeared to be comfortable. Many of them were lying down, others were smoking, while two or three were walking about. "Si Yung has not met with any actual ill treatment, though one of the runners had said he must put a chain round his neck about ten days ago. As none of the other prisoners in that particular cell are chained, the threat could only be looked upon as a pretext for a squeeze, and Si Yung had to pay the runner \$2 to prevent the threat being carried into execution. Other foreigners had been to see Si Yung, and had put a number of questions to him as to how he was getting on." The *N. C. D. News* believes that fresh efforts are being made to procure the detective's release.

A MELBOURNE man advertises that he has made, during the past ten years, from £4,000 to £5,000 a year by systematic betting on horse-

racing, but as he is in want of £1,500 he will sell his secret for that price. This reads like a genuine affair, and if next door's cat hadn't broken our milk-jug we don't know that we wouldn't speculate. As it is, we give (with a sigh) the world a chance.—*Sydney Bulletin*.

THE Singapore subscription lists for the Java Relief Fund have been published, and so far show a total of \$10,545.64, of which \$7,500 has been already remitted, and the balance will be forwarded when the lists close on the 20th inst., by which time no doubt the amount will be swelled still more. This sum was made up by subscriptions of \$6,355.64 by the European community, \$3,950 from the Chinese, and \$240 from the Governor and Civil Service.—*Strait Times*.

THE *Hongkong Daily Press* says that Colonel Curtis Jankea, the representative of King Kalakaua at the coronation of Alexander III. and His Hawaiian Majesty's Envoy Extraordinary and Minister Plenipotentiary to the Courts of Europe, will shortly pass through Hongkong en route to Japan. This young Ambassador is said to be a well educated and intelligent gentleman. He converses in the English language fluently, and is a man of fine physique and prepossessing appearance. He is accompanied by Mr. Henry Poor, who acts as his Secretary. The last-named gentleman is of Hawaiian extraction with a considerable amount of "white" blood in his veins.

IN H.B.M. Court for Japan, yesterday, before T. R. H. McClatchie, Esq., Acting Assistant Judge, Mr. Sinclair, an officer of the *Haddon Hall*, was charged with assaulting one Welsh, an apprentice. The defence was that the boy was only "corrected," by having his ears boxed and sundry kicks administered by his superior, whom he had grossly insulted. As no evidence was produced for the defence, His Honor found the assault proved and fined Mr. Sinclair \$2, and costs of Court.

SOME interest has been excited in India in consequence of the sun presenting a peculiar greenish appearance at certain periods of the day. It is believed that the phenomenon is due to the passage across India of a tremendous volume of sulphurous vapour, arising from the recent volcanic disturbance in the Sunda Straits.

THE Pacific Mail steamship *City of Tokio*, for this port, left San Francisco on the 7th November.

WE read in a Shanghai paper that Sir Harry Parkes arrived at Chefoo in the *Sing Nansing*, on the 23rd of October in very rough weather.

WE note the departure by the *Arabic* of Admiral Crosby, late in command of the American fleet on this station.

WE understand that M. Tricou is on his way to this port from Europe, and that he is on board the French man-of-war *Volla* which arrived in Kobe yesterday.

MR. FUKUZAWA ON FOREIGN RELATIONS.

A WEEK ago nothing seemed less likely than that a Japanese newspaper should be suspended for publishing an article calculated to promote anti-foreign feeling, and the surprise which the news causes is still further augmented when one learns that it is the *Fiji Shimpō* which has thus offended. It is true that the distinguished editor of that journal allowed himself to be betrayed, some years ago, into expressions which argued a remnant of hostility to the rapid radicalism of Young Japan, and to the intercourse which had been the cause of its growth. But the most ardent friends of progress could sympathise with a spirit which plainly derived its inspiration from patriotic sources; and, for the rest, the pre-eminent part Mr. FUKUZAWA had taken in bringing Western civilization within his countrymen's reach placed him completely above the suspicions his temporary attitude might otherwise have suggested. Nothing, indeed, could be more extravagant than to charge this remarkable scholar with anti-progressive or anti-foreign tendencies. His really vast achievements are before us. No Japanese, not even excluding those, statesmen and soldiers alike, who sacrificed their lives in the defence of the principles they once opposed, has established a more solid title to the gratitude of Young Japan, or done more to smooth away the obstacles his country had to encounter in emerging from her ancient isolation. Justice compels us, therefore, to regard his recent essay as the opinion of a writer whose conservatism is comprised within the limits of honest patriotism, and who, while criticising some of the aspects of foreign intercourse, has nevertheless devoted life-long labours to its promotion.

The essay itself consists of two parts. It sets out by a retrospect. Five and twenty years ago, when Japan first began to emerge reluctantly from her isolation, the attitude of her foreign friends was courteous and considerate, while her own was deferential and at times almost timid. Each side treated the other after the fashion of new acquaintances whose policy is still mutually tentative. As years went by, however, and as it became apparent that Japan was thoroughly resolved to emerge from her seclusion, Western peoples began to regard her with greater interest, and Western Governments to treat her with greater cordiality. She became an object of flattering attention, and it might well have been supposed that she had won the sympathy of the civilized world. But was

that sympathy inspired wholly by genuine friendship? Mr. FUKUZAWA thinks not. He analyses the sentiment, separating it ultimately into three elements:—first, the prospect of future benefit to be derived directly from Japan; secondly, the prospect of indirect benefit, and thirdly, disinterested esteem for a nation so unexpectedly earnest in its pursuit of a higher civilization. Of these three elements, the first had its origin in old-time fables of Japanese wealth and resources, and the third needs only a grateful comment. But of the second the writer offers a curious and novel explanation. The indirect benefit which foreigners hoped to derive from Japanese intercourse was the influence of that intercourse upon China. To the subtle pedlar, says Mr. FUKUZAWA, when he has to do with a niggardly householder who resists all the attractions of his wares and the persuasions of his puffs, there yet remains another and a very efficacious method. He doubles his attentions next door: sells this to neighbour A; shows that to neighbour A; goes in and out of neighbour A's perpetually; and seems altogether to be giving neighbour A so much satisfaction that at length neighbour Niggard begins to reflect, to fancy he may be losing something by keeping the peddler away, and at last to feel jealous of the monopoly neighbour A is enjoying. Then the pedlar's end is gained. So it was with Japan and China. The former was neighbour A, the latter neighbour Niggard, and the other details of the simile may be left unscrutinized. The *Fiji Shimpō* continues as follows:—

Thus regarded, the efforts made by foreigners to help Japan's feet along the path of civilization seem to have been prompted by a desire to rouse China from her lethargy and to push her into trade rivalry with her neighbour. And those efforts, having in a great measure succeeded, their instrumentality has ceased to be efficacious. Japan's function is fulfilled. She has lost her usefulness, and is no longer worthy of the consideration she formerly received. Not unnaturally, therefore, Westerners are beginning to ignore her, and to display greater friendliness towards China. Japan's foreign trade, if it has not already attained its full development, is no longer an indefinite quantity. Its future dimensions can be gauged with tolerable accuracy, and its insignificance, when compared with Chinese commerce, is apparent. The intimacy of international relations is in direct proportion to the profits accruing from them. By and by Dai-Nippon will drop entirely out of the Western world's notice. A moment's consideration of her foreign affairs shows that she commands much less attention now than was formerly the case. Thus with regard to treaty revision, her just demands are evaded or virtually disregarded, though the time fixed for revision has long gone by. Again, the sequel of the recent opium affair at Nagasaki illustrates the spirit displayed towards this country. The foreign journals published in Yokohama commented upon the affair in a tone distinctly hostile to Japan and favorable to China, while the foreign Consuls in Nagasaki proposed measures of similar import. This is a paltry matter, to be sure, but "a straw shows how the wind blows." Were foreigners disposed to treat Japan with anything like the

same courtesy they formerly displayed, her diplomats would not now be powerless to achieve treaty revision, nor would China's cause have been espoused, in the Nagasaki opium affair, against Japan, before the latter's case was even heard. With these things before our eyes can there be any doubt as to the direction Western sympathy would take in the event of trouble between Japan and China? Truly public opinion is as shifting as a wave of the sea. A few years ago, this nation was treated with esteem and regard; to-day, its sometime friends are ready to flout it, nay even to throw stones at it.

Beyond doubt this species of writing is calculated to resuscitate Japan's old dislike of foreigners, and for that reason the action of the authorities in suspending the *Fiji Shimpō* was, in a manner, unavoidable. But there occurs here a question which cannot well be left unanswered:—Has Mr. FUKUZAWA been punished for speaking the truth. Most of us will be disposed unhesitatingly to reply in the negative. It is true, we should say, that the novelties of Japanese intercourse, as well as the interest of Japan's early struggles to place herself abreast of Occidental States, have somewhat faded, and that in this sense she attracts less attention and, perhaps, receives less sympathy than in the opening days of her admission to the comity of nations. But this natural access of indifference is not to be mistaken for dislike or disdain. The friendly admiration her courageous liberality has won from the civilized world is not less sincere than ever because it seems less demonstrative. The sentiment remains undisturbed, though opportunities for its display grow yearly more unfrequent. As for the notion that Japanese friendship was cultivated for the purpose of exciting Chinese rivalry, while not wholly erroneous, the interpretation it receives at Mr. FUKUZAWA'S hands is, to say the least, misleading. It was perfectly natural that Japan, having distanced all her Eastern neighbours in the race of civilization, should be used as an example to stimulate their stubborn inertia. Assuredly there is nothing she has any reason to resent in such treatment. But though others, following her example, should be regarded in their turn with equal interest and consideration, and though public attention should seem to grow listless towards her, the solid fact remains, and will always stand to her credit, that in the history of the world no nation has given proof of a truer instinct or shown a more unprejudiced desire for progress. For these things she deserves, and will always receive, respect.

We cannot hope, however, that these general statements will effectually outweigh the evidences of dislike and disdain which are daily visible to every educated Japanese in the demeanour and utterances of foreigners in Japan. The na-

tion is not to be blamed if it accepts our own version of the sentiments we entertain towards it. This is what the editor of the *Fiji Shimpō* has done. It is a part of his duty to be familiar with what is written and spoken about his country, and he has been constrained to attach some importance to the fact that, of the six foreign journals published in Japan, five are unequivocally hostile to the Japanese. The severest criticism may still be friendly, but the criticism of these journals is openly inimical. Of their motives we have no right, even if we had any inclination, to speak, but it were idle to close our eyes to the fact that no person capable of construing a sentence of English or French could fall into the error of accrediting them with any particle of good-will or sympathy for this country. Day by day and week by week it is the same unvaried routine of cruel aspersion and harsh denunciation, never relieved by a kindly word or softened by an encouraging utterance. However unwilling a Japanese may be to believe that these journals represent foreign opinion, he cannot evade the unpleasant conviction that they are recipients of foreign support and that they do but echo the creed of their supporters. Foreigners themselves, who are able to look a little beyond this local horizon, discern the vast interval that separates the generous magnanimity of representative Europeans from the unmanly illiberality which appears to characterize Europeans in Japan. But this wider prospect is not visible to Japanese eyes. To them our portrait appears as it is painted by ourselves, and who can pretend to think that it presents any attractive features? We have before us to-day a spectacle whose significance cannot be ignored. We have the laws of the land interfering to impose silence on one of Japan's greatest scholars,—to deprive of the right of free speech a man who more than any other has helped to bring the blessings of Western civilization within his countrymen's reach—on the grounds that his language is calculated to create an unfriendly feeling towards foreigners; and we have, at the same time, five foreign journals, published in Japan, telling the Japanese day after day and week after week, in words bitterer and harsher than those of the *Fiji Shimpō*, that disdain, dislike, and distrust are the principal ingredients of foreign sentiment towards Japan. May not the editor of the *Fiji Shimpō* justly draw this comparison, and may it not occur to the Government that they are engaged in a work which can never bear any sound fruit when they attempt to restrain their own people from

noting an impression which foreigners themselves unceasingly labour to convey?

Where is it all to end? In the times of Japan's earliest foreign intercourse, three centuries ago, the cordiality of the welcome she extended to her visitors from the West was not inconsistent with the best precedent offered by the age. As years went by, however, fanatical propagandism and political intrigue, in the garb of religion, evoked a hostile spirit, which ultimately permeated the traditions of the nation and induced it to prefer isolation to the danger of effacement. History repeats itself. Scarcely fifteen years have elapsed since that spirit was successfully conciliated, and already the foreign press in Japan is labouring to revive it. The consequences are before us. We may be quite sure that the editor of the *Fiji Shimpō* is not the only educated Japanese who finds it difficult to keep silence in the presence of the contemptuous taunts and sneering defamations of which his country and its administration are the daily objects. Others are at least equally indignant, and the responsibility of checking this growing umbrage, fomented by ourselves, devolves upon a Government whose hands we do our utmost to weaken by constantly preferring against it public charges of incompetence and corruption. Thoroughly appreciated as these things must be by every thinking man, they find no expression, because to utter them is to expose oneself to shameless abuse. The arena is occupied by men that mistake malediction for argument, mouth-pieces of the so-called "British party," who, in the words of Mr. GLADSTONE, "represent themselves as having a monopoly of loyalty; who from point to point have everywhere resisted everything that was proposed for the benefit of the people of the country they live in; who have never favoured or supported any of the great reforms which have been brought about by the courage and the wisdom and the foresight of the British Legislature; who are doomed almost to narrow modes of examining local questions; who each of them look at themselves in relation to persons whom they feel to be, in energy and certain practical effects, inferior to themselves, and whose tendency is to indulge in a spirit of ascendancy which it is the business of the British Legislature and of patriotic British officials with wisdom and with care, but with decision, to modify and to check." To the representatives of this party, we say, the arena is abandoned in Japan, while unfortunately the attention of European statesmen is directed to other

matters; and European public opinion has not yet recognised the necessity of expressing itself on the subject. Possibly, when the mischief is almost beyond the reach of remedy, the world will awake to the fact of its existence. Until that time we can only hope that the Japanese Government will be strong enough to restrain the anti-foreign feeling which Europeans in Japan are wittingly or unwittingly engaged in exciting.

SPURIOUS JAPANESE WARES.

IT is perhaps too much to hope that anything written at this end of the world will find its way to the notice of people in America, but our duty is none the less imperative to denounce an attempt which, if not fraudulent, is certainly calculated to promote fraud. In a recent issue of the *Boston Herald* we find the following notice of the Japanese Section of the Foreign Exhibition in that city:—

As the foreign exhibition is developed, and the purposes underlying several of its principal exhibits begin to be understood from the exhibits themselves, the interest of visitors is deepened, and the whole enterprise takes on a broader aspect than that of a mere bazaar. It is seen to have a twofold effect—one educational and the other cosmopolitan. The one shows that there are arts and civilization beyond the pale of American advancement, and the other has an enlightening effect upon the mind, expanding its views beyond the horizon of mere local surroundings. Now one of the purposes underlying the exhibition was to make some of the displays shown there as much historical in character as possible. This purpose has been carried out in a remarkable degree by Commissioner Graves, who started at the outset to secure, if possible, a complete historical exhibit of all the products of Japan. At the Centennial Exhibition, and at all the world's fairs held abroad, the exhibits from Japan have been simply commercial in character, the articles in all cases having been selected and sent forward solely with an eye to their sale. In the present collection shown it was attempted, for the first time, to secure through direct appeal to the Japanese government such an exhibit as should be historical, and cover examples of all the various products of Japan, both ancient and modern. This has been, for the first time, accomplished, and in this respect, at least, the Boston foreign exhibition may be said to be "unique." To the hearty coöperation of the Japanese government, then, is due the rare collection of historical works to be seen at the exhibition, for without such coöperation and the friendly interest which prompted the same, it would have been utterly impossible to have secured such a collection. Great praise is due that government, and it will be readily accorded when it is known that, while it has refused to do the same favor for other nations holding similar exhibitions, it has, out of its especial interest in our country—which the whole Japanese people regard with the most friendly feelings accorded to our request. The visitors, therefore, to our foreign exhibition will, for the first time in the world's history, have the pleasure of examining such a collection from this exceedingly interesting country as no one has ever enjoyed before.

It is truly singular that any newspaper should have the courage to publish such palpable and easily exposed misstatements as those contained in this paragraph. The public is here informed that, while "the Japanese Government

refused to do the same favour for other nations holding similar exhibitions, it has, out of its especial interest in the United States—which the whole Japanese people regard with the most friendly feelings—acceded to America's request," so that "by its hearty coöperation a rare collection of historical works is to be seen at the Exhibition." There is just one grain of fact among these assertions, namely—that the Japanese people regard the United States with the most friendly feelings. The rest is pure fiction. The Government of this country has taken no part whatsoever, either directly or indirectly, in the collection of specimens for the Boston Exhibition. Nay more, no avowed attempt has been made by any Japanese, whether official, amateur, or tradesman, to send thither articles representing any period of Japanese art prior to the year 1883. Everything contributed by this country was either expressly manufactured for sale at the Exhibition, or selected from the recent outcome of the art workshops in the two capitals. No idea of sending "a collection of historical works" was at any time officially entertained in Tokiyo. It is true that the Government of Japan—so far from "refusing this favour to other nations"—did, at the instance of Sir RUTHERFORD ALCOCK, send a rare collection, illustrating all the best periods of Japanese art, to the second International Exhibition of 1862 held at London. It is true that they took a similar step, supplementing it by a historical notice more or less exhaustive, in the case of the International Exhibition, of 1862, in Paris; and it is true that they took a similar step in the case of the International Exhibition of 1873 in Vienna. But for the Boston Exhibition they did nothing of the sort. Not that there was any reluctance to do by Boston as others had been done by, but simply that the time is past when official initiative is necessary in these matters. The exceptional course pursued in the cases of London, Paris, and Vienna was dictated by exceptional circumstances. Private enterprise was not then sufficiently educated to be capable of any systematic effort abroad. Now, however, these conditions are quite changed, and the measure of official coöperation on behalf of Boston was the appointment of Commissioners and the granting of certain facilities to exporters. It is not, perhaps, any direct concern of ours what devices are employed to cajole the American public, but this shameless attempt to associate the Japanese Government with a disgraceful deception cannot be too severely denounced.

The same notice tells us that there are

eleven exhibits, in all, from Japan, and that they "include the rare and costly collection offered by the Commissioner-in-Chief, that of the Commissioners sent by the Japanese Government, and those of the nine leading manufacturing companies of Japan." Of the first two we are of course unable to speak. The Commissioner-in-Chief and the foreign Commissioner sent by the Japanese Government may have contributed many rare specimens, for aught we know to the contrary. But however this may be, the Japanese Government had, we repeat, no hand, act, or part in the provision or classification of those specimens. Good or bad, genuine or spurious, the Chief Commissioner and his colleague are alone responsible for their collections. Of the articles exhibited by "the nine manufacturing companies," on the other hand, we are in a position to assert they are all new, and that they do not profess to be anything but fine examples of modern Japanese art workmanship. We conclude, therefore, that to one of the former gentlemen belongs a collection of Satsuma faience described as follows:—

There are now open and arranged in the main court in Washington Hall an historical collection of the famous imperial Satsuma, which is regarded not only by the Japanese themselves, but by those most familiar with such objects of art, as the most beautiful faience in the world. Here may be seen the earliest pieces, bearing the archaic attempts at decoration; and from these one passes up to those pieces which are decorated with the most artistic and elaborate designs in fine gold and enamels tinted with the oxides of gold alloys. This collection contains pieces of every period and every style of decoration, including many of the masterpieces of Japanese artists. The work on these is so fine that, to appreciate them fully, a close and careful study is required. To show its verity, it may be said that beyond this—outside the imperial collection at Tokiyo—there is no similar collection in the world. Some of the bowls and vases shown represent the highest grade of artistic skill, and the labor of years has been given to their production and completion. No duplicates of these pieces are in existence.

Premising that the "famous imperial Satsuma" is a ware entirely unknown in Japan, we admit at once that this collection baffles us. For, in the first place, its only acknowledged peer, "the imperial collection at Tokiyo," has no existence; and in the next, archaic decoration is to be found only on pieces of Satsuma expressly manufactured to deceive foreign collectors. The oldest specimens of decorated Satsuma faience are chiefly remarkable for the exceedingly delicate and careful workmanship they display. Some rare and really representative pieces were, indeed, sent by a private collector to the Boston Exhibition, but they were not yet on view when the above notice was written, and we learn, on the authority of a competent expert, that the "historical collection" described in the

Boston Herald does not cover a period of more than five years. The American public has been so systematically and successfully duped in the matter of Satsuma pottery that we would fain put collectors on their guard against a fresh repetition of the same wholesale deceit, more especially when an unwarrantable attempt is made to associate the Japanese Government with the fraud.

We pass over grotesquely false descriptions of two "imperial iron boxes of the 14th century, beautifully inlaid with gold and silver;" of a "hand-wrought crystal ball—a perfect sphere, some four inches in diameter—representing, it is said, years of patient toil;" of *inros*, or medicine boxes made of the finest pure gold lacquer, etc., some of which are believed to be older than our era;" of "a famous dress-sword of the Tycoons, formerly the property of one of the Government lords;" of "the only Imperial sword that has been permitted to leave Japan"—we pass over all this impertinent clap-trap in order to conduct our readers without delay to the following marvels:—

In the next case are some wonderful ivory carvings. There is a set of three tusks—the centre one being that of a mammoth, and regarded as the finest ivory carving in the world. It is elaborately ornamented with historic designs. The tradition is that it took the old master workman who made it what it is 30 years to carve and inlay it with gold, silver, and stones. The other two tusks are those of elephants, and the whole group are elaborately mounted on gold and silver standards. This set is historical. It was presented centuries ago by one of the Emperors to the governor of the castle of Osaka, the "key" to the inland sea, to Kioto, the capital, and hence to Japan. After the overthrow of the Daimios it was offered for sale, and bought by the agent of the present owner and exhibitor.

Needless to observe that the whole of this story about the Governor of the Castle of Osaka, and the present of carved tusks he received from an Emperor centuries ago, is a baseless fabrication. Such impositions, unfortunately are not uncommon. What is more curious is the idea that vague romances of this nature should be counted capable of enhancing the value of an article which, if it be worth anything at all, derives that worth solely from the skill and care its workmanship displays. The public lays itself open to be duped when it develops this morbid taste for age without reference to excellence. It is this ridiculous fancy which renders rustiness, dirt, and rudeness of manufacture, objects of desire to collectors, and constitutes the *raison d'être* of a dishonest trade that depends chiefly upon subtle processes of discolouring, disfiguring, and begriming. But it is not our present purpose to discuss such diseased conceptions of art and its products. We merely seek to warn visitors to the Boston Exhibition that neither the Government nor the people of Japan have any concern in these attempts to impose upon American collectors.

THE FISHERIES EXHIBITION AT SOUTH KENSINGTON.

THE International Fisheries Exhibition, open throughout the summer at South Kensington, has been one of the most interesting and successful of such enterprises. It is the last and not the least important offspring of the prolific parent of 1851, that first and always "greatest" of "Great Exhibitions," which has been followed not only by successors of like universal nature, but by others, partial and special, beginning with the collection of Irish Arts and Manufactures at Cork so early as 1852. The utility of such undertakings in furthering arts, manufactures and industries having been recognized and demonstrated by a long succession of Exhibitions, general and special, national and international, since that time, it was only natural that an industry so universal as that of Fishing, and so important as being one of the sources of food-supply, should at length become the subject of a special Exhibition. Of Fisheries Exhibitions, Boulogne was the first place to set the example, shortly to be followed by the Hague in 1867, and Naples in 1871, and later, on by far the largest scale, by the International Fisheries Exhibition at Berlin in 1880. First in England came the Exhibition at Norwich, and out of that arose the "Great International Fisheries Exhibition" of the present year in London. It would be difficult to realize, without having seen with one's own eyes, the infinite variety and number of interesting objects capable of being collected in connection with Fish and Fishing. In the present Exhibition it takes days of patient inspection to obtain even a superficial idea of its most prominent features: and, apart from the interest and information afforded to the ordinary sight-seer, it cannot admit of question that so complete a collection of the comparative products and processes of all nations must be prolific of the most beneficial results to all those in a position to take advantage of the opportunity.

It is very much to be regretted that Japan, which has hitherto not been backward in such matters, should either have failed to understand the scale of the present undertaking, or to recognize the importance of the subject-matter of the exhibition. The former explanation of her shortcomings we would fain adopt: for, that any Department of Government in a country where fisheries play so large a part as in Japan in producing the food-supply of her people should set small store by the "agriculture of the sea" is an hypothesis to which,

where Japan is in question, we should not readily subscribe—and the display at Berlin in 1880 proves that this is not the case. But, be the cause what it may, the fact remains that at the Fisheries Exhibition this year in London, Japan is most miserably represented. The Department of Agriculture and Commerce seems to have been content with appointing the Japanese Consul in London Commissioner to the Exhibition, and sending him a few Fish-hooks and a good many tins of Preserved Salmon, together with a small sum of money wherewith to make the best display attainable with these rather limited materials. Needless to say, the result is not striking, in a favourable sense at any rate: and astonishment and regret are very generally expressed that an Island Empire with a large fishing industry and an eminently fish-eating population should have taken so little trouble and made such a little show. The smallness of the space occupied by the Japanese Section in the Eastern Gallery of the Building, and by the printed matter relating to it in the Official Catalogue, would be enough to betray the poorness of the display made by Japan in comparison with her neighbours—and her neighbours in the Exhibition are more or less also her neighbours geographically; for China, India, and the Straits Settlements are on one side of her, Ceylon, Hawaii, and Chili on the other. Some idea of the proportion of the exhibits may be gathered from the fact that China occupies four or five times the room of Japan in the annexe, while India fills nineteen pages of the Catalogue to Japan's one. But it is not only in the quantity, but also in the quality and nature of the exhibits that the comparison makes so badly against Japan. In the Chinese, Indian, and Straits Sections alone one can spend hours among the host of interesting and curious specimens and models. China, in particular, is especially rich in her display; and yet there is scarcely an object there that might not have found its counterpart in the Japanese Court. In the Catalogue, again, the list of Exhibits is prefaced in the case of almost every country by an official Introduction on the subject of the national Fisheries as illustrated by the objects shown. Nothing of the sort has been written for Japan. A gentleman attached to the Consulate in London has recently compiled in English a pamphlet dealing with some aspects of the subject: but, coming at the close instead of at the opening of the Exhibition, this cannot supply the omission referred to. Nothing more could of course have been done by those associated with the

Japanese Commission in London: but it is matter for regret that the Department concerned did not enter more heartily into the work, and, besides sending a more complete and interesting collection, as might so easily have been done, issue at the proper time a monograph of the kind required. It might also with advantage have sent some of its younger officials, not only to assist in the exhibition of Japanese objects, but themselves to profit by the opportunities the exhibition as a whole affords for improving the methods and processes of the national industries connected with fishing at home. As it is the opportunity has been lost in every way.

Passing through the Central Aisle of the eastern annexe, on coming to the Japanese Section one sees, on the one side the fish-hooks and tins of salmon above-mentioned—and really very little else meets the eye: on the other side—*Curios!* So limited was the number of articles sent for exhibition that one half of the almost *minimum* allowance of space allotted to Japan had to be filled with curios from Messrs. LIBERTY & Co., of Regent Street, under the class appointed for Loan collections "within the scope" of other classes. These "artistic examples in bronze, porcelain, embroidery, lacquer-work, and paintings," have to be dragged in as "illustrating various subjects in relation to Fishing and Marine Studies"—as, for instance, in the ornamentation of bronze vases with mythical sea-dragons, and the like. However, it is only fair to say that no inconsiderable stretch and liveliness of imagination is required in other Courts besides the Japanese to discern the association of some of the objects exhibited with the scope of the Exhibition. Probably no other products of Japan, or none any more closely allied to fisheries, were to be obtained in England to fill up the gap: but it is none the less a pity that the gap should have existed. The official classification gives six classes (exclusive of Loan Collections) making in all sixty-one divisions. Of these sixty-one divisions Japan shows objects in only eight. In class I, "Fishing," sub-divided into "Sea Fishing" and "Fresh-water Fishing," and comprising the first twenty divisions, she is represented only in one—that for "Gear" of every description used in fishing. Here are eight exhibits:—fishing-lines, hooks, rods, and a few specimens that seem to belong rather to a different category. Apart from the meagreness of the articles exhibited in this single division, what a field of interest is neglected in others of the Sea-fishing sections! Take,

for instance, that for "Fishing craft of all nations; models and representations of the same." Never a model of a fishing-junk, never a sampan! In the Chinese Court there is a perfect museum of models, one of the most interesting features, to the sight-seer, of the whole Exhibition. China too takes practical advantage of another division in this class, relating to appliances for the safety of mariners, to show to the world, hung conspicuously on the wall, an enormous chart of the coast with all the Lighthouses erected there since 1863. Here was an opportunity lost by Japan of letting people in Europe see the reality and practical usefulness of her material advance in the same period. In "Fresh-water Fishing" and in Class II., "Economic condition of fishermen," Japan is not represented at all; though in the divisions for "Apparel and personal equipment" and "Models and plans of dwellings" many objects of interest might easily have been collected. The apparel and personal equipment would perhaps be rather of a negative description in a Japanese counterpart of the life-sized models of fishermen equipped for their calling, numerous throughout the Exhibition—notable among them being some rakish-looking but life-like Chinamen in boats, both in the building and afloat on one of the garden-ponds. In Class III., "Commercial and Economic," the Department at Tokio seems to have felt that its true sphere of action lay. Here they do show an eye for business, in displaying dried and preserved fish of various kinds, sardines and tunny in oil, salmon, salmon-spawn, and oysters tinned, cod liver and other fish oils, fish wax, isinglass, glue, and dried sardines for manure. They do not show, as they might, any models of fish-curing establishments or of appliances for preparing oils and manures from fish—such, for instance, as those one has to pass through on the beach-path between Negishi and Tomioka: and perhaps it is as well for some of us that they do not, as the sight would inevitably recall the most nauseating of all nauseous smells! Nor again is advantage taken by any Japanese Exhibitor of divisions for the display of the artistic applications of mother-of-pearl and tortoise-shell. In the class for "Fish Culture" it is not surprising that Japan has nothing to show. But even in Class V., "Natural History," the exhibits are not so numerous as to preclude individual mention. They are (according to the catalogue) coral; shell of sea-ear: oysters, tinned: crab, stuffed: Fibre of Whale-bone: not an imposing list. Another practical chance has been lost in

not showing, under the appropriate division of this class, specimens of seal and sea-otter skins from the Northern Islands. While in Class VI., "History and Literature of Fishing," the Foreign Office might, under the division for "Copies of Treaties, Conventions, &c., dealing with International Fishing Relations," have forwarded for exhibition some interesting and suggestive pieces of blank paper in connection with these same Northern fishing and hunting grounds.

Exhibitions of like nature in other branches of industry are to be continued annually for some time, in the same buildings on the old exhibition ground at South Kensington. It is very much to be hoped that in succeeding years Japan may come forward and do something to retrieve her character for enterprise; though few occasions can again present themselves for such a characteristic display of so truly native and national an industry as might have been made this year. In contributing to Art Exhibitions we all know Japan is not backward; but she ought to show something besides artistic work. Nor is it desirable that a Department of the Government should be the sole nominal exhibitor. The Department concerned, generally the same one, can very properly and usefully undertake the management and control of the whole matter: but the purposes and advantages of each exhibition, be it of what it may, should be made known throughout the country, and manufacturing or industrial Companies and Firms encouraged to take part in their own names. And there is another aspect of the case that should not be left out of sight. Mutual instruction, the improvement of our own products and methods by seeing those of others, is one of the primary objects of such exhibitions: they are not merely concrete advertisements of producer's wares: and therefore, while we wish to see Japan show everything she has to show, whether for the sake of finding new markets or of less direct forms of material profit, we should like at the same time to see as many as the great distance allows of those specially concerned with the subject matter of each exhibition travelling to Europe to see and learn with their own eyes. The opportunities thus afforded are unique and ought not to be neglected. More practical industrial knowledge could probably be thus acquired in a few months, and at far less expense, than by the most exhaustive of tours undertaken for the same purpose without the facilities an exhibition affords by bringing together the work of all nationalities into a single focus.

CASAMICCIOLA.

THE recent terrible calamity at Casamicciola, and the presumable probability of its recurrence, afford good grounds for innovation in matters of architecture, even to the abandonment of many strong and reasonable prejudices. The luxury and comfort of transient visitors to a hot spring, and even the scenery of such a charming retreat as Ischia, may well be partially sacrificed to the necessity of diminishing or averting the sufferings of residents exposed to the attacks of sudden and not-to-be-anticipated convulsions. It is not surprising, therefore, that the style of building to be adopted in the reconstruction of Casamicciola should have given occasion to considerable discussion, and elicited such a thesis as that of M. JOHNSTON-LAVIS, a translation of which will be found elsewhere in our columns. The subject is full of importance in a country like Japan, and our readers will doubtless peruse M. JOHNSTON-LAVIS'S essay with interest.

It by no means follows that the solid buildings which a nation requires for the monumental durability and adornment of its chief cities, and the secure protection, comfort, and commercial facilities of their inhabitants, need of necessity be imitated in a summer resort, situated, in point of fact, upon the hissing safety valve of internal commotion. Any town so situated had best he moved, "bag and baggage," to a less disturbed region. Certain tradal and political advantages might have to be sacrificed, but these losses would be more than equalled by the destruction continually devouring such cities and preying upon the comfort, security, and wealth of their residents, whether their domiciles be constructed of masonry heavy enough to crush out the life of those upon whom it falls, or of wood equally dangerous from other causes.

Tokiyo has, within the memory of the living, been visited by an earthquake of serious severity, sufficient to throw over wooden buildings and crush and maim many victims. It is probable that, had these buildings been of loose masonry, the loss of life from falling weights would have been much greater; but all accounts go to show that far intenser calamity and suffering were caused by the vast fires which sprang up from every side, encircling and entrapping thousands of miserable fugitives, than by the direct consequences of the catastrophe. That a similar violent upheaval may not occur again, no one can say; and though it is well to be prepared for the worst, the adoption of precautions (at best

inefficient) against the visit of one possible and rare foe, in a manner which invites the attacks of another constant and inveterate enemy, can scarcely be said to offer a satisfactory solution of the problem.

The solid buildings in foreign style in the capital, though not of the first class of construction, have pretty well proved their capability to resist the most powerful of the ordinary shocks which occur from time to time. Slight cracks have been remarked in the most flimsily built, but in those in which a greater adhesion has been given to the masonry by cement joints and iron ties, no signs whatever of yielding have been discovered. There is also a reasonable probability that seismological science will succeed in determining the directions of strains and thrusts so as to indicate many important modifications in the method of distributing weights, forming arches, and otherwise adapting masonry to withstand earthquakes. Mr. JOHN MILNE, of the Tokyo Seismological Society, has already done valuable work in this direction, and we look with confidence for still larger results.

With regard to the notion that the expansion of iron ties within masonry would cause injury, it has been established by experiments made within walls of moderate thickness during extremes of external temperature, that the variation of internal temperature is so slight as to make the expansion of iron inside almost nil, or so minute as to be easily allowed for in the joints. The difficulties pointed out by Mr. JOHNSTON-LAVIS in arranging diagonal ties and cross ties of iron, are far more easily surmounted than the difficulty of prescribing a fixed pattern in width, length, and height for all structures alike, which alternative is suggested by that writer as a possible necessity in earthquake districts. Iron is undoubtedly the coming material for building purposes, and even in countries where earthquakes need not be considered, more extended application of iron construction is becoming a frequent subject of discussion. M. JOHNSTON-LAVIS points out some of the difficulties and inconveniences attending its application to permanent and comfortable habitations, such as conductivity of heat and cold, corrosion, *et cetera*. Moreover, all time-honoured ideas of architectural mass and solidity would have to be abandoned; the eye and mind would have to become accustomed to the different properties of the material, to slenderer proportions, fresh arrangements and a totally new style of ornamental treatment.

But the employment of iron in seismic districts is certainly a practical suggestion,

and one the difficulties of which are not beyond the pale of ingenuity to overcome. The same cannot be said for the idea of coating wood with a paint which would render it proof against fire or decay; nor for the often advanced and often exploded theory of building upon castors or balls. Theoretically, this latter system is one only applicable to resistance against horizontal shocks; while practically the architect has to contend, not with his prejudices alone, but with continual unsteadiness, in light buildings, and, in the case of heavy structures, with certain insuperable principles such as the law which Sir ISAAC NEWTON is said to have discovered. M. JOHNSTON-LAVIS himself does not seem to believe in the practicability of this device, for he concludes that the "attachment of buildings to the ground must be solid." It is not perhaps generally known that the upper portions of some of the Japanese lighthouses were erected upon an arrangement of iron balls, which have since had to be wedged and closed up. In them it was a case of continual earthquake.

FORECASTS OF FUTURE CATASTROPHES IN ISCHIA.

Under the above caption there has been published an essay which has special interest for dwellers in Japan. The translation is as follows:—It has been proposed to reconstruct Casamicciola in wood and iron; and different sites have been suggested for the establishment of the new town. It is then only proper to inform oneself of the value of these propositions before anything is definitely determined.

In all earthquakes there is a central fire, varying in depth from the surface: this "hearth" (*foyer*) generally assumes the shape of a fissure which may vary in position, dimensions, and direction. In the present case all the evidence concurs to show a radical fissure travelling some degrees west-by-north and east-by-south and passing directly west of Casamenella and having its origin in the ancient chimney of the Epomeo. A violent rending and the immediate irruption of volcanic matter, which possesses enormous force, from some cavity, are the cause, of the vibrations of earthquake. These vibrations start from the "hearth," or the fissure, in waves having the form of concentric blades, and in consequence reach the surface at varying angles, and produce effects dependant entirely upon the situation that the edifice occupies in relation to the centre of ignition. It becomes, then, necessary to construct the new houses in such fashion that they can resist the species of movement to which they may be submitted.

A given point on the earth's surface describes at each vibration an ellipse whose plane is at right angles to that surface and parallel to the radial line springing from the central fire to the edifice. That may appear difficult of comprehension without the aid of diagrams; but perhaps I shall make myself clearer by saying that every point of the surface of the earth begins to move upward, then forward, then downward, backward, and upward.

This series of movements is repeated every time that a wave comes and as long as the shock lasts.

When it is near the centre of perturbation the major axis of the ellipse is from below upward, so that the vertical movement is great and the lateral small. This is what we call a "sussultory" shock. When the ellipse is farther away the longer axis is horizontal: we have then the maximum of movement in a lateral sense; and this is what is called an "undulatory" shock.

The destruction of buildings comes from their incapacity to follow these movements. Their heavy weight gives them an enormous inertia: in other words it takes a long time for the earth to communicate its motion to them. Consequently when the foundations are dragged forward by the earth, the upper portion of the structure remains behind: when the earth returns this upper portion has begun to move forward, but the foundations return already to their normal position. Hence the walls are fissured, broken by the tension that is produced between their free and their fixed portions, and they fall to pieces because their cohesion as a mass is almost null as compared with their enormous weight.

We may see then from what precedes that, if we wish for houses having massive walls, we must increase their cohesion. That is sometimes obtained by means of strengthening iron bars; but whoever has examined the houses destroyed at Casamicciola, must see how useless are these bars, especially in places where they are horizontally arranged.

If recourse is had to iron bars they should be so disposed as to form a complete frame over walls and floors, which, because of their quadrangular form, would require, in order to be cut into triangles the addition of transverse bars starting from each corner.

There are two grave objections to this employment of a mixture of iron and masonry.—1. The diagonal bars, going from the lower corners of the wall to the upper corners of the opposite wall would necessitate a special arrangement of doors and windows so as to avoid any interposition between them—a difficulty the extent of which will be seen at once by any architect. 2. The constant tension produced by the changes of temperature, the contraction and expansion of the iron bars running in different directions, would be, surely though slowly, a gradual agent of disintegration of the masonry.

Another method by which we can, theoretically, surmount the difficulty is to detach the houses from the soil. That might be put in practice by placing the houses upon castors like those used for arm-chairs. Nevertheless, apart from the expense and the difficulty of this kind of construction, if we take into consideration the roll of a house during a shock and, consequently, the space necessary to give to each one, we shall understand the impossibility of adopting any such method.

So far we have only considered the case of a house submitted to an almost horizontal undulation; that is to say, situated at a considerable distance from the point immediately above the "hearth." When, on the other hand, the movement is principally from below upward, it is chiefly the floors and roofs that suffer. In the ascending motion the walls are pushed upward with a brisk jerk; but the roofs and heavy floors remain behind and tumble on to the heads of the inmates. When the walls descend, the roofs and floorings go up; and that is repeated a certain number of times. It would be difficult to find any style of construction excelling that prevailing in Ischia for the

enormous weight of the walls and ceilings, and their accompanying lack of cohesion and elasticity.

I think I have said enough to prove that masonry would be much too expensive if constructed with a view to resist earthquakes, and at the same time would remain dangerous in spite of all precautions.

Let us now consider iron as the material of construction. It responds certainly to all we can expect in the matter of lightness and elasticity; but it also presents sundry inconveniences. 1.—It is costly. 2.—It requires careful and constant attention: otherwise it rusts rapidly near the foundations especially in volcanic regions. 3.—It is intolerably hot in summer and cold in winter. If this iron is properly and regularly coated with pitch or some oil paint, so as to render it durable, one might perhaps surmount the two first difficulties; and the third might be suppressed by making double walls and filling the space with sawdust.

Next comes wood, which offers many advantages in the way of lightness, strength, elasticity, and economy both of material and construction. But it has two great defects: its liability to take fire and its perishability. The first may be corrected to a certain point by convenient supplies of water, and treating the woodwork with tungstate of soda—a process suggested by Mr. Emery—or with the new incombustible asbestos paint.

Decay may be arrested, and the invasion of insects and cryptogamous plants avoided by injecting chloride of zinc into the wood, as is done in the case of railway sleepers, and by providing free ventilation from below the lower story.

Apart from the material, we have also to examine the position and the form of construction, because a house whose longest axis is parallel to a radius starting from a point vertically above the seat of the fire offers much greater resistance than if that axis is situated at a tangent. The height of the house ought never to exceed three-fourths of its length, and its depth ought always to be more than twice its length. Its attachment to the soil should be solid. Further, from the roof, starting from the upper angle of each wall, a bar of iron, connected with the framework of the house, should be brought down in the same plane as the wall and at an angle of 45 degrees at most, and attached to a block of masonry in the soil, or to a strong wooden pile, in such manner that a quadrangular house would have eight of these stays.

The purpose of these latter is to communicate the movement of the earth to the top of the house simultaneously with the shaking of the foundations, so that the condition of the house would resemble closely that of a suspension bridge's towers. The inner walls, partitions, and floors ought to be strengthened by diagonal bars.

Probably it will be found convenient to construct houses into whose structure both iron and wood will enter, the former for the outside the latter for inner lining. The floors might be covered with French tiles, as might also the walls of some of the rooms. If such houses are built in a suitable manner, they may be rendered much more healthy and convenient, prettier and more comfortable, than those constructed in masonry. As to the site to choose for the new Casamicciola, I will deal with that subject in a few days.

H. J. JOHNSTON-LAVIS.

The easy accessibility of the island of Ischia, the present advanced stage of geological know-

ledge, and the restricted extent of the superficies of earthquake, make of this island a situation thoroughly appropriate and convenient for the study of these terrestrial movements. To that end it would be necessary to establish a certain number of seismographs, spread over the island: they should be able to register the azimuth, the angle of emergence, or the molecular velocity, and the exact period of each motion, so that the speed of transmission might be determined. These seismographs should be distributed in two circles around the seismic vertical: there should be at least sixteen, to wit eight in each circle. One or several of these apparatus should be disposed along the seismic vertical in order to register vertical waves.

Exact thermometric measures of the principal fumaroles and the mineral springs should be registered hourly, and if possible it would be well to devise some means to take account of the discharge of the mineral waters and the pressure of the vapour in the fumaroles.

To this it might be useful to add microseismic observations. Changes in the sea level might also be of some interest compared with those at Naples.

The principal expense would consist in furnishing the instruments, which could be placed in chambers hewn in the solid tufa grottoes that are to be found by hundreds in the isle, and that might be acquired very cheaply, perhaps, even for nothing.

Thanks to all these measures we could study the real nature of the shocks, the progress of the centre toward the surface, and establish whether it is possible to trust to precursory symptoms of earthquake.

I would suggest to all charitable persons that the money spent in such an enterprise would produce much more good than if it were distributed among people to rebuild their dangerous houses of masonry, and thus prepare for new catastrophes.

Less than six days after the terrible occurrence, I saw masons at work repairing walls which threatened to fall; and many of the inhabitants had already returned to houses fissured and crumbling.

Further, if another shock should be felt more violent than the last a greater number of localities must suffer, as, for instance, Forio and Ischia, as well as the villages situated upon the south side of the island. It is necessary then to do all in one's power to preserve them against fresh disaster.

H. J. J. L.

Naples, August 22, 1883.

REVIEW.

Okoma. Roman Japonais illustré, par Félix Régamey, d'après le texte de Takizawa Bakin et les desseins de Chikanoi. Paris, E. Plon et Cie, Imprimeurs-éditeurs., Rue Garancière, 10. 1883.

BAKIN is the first of Japanese novelists. In one respect the Japanese novel better deserves perusal than the majority of its Western fellows. It is a more faithful record of every-day life. Sometimes, indeed, the writer makes excursions into the regions of the supernatural. Magic and mysticism exercise an important influence on the doings and destinies of his heroes and heroines. But even here his picture is not wholly untrue, since it only gives form and substance to the shadowy superstitions which live in the domestic traditions, and are more or less reproduced in the story, of every Japanese. We speak, of course, of things as they were when Bakin wrote, fifty years ago. That section of the nation which has come into

contact with Western civilization no longer furnishes types in this respect consistent with his ideals. But for the rest, students of Japanese character will find themselves well repaid by a perusal of his works. The more so that he was not an author whose conceptions, like those of many a much greater European writer, were portraits of himself from different aspects. Bakin had not time to fall in love with his heroes and heroines, and to dress them in all the elaborate drapery of his own idiosyncracies. He wrote to keep body and soul together, prefacing some of his works by a frank confession that the existence of a needy author is at best a semi-vitality. So little, indeed, did he associate himself with the men and women who peopled his pages, that he had need of mechanical expedients to keep the threads of their lives disentangled, putting the effigies of deceased heroes into a mimic coffin, and tying those of married folks together. Thus he was content to deal with ordinary people, and the more his portraits had in common with those to whom they were presented, the better was he satisfied with his work.

The romance of *Okoma*, though by no means one of his best efforts, possesses features peculiarly attractive to the translator. It is a novel founded on a Buddhistic theory which divides the great whirlpool of humanity into a multitude of little eddies, whose units owe their mutual attraction to the irresistible law of destiny. These circles of fate are not necessarily completed in the lifetime of one generation not yet of two. The particle which forms the nucleus of each may have had its origin in a remote time, and may have gone on, decade after decade, drawing fresh units within the sphere of its influence, until the catastrophe is consummated, and the iron band of affinities yields to the solvents of atonement and repentance. Nor does it necessarily follow that the constituents of such a circle have individually merited the place they occupy. The destiny of the Buddhists is an implacable power. Like the god of the Old Testament, he delights in revenge, and visits the sins of the fathers upon the children to the third and fourth generation. Thus the seemingly innocent share the fate of the guilty, and pity is referred for explanation to some crime committed in a previous state of existence, of which no consciousness survives though its responsibilities have been unsparingly transmitted.

The circle into which the life of *Okoma* is swept had its origin in a crime committed five hundred years before her birth. A priest, by name Gokubo, had violated his vows of celibacy and murdered the son of his paramour, whereupon the woman cut her throat, and her lover threw himself into a river, having first tied round his neck a purse of gold and a celebrated ink-stone, an heirloom of the monastery to which he belonged. The monastery was afterwards razed to the ground, and the bodies of the three, Gokubo, the widow and her son, buried under the ruins. Thenceforth the valley was inhabited by the spirits of martyred innocence and malevolent guilt. It became a place of worship, and the incongruous influences of its presiding deities, though easily exercised on behalf of those that solicited their aid, never failed to be revenged on those that forgot to be grateful. Among the latter was an official to whom a son had been born in answer to prayers uttered before the Fatal Tomb. The child had almost attained man's estate before its father thought of propitiating the spirits that had presided at its birth, and then his thought came too late. His request for permission to rebuild the ruined shrine was refused by the lord

of the manor, at the instance of a councillor who denounced the idea of erecting temples to demons. The result was that the child, becoming an agent of evil, finally lost his life in attempting to take that of a virtuous brother official, and the latter, knowing that his assailant had been inspired by their common master, resigned his office and retired into private life. The name of this virtuous official was Saikaku. He was married to the daughter of the councillor whose protests had prevented the erection of the proposed shrine. Thus though the spirits of the tomb had used Saikaku as their instrument, his household had still to dread their vengeance. Here it is that the many circles traced by the wheel of fate find a point of contact. Saikaku's intended assassin had two retainers, Shôhei and Chôtsuke, who were dismissed, after their master's death, with a present of twelve *riyo* each. Travelling together to their native village, they found, on the way, two hunters disputing the ownership of a hare. Chôtsuke, a peace-loving benevolent man, bought the hare and divided the money between the disputants, who went away delighted, leaving behind them in the grass a loaded gun. With this gun Shôhei shot Chôtsuke, and stealing his twelve *riyo*, escaped unobserved. Shortly afterwards the corpse was found, and the matchlock being identified as the property of the hunter Mata-ichi, the latter was arrested and thrown into prison, where he died shortly afterwards, leaving a widow without means of subsistence and an infant son, Kiso. Thus already a complicated series of debts of vengeance were contracted—the vengeance of the deities of the tomb, consummated in the case of the ungrateful suppliant by the killing of his son, but still to be achieved against the household of the latter's slayer, Saikaku: the direct vengeance of the vassal Chôtsuke and the hunter Mata-ichi against the man Shôhei, who had done them both to death; and the indirect vengeance of Chôtsuke against Saikaku, by whose act his dismissal and consequent crimes had been inadvertently brought about. These threads of his labyrinthian plot Bakin now proceeds to weave together. The fortunes of the murderer Chôtsuke are first followed. His ill-gotten gold brings nothing but failure. Poverty and sickness visit his house. A daughter is born to him on the fifth day of the fifth month, and to propitiate the anger of the deities, plainly foreshadowed by this coincidence, the only course is to expose the child. Chôtsuke carries his baby out and leaves it, at day-break, near the house of Saikaku, whose wife finds the child and brings it up with her own son. This baby is Okoma, the heroine of the book. She grows to be a girl of exquisite beauty, but her left hand is crippled. The fingers remain perpetually closed, defying all the medical skill of the time. At last Saikaku extracts from an ancient book a recipe that takes a strange hold upon his faith. To compound it, however, he must procure some mould from the Fatal Tomb. His wife in vain essays to turn him from his purpose. He visits the grave, but no sooner does he begin to dig than nature is convulsed; the earth opens and Saikaku falls into a chasm. His cries summon a wood-cutter who is no other than Shôhei, now a widower reduced to the last extremity of indigence and barely able to procure food for himself and his son. Shôhei jumps into the abyss, and the two men ultimately escape after a terrible struggle with, as they imagine, a huge serpent and a giant spider, which, however, turn out to be an inkstone and a string of gold pieces. Saikaku gives the gold to Shôhei and carries the inkstone away him-

self. He then rubs the mould on Okoma's hand, and the fingers, opening at last, release two beautiful insects, one of which hides in the girl's sleeve and the other lights upon the robe of Saisaburo, the son of Saikaku. From that day the two young people are seized with a violent attachment for one another, and their union, being sanctioned by Saikaku, is about to be consummated when Chôhei claims his daughter. Saikaku remonstrates, but to no purpose. Chôhei is now a wealthy man, but former misfortunes have made him a fatalist, and he has persuaded himself that he will again incur the anger of heaven unless he takes his daughter back. His only child is dead—killed in a trap set for foxes by Chomatsu, the son of the murdered Chôtsuke, and in this event the murderer sees a new cause to propitiate the Gods. Okoma, overwhelmed with grief, returns to her father's house where she finds a step-mother, Tatsuki, and a confidential clerk, Jôhachi. These two are paramours. The former is the widow of Chôtsuke; the latter, the younger brother of the hunter Mata-ichi. Their connection with Shôhei is the result of a plot to possess themselves of his fortune, and finding Okoma in their way, they conspire to effect her ruin. Meanwhile Okoma's lover, Saisaburo, in obedience to his father's commands, marries a cousin. At the ceremony of betrothal the insect escapes from the folds of his robe, and flying off, settles upon a servant who lives in Shôhei's house. This servant is Kiso, son of the hunter Mata-ichi. From that moment he, in his turn, is seized with a burning love for Okoma, who inadvertently ministers to his passion by her endeavours to win his good-will in order that she may employ him as an agent for communicating with Saisaburo. The step-mother Tatsuki avails herself of this chance. She persuades the unfortunate girl to write a declaration of unchanging affection, promising to deliver it to Saisaburo, together with the robe Okoma should have worn at her marriage with him. But she delivers them to Kiso, who, beside himself with joy, is waiting for further proofs of affection, when suddenly his mother appears upon the scene, and taking him home, obliges him to marry his cousin Okimi. The marriage is so unhappy that Okimi loses her reason. One day, during her husband's absence, she finds Okoma's robe, and putting it on, throws herself into the river. Kiso, on his return, goes out to search for her. Wandering by the river's bank in the dusk of the evening, he sees a woman run towards a bridge and precipitate herself into the water. Kiso jumps in, rescues her, and carrying her home, finds that he has saved, not his mad wife Okimi, but his love, Okoma, who hearing of Saisaburo's marriage, had conceived the idea of putting an end to her intolerable existence. Okoma, not suspecting Kiso's passion, does not rebel against remaining in his house. Any refuge is welcome that saves her from the marriage to which her father desired to force her. Some days afterwards, the body of Okimi is found. The features are too much decomposed to be recognisable, but the dress is identified as that of Okoma. Meanwhile the latter is kept close prisoner by Kiso. No questions are asked by the neighbours, who suppose that the husband is only doing his duty in confining his mad wife. Once more Okoma tries to kill herself, and once more Kiso prevents her. During this interval strange things are happening both in the house of Saikaku and in that of Shôhei. The ink-stone by its miraculous disappearance at a critical moment, and subsequent restoration to the Fatal Tomb, becomes the cause of Saikaku's

death, and of his son's elevation to a post of great dignity. Hearing of these things, and warned by the supposed death of his daughter that the gods are not yet appeased, Shôhei, in his turn, determines to restore to the tomb the string of gold pieces. Tatsuki and Jôhachi seize the opportunity to try and throw him over a precipice, but falling over themselves, are killed before their intended victim discovers their design. Shôhei goes home disconsolate, finds out that he has been living with the wife of the man he murdered, loses all command over his affairs and becomes at last a beggar and a leper. Meanwhile Saisaburo's wife, Ikoma, is attacked by a strange malady which defies all medical skill, and is openly attributed by the neighbours to the influence of Okoma's ghost. The patient's life is despaired of, when one evening there arrives at the house a travelling priest whose reputation as a diviner is widely known. By his advice Saisaburo keeps watch, spear in hand, every night at the time of his wife's paroxysms. Fate chances just at this time to lead Okoma to the home of her infancy. She has seriously wounded Kiso by mistake, and wandering about, half unconscious, falls by the spear of her first and only love. At this moment Shôhei, appears upon the scene, a leprous mendicant, and recognises in the priest his former gardener Chôtsuke, the cause of his son's death. Chôtsuke explains that all these misfortunes have been brought about by the influence of the Fatal Tomb: that the spirit of the sacrilegious priest Gokubo had entered into Okoma; that of his paramour into Tatsuki, and that of her murdered son into Saisaburo. Ultimately Shôhei, Kiso, and the latter's mother, shaving their heads, retire to a cloister to spend the rest of their days in prayer, and the evil influence of the Fatal Tomb disappears from the history of Saisaburo's life.

Such are the marvellous incidents of Bakin's novel, the gist of which M. Felix Régamey has now made familiar to the French public in a volume of extraordinary beauty and elaborateness. The translator's object has evidently been to render the outward features of his work so attractive to the eye that its contents will be almost sure of commanding a favorable verdict. And in this he has admirably succeeded. A straw-coloured silk binding, relieved by delicate designs in Indian ink, encloses eighty-three pages of rich thick paper, every one of which is adorned by some charming specimen of Japanese pictorial art, here in colours, here in sepia, and anon in black and white. On the left of each page, separated from the text by a thick line of sepia, is a broad margin containing detailed descriptions of the pictures; descriptions which, despite occasional inaccuracies and misconceptions, constitute valuable interpretations of Japanese manners and customs. It is to be regretted, however, that M. Régamey, instead of performing his duty faithfully as a translator, should have contented himself with giving a mere sketch of Bakin's work. In his prefatory notice of the Japanese author he describes him as a writer "whose phraseology is powerful; whose brevity goes straight to the mark; who, like the artists of his country skilled to make rapid, simple, and graceful strokes express everything, deals in accurate words harmoniously grouped, and in expressions so faithful that they seem to intensify the truth of what he writes." Having thus excited his readers' interest, M. Régamey would have done well to give them a specimen of the excellencies he lauds. But nowhere does he make the attempt. He confines himself throughout to telling us Bakin's story of Okoma in the words of M. Felix Régamey. To

illustrate the difference between the recitals of the Japanese and the French authors, we cannot do better than translate, and place side by side, the same passage from each:—

BERTY.
Then a stirring thought presented itself to Shōhei:—"Were all the money mine, it would constitute a provision for my whole life." And then, again, envy, that passion which knows no limit when once it possesses the soul, visited him:—"What had Chōshū done that he should receive half the gold which might have come to me undivided?" And then at last the evil fancy entered his head:—"Why not take it from him?" He glanced keenly back. Chōshū was still but a little distance off. No other wayfarer was visible. And there, half concealed by the long grass, lay a matchlock, forgotten probably by one of the hunters. Shōhei seized it with the meekness of a man to whom fortune is suddenly kind. It was loaded and the fuse was yet alight. In a moment he had thrown himself late position, levelled the weapon and fired. His aim was true. The unfortunate Chōshū, pierced from back to breast, had scarcely time to utter a groan before he was lying on his face, dead. Shōhei hurried away the matchlock; sprang to the side of the corpse; thrust his hand into Chōshū's bosom; pulled out the money; transferred it, with a glad face, to his own pocket, and then, fearful of observation, turned quickly off the main road into a by-path that led through a thicket of reeds in the direction of his native village. No man had knowledge of the crime.

M. FELIX RÉGAMÉY.
Shōhei remained behind, absorbed in reveries which, to judge from his sombre face, had nothing joyful about them. In truth he had just propounded to himself this axiom:—"Twenty-four rya are worth more than twelve. My fortune would be doubled if I could appropriate those which the other has received as well as me." And now he propounds to himself the problem:—"Yea! But by what means?" At this moment Chōshū—the hunters having left him—resumed his journey with the hare in his hand, at the same time hailing his companion. At the sound of his voice Shōhei, as though startled out of a dream, began to move on mechanically. He goes along always thoughtful, his look fixed upon Chōshū, who hastens his steps. Arrived at the place of the dispute, Shōhei staggers. His foot has struck against something. He looks. It is a loaded gun which one of the hunters has left there. An idea, swift as lightning, enters his head. And already the weapon is at his shoulder. He fires. Chōshū falls with-out a cry. The assassin has thrown the gun far away from him. Then he looks about him; not a living soul. He throws himself on his victim, spoils him and flies.

The contrast between these passages, taken, be it observed, at random, shows that M. Régaméy has made little if any attempt to preserve the spirit of his original. His book is nothing more than a French *procès* of the Japanese author's work. For the student of Japanese literature it has, therefore, scanty interest. But for those who care to become acquainted with the structure and plot of a celebrated Japanese novel, as well as with some of the superstitions which still survive in the domestic life of Buddha's worshippers, this beautiful volume will prove a pleasant acquisition.

ASIATIC SOCIETY OF JAPAN.

A General Meeting was held on Monday, 15th October, 1883 in the Grand Hotel, Yokohama. The Chair was taken by the President, Dr. Hepburn, supported by Mr. Hannen, the Vice-President, several members of Council and of the Society, and numerous ladies and visitors.

The minutes of the annual meeting held in Tôkiô on 20th June were read and approved. The Secretary announced, as a communication from the Council, that a request had been made to H.E. Sir Harry Parkes to allow his name to be added to the list of Honorary Members; also that, as Mr. Hattori, who had been elected a member of Council the last meeting, had declined to serve, Mr. Naibu Kanda had been elected in his stead; also that Mr. Henry Gribble had been elected a member of Council in the place of the late Dr. Geerts.

The PRESIDENT spoke with feeling on the loss that the Society had sustained by the early death of their esteemed member, and referred in terms of high eulogy to the services rendered by Dr. Geerts to the cause of science, and remarked that it was a source of pride to the Society that most of the valuable results of Dr. Geerts' energetic and patient study should have been given to the world through the pages of the Asiatic Transactions.

Mr. GRIBBLE then read his paper on "The Preparation of Japan Tea" in which, after describing the origin of Tea in Japan, so far as legend

and history afford us information on the subject, he referred briefly to its botany and chemistry, and then described in detail the process of country-preparation, from the planting of the seed to the packing of the cases for transporting the fired leaf to the treaty ports. Details were also given of the country cost of producing tea. The further process of refining in foreign godowns was then referred to, as also the operation of artificial colouring, and the use of machinery for tea-firing. A description was also given of the preparation of Japan Congou (furnished by Mr. James Green of Kōbe) and samples of Brick-tea were exhibited which had been supplied by Mr. Ringer of Nagasaki. The paper further contained Tables showing the total export of Tea from Japan during the past twenty years, and the prices obtained for different grades of Tea in Yokohama during the past seven seasons. The Government Department of Agriculture and Commerce had also furnished an addition to the paper by a tabular statement and diagrams showing the extent of land under tea cultivation in Japan. The Appendix also contained supplementary papers by Dr. Divers upon "The chemical properties of Tea" and upon "Artificial colouring." The paper was supported by numerous illustrations of the different processes of tea manufacture, which had been lithographed, and are to form part of the volume when printed.

After the PRESIDENT had opened the discussion by a few remarks on the universal use of tea, the influence it has on commerce, on society, and on the wealth of nations, Mr. F. WARRINGTON EASTLAKE remarked that Mr. Gribble spoke of both *Thea Viridis* and *Thea Bohea*, but according to some recent papers of the German Botanical Society at Berlin he understood that *Thea Viridis* is no longer made a separate species but is spoken of simply as a variety of *Thea Bohea*. Could it not be possible that the *ou-cha* and *me-cha* spoken of by Mr. Gribble represent the two forms of *Thea Bohea*? About a year ago the German Government sent to Hongkong for specimens and seeds of the tea-plant, but he believed that the request was for *Thea Bohea* and any other varieties known to the Chinese.

Mr. GRIBBLE understood that the *ou-cha* and *me-cha* are both offspring of one and the same plant, and that the tea-planters never knew beforehand which variety would be produced by the young plant.

Dr. DIVERS said that botanists appeared to recognise only two species, or at least very distinct varieties, of *Thea*,—*T. Sinensis* and *T. Assamiensis*. Indian tea was now gathered almost exclusively from a hybrid of the Chinese and Assam species. He had brought with him, as likely to prove of interest to the meeting, a specimen of *caffeine* or *theine* which he had had prepared from Japan tea by one of the students of the Imperial College of Engineering. He might mention that the injurious effects of too much tea-drinking were not of such an imaginary character as might be supposed from Mr. Gribble's introductory remarks. These effects were often apparent in many of the women attending as out-patients at the London hospitals; and with those patients it was often of as much advantage to stop their tea for a time as it was to check the use of alcoholic drinks with others.

During the evening a venerable Japanese professor of the ceremonies of the *Cha no Yu*, with two fair assistants, had been preparing some cups of *Hikicha* (powdered tea) which were partaken of by the visitors after the meeting had dissolved, and assumed the more social aspect of an evening tea party.

TRANSLATIONS FROM NATIVE JOURNALS.

THE EBB AND FLOW OF SOCIETY MATTERS.

(Translated from the *Choya Shimbun*.)

Let us, for instance, from the summit of a high mountain look down upon the vast ocean. The firmament appears as though engulfed in boisterous waves, which in their turn seem like a crumbling mass of huge rocks or an immense herd of horses galloping frantically. The white sails of passing craft and flying sea birds are seen now and then peeping through the clouds. Our eyes are dazzled and our minds filled with intense amazement. Even on calm days, when there is not enough wind to shake a ship's canvas, the water seems to be in a state of constant commotion. This is caused by the revolution of the world and the attraction of the sun and moon. It requires but a little wind to throw the water into a state of great fury. Worldly affairs are analogous to this motion of the waves. When they are quiet, we cannot observe the operation of the law. But if they once move they will not go ever forward. They have to rise and fall. Everything in this universe, be it small or great, organic or inorganic, is governed by this rule. The principle is observable not only in the tides but in the water of a pond, which can be stirred by throwing a stone into it; or in a stream which never flows in a straight direction. Let us, for instance, place a board in an oblique position and pour a quantity of water on it. The liquid will not run straight down, but in a devious way. Again, witness the direction of the wind which howls and shakes the houses. At one moment, it blows from the East at another from the West. [Here the writer give a number of similar illustrative cases.] According to Christianity, God reposed from the creation of this world on the seventh day. Thus, the Omnipotent himself rested. Even in His power, there seems to be expansion and contraction. How much more then must such be the case with His creatures? This law applies not only to one individual or his family, but to the economy of the world. Should a manufacturer succeed in making a novel article and consequently gather large wealth, others will speedily follow him and invest much capital in the manufacture of the same article. The result will be a superabundance of the goods and a fall in their price. Under such circumstances, manufacturers will be obliged to invest their capital in other enterprises; and the consequence will be a conspicuous change in the market. If imports exceed exports, the rate of exchange will fall and the tendency toward exportation will be increased. On the other hand, if the latter exceed the former, the rate of exchange will rise and the tendency toward importation will be increased. International trade, by the way, is nothing more or less than the rise and fall of tides. Rice and Stock Exchanges are another example of the law. There are also signs of change in matters of less importance, as for example, in fashion, and of greater importance, as the decline or prosperity of a nation. Our community must either advance or retrograde. A perusal of history shows us this mystery disclosed in the prosperity and decline of nations. In connection with this subject, it is interesting to examine the Chinese method of divination by drawing dots—geomancy. This science professes to illustrate

the natural order of things, that is, the active and passive principles of the universe. The "Twelve Trigrams" correspond, in this respect, with these principles in so far as the representation of the earth, heaven, and restoration (from evil to good) are concerned. This seems mysterious enough, but it is founded on the law of active and passive principles. Although the *Yeki* (divination) is often at variance with reason and based upon absurd postulates, yet there are some germs of truth in it, since it was invented by ancient Chinese philosophers who had great experience in the art of divination. We will now proceed to apply the *Yeki* to our national vicissitudes and see whether the present revival of old customs is momentary or permanent. It must, however, be borne in mind that we prescribe the Chinese method of divination, not because we favor the resuscitation of Chinese learning, but because the very learning that the pro-Chinese classical party attempt to restore, is predicted by the *Yeki* to be of short duration. Our calculation is as follows:—

In the *Yeki*, the odd numbers represent the male, and even numbers the female, principle. The white dots indicate the former and the black dots the latter. The male principle represents heaven, virtue, tranquillity, wise men, and mental activity. This we may call the positive principle. The female principle signifies earth, vice, disorder, unwise people, and inaction—the negative principle. Five white dots and ten black dots occupy the central position in the above diagram. Three white dots are on the left side with one just below the five black dots, surrounded by eight and six black dots at the left and at the bottom respectively. On the right and top, there are seven and nine white dots enclosing two and four black ones. The central white and black admit no change of position, thereby signifying the so-called heaven and earth in the divination. The course of the remaining dots runs from left to right, white and black chasing one another—an indication of the constant transformation of the universe. But the central dots, representing the principle of nature, do not undergo any change whatever. This is exactly the case with our affairs. History gives remarkable illustrations of this fact. [Here the writer quotes from Chinese history a long narrative of the rise of such a dynasty and the fall of another.] The overthrow of the late Tokugawa Government affords another indisputable example. While the usurper was in possession of supreme power and was crowned with glory, the loyal party sprung up and contrived to annihilate the feudal *régime*. Nothing could resist the progress of reform. Again returning to the book of the "Twelve Dia-

grams" at random, we encounter the following signs:—

Under restoration, we find one positive (—) then (reading from left to right) *turning point*, then *peace*, *great prosperity*, *immovable*, and *heaven*. The last mentioned word, however, changes to *re-union* if two negatives (— —) appear in the last line. Then, the phrase will read *re-union*, *avoidance*, *close observance*, *deprivation*, and *earth*. Thus, we see that the Twelve Diagrams and geomancy are identical. They always lead from extreme prosperity to extreme decline and *vice versa*. All human affairs are subject to this rule.

Observers may remark that Geomancy and the Twelve Diagrams deal simply with the progressive and retrogressive attitude of our community as represented by the positive and negative principles, and mean nothing more than that tranquillity merges into disorder and *vice versa*; that if this doctrine is correct, there is no room for progress in society, which is always within a limited space; and that finally our remark is opposed to the theory of evolution. This is absurd. We have only referred to geomancy and the Twelve Diagrams to show that human affairs are alternately progressive and retrogressive. It is, however, in the order of nature that the superior should dominate over the inferior. Examine the conditions of the rise and fall of a political party. Where there is one powerful party—this is a trait of human nature—another will use its utmost exertions to compete with it, thus augmenting its own power, knowledge, and ability. But when it attains supremacy, it relaxes both caution and foresight. Hence the alternate decline of power.

[Here the writer reviews the various changes that have taken place in English politics and Japanese fashions. For instance, even after the Magna Charter had been granted by King John, the rights of the people suffered more or less in various ages.]

From the Restoration up to the present date a period of sixteen years—we have witnessed several changes occurring with the rapidity of succeeding waves. Our political system was imperfect and a fresh one was established on the model of England. Law was copied from France. Japanese costume has an appearance of barbarism. The Chinese classics impede the progress of civilization. Men and women have equal rights. That the husband should exercise exclusive power over his wife, is against universal justice. They must walk arm in arm after the European fashion. Thus, both good and bad alike were overturned.

At that moment, those who advocated the encouragement of morality and urged the necessity of preserving our customs and manners were condemned as obstinate and ostracized by society. The upper classes did everything in their power to introduce Western institutions. The effect was remarkable: even those ignorant of the alphabet talked of civilization. This state of affairs continued till but a few years ago. Then statesmen

began to assert that Japan was Japan, and having customs, manners, laws, and a constitution of her own, it was absurd to introduce all kinds of European institutions. This proposition was immediately followed by a revival of those archaisms which had fallen into desuetude long ago; and what is more astonishing, ardent efforts are being made to replace the movement for the extension of freedom and popular rights by the elder code of ethics. This is in accordance with the law of ebb and flow of tides. But vicissitude has one fixed point over which it oscillates. All temporary influences soon dwindle away. It is, therefore, most important now to consider what effects have arisen from without and within and to judge whether or no our "progress" is not "retrogressive."

For three centuries, we maintained a rigid seclusion; and, consequently, when the country was opened to foreign intercourse we were startled by the wonderful and novel features of Occidental civilization. At the very outset, we evinced an intense hatred for foreign things; but as we grew accustomed to them, we commenced to appreciate them keenly. And this sentiment increased in force as the immense advantages arising from their adoption presented themselves. In short, anti-foreign feeling changed to a pro-foreign one, and the consequent intellectual development was remarkable. The Government also, recognizing the drift of popular opinion, exerted itself to accustomize European institutions in Japan. It constructed telegraphs and railways; organized the Navy and Army; abolished the old calendar and those teachings of the Chinese sages which had embedded themselves in the brains of the Japanese; and established schools and colleges after European models. Looking at the past, we are surprised at the rapid progress made in the manner of living, education, fashion, etc. It appears as though a tidal wave from abroad had swept old Japan away and created a new world in her place. The reverse, however, is the case now. The tea-ceremony and sundry other usages that were abandoned long ago have come into new use. Hence the question arises:—"Is Japan retrograding?" To solve this query, we must search the record of her adoption of steam and electric inventions. None will fail to recognize the vast advantage of steamers over junks: the value of telegraphs, telephones, dynamite, and the postal service. We cannot dispense with them. Hence there is no necessity for apprehending their in stability among us. It is plain that the present revival of old things is momentary and will be superseded by another and a stronger desire for new things. But what renders us most apprehensive is the change in the educational and political systems of the country. It threatens our welfare for ever. The progress of this change we recognize now and then. The Chinese language [was employed for a considerable time as the medium of thought, and it has become almost impossible to dispense with it entirely. Nevertheless, the study of Western languages has attracted the attention of the populace, which has eagerly adopted it. In consequence of this, the Chinese schools have been completely ruined, while English teaching seminaries have sprung up in all parts of the empire. The provincial officials have considered it their first duty to establish such schools in the districts under their jurisdiction. Those who possess the slightest knowledge of the English language have been appointed officers with high emoluments; whilst Chinese scholars are unable to obtain even the lowest position. And so has arisen a class of people, who, while possessed of a good knowledge of foreign languages and advanced ideas, cannot express themselves in writing and are incapable of taking part in journalistic controversy. This shortcoming they have at last discovered, and, though they despise the Chinese tongue, have been obliged to study it in order to acquire sufficient knowledge to express their ideas in the Japanese written language. This reaction has given a great impetus to the neophobists who regard the revival of Chinese literature as a sign of the restoration of the old state of things. The whole is the outcome of sheer ignorance. The introduction of Occidental science originated the doctrines of liberalism and popular right. Conservative persons, however, came to apprehend that at no remote date the Imperial authority would be abolished and the foundations of the dynasty would be shaken. To avoid such calamity, they contrived to encourage

the revival of the study of Chinese classics. This may continue for some time, but so soon as the tide ebbs, Chinese learning will be a thing of the past. This interference from without cannot be ultimately successful: yet it must be opposed as sternly as possible. We firmly believe that the revival of old customs is only momentary, and cannot be much impediment to our progress.

TRADE REGULATIONS BETWEEN JAPAN AND KOREA.

(Translated from the *Fiji Shimpō*.)

Our readers will be aware of the Trade Regulations recently enacted between the two countries, which we published a few days ago. They were concluded in Seoul on the 25th of July last between the high plenipotentiaries of the respective powers, H.E. Takezoye and H.E. Min Yoo Mog, and have been ratified by the Governments of the two nations. They were to come into force within one hundred days after the ratification, so that they must have been in operation since the 2nd instant. These provisions are of the utmost importance to our merchants, who ought to pay serious attention to them.

The treaty of friendship and commerce with Korea was concluded in February of the 9th year of Meiji, since when seven years have elapsed. At that time, a small number of Japanese merchants went to Korea and confined themselves to the one port of Pusan. It is but three or four years since Korean commerce with us assumed any importance. Inchōn was opened this year and a large number of Japanese flocked thither, hoping for a prosperous trade. Till now Japanese commerce with Korea was foreign in name, yet in fact it was domestic. Japanese craft could enter any port of that country. They were not required to enter and clear at the treaty ports. We could sail thither in junks and fishing boats. No tonnage dues were imposed upon Japanese ships and no duty is levied on goods. It was owing to this liberal policy that trade developed, a fact which requires no confirmation from us. Now, the tariff having been fixed, our merchants will experience great inconvenience; and the trade regulations appear to be a great disaster, yet, when considered calmly, they are found to be in accordance with reason and justice. There is no country on the earth where, even though free trade be nominally adhered to, all imports and exports are duty free. It is, therefore, against reason to deny to Korea the right of imposing a duty on goods. As we Japanese hate unreason and injustice, we have no desire to be included in the category of evil names, even though we may be unable to conform to the strict dictates of justice. We firmly believe that no complaint will be raised among merchants, although they may have different opinions as to the proportion of the duties to be levied. On looking into the tariff, we find that, with the exception of coin, bullion, and passenger's personal effects, all exports are subjected to a duty of 5 per cent., that on ginseng only amounting to 15 per cent. On the other hand, all imports are subjected to a duty varying from 5 per cent. to 30 per cent. This is by no means a light scale. Had the draft of the tariff been submitted to the consideration of Japanese merchants prior to ratification, following the example of European Governments, they would have suggested having some of the 5 per cent. goods put in the duty free list, eight per cent. goods charged 5 per cent. and so forth. But it is too late now. To speak of it almost amounts to counting the age of one's dead children. As things are in this sad condition, we have nothing left but to advise our mercantile community to wait till improvement comes of itself. In our opinion it is imminent in the near future.

The countries at present in treaty with Korea, are America, China, and Japan. The second named country has put on record its empty pretension that Korea is its dependency. Having no proper convention, its relations with the peninsular kingdom are ambiguous. At the end of last year, however, commercial regulations between the two nations were agreed upon at Tientsin, Korea being represented by Cho Yōng-ha, Kim Kōng-jip, and O Yun-jung, and China by Li Hung-chang

and Ma Ken Tsung. The Convention consists of eight provisions which are binding upon Chinese merchants trading in Korea—a fact which goes to show that China is nothing more than a treaty power *vis-à-vis* Korea after all. It is necessary first of all to know whether or no the trade regulations between America and Korea or those between China and Korea were taken as the basis of our tariff. Looking over the China-Korean trade regulations, we find that Chinese and Korean merchants are alike required to pay duty on imports and exports. But we do not find any scale, though we see that ginseng is subject to a duty of fifteen per cent. Article 5 of the said regulations reads as follows:—"Likin offices will be established on the frontier of the two countries where Koreans and Chinese are in the habit of trading. Five per cent. will be charged on all goods with the exception of red ginseng." According to this passage, it appears that the traders of the two nations are at liberty to conduct commerce on the frontier of the two countries, paying five per cent. on all commodities. The difficulty is to know whether the regulations apply to the commerce on the frontier only, or extend to Pusan, Inchōn, and other Korean ports. If they are operative in the treaty ports, Japanese trade will be completely ruined. Under such circumstances, it will become necessary to revise the trade regulations between Japan and Korea. As, however, it is impossible that the functionaries entrusted with making the Convention should have failed to foresee its consequences, it is safe to conclude that the China-Korean trade regulations are operative only on the frontier. Then arises this question:—Is it not unfair that on the frontier five per cent. dues should be imposed, whilst 15 to 30 per cent. is charged on the same article in the treaty ports? Under such conditions there is no chance of the development of trade. Indeed, the whole trade will be monopolized by Chinese; and Japanese will be obliged to close their stores and return home. The town of Wi-ju lies at a distance of one hundred *ri* from Seoul; and access thence to the capital is easy. To the North Wi-ju is what Pusan is to the South. Suppose we export *saké* to Inchōn, we pay a duty of *yen* 30, while we are required to pay only *yen* 5 in Pusan. No Korean living in Inchōn will purchase the spirit at a high price, however near by he can buy it, so long as he can get it cheaper from Pusan. How much more, then, is this applicable to the residents of Chhung-chōng-do, Chōl-la-do, Kyōng-sang-do. So long as the present China-Korean trade regulations are in force, Japanese regulations are of no avail. Did the functionaries who drew them up fail to recognize such an evident result?

Although America concluded a treaty of commerce and friendship with Korea last year, yet nothing has yet been decided as to the regulations under which American trade is to be conducted in Korea. The question is whether the functionaries who made the Japanese regulations consulted with the American Government prior to ratifying it. While English, French, and German goods are subject to an 8 or 10 per cent. duty, American petroleum is taxed 5 per cent. only. But we believe that there was no regular previous consultation between the U.S. Government and the other parties. Nevertheless, Americans trading in Korea are exempt from duty so long as they have no trade regulations; while, on the other hand, Japanese merchants are subject to heavy duties.

So far for the American and Chinese merchants in Korea. In our opinion, there is a means to save Japanese merchants from ruin. Article 42 says:—"Any right, privilege, or favour which the Korean Government has actually granted or may hereafter grant to the Government or subjects of any other states shall be extended to the Government or subjects of Japan without delay." Thus, if Chinese merchants can trade on the frontier paying duties on a five per cent. basis, Japanese can claim the same privilege. If Americans pay no duty, Japanese need not pay any either. We have the right to claim whatever privilege is granted to other nations. Japanese, therefore, need entertain no apprehension whatever. America being a protectionist country surpasses all other nations in the exorbitance of her tariff. To prevent others from doing to her what she does to them, is inconsistent with the principles of justice and reason. On this ground, America appears to be condemned to silence. But her com-

merce in the Far East is not so large as that of England. Consequently she is far less affected. The liberality that America displays toward Korea is the result of the insignificance of her interest in that country, and is not true charity. With us, however, the reverse is the case. Our interest in Korea has been growing great and greater ever since the Seoul outrage. Prior to that event, our trade in Pusan and Wōnsan amounted only to *yen* 4,000,000 per annum. But since July last year, Inchōn and Yang-hwa-chin were opened for our trade, and as Koreans have begun to show a keen appetite for foreign intercourse, there is just now a promising prospect for commerce. Nevertheless, we agreed to the tariff on a five to thirty per cent. basis. Our liberality and courage in this have no equal! Twenty or thirty years ago European nations taking advantage of the ignorance of Japanese statesmen, forced upon us a five per cent. tariff. (Actually, it is as low as three or four per cent. with the exception of a few articles.) Whether it is the recognized tactics of civilized nations to treat the uncivilized in this fashion we cannot say. But even though Japan should force a five per cent. tariff upon Korea, Europeans have no right to open their mouths on the subject. In other words, it may be asserted that Japan had a right to enforce a five per cent. tariff upon Korea; but she accepted a schedule varying from five per cent. to thirty per cent. The utmost liberty and respect for international morality are the fittest words of encomium for Japan's conduct towards Korea. Taking a merely superficial survey of affairs, we are inclined to applaud these abstract virtues. When, however, we sound matters to the bottom, we find that the liberality and morality cannot endure. China and America are already placed on a better footing than Japan. England will shortly be placed on an equal footing with them. Her representatives, Sir Harry Parkes and Mr. Aston, have gone to Korea, and will claim whatever privileges they deem necessary for the furtherance of trade. England is to Korea what an eagle is to a sparrow. If the former wants to have its own way with the latter it will have it. England concluding a treaty with Korea, will be the signal for the concession of the privileges to Japan which are provided for in the forty-second Article of the Trade Regulations. Some might argue that the present tariff is contrived to deprive the treaty Powers of any further pretexts to refuse revision of their Japanese conventions. This is sheer ignorance. In the eyes of Englishmen, the tariff between Japan and Korea is nothing. All that they want or care for, is the promotion of their own interest. It is clear that the tariff was not made with any reference to treaty revision.

KOREAN TRADE.

(Translated from the *Mainichi Shimbun*.)

Our readers will remember that we have lately published a copy of the commercial stipulations between Japan and Korea, which were evidently devised to regulate the mutual trade, authorizing the peninsula to collect customs duties. These stipulations have an important bearing upon Korean and Japanese commerce. We will first call the attention of our merchants in the peninsula to the present condition of trade with Japan, and afterwards comment upon the stipulations referred to. It must be remembered that about seven years have elapsed since we entered into trade with Korea. At the commencement of our transactions, some asserted that they hardly expected to see Korean trade prosper in future, while others expressed the contrary opinion. Complicated discussions ensued, and the public appear to have recognized the perils that were likely to attend the uncertain nature of Korean commerce. Nevertheless, the trade between the two countries seems to have lately progressed in some measure. Latest information announces the value of exports and imports in Korea to have amounted to four million *yen*. This amount does not suffice to show the prosperity of business, yet so far as the present condition of our foreign trade is concerned, we may be justified in saying that our commercial relations with Korea are not so insignificant as have been

supposed by some people. Holland, Russia, Italy, and Germany, entered into commercial stipulations with our Empire prior to the opening of intercourse with the peninsula. Unlike Korea, these four countries do not regard foreign commerce as a thing to be despised, while they surpass her in their national power and civilization. Yet, considered with regard to commercial relations, Germany, Russia, Italy, and Holland are far inferior to Korea. According to the annual statistical report, the value of exports to Russia in 1879 and 1880 amounted only to yen 60,000, and in 1881 to a little more than yen 100,000. The exports to Holland in 1879 realized yen 60,000, and in 1880 only yen 20,000; while the value of imports from and exports to Italy in 1879 and 1880 did not exceed yen 600,000 and 1,000,000 respectively, although she is regarded as the chief customer of our silk and silkworm egg cards. The trade report of last year shows the amount of exports to, and imports from, Holland and Italy to have hardly reached the value of yen 10,000 and yen 400,000 respectively. There are many other States in Europe, which have concluded commercial stipulations with us, but none of them has ever surpassed Italy in the amount of exports and imports. While Korea is despised by our people as a small, barbarous country, her trade with us has been so successful as to realize four million yen a year. In so far as the actual condition of our foreign commerce is concerned, it is quite reasonable to assert that our Korean trade ought not by comparison to be condemned as insignificant. Our readers may remember that, since the 29th ultimo, we published in instalment an admonitory document despatched to Korea by the Chinese Government with a view to conclude special commercial treaties. The demands of the Chinese authorities, however, was firmly rejected, on the ground that should special treaties be concluded with China in accordance with her proposal, Japan would not hesitate to follow their example, and that compliance with the Japanese demand would render it necessary to conclude similar stipulations with America, England, France, and Germany. If this be the case, the people of these powers will reside in the interior of Korea indiscriminately with the natives, and carry on fishing on the coast with perfect liberty. Thus countless misfortunes may befall the peninsula. Nevertheless, China did not take into consideration these circumstances, but pressed her neighbour to agree to her arbitrary request. Whether the Middle Kingdom will be enabled to attain her ends or whether she will fail on account of the existence of Japan and other treaty powers, we are unable to conjecture. Yet it is unquestionably certain that she will shortly succeed in entering into new commercial relations with Korea, and commence trade operations in the various open ports in the latter country just as is the case with our countrymen. From these circumstances we may be allowed to infer that our Korean trade will ere long present a totally different aspect, and that seventy or eighty per cent. of our commerce will fall into the hands of the Chinese. In corroboration of this argument we may state that the Japanese merchants possess neither the ability nor experience in trade of the Chinese, while the territory of the latter offers greater facilities, through its position, for trade than that of Japan. Moreover, our exports to Korea do not consist of articles of our own manufacture, but are almost entirely those of foreign production. Before commenting upon these particulars, we will endeavour to show how our merchants were enabled to reap large profits in the peninsula, which might have been secured by the Chinese. There is a province called Gishiu on the boundary between China and Korea. As the Chinese authorities have hitherto prohibited maritime trade with her neighbour, the sale of merchandise on both sides could only be effected by opening stores in Gishiu, so that business might be conducted on land. It was simply on account of this oversight on the part of the Chinese Government that our merchants were enabled to reap large profits in the peninsula. The profits resulting from transactions in Gishiu have thus hitherto been monopolised by Japanese, but it now happens that our merchants in Korea have to be deprived of their advantageous position and must expect to incur considerable losses. In corroboration of this view, we are informed that prior to the opening of the two ports,

Pu-san and Won-san, the trade in Gishiu, namely the China-Korean transactions, realized three million *ryos* a year, but that since these ports were opened to commerce, Chinese business appears to have steadily declined, the imports and exports in Pu-san in 1881 amounting in value to yen 2,300,000 and those in Won-san in 1882 reaching yen 1,400,000. From these facts it may be inferred that the transactions in Gishiu should have diminished by half the amount as compared with the previous years. In the course of events, the depression of our peninsular business is now to be replaced by the growing prosperity of commerce between China and Korea. This can be plainly perceived from the fact that steps are being taken by the Middle Kingdom to commence transactions in Pu-san and Won-san by establishing steam communication with these ports instead of carrying on an overland trade exclusively as heretofore. The principal imports to Korea consists of shirtings and lawns manufactured in Western countries, while transport can be effected by the Chinese at lower rates than by the Japanese. The China Merchants' Steam Navigation Company have, we are informed, already established a regular service between Chefoo and In-chhôn, their vessels plying three times a month, whereas we have not yet arranged to dispatch a mail even once a month. Therefore, China may reasonably be recognised as getting ahead of us in this respect. In our opinion, it is quite unnecessary for the authorities to subsidize heavily a line of steamers for this trade. Supposing the Government renders ample pecuniary aid to the Mitsu Bishi Company or the Union Shipping Association, with a view to establish steam communication with In-chhôn three times a month, it is still impossible to compete commercially with the Chinese in that port; inasmuch as the most prominent imports to the peninsula, namely shirtings, are brought from Shanghai, thus opening direct intercourse with In-chhôn and affording Chinese the facilities unattainable by Japanese. Below is a comparative table of distances between In-chhôn and the various ports in Japan and China:—

| Miles. | Miles. |
|-----------------------------------|-------------------------------------------------------|
| Nagasaki to In-chhôn 458 | Nagasaki to In-chhôn via Pu-san 593 |
| Shimonoseki to In-chhôn 590 | Shanghai to In-chhôn via Chefoo to In-chhôn 572 |
| Shanghai to In-chhôn 493 | Nagasaki and Pu-san 1,053 |

From the above it will be seen that the distance from Nagasaki to In-chhôn is 458 miles (nautical), and from Shanghai 493 miles. Should Chinese desire to transport merchandise to In-chhôn, they have to travel about thirty miles more than Japanese in Nagasaki. Yet a closer investigation shows that the reverse is the case. This may be clearly comprehended from the fact that the chief imports to Korea, such as shirtings and lawns, which form seventy or eighty per cent. of the whole trade, are first brought from Shanghai to Nagasaki and then transported to In-chhôn via Pu-san. Therefore, the export of these commodities to In-chhôn requires a voyage of more than a thousand miles. On the other hand, Chinese may effect their purchases direct from Shanghai by sailing 493 miles only. Even admitting that there is no difference in the rate of freight in China and Japan, half the amount will suffice for the former as compared with charges necessary for the transport of goods to Korea from the latter country. Shirtings and lawns exported by Chinese are thus saleable in Korea at lower prices than those transported by Japanese. How can it be possible for our merchants to compete commercially with their neighbors the Chinese? These circumstances can scarcely fail to create disadvantages for our merchants. Those who are engaged in foreign commerce are familiar with the fact that the freights charged by the China Merchants' Steam Navigation Company are lower than those charged to our merchants by Japanese steamers. We have not investigated the cause of the difference in freights in the Middle Kingdom and in Japan. According to the statements of some of our merchants, it seems probable that the Chinese Steam Navigation Company referred to has been organised under the special auspices of Li Hung-chang with a view to receive its assistance for carrying out his policy, and that he furnishes an enormous subsidy to enable the Company to carry on in such a manner as will hardly admit of competition. Under these circumstances we may be permitted to assert that competition with the

China Merchants' Steam Navigation Company in the matter of freights is quite out of the question so far as our shipping facilities are concerned. The return of imports in 1881 and 1882 for Pu-san and Won-san is as follows:—Pu-san—shirtings, value yen 490,000; lawns, yen 330,000; copper, yen 60,000; *kaiki* (silk fabric) yen 30,000; making a total of yen 910,000 in value. Won-san—shirtings, value yen 440,000; lawns, yen 150,000; copper, yen 6,300; making a total of yen 596,300. From this it will be seen that the total value of imports in Pu-san in 1881 was yen 910,000, shirtings and lawns together reaching yen 820,000, while imports in Won-san in 1882 amounted in value to yen 596,000, shirtings and lawns realizing yen 500,000. There may be some difference between the demand at Pu-san and Won-san and at In-chhôn, yet, so far as the actual condition of trade in two ports is concerned, we may assume that the people in Kyōng-kwi-do must be regarded as the chief customers of In-chhôn, and that their wants will be similar to those which satisfy the inhabitants of Pu-san and Won-san. From the past condition of trade we may prognosticate its future, and thus we are finally led to the conclusion that future prospective trade in In-chhôn will scarcely fail to bring ruin upon Japanese merchants.

Now, a question arises, "Can we expect to succeed in our business in the other two ports, namely Pu-san and Won-san?" To our great regret, the answer must be that as regards the transactions in these ports, we anticipate dire disappointment. This view is supported by the fact that the shirtings in demand in Korea are entirely different in quality to those wanted in Japan. Manchester manufacturers can only satisfy the desire of our neighbours. Some prominent merchants in the Middle Kingdom have already entered into contracts with manufacturers in Manchester to mark their orders with their own trade marks, such as "Gigen" or "Taian." The Koreans appear to place strong confidence in these goods; so much so, that they have almost refrained from purchasing any other than those bearing the above marks. Japanese used to buy these specified commodities from Chinese traders and import them to Pu-san and Won-san. Should commerce, therefore, become practicable between China and Korea, the former will not hesitate to export her goods to Pu-san and Won-san and any other ports, where she may be enabled to make a profit. Thus it is plain that she can carry on a business with her own goods, while Japan can only engage in Korean trade through Chinese dealers. At all events, we can never hope to obtain such advantages as those enjoyed by the Chinese. Under these circumstances, we may be justified in saying that our Korean trade is destined to end in failure, for it does not manifest the least prospect of continuation. The foregoing statements are specially furnished to attract the attention of our merchants who are engaged in Korean commerce. Should any of our readers be able to devise a scheme whereby a hold may be maintained upon Korean commerce, we earnestly request them to inform us of the same.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinions of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—You have perhaps heard of the gentleman who read his Japanese servant a long moral lecture without employing language more diffuse or elaborate than the simple words "Naze omaye!" I have met incredulous persons who profess to doubt this story. Should there be any such among your readers, permit me to refer them to "Observer," (a correspondent of one of your local contemporaries) who possesses the ability of holding long conversations on difficult subjects with natives of this country, though his knowledge of the vernacular does not help him to compose better Japanese than, "*Nippon nifu tain warui, a-ah warui de gosaimasu!*"

Your obedient Servant, INDEED.
Tokyo, November 2nd, 1883.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, NOVEMBER 2ND, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongh, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

Dotted line—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

• Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 14.6 miles per hour on Thursday at 3 p.m.

The highest reading of the barometer for the week was 30.307 inches on Tuesday at 10 a.m., and the lowest was 29.777 inches on Friday at 6 a.m.

The highest temperature for the week was 69.0 on Friday, and the lowest was 38.0 on Tuesday. The maximum and minimum for the corresponding week of last year were 68.1 and 41.3 respectively.

The total amount of rain for the week was 0.308 inches against 0.724 inches for the corresponding week of last year.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00, 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

TIME TABLES.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, sen 70.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

LATEST SHIPPING.

FREIGHTS.

In sympathy with the China ports, freights are at a very low ebb, with scarcely any business. From this to Nagasaki, with lumber, the British barkentine *Evangeline* has been chartered, \$500 in full, 28 lay days. The *Sagitta*, for Havre and London, has not yet left here, while the *Gilead* has filled at Kobe and sailed for New York on the 6th instant. The *Flintshire* was to have left Kobe on the 9th for London, via ports, and the berth here for that destination is occupied by the *Breconshire* with quick despatch. For New York, the *Venice* is to sail on the 20th instant, with the *Canton* to follow for same destination with quick despatch.

ARRIVALS.

Arabic, British steamer, 2,787, W. G. Pearne, 2nd November.—Hongkong 27th October, Mails and General.—O. & O. S. S. Co.
Taganoura Maru, Japanese steamer, 448, Matsumoto, 2nd November.—Yokkaichi, General.—Mitsu Bishi M. S. S. Co.
Kenjin Maru, Japanese steamer, 230, Masuda, 4th November.—Handa, General.—Seiriussha.

LATEST COMMERCIAL.

IMPORTS.

Since last report the business done has been so trivial that it is impossible to alter quotations which must, however, be taken as quite nominal in view of the present stagnation, as dealers are not operating at all in Staple Goods; almost the only article which has been moved at all being Mouselines. Metals continue quiet, though one or two sales of bar and nailrod Iron of favorable sizes have found buyers "to arrive."

COTTON YARNS.

| | PER PICUL. |
|-----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium - | \$25.00 to 28.50 |

| Nailrod, small size - | 2.85 to 3.15 |

KEROSENE.

No business whatever has transpired in Oil during the past week, and the following quotations are therefore nominal. Deliveries have amounted to 15,000 cases, leaving a Stock of about 650,000 cases in first hands of sold and unsold Oil.

| | PER CASE. |
|----------|-----------|
| Devoe - | \$1.68 |
| Comet - | 1.65 |
| Stella - | 1.52 |

SUGAR.

Prices remain unchanged, but business is small on account of holders refusing to make any concession.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.40 to 8.50 |
| White, No. 2 - | 7.00 to 7.50 |
| White, No. 3 - | 6.75 to 7.00 |
| White, No. 4 - | 6.00 to 6.50 |
| White, No. 5 - | 5.00 to 5.20 |
| Brown Formosa - | 4.60 to 4.65 |

EXPORTS.

SILK.

Business in this staple has fallen off during the last few days. Race-holidays and other causes have kept the Market quiet. Settlements from the 2nd to 9th instant inclusive were 600 piculs, but nearly all this amount was fixed in the first two days of the period under review. Export to date (including the *Tanis* which left this morning)

reaches the large total of 16,197 bales, the direct shipments on Japanese account having been very heavy by all the recent steamers. Quotations for all kinds may be called weak: sellers continue to ask about former prices, but in the absence of much demand it is difficult to say what would really be taken for actual business. At closing some negotiations for purchase of considerable parcels of Hanks and Hamatsuki are reported to be in progress. Stocks of all kinds are estimated at about 5,500 piculs fully half of this being Hank sorts.

Hanks.—Some fair lots were settled at the beginning of the week on a basis of \$500 for best Shinshu—same price for Shimonita; possibly now a trifle better could be done. Medium Shinshu have again been taken at \$465. Annaka \$445. Maibash \$430. Hachioji \$410.

Filatures.—Buying for the *Arabic* was completed on a basis of Tokosha \$600; Tenriusha \$610; and Good Shinshu kinds \$590. A transaction in fine size No. 1 is reported also at \$600. There is not much pressure to sell (especially good silks) but with orders in hand it would be possible to obtain slight concessions.

Re-reels.—These were done for last steamer on a basis of \$585 for Five-girl chop. There have been no transactions of moment since the departure of the *Arabic*. With a further fall in *kinsatsu* better might be done.

Kakedas.—Nothing much doing in these for the moment, last price made for Sano-musume was \$600 Best, \$540 seconds, \$520 thirds. Chochio are held at \$585 for an offer.

Hamatsuki.—Business done in these at a reduction on last weeks figures. *Nambu* noted at \$370 to \$390 according to quality.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$495 to 500 |
| Hanks—No. 2 (Shinshu) - | 450 to 490 |
| Hanks—No. 2 (Maibashu) - | 475 to 485 |
| Hanks—No. 2½ (Shinshu) - | 465 to 470 |
| Hanks—No. 2½ (Maibashu) - | 455 to 460 |
| Hanks—No. 3 - | 430 to 440 |
| Hanks—No. 3½ - | 410 to 420 |
| Filatures—Extra. - | 620 to 630 |
| Filatures—No. 1, 10/13 deniers - | 600 to 610 |
| Filatures—No. 1, 14/16 deniers - | 600 to 605 |
| Filatures—No. 1½, 14/17 deniers - | 580 to 590 |
| Filatures—No. 2, 10/15 deniers - | 550 to 560 |

| Oshiu Sendai—No. 2½ - | 475 to 485 |
| Hamatsuki—No. 1, 2 - | 405 to 475 |
| Hamatsuki—No. 3, 4 - | 420 to 440 |
| Sodai—No. 2½ - | 420 to 430 |

TEA.

Following the departure of the last American mail a current business for a few days enabled Tea producers to fully maintain previous quotations: later however with continued depressing telegrams from the United States, the Market again relapsed into extreme quietness, and the buying done has been confined to a few houses. The aggregate Settlements only amount to 900 piculs, and comprise the following grades:—Good Common 10, Medium 235, Good Medium 270, Fine 290, and Finest 95 piculs. At the close values have an upward tendency which may be partially accounted for by the increased value of native currency. The total Export to the United States and Canada are as follows:—For New York 9,351,829 lbs., for Boston, Chicago, Canada, &c., 5,019,548 lbs., and for California 2,883,391 lbs., making a total of 17,254,768 lbs. of fired Tea from Yokohama, against 17,812,374 lbs. at the corresponding date in 1882. The British steamers *Venice* and *Canton* are advertised for New York, via ports: the former will probably leave here on the 18th inst. The rate of freight is fixed at 45 shillings per ton of 40 cubic feet for Tea; the latter to arrive will also take Tea at the same rates; but the date of her departure is not yet arranged. The cargo from this port of the O. and O. steamer *Arabic* despatched on the 6th inst., comprising 178,488 lbs. Tea: for New York 28,305 lbs., for Chicago 13,106 lbs., for St. Paul 2,588 lbs., for California 99,432 lbs.,

and for Canada 35,057 lbs. These figures are not included in the total Export as given above.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

JOSEPH GILLOTT'S STEEL PENS. Paris,
JOSEPH GILLOTT'S STEEL PENS. 1878.
May 1st, 1883.

**J. & E. ATKINSON'S
PERFUMERY,**

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia.

ONLY GOLD MEDAL—PARIS, 1878,
TWO SILVER MEDALS AND "FIRST ORDER OF MERIT,"
MELBOURNE, 1881.

**ATKINSON'S CHOICE PERFUMES FOR
THE HANDKERCHIEF.**

White Rose, Frangipanne, Ylang-ylang, Staphanotis,
Opopanax, Jockey Club, Ess Bouquet, Trevel,
Magnolia, Jasmin, Wood Violet, Gold Medal Bouquet,
and all other odours, of the finest quality only.

**ATKINSON'S
GOLD MEDAL EAU DE COLOGNE**
is strongly recommended, being more lasting and fragrant than the German kinds.

**ATKINSON'S
OLD BROWN WINDSOR SOAP,**
celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,
a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,
and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers.

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Beware. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

ESTABLISHED 1799.

Printed and Published for the PROPRIETOR, at 72, Main Street, Settlement, by JAMES ELLACOTT BEALE, of No. 106, Bluff, Yokohama.—SATURDAY, November 10, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 17TH, 1883.

BIRTH.

At 5, Tsukiji, Tokiyo, on the 13th November, the wife of Rev. C. S. Eay of a daughter.

MARRIAGE.

On Thursday, the 18th October, at Trinity Church, San Francisco, by the Rev. Dr. Beers, D.D., RUSSELL ROBERTSON, H.B.M.'s Consul, Yokohama, to ANNIE, daughter of John Ross, 79, Great King Street, Edinburgh.

WEEKLY NOTES.

JUDGING from notes which constantly appear in the vernacular press, the Japanese are daily turning their attention more and more in the direction of railway construction. Probably the unexpected facility with which the Tokiyo-Takasaki line was completed, and its financial success, have some influence in the matter. It is said that the net profits on that line are upwards of thirteen per cent. of the total expenditure, and that they are likely to be more than twice as large when the road is carried to Mayebashi. However this may be, the project of a railway to connect Tokiyo with Kiyoto, via the Nakasendo, is again on the *tapis*. The length of this road, or rather of the principal section of it, is stated to be about 200 miles, and the *Choya*

Shimbun goes so far as to say that the scheme has received official sanction and will be carried out under the auspices of the Public Works Department. We cannot but think that these projects savour of rashness. Without stopping to consider whether or no such a line would pay, it may be confidently asserted that the conversion of a large quantity of floating, into fixed, capital would severely tax the commercial vitality of the country. Just at present land investments are only yielding a return of some five or six per cent., against nearly twice those figures three years ago. Capitalists may therefore be willing enough to invest money in speculations which offer prospects comparatively so favorable as those already realized in part by the Tokiyo-Takasaki line. But to divert capital permanently in this direction is to deprive trade of the means of reviving. Japan is not rich enough to build her railways with her own money. Few countries are rich enough, or, to speak more accurately, few countries have sufficient accumulations of capital seeking investment to justify them in becoming their own bankers. Japan can procure hard money abroad to build her railways at rates very much more favorable than she can obtain at home. We admire—everybody must admire—the spirit which prompts her to abstain from contracting foreign debts. But that spirit is admirable under some aspects only. So soon as its indulgence involves needless expenditure, it ceases to have any claim upon our sympathies. Writers on political economy are unanimous in agreeing that, according to the present distribution of the world's wealth, some countries are manifestly fitted to be the bankers of others. The same reasons which send buyers to India for rice, to China for tea, and to Japan for silk, sent Italy to England and France for gold to redeem her paper, and India to England for money to build her railways or carry out her schemes of irrigation. While there are in Europe stocks of surplus money seeking investment and procurable on easy terms, it is just as unwise for Japan to diminish her already-too-scanty capital by sinking it in railways, as it would be for a merchant to abstain from a manifestly profitable operation because of a romantic antipathy to banking facilities. Japan is following the lines of old-fashioned traders who confined themselves strictly to the limits of their own capital. Some of her financiers do not yet appear to have observed that when the normal profits of trade are nine per cent. and the rate of interest is six, a capital of ten thousand dollars may be made to

yield a return of twelve per cent. by borrowing ten thousand to supplement it.

THE *Jiji Shimpō's* suspension only lasted five days. On the 7th instant it made its reappearance. It will be remembered that among the new Press Regulations, published last spring, there is a provision that a newspaper, reappearing after suspension, shall publish in a conspicuous part of its columns a statement of its offence and of the sentence pronounced against it. The *Jiji Shimpō* does not comply with this provision, for the simple and sufficient reason that the nature of its offence was not explained to it. "We are not informed," says our Tokiyo contemporary in a leading article which appears in his first re-issue, "whether the cause of the suspension is to be found in the leader, domestic news, or foreign news" of the number which evoked official censure. The editor, indeed, cannot have much doubt on the subject. We ourselves, guided solely by the contents of the offending number, did not hesitate to designate his leading article as the source of trouble. But just laws do not leave a culprit to guess the items of his charge. It is a misfortune for the Japanese Government and for the Japanese people alike that there should still exist in this country any necessity to impose restrictions upon freedom of speech. On the other hand, to deny the existence of that necessity were mere impertinence on the part of a foreigner. But both Japanese and foreigners may well question the necessity of enforcing press regulations after the methods which appear to have been employed in the case of the *Jiji Shimpō*. Some time ago we did not hesitate to denounce as unjust and incorrect a charge of similar arbitrariness preferred against the authorities by a local contemporary. Recent events compel us to confess frankly that our judgment on that occasion was over-confident. It appears that a Japanese newspaper can be suspended without any definite explanation of its offence. We should have thought that the press laws were already sufficiently obnoxious without the addition of such arbitrary administration. The *Jiji Shimpō's* language in commenting upon its misfortune is moderate but firm and dignified. A translation of its article will be found elsewhere in our columns. Those who read between the lines will see that the editor, while acknowledging the Government's right to judge what is right and what is wrong in the eyes of the law, stoutly repels any imputation of disloyal motives and refuses to be credited with any sentiments other

than an honest desire to promote the welfare of his countrymen. We do not think that Mr. Fukuzawa's reputation will suffer by this incident, though we do regret that it should have exposed him to some exceedingly vulgar and insolent scurrility at foreign hands.

On the 1st of July, 1881, there was promulgated a new system of regulations with respect to the collection of the land-tax in this country. The total amount of the tax on wet fields was then about 36 million *yen*, and it was collected in three instalments, thus:—

First instalment (collected between December 1st and January 31st), one half of the whole tax, or 18 million *yen*.

Second instalment (collected between February 1st and March 31st) three-tenths of the whole tax, or 10,800,000 *yen*.

Third instalment (collected between April 1st and April 30th) one-fifth of the whole tax, or 7,200,000 *yen*.

These instalments were subdivided in the process of collection, so that in reality the agricultural classes had to make six payments, one in each consecutive month from December to March, and two in April. Under the new system this method was changed to the following:—

First instalment—two payments, collected between November 1st and December 15th—one half of the whole tax.

Second instalment—two payments, collected between January 1st and February 28th—one half of the whole tax.

This change was keenly criticized at the time, and there can be no doubt that its effects were highly embarrassing to the farmers throughout Japan. The rice market is limited, and cannot fail to be sensibly depressed by the enforced sale of such large quantities of the staple in so short a period. Moreover, it was plain that this accelerated method of collection must exercise its maximum effect, since it would be practised at the very time when the disposable funds of the manufacturing and agricultural classes are otherwise subject to their greatest drains, namely at the New Year. In the spring of 1882, when trade began to suffer from the depression which has continued ever since, the vernacular press attributed the trouble to the disturbing influence of this fiscal alteration, and it seemed difficult wholly to deny the truth of the inference. Thirty-six million *yen* were withdrawn from circulation between November and February, while, on the other hand, the Treasury makes no disbursements of any importance until May, when the holders of pension bonds and other scrip receive a total of nearly six millions. Some very long-headed calculators went so far as to discover in the new method of collection a device of the Finance Minister (Mr. Okuma) to bring about an artificial appreciation of *Kinsatsu*, but this suspicion, like many other marvellous mare's-nests of a kindred nature, could not endure the test of sober analysis. The simple fact was that the Government wanted to get the taxes paid with greater punctuality, and that the best chance of accomplishing this object seemed to lie in demanding payment within a short interval of the harvest. Certainly if any sacrifice was to be made to meet the convenience of the public funds, it seemed most just that the farmers should be called on to make that sacrifice, since

their prosperity in the years immediately preceding had been as remarkable as it was uninterrupted. But the farmers were destined, like everybody else, to feel the effects of currency contraction. The price of rice fell faster than the general depreciation of other values (expressed in *kinsatsu*), and despite an exceptionally fine harvest, it became apparent that some modification of the system of collection inaugurated at the end of 1881 was desirable. The Government has accordingly issued a Notification to the effect that the period for paying the fourth instalment of the land-tax will be extended, this season, to March 31st. The effect of this change is that the farmers, instead of having to pay ten million *yen*, approximately, during the month of February, will have the whole of February and March to find that sum. A month's grace is at all times a large concession, but its value will be further appreciated in the present case, since not only will the agricultural classes have so much more leisure to put together the required amount, but also the market will be considerably relieved from the depressing effects of forced sales. We may hope, too, that the Central Bank has by this time contrived some machinery for affording tax payers greater facilities than they formerly enjoyed, though measures of this nature must necessarily be of slow accomplishment.

A MARINE Court of Inquiry, constituted under the Regulations of the Marine Office of the Agricultural and Commercial Department, sat in Tokyo on the 12th instant and following days, to investigate the circumstances of the loss of the Mitsu Bishi Mail Company's steamer *Akitsushima Maru*, which ran ashore, October the 10th, on the coast of Nambu, about 14 miles south of Shiriya-saki, while en route from Yokohama to Hakodate. The finding of the Court is not yet published, but the evidence adduced went to show that the proximate cause of the catastrophe was an error made by the master who mistook for the Shiriya-saki light a beacon which appears to have been erected for the guidance of fishermen. The master seems to have taken one bearing of this light and then left the deck, where he had been on constant duty for forty-eight hours, giving the ship in charge to the first officer. Shortly afterwards the light disappeared, but the chief officer, expecting its reappearance every moment, neither called the master nor altered the course, so that after a lapse of about 15 or 20 minutes the ship ran ashore. The catastrophe was reported to the directors of the Mitsu Bishi Company in a letter written in the first person, but signed by the master, the first officer, and the chief engineer. The concluding clause of this document ran as follows:—

The chief officer says he lost sight of the supposed Shiriya Saki Light shortly after I left the bridge, but did not call me because he thought we were clear of everything. Had he called me, according to my orders given to him, I feel confident this sad accident would not now have to be reported by yours,

Gentlemen, obedient servants,

(Signed) JOHN FRAHM.

(Signed) JOHN C. WERNER, Chief Officer.

(Signed) R. HAMILTON, Chief Engineer.

The responsibility was thus laid on the

shoulders of the chief officer, and apparently with the latter's assent. But the evidence did not bear out this statement. It was not shown that the master gave any such orders as those here alluded to. According to his own statement in Court, he merely desired the chief officer "to keep the ship steady and to keep a good lookout," and further added:—"I did not tell him what time to call me, as I had no intention to go to sleep, but only to change my clothes and lie down in the chart-room for a little rest." There were elicited in the course of the investigation many points reflecting injuriously on the system of discipline and responsibility that prevailed on board the *Akitsushima Maru*, but pending the publication of the Court's finding we necessarily refrain from comment.

THE return of His Excellency Terashima from Washington has been made the basis of a number of rumours, the most plausible of which is that the returning Minister is to take the portfolio of Foreign Affairs, relieving Mr. Inouye, who will proceed to Europe on what the vernacular press terms "a tour of inspection." Further changes in the Cabinet are promised by the same newsmongers, but as the foundation upon which they all rest is of the most aerial description, it scarcely seems necessary to repeat them. The simple fact, so far as Mr. Terashima is concerned, is that his health has broken down, and instead of coming back with the intention of performing the onerous duties of an important office, he found himself quite unable to occupy the comparatively easy post of Japanese Representative in Washington. We fear, indeed, that a considerable time must elapse before his valuable services will be again available in any public position.

A VERNACULAR journal publishes a statement to the effect that the number of foundlings in Japan during the twelve months ended June 30th, 1882, was 4,958, of whom 4,243 were brought up at the public expense, and the remainder by private benevolence. The value of the rice consumed by the former is stated to have been 25,283 *yen*, or about 6 *yen* each. The most curious part of these statistics, however, is the proportion of the foundlings in different localities. Nagasaki heads the list with 643, after which come Oita, 618; Okayama 546; Yehime, 530; Fukuoka, 363; Shidzuoka, 314; Tokiyo, 298, and Osaka, 242. Nagasaki has always enjoyed the reputation of being the most immoral place in Japan, a fact which some persons are disposed to attribute to its long association with foreigners. However this may be, its position in the above list does signal credit to its notoriety.

NOTES.

A QUESTION has been raised in the New York Courts, as to the validity of legal proceedings against any Chinaman whose true name may be open to doubt. It appears to be generally understood that all natives of the Celestial

Empire, on settling in foreign lands, lay aside the family appellation, and take upon themselves titles which are significant merely of abstract moral or physical qualities. Thus an individual who may have borne, at home, a name as simple as Smith, Brown, or Jones, in Anglo-Saxon nomenclature, may become Concentrated Cleanliness, Aromatic Odours, or Unimpeachable Chastity, as soon as he touches American soil. The particle "Ah," which almost every Mongolian prefixes to his assumed designation, is alleged to have only an honorary meaning, and to convey no more evidence of identity than "Mr." or "Esq." These facts were strongly set forth by one Mr. Rosebalt, who contended that the sureties on the bond of a certain plaintiff were myths. They called themselves Ah Tuck Hop and Ah Wong; and, according to the best Chinese dictionaries the counsel had been able to consult, these words were ornamental generalities, and did not specifically describe the persons to whom they were applied, or any person whatever. Therefore he urged that the order of arrest against his client be vacated. On the other side, Ah Wong, who was personally produced, denied with extreme emphasis and energetic gesticulation that he was a myth. He did not appear to know what a myth was, but he objected as strenuously to being thus styled as the fish-wife in the story protested against being classified as an isosceles triangle. He stormily proclaimed himself a living actuality, with a local habitation, if not an indisputable name, and the possessor of property worth more than one thousand dollars. After some debate, the Judge decided that every man "has a right to call himself what he pleases, being bound by whatever act he does under any name he may assume." The trial was then adjourned, and the two challenged sureties went on their way, rejoicing in the consciousness of having relieved themselves from the awful imputation of being myths.

The case in which the above incident occurred was a libel suit, brought against that remarkable intellectual product of the Middle Kingdom, Wong Chin Foo, whose romantic achievements as a lecturer, and whose wondrous inventive power as a contributor to *Harper's Magazine*, have hitherto been described for the edification of readers of this newspaper. Evidently Wong Chin Foo is not a man to be lost sight of. In one way or another, he is determined to keep himself well to the front. To carry out this ambitious purpose, he assumed the editorship of the *Chinese American*, a paper published, in his own language, in the city of New York. To create a sensation by anything printed in such obscure characters as those of Wong Chin Foo's native tongue, might seem a difficult task; but the ingenious writer was equal to the emergency. By carefully studying the ins and outs of American journalism, he discovered that if a person is hit hard enough in print, he will seek redress, in one form or another, with the inevitable consequence of a scandal of some sort. Selecting one Chan Pond Tipp for his victim,

the editor commenced a series of articles, arraigning that member of the Chinese community as a thief and an assassin, who had been bribed to travel from San Francisco to New York, under contract to murder him, Wong Chin Foo, for having taken high philosophical ground, on several occasions, against gambling and opium smoking. As had been anticipated, Chan Pond Tipp immediately instituted proceedings for libel, demanding that his assailant be held to bail in the sum of \$2,500. Wong Chin was enchanted with everything but the magnitude of the required deposit, which however, was reduced to \$500, so that the case goes on, leaving the defendant at liberty to pursue his vocation unimpeded, and to devise new methods of making himself conspicuous.

A mind so fertile in resource was not long at a loss. One of the characteristic addresses of that eminent orator of the sand lots, Mr. Denis Kearney, afforded the required opening. In one of his outbursts of fiery eloquence, delivered at the Cooper Institute,—an edifice from which the office of the *Chinese American* is only about two miles distant, and consequently quite within reach of Mr. Kearney's magnificent vocal organ,—the famous foe to Mongolian occupation of the United States territory reiterated his familiar invectives against the "lepers of Asia," and regretted that he had not succeeded in "barring out" the odd hundred thousand still remaining, as he had excluded the hundreds of millions who would now be pouring into the ports and scaling the coast cliffs of the Pacific Slope, but for his, Kearney's, heroic exertions. No Chinese gentleman likes to hear himself called a leper, any more than a myth, and Mr. Wong instantly girded up his curiously encased loins, and called upon the distinguished rhetorician to have it out with him. Being denied an interview, he sent a letter by one of his reporters, Ah Koon, hurling back the scornful implications of his country's calumniator, and proposing a public discussion, in which the question of Kearney versus the Chinese Empire should be exhaustively argued,—the cause of Kearney to be represented by himself in his shirt sleeves, and that of the Middle Kingdom by the editor, in the attire befitting a Confucian sage. To this suggestion the Man of the People verbally replied, that when Mr. Wong should write to him like a gentleman he would respond like a gentleman;—though how he intended to accomplish that hitherto unattempted and, for him, presumably impossible feat, he did not vouchsafe to explain. At this point, the Oriental editor's feelings are supposed to have overcome him entirely. He is reported to have entered his "sanctum" with several packages of fire-crackers and bunches of Catherine wheels, under the explosive inspiration of which he produced the following effusion:—

The law which punishes a challenge to a duel protects you from being called to account for your insults to my people; but if it were possible for you to waive that protection, I should not shrink from encountering you with the weapon which is your instrument of war, a "stink-pot." Contemptuously. WONG CHIN FOO.

Celtic blood, and Mr. Wong found it necessary, at last, to desist from his endeavours to provoke a conflict. But he acquired new celebrity by the controversy, and in this he may possibly have found consolation for his disappointment as a challenger to argumentative or other combat.

It is not to be supposed that, while aiming at these higher flights of notoriety, the versatile editor is unmindful of smaller chances. "Seneca cannot be too heavy, nor Plautus too light" for him; and "for the law of writ and of liberty," while he may not be the "only" man, he is certainly, as Artemus Ward might have said, "one of the onliest." While defying the terrors of the judiciary, in the Chan Pond libel suit, and measuring epithets with the crack-brained demagogue from San Francisco, he yet gathers time to conduct a campaign against those organized and disciplined bands of detractors whose favorite occupation it is to accuse his countrymen of eating rats. These ignoble slanderers, led on by a couple of Frenchmen, have recently alleged that both rats and cats form part of the regular menu in a Chinese eating-house at No. 5, Mott Street. One of the declarants, himself the keeper of a restaurant on superior Parisian principles, testified that the Asiatic cook has been observed to "skin the animals, cut off their heads, chop their bodies into small pieces, and put them into a pot." Nobody, however, claimed to have seen any person partake of the dish thus compounded. Here was a fresh target for Wong Chin Foo's broadsides. His first demonstration was to "offer a reward of five hundred dollars to any one who could prove that a Chinaman ate rats or cats,"—a rash proceeding, it would seem, for so logical a mind, since nothing would be easier than for an enterprising speculator to hire a Chinaman to devour a number of the said animals, and then claim the award,—not to speak of the numerous thrifty Mongols who might be tempted to indulge, on their own account, in this harmless, if not particularly attractive, diet. Experience has proved that the flesh of cats and rats is innocuous, and the veracious Mr. Labouchere, who is synonymous with *Truth*, long ago described its rare gustatory qualities, in the language of an enlightened gourmet, during the siege of Paris. But Mr. Wong's patriotic ardour was not to be impeded by mere matter-of-fact trammels. He averred, moreover, that he had travelled all over his native land, and had never seen a rat eaten there. Nor yet a cat. Dogs, certainly;—he would concede those estimable and nutritious quadrupeds, but not one step lower in the animal scale would he go. In this state of stern resolve, he made arrangements to sue the Frenchmen for slander, as well as all others who should repeat their wicked fabrication. Evidently, Mr. Wong Chin Foo is a person who must be kept in view. He is too amusing to be forgotten. At the same time, while we laugh at his eccentricities, and find it necessary to protest against some of his abnormal demands upon the credulity of his readers, we confess to a certain respect for the pluckiness

with which he upholds the reputation of his race and country, against all assailants, high and low. A little discretion mingled with his valor would enable him to serve more effectively the cause he has at heart, and to escape some of the ridicule which now inevitably descends upon him.

THE Mexican Government is actively exerting itself to extend the culture of the mulberry tree within its domain, for the encouragement of sericulture, and is introducing large quantities of plants from Europe and elsewhere, and distributing them among the most intelligent native planters, and the Italian, French, Swiss, and German colonists, now located in different sections of the Republic.

A CURIOUS circumstance in connection with the untoward incidents in Paris, during King Alfonso's visit, is the declaration, some time after the mischief is over, that the Spanish monarch had no expectation of his appointment to an Uhlan colonelcy, and that he received his commission and his uniform simultaneously—the one pinned to the other, we may be permitted to imagine from the quaint style of the announcement. That naïve and innocent old campaigner, Emperor William, "intended the appointment as an agreeable surprise." It is a habit of his, it seems, to surprise all sorts of distinguished persons, to whom he takes a fancy, in the same agreeable manner. Sometimes it may be an English prince, sometimes a continental sovereign. Apparently he keeps a wardrobe filled with colonel's uniforms, of different sizes, ready to bestow upon visitors "for whom he takes an exceptional liking." A similar convenient system is followed by a certain gracious lady, who, on nuptial occasions in which she feels an interest, always endows the bride with a shawl of invariable pattern. Rulers, like other people, have a perfect right to decide as to what presents they shall confer upon their favorites, and it would be exceedingly unbecoming to look a gift colonelcy in the mouth, so to speak; but in view of all the circumstances, this particular offering was, to say the least, a little ill-timed. While privately putting the uniform on, for his own and the venerable donor's delectation, the royal recipient ought somehow to have contrived to put the appointment off,—or at least the public notification of it. He might have taken his agreeable surprise in a satchel to the imperial apartments, arrayed himself in it behind a screen, shown how nicely it fitted, and then sent it straightway by express to Madrid, whispering to his aged friend the Teutonic equivalent of "mum's the word!" It is one of the defective arrangements of society, that before a present is awarded, the taste and inclination of the receiver cannot be consulted. When Captain Cook made his first voyage among the Cannibal Islands, one of the powerful kings, possibly detecting a suggestive significance in the great explorer's name, sent off to his vessel a haunch of roasted native nobleman, as the most complimentary token at his command. The gallant navigator

was embarrassed, chiefly, it is presumed, at the difficulty of making a suitable response, hints having been held out that nothing less was expected than a savory dish of stewed midshipman, while even a joint of first lieutenant might not have been too choice a tribute. It was, no doubt, the unforgotten failure to meet anticipation, on this occasion, to which we must attribute the subsequent fate of the original "Cook and Captain bold," whose pathetic epitaph Mr. W. S. Gilbert has written—though with a slight confusion of the true historic data. Again, when Winwood Reade visited the unknown regions of Africa, he encountered a mighty chieftain whose practice it was to honor every visitor of distinction by sending him one of his, the chieftain's, wives. Painfully conscious of the poverty of his resources, this traveller, breaking through all restraints of etiquette, straightforwardly asked which of his possessions would be accepted as a partial acknowledgment of his tropical Majesty's munificence; and was rejoiced to learn that a fine tooth comb (erroneously transmuted by the aboriginal imagination into an amulet, or a rare work of art) would be esteemed the equivalent of any ten queens then extant in those dominions. All these and many similar things being considered, it is obvious that the gifts of the great are liable to give rise to awkward complications, however graciously intended. Nobody will be prepared to dispute the assertions, officially telegraphed from Berlin all over the world, that the Emperor's "agreeable surprise" was totally unexpected by Alfonso; that it came upon him like the contents of a jack-in-the-box; that the German sovereign would not dream of "exciting prejudice" against the son of Isabella in the eyes of the French or any other nation; and that "Bismarck had nothing to do with the appointment." These various declarations will be accepted in the spirit of candid and ingenuous simplicity with which they are proffered. But everybody is equally privileged to understand that, if the imperial ruler of North Germany had meditated a deep and cunning device, instead of projecting an "agreeable surprise;" if he had distinctly contemplated "exciting prejudice" against the Spanish King, during the latter's visit to France; if Bismarck had been acquainted with the plot all through, instead of "having nothing to do with it;" if the aged Kaiser and his astute Chancellor had been laying their politic heads together for weeks and months, devoting the shining hours of the day and the shady watches of the night to the concoction of a scheme calculated above all others to create a misunderstanding between France and one of her few remaining natural allies;—nothing more ingeniously certain to ensure the desired result could have been arranged than the nomination of the royal tourist to the command, not of an ordinary German regiment, but of one of the regiments especially obnoxious to the entire French race, and of the very particular regiment now quartered in the city whose loss France most loudly and unceasingly mourns. Of course we all know, being duly reminded, that there was nothing to complain of

but want of tact and delicacy; but it is singular to note the absolute identity, in this instance, between such trifling lapses of discretion, and what might, without explanation, have been mistaken for the conception and development of a carefully laid plan for provoking an ugly international quarrel, all for the advantage of Germany's prospects, by an ostensible act of commonplace courtesy.

THE Notification of the Council of State extending the period for the payment of the fourth instalment of the land-tax from February 28th to March 31st, will doubtless be welcomed as a great boon by the agricultural classes. A twelve month ago we commented at some length on the apparent unwisdom of the system inaugurated by the late Minister of Finance; a system by which twenty million yen, approximately, were withdrawn from circulation between November and February. The difficulty of finding so large a sum within so short an interval, and the want of financial facilities were productive of considerable inconvenience. Indeed, it was thought by many persons that the gradual depression from which the country has suffered since 1882 had its origin in an unwise abbreviation of the period over which the several payments of the land-tax were formerly distributed. Without endorsing this somewhat extreme view, we cannot doubt that Mr. Okuma's measure exercised a more or less injurious influence, and the action of the Treasury in extending the time is both sensible and humane. The people will now have thirty-one days longer to collect the tax, and while the convenience to them will be considerable, the Treasury also will probably benefit by a diminution in the number of defaulters.

A GERMAN writer affirms that the causes of earthquakes are much slighter than has hitherto been believed. They may, in fact, he says, be sought at a depth of not more than ten or fifteen miles, and often of less, and rather feeble forces even may produce earthquakes which will be felt at great distances. As illustrating this theory, the fact is cited that the hammer in Krupp's factory, which is of immense weight, and falls from a height of ten feet, produces sensible concussions over a surface five miles in diameter; also, the fact that a recent explosion in a dynamite factory was felt at between twenty-five and thirty-five miles away.

THE Korean correspondent of the *Yiji Shinpo* speaks of an examination of candidates for military rank held at the palace of the King in the presence of Korean and Chinese dignitaries, as though the latter's participation in the internal administration of the peninsula was a natural and proper thing. Curiously enough the same correspondent, almost in the same breath, mentions the arrival of Mr. Aston at Inchhōn, though he obviously attaches no importance to the juxtaposition of the two facts. For our own part, however, we are inclined to think that Sir Harry Parkes and Mr. Aston are not unlikely to solve

the riddle of China's relations with Korea in such a manner that the presence of Chinese troops at the Korean capital and of Chinese officials at Korean administrative ceremonies will no longer depend on the caprice of a Chinese statesman. It is said that Sir Harry Parkes has submitted some very pertinent propositions to the Grand Secretary Li with reference to this point, informing the great Viceroy, in most unequivocal terms, that England means to regard Korea as an independent Power, so far as the right to make commercial treaties is concerned, and that, under these circumstances, some modification of the forms of speech employed in the trade regulations dictated a year ago by the Middle Kingdom to its so-called tributary, becomes a desideratum, if not a necessity. How this very plain suggestion was received by the Viceroy we are not in a position to say, but we have confidence that Sir Harry Parkes will reduce to some intelligible and practical shape the arbitrary conditions now existing. It will be well worth his while to devote a good deal of his proverbial perseverance and sagacity to the task, for it is plain to the most superficial observer that in the undefined relations between China and her petty neighbours lies a constantly active germ of possible disturbance to the peace of the Orient.

PROFESSOR ANGELO DE GUBERNATIS has addressed a very pretty letter to Rochefort. It runs as follows:—"Sir, under a first impulse of generosity you found the cause of Casmiciola a humane cause, and you were the first of all the writers of your country to answer my appeal by sending me, for the International Album of autographs, some lines signed by you. Now that you not only appear to regret the noble co-operation of France in my humanitarian work, but also make a pretext of it to insult my country and our beloved Sovereign, you will not be surprised if I return your autograph. Not only has it ceased to have any value for me, but it would disfigure the Album of International Charity. At Venice, in the saloon of the Grand Council, where all the portraits of the Doges were disposed, one saw, in the place where the portrait of the Doge Marino Faliero ought to have appeared, a throne draped in black with the inscription:—*This is the place of Marino Faliero decapitated for his crimes.* Marino Faliero had betrayed his country. In the International Album also a vacant place will be found—yours, Sir, and this time it will be for the crime of treason to humanity." Truly it seems like breaking a fly upon a wheel, this punishment that Italy inflicts upon a libeller who only deserves contempt. M. Henri Rochefort is nothing more than a very rude vulgarian. The bitterest treatment he could receive would be to be ignored altogether. There are men who prefer notoriety to insignificance. It is a pity that they should be assisted to take their choice.

A VERY old contributor to the columns of this journal addresses us, from America, on a subject

which will be found interesting in connection with the scheme of *Kana* reform and the protests that scheme has evoked from some well known scholars. Our correspondent takes as his text a recommendation, made by a writer in the *Chrysanthemum*, that in translating books for the use of the Japanese, Chinese should be employed as much as possible. He condemns the suggestion roundly, urging, in the first place, that Chinese is not a tongue at all, since it is incapable of conveying thoughts from mind to mind without enlisting the services of the eye; and in the second, that the Japanese language has advantages which forbid its rejection for the sake of so defective a substitute. It would be too serious a tax upon our readers' patience, as well as upon our own space, to discuss the relative merits of the two languages, but the obvious misconceptions underlying our correspondent's statement cannot be suffered to pass quite unchallenged. "Retrospective Rambler" seems to think that there exists in Japan a language quite distinct from the Chinese, and he describes the former as "syllabic, inflectional, melodious, and expressive," whereas the latter is "insoluble, rigid, inharmonious and insusceptible of expression." Now the fact is that if the language written and spoken to-day in Japan were stripped of its Chinese elements, there would remain the mere skeleton of a tongue. The commonest forms of expression would have to be recast, and with a very few exceptions, all the books in the country would become unintelligible. In considering this question, the majority of foreign writers are guided by the ear alone. Not having studied the two languages, they conclude that because Japanese conversation is soft and euphonious while Chinese is harsh and nasal, the two must be quite distinct. A similar argument might be applied with equally erroneous results to the Latin of Cicero and the Italian of Tasso. The Japanese never use Chinese intonations and seldom Chinese sounds; they employ a different order of construction, and they add certain particles and inflections which are supposed to facilitate expression. But beyond these differences the two languages have so much in common that to separate them as our correspondent proposes would be simply impossible. As well, nay far better, might we proceed to eliminate from the English tongue every word of Latin or Greek origin. "Let the knowledge of facts and truths and principles and of the thoughts of all the ages," says "Retrospective Rambler," "be borrowed from any and every source, Chinese, Korean, Dutch, Russian, Portuguese, French, English, American—anywhere, everywhere; but let the expression of all these be in the tongue wherein the people were born." This is precisely what is happening at present. Japan is appropriating science and knowledge from all parts of the universe, and translating her acquisitions into her own tongue, that is, into the mixture of Chinese and Japanese which is employed by the people of these islands just as a mixture of Saxon, Latin, Greek, and other languages is used by the inhabitants of

the British Isles. We confess that these romantic, and we fear we must add, sciolous, claims advanced on behalf of the long dead and buried *Yamato-kotoba*, are growing somewhat tiresome. Japan cannot dispense with the Chinese language. It never served her in such good stead as during the past two decades. Without it she must have hopelessly failed to translate intelligibly the multitude of new ideas, to gain easy access to the stores of hitherto unexplored truth, which her intercourse with the West suddenly brought within reach. But that she should borrow Chinese ideographs simultaneously with Chinese words is a necessity we cannot admit. In English there are words of Sanscrit origin, of Hebrew origin, of Greek origin, yet not one of them is written in Sanscrit, Hebrew, or Greek characters. So, too, in Japanese there may be words of Chinese origin without employing Chinese hieroglyphs. To deny this is tantamount to asserting that there is no spoken language in Japan. For if there is a spoken language, it must be intelligible by sounds alone, and therefore capable of phonetic expression in writing. To this argument the opponents of *Kana* reform have only one reply. The spoken language of Japan, they say, that is, the spoken language enriched as it has been of late by a host of new thoughts set forth in Chinese derivatives, is incapable of intelligent expression by word of mouth alone: the speakers have sometimes to resort to the expedient of tracing ideographs on the palms of their hands or in the air. The mere statement of such a contention is sufficient to expose its fallacy. For if the intercourse between man and man is impossible without the aid of this aerial scripture—a hypothesis which we entirely deny—the only fair inference is that the nation has not yet had time to grow familiar with the scientific and philosophical novelties recently showered upon it in such quantities. Even in our own language the progress of scientific research necessitates the constant fabrication of terms whose sounds are often quite incomprehensible without reference to their roots, but which soon become familiar to every educated man. This is what has happened of late years, and is still happening, in Japan to a much greater extent than has ever been the case among ourselves. But the resulting embarrassment is temporary. Technological and other explanatory dictionaries will doubtless be more necessary here than elsewhere for some time hence, but at the last the nation will surely emancipate itself from an educational impediment which is fatal to the development of intelligence and knowledge. Had our correspondent attacked the Chinese language from this direction, we should support him heartily, but his criticisms, as they stand, seem more superficial than sagacious.

THIS is a wonderful period for comets. The latest visitor, discovered by Professor Brooks about the middle of August, proves, on close investigation, to be the same that was originally observed by Pons, at Marseilles, in July, 1812.

Its return was expected in May of this year, but it will not be actually in perihelion until the end of next January. In more ways than one it has refused to verify the calculations of the astronomers, and its latest eccentricity is the sudden development of an unlooked-for brilliancy, which may bring it within view of the naked eye at any moment,—although that degree of distinctness was at first set down for the beginning of next year. The detection of this celestial wanderer by Professor Brooks adds another to the numerous recent successes of American astronomers, which may probably be ascribed to the system of divided inspection they have adopted. A section of the heavens is assigned to each important observatory, which confines its operations exclusively to the region within its scope. In Europe, up to the present time, the examination is general, the range of each notable telescope being unrestricted. Under these well organized conditions, American priority of discovery is easily explained.

THE Yokohama Skating Club held their annual meeting on the 13th inst., at the Y. U. Club (by kind permission of the Committee), when Mr. Rickett was voted to the chair. Mr. Van Buren, the Secretary, read a statement of the accounts, which showed a balance in hand. There are 55 members on the books. The new committee and secretary were elected, Messrs. Van Buren and J. L. Merriman in the former capacity, and Mr. Jas. Stewart in the latter. A vote of thanks to the retiring officers, and to the Chairman presiding at the meeting, closed the proceedings.

It is a sight at once edifying and diverting to watch the manoeuvres of two immoral crows when they endeavour to rob a poor dog of his bone. One of the jaunty pilferers makes the dog's tail his object of attack, and his assaults are so persistent and daring that at last the tormented cur, abandoning his bone, chivies the thief to the nearest tree. Meanwhile the corvine accomplice hops up and conveys the tid-bit to a place where its qualities can be discussed at leisure. Chinese thieves take the conduct of crows as a model. A Hongkong journal tells us that as a ship's officer and his wife were walking, the other day, in the Western part of the town, a Chinaman made a violent attempt to get hold of the lady's ear-rings. He was of course detected and pursued by the gentleman, whereupon an accomplice, deliberately stepping in, snatched away the lady's watch and chain. This was clever, though not deserving of any higher rank than the exploit of the crows, and certainly far inferior to the achievement of the Chinaman many years ago, who seeing a Ceylon Rifleman asleep on sentry, climbed the wall, against which the man was leaning and fished his rifle out of his hands with a crook and line before the Cingalese awoke from his nap. A still shrewder device, however, is attributed to a certain class of Japanese thieves who devote their attention chiefly to appropriating foot gear. A young lady with handsomely lacquered pattens

is their special quarry. They know exactly at what places pleasure-seeking damsels are wont to stop and gaze at the prospect, and there they station themselves with two or three pairs of very old pattens in their sleeves. So soon as the young lady is sufficiently absorbed by the view, she feels something tickling her foot, whereupon she withdraws the other foot from its patten and applies its toes to the irritating spot. By and by that foot also demands similar treatment, and ultimately the damsel walks away, reshod. Each time she used one foot to scratch the other, an old worn-out patten was substituted for the dainty article from which the foot had been withdrawn.

• • •

The Hongkong journals complain, we observe, that "crime of every description seems to be on the increase in the Colony." About eight months ago the same journals recorded the agreeable fact that crime had considerably diminished, and attributed the decrease in the number of convictions to a supposed improvement in the police administration, its efficiency being no longer impaired by the pragmatical interference of Governor Hennessy. To many persons the inference seemed a little strained, but its authors were very resolute in maintaining it. They refused to admit the hypothesis that the state of the Colony's criminal statistics, immediately after Sir John Hennessy's departure, was more reasonably attributable to the measures adopted under his direction, than to the supposed exodus of a swarm of ruffians who foresaw the impossibility of living in Hongkong under a less lenient Governor. Admitting the soundness of these critics' views, however, we are curious to learn how they explain the present state of things. Can the recent increase in crime of every description be connected, in some fashion, with Sir John Pope Hennessy, or must it be laid to the charge of the changes made by his successor? Just for the sake of logical consistency we should like to have this matter made clear. Has somebody been interfering again with the police in the execution of their duty, or have Governor Hennessy's rowdy *protégés* been attracted back to their old haunts by the discovery of humanitarian traits in the methods of his successor?

• • •

It is universally agreed that the police of Yokohama are not in the first rank of inefficiency. So bad are they that many respectable land-owners have not hesitated to prefer a charge of corruption against the whole force. But, for all that, we do not hear of ladies who, while walking in broad daylight in the streets of Yokohama, have their earrings torn from their ears, their watches plucked from their girdles and rolls of bank-notes snatched out of their hands. We might be worse off, evidently. We might be living among Chinese under the protection of Hongkong constables. There was a time in this same Yokohama when things were considerably less pleasant than they are at present; when seventeen times during the course of twelve months, thieves managed to steal money, jewelry, and uniform from the quarters of officers in the English Camp, where sentries were

posted on every gate and watchmen patrolled every square. No doubt the sentries and watchmen were in the pay of the burglars, but that only makes the comparison more perfect.

AN interesting fact, which, though at first sight inconsistent with the common complaint of scarce money and bad times, is in reality a feature of the present prevailing depression, may be observed by reference to the last records of the Post Office Savings Bank. Established in 1873, that institution did not, at first command a large share of public favour. The rate of interest allowed on deposits was only six per cent., a figure that did not contrast advantageously with the price obtainable for money in other investments. Thus in the interval of nine years from 1873 to 1882, the total sum deposited with the Savings Bank scarcely reach one million *yen*. Last year the rate of interest was changed to seven, and now stands at 7.2 per cent. Other modifications of the rules have also been made, the most notable being an increase of the aggregate which each person is allowed to deposit per diem from 30 to 50 *yen*. During the first ten months of the current year the amount deposited was nine hundred thousand *yen*; that is to say, a sum but little short of the whole deposits for the preceding nine years. A post office savings bank is not intended to satisfy the requirements of general investors. Its natural sphere of usefulness is confined to persons whose savings are too small to be used as capital or too valuable to be risked in speculation. Nevertheless, though the apparent multiplication of such savings is in itself a sign of prosperity, the fact that they find their way in such largely increased quantities to the vaults of the Bank indicates anything but a brisk state of business.

THE representatives of the Church Missionary Society in China have decided to withhold the benefits of Christian education from all small-footed girls unless their parents consent to unbind their feet. The decision sounds somewhat rash. One is disposed to predict that its results will be a considerable diminution in the number of Chinese children who receive Christian education, and a very insignificant diminution in the number of those whose feet are subjected to this most barbarous and torturing process. But on the other hand, inconsiderate haste is the very last error into which Missionaries are likely to fall when a problem that affects the whole scope of their labours has to be solved. They thoroughly recognise that in the educational advantages they are able to offer lies the best, if not the only, chance of winning converts among Oriental peoples. It is not probable that they would sacrifice the prospect of saving souls to the hope of saving feet. The question has doubtless been under careful consideration for many years, and we feel confident that the Missionaries have seen their way clearly before committing themselves to such a step. It must have been easy for them to ascertain what amount of support they could look for among the Chinese, and how far this prohibition

will influence the present attendance at their schools. Assuming,—and the assumption is surely reasonable—that they had given these matters due thought before passing the resolution which now stands in the minutes of the Ningpo Convention, the language of some of their critics seems a little hasty. The *North China Herald* characterizes the resolution as “both irrelevant and unjust,” and goes on to say:—“Here we have girls forbidden by Missionaries to attend the mission schools because, some ten, eleven, or twelve years ago, as the case may be, their feet were mutilated by their parents in deference to a pernicious custom, and the parents refuse to undo the mischief now. We fail to see either the logic or the justice of this resolution. It is as though one were to refuse to save a man from starving because somebody had tattooed him when a child.” Now it cannot be denied that if this new rule of the Missionaries is intended to be of unlimited application, it fully deserves the epithets bestowed upon it by our Shanghai contemporary. For when a Chinese girl's feet have been subjected to the cramping process, during ten, eleven or twelve years, the mischief is irrevocable, and to duplicate her misfortune by making it disqualify her for the benefits of education, would be at once cruel and unjust. But here, too, we give the Missionaries credit for better judgment. It is incredible that their rule is meant to be enforced in cases where to unbind the feet would simply mean to expose a deformity without securing any corresponding benefit. Fuller particulars are required before any final opinion can be expressed with regard to a measure which, so far as its motive is concerned, must command universal sympathy. It is impossible to conceive anything more revoltingly unnatural than the heartless barbarity inflicted upon female children in China. It has been compared to the tight-lacing practised by ladies in the West, but after all, the latter is discretionary, whereas in China a poor little baby is maimed and crippled for life before it has learned to address an intelligible remonstrance to its cruel parent. It is something to know that the present rulers of the Middle Kingdom are opposed to the custom. “The Maichu Emperesses and Princesses,” we learn, “are all natural-footed women, and so stern is the law against binding, in the Palace, that no woman with compressed feet is even permitted to enter.” Wisely or unwisely, then, the Missionaries are only acting in unison with laws enacted by those temporal rulers whose authority it is their duty to support.

THE American Consulate in Hakodate has been abolished,” says the *Fiji Shimpō* in its occasional notes, much as though it were disseminating the news of some common everyday event. But if the intelligence be correct—and we believe it is—the future judicial control of American citizens in Hakodate becomes an interesting speculation. Are Japanese complainants, should there be any such, to carry their charges and witnesses to Niigata or Yokohama, or are they

to do without redress altogether? A United States Consul at Hakodate has probably little or nothing in the way of official business to transact. Indeed the Hakodate Consul of another great Power lives comfortably from year's end to year's end in Tokiyo, and lets litigation at the northern port take care of itself. This variety of Consul is worse than no Consul at all, since to uselessness be adds gross neglect of duty. But it will occur to reflecting individuals that, having deprived the Japanese of judicial authority, the Treaty Powers are bound to make provision against all risks of a failure of justice, and we fail to see how this obligation is fulfilled by abolishing the Consulate at a port where American citizens may at any moment be found residing or American sailors taking a holiday on shore.

TRAX to the Republican tradition that civil officials take precedence of military and naval authorities in time of war, the French in Tonquin have supplemented the difficulties of a task already sufficiently difficult by twisting the chain of responsibility into all sorts of complicated knots. First came the troubles between M. Harmand and General Bouet, ending in the latter's disappearance from the scene at a moment when his services seemed essential. The consequences of that “split in the camp” were not immediately visible. The Admiral replaced the General, and things seemed to go on pretty much as before, though to those behind the scenes, it was apparent that the conduct of the campaign had been sensibly impeded by these complications. Then followed the disbanding of the Yellow Flags, a more striking example of the evils of many heads and divided authority. Under Captain George these Chinese mercenaries had distinguished themselves not a little. In fact, judging from the accounts of their achievements that occasionally reached us, they were not only efficient but faithful troops. At the end of September, however, the *Saigon Independent* announced that they had been disbanded, because M. Harmand had resolved not to employ Chinese as soldiers any longer. This was an intelligible prejudice, but it now turns out that the dismissal of the Yellow Flags was really the result of disputes similar to those which led to General Bouet's resignation. And the sequel of this new complication is that the disbanded mercenaries have quietly passed over to the Black Flags and are now arrayed against their former employers. Whatever sympathy may be felt for the French troops in the troubles they have to encounter owing to the vacillating policy of the Grévy Cabinet, it cannot be said that those entrusted with the immediate conduct of the campaign in Tonquin are doing much to smoothe away their difficulties.

REFERRING to Mr. Colquhoun's comments on the Indian Opium question in his book “Across Chryse,” *The Friend of China* says:—“Mr. Colquhoun is not a missionary, but an officer of the Indian government, and his testimony will

perhaps find credence among people who have contemptuously rejected missionary evidence, and the more readily that he is no foe to the opium revenue, but rather opposes the anti-opium agitation. For ourselves we hold that it is not lawful to shape our conduct by mere conjectures as to what others will or will not do, when we have done our duty. Let it be granted, for argument's sake, that the abandonment by our nation of its unjust and unchristian support of a destructive trade, although requiring considerable financial sacrifice on our part, will produce no good effects whatever in China, nevertheless we hold that the claims of duty and honour are imperative, and must be fulfilled, whatever the cost, whatever the consequence. For can we think that the case is yet so desperate as to be beyond all remedy, all mitigation. Even now, if our government will but hearken to the voice of conscience, and revert to a policy of international righteousness, we are persuaded that the good effects of our repentance will more than compensate for the sacrifices entailed.”

In this connection we read that, in his recently published “Life of Lord Lawrence,” Mr. Bosworth Smith refers to a memorandum by Lieut.-Colonel Edwardes, C.B., Commissioner of Peshawar, on “The Elimination of all Unchristian Principle from the Government of British India,” which was presented to his superiors in 1858, when the terrible events of the mutiny had impressed many Christian men in India with the conviction that the Indian Government had incurred the Divine displeasure by its support of idolatry, its opposition to Christian teaching by its officers, its patronage of the opium trade, and other inconsistencies. In sequence of this protest, Sir John Lawrence (at that time Chief Commissioner of the Punjab) communicated to his government his own views upon the topics treated of by Sir Herbert Edwardes. In this thoughtful, courageous, and high-minded despatch, Sir John Lawrence gave forth his opinion upon the opium revenue as follows. *The Friend of China* is indebted to the kindness of Dr. Charles Hathaway, who was Lord Lawrence's friend and private secretary, for a copy of the extract:—

Ninthly, the Chief Commissioner concurs generally in what is urged both by Colonel Edwardes and Mr. MacLeod regarding the objectionable character of the connection of the British with the production and sale of opium. In what degree the consumption of opium is deleterious to the Chinese is a matter on which the English are not called upon to pronounce: the Chinese themselves are the judges of that. Moreover, so long as the Christian nations of Europe consume intoxicating liquors, it is needless to take the case of the Chinese into special consideration. The Chinese people, if left to themselves, would demand opium; the people of India in like manner would supply it. But, although the Government may be quite justified in levying taxes on the opium thus produced, it does not follow that we are morally right in encouraging the production, or in actively supervising the producing, storing, carrying, and selling of the drug, and advancing money for this purpose to cultivators. We are right in raising revenue from the drug, but not in employing this particular method for doing so. All this is done, of course, for the benefit of the revenue; and as the question is a financial one, it becomes beset with difficulties. By our present method some 400,000 sterling per annum are raised, and the Chief Commissioner fears that nothing like this amount could be raised by any other method. Morally, the

best course to adopt would be to sever government connection with the production of opium, and to levy a heavy export duty on the drug, similar to that which in the Bombay Presidency is levied on the Malwa opium.

It will be observed, adds *The Friend of China*, that Lord Lawrence was treating the subject entirely from an Indian point of view. He did not criticize the action of the British Government in its Chinese wars and diplomacy. Probably he thought that, writing as an Indian official for the Indian Government, the Chinese affairs were not within his scope. But in 1877 Lord Lawrence showed his hearty desire to secure justice for China by signing a memorial to the English Government advocating on philanthropic grounds the abolition of the opium trade.

A QUESTION which may in future deeply affect the status in America of persons of Asiatic birth, has been brought into prominence by the application of a Chinese resident of Philadelphia for a certificate of naturalization. This aspirant for citizenship is twenty-seven years old; has lived eleven years in the land of his choice; wears no "tail;" speaks English with hardly a trace of foreign accent; is a man of substance, owning several laundries; has an excellent reputation in legal circles, owing to his success in privately adjusting disputes among his litigious countrymen, and is presumed to be a Christian from the circumstance that he took, upon the Bible, the requisite oath renouncing foreign potentates. Having gone through the preliminary formality commonly known as "declaring his intention," he is subsequently informed that under the provisions of the naturalization law he is for ever excluded from the privilege he desires to enjoy. The original statute, which remained in force until thirteen years ago, permitted only "free white persons" to enter the Republican community. After the civil war had removed the disabilities of the negroes, a proposal was made by Senator Sumner to amend the act by striking out the word "white." This was objected to, on the express ground that the Chinese would thereby be made eligible; and Mr. Sumner, whose thoughts were chiefly bent upon the complete enfranchisement of the race in whose behalf he had always laboured, injudiciously gave way, and sanctioned a change by which it was stipulated "that the naturalization laws are hereby extended to aliens of African nativity and to persons of African descent." In 1875, Congress being still apprehensive that Chinese emigrants might force their way into a fastidious national brotherhood which already included, in addition to its multitude of enlightened citizens, a liberal representation of dynamic Fenian savages; masses of totally ignorant and useless Ethiopians; and no inconsiderable number of wild and irreclaimable red Indians;—Congress being thus apprehensive, an additional phrase was inserted into the text, rendering the law of admission applicable only "to aliens being white persons and to aliens of African nativity and to persons of African descent." It would thus appear that hordes of utter barbarians may be carried over from regions

wilder than any known to Stanley, if there be such, and, after complying with the usual regulations, may be invested with all the social and political rights pertaining to American citizenship in its extremest breadth and dignity; whereas a well disposed, well educated, well-to-do denizen of the "city of brotherly love" cannot be similarly endowed, because he came from a continent of which the "hoodlums" of a few immature Western cities do not approve. The laws of America reject every comer from that quarter of the globe in which civilization first dawned upon humanity, and hold out a greeting to wildernesses where civilization is still unknown, and the inhabitants of which are but dimly recognizable as belonging to humanity. They strain at a Mongol and swallow all Africa!

Anomalies of this sort cannot possibly continue. In fact, the principle embodied in the naturalization law is one which the officers of the State Courts seem to shrink from putting into effect. In spite of the narrow legislation of 1870 and 1875, natives of China, as well as of Japan, have been naturalized, without a doubt being thrown upon the validity of the transaction. Whether they have or have not, been admitted to all the privileges of citizenship is a question which we have no means of deciding. It is contended by those who insist upon a literal application of the statute that, whatever process Asiatics may go through, they cannot legally become Americans. How, then, are they to obtain redress for the fraudulent operations of which they have been the dupes, and for which they have been required to pay? The clerk of the court accepts the attestation of any declarant, gives him the required certificate, and collects the fee. After the prescribed lapse of years, the applicant returns, completes the formalities, and goes forth in the fullest confidence that the wished-for end is accomplished;—is justified in that belief by the explicit language of the document he carries with him. It may be within the power of a higher Court to nullify the action thus taken, rob the victim of the title he has waited patiently to obtain, and turn him out of the position which he fairly believes to be his due; but a system which affords opportunity for such an abuse is manifestly false, and cannot last. Other and more liberal amendments to the law will in course of time be proposed and carried. Not so speedily as if the political control in America were exercised by Americans, instead of being largely dictated by fugitives and outcasts from other lands; but soon enough, we trust, to prove that the craven prejudice of to-day is merely an evanescent impulse, to be wiped out and atoned for by the influence of sober and upright conviction.

THAT Chinese merchants are an eminently practical class of persons may be proved, if any proof is needed, by reference to the rules of a trade guild at Canton, published in the last number of the *North China Review*. Commerce at the Southern capital is not what it used

to be. Daily it becomes more difficult to turn an honest penny, and daily a higher grade of intellectual qualities must be employed in the effort. We learn from the remarks prefatory to the rules of the guild, that before Canton was opened to foreign trade, most of the merchants who came to establish themselves in business there, went home with large fortunes, whereas now-a-days the record is of a totally different character. There is not much to interest us in this statement. Merchants are proverbially *laudatores temporis acti*, and the burden of their song all over the world is a similar monotone. The Canton tradesmen, however, are not sentimental about their diminishing opportunities. They bluntly refer the change to the increased difficulty of making "corners" in the market. "Since vessels of foreign type have been admitted," they say, "goods come in a flowing stream, so that now-a-days there is no chance of holding stocks to raise prices as of yore." Hard times for tradesmen, then, mean good times for their customers, so that the world, as a whole, does not lose anything by travelling faster. The reader will doubtless be prepared to find, after this confession of faith, that the object of the Cantonese guild is to combine the materials for constructing "corners," but if this be the purpose of the institution, nothing of it is suffered to appear on the face of the rules. To secure mutual protection against fraud and to supplement the imperfect working of Chinese executive machinery seem to be the chief aims of the coalition. The rules set out by providing for the levy of certain contributions. Members have to pay one mace per hundred taels' worth of transactions, besides storage and transhipment fees on goods not for sale, and a shipping tax of \$1 for every junk they own. The method of collecting these contributions and ensuring their correctness is very interesting. A day being fixed for announcing the name of the largest contributor, the manager of each subscribing firm repairs to the guild, provided with a duly sealed statement of his contributions for the year, and enters his name in the register. After this the members adjourn in company to the San-po Temple and "do obeisance in token of good faith." Even then, however, if there is any suspicion that an account is inaccurate, the firm is required to produce its books for inspection, and should the inaccuracy be proved, the defaulter is fined five times the amount of his default. Besides these yearly meetings there are convivial re-unions every month, on which occasions the members report the amounts of their monthly contributions and then dine together. The guild does not concern itself about Customs and Likin dues, except so far as to recommend their prompt payment, but in the event of a member incurring bad debts through the dishonesty of a local dealer, the guild undertakes to prosecute the latter, and furthermore to proscribe him. This punishment of proscription appears to be the chief weapon of the associates, and a very trenchant weapon too. For when a *hong* is thus proscribed—expulsion from the guild necessarily

includes proscription—any member who is discovered to have dealings with the proscribed tradesman or firm, whether from sympathy or friendship, is fined 100 taels. The rules with regard to lawsuits are peculiar. When a member, having occasion to go to law to obtain redress for a real grievance, finds his resources inadequate to carry on the suit, the guild addresses a joint petition to the court praying for an adjustment of the case, and, further, defrays half the expenses. Additional assistance of a similar nature is also given, but by way of set-off, members having disputes about money matters are required to submit their cases to arbitration at a meeting of the guild, and not to appeal to the authorities unless a satisfactory settlement is unobtainable by the former process. A member having recourse to the courts without first appealing to the guild, is subjected to a public reprimand, and any case he may subsequently submit for the opinion of the guild is dismissed without a hearing. Truly there are points here that might well be imitated by other nationals. The same may be said of the rules with regard to the suppression and punishment of theft. Thus the restorer of stolen property, whether a policeman or a private individual, receives a reward of half its value, and if he captures the thief also, the recompense is increased to eight-tenths of the value. Standard weights and measures are also kept by the guild, and any member convicted of deviating from them is heavily fined. In fine, if the objects with which Chinese merchants associate themselves be correctly deducible from the rules of this Cantonese guild, the tradesmen of other countries might follow their example with advantage.

THE Russian paper *Navosti*, in a recent issue, states that the "forehead fight," a brutal combat inherited from the old Turks, still survives in some districts among the Tartars of the Crimea. A duel of this savage kind took place a short time ago in a Crimean village. The report of it is given by a physician who was called to attend to the defeated combatant. The two foes take their stand at a measured distance from each other with their heads bent forward; then, at a given signal, they rush at one another, butting forehead against forehead, like two goats. The remainder of the duel is fought wholly with the forehead; neither blows nor kicks are permitted, as the man who uses any weapon except his forehead is disgraced. In the recent case blood streamed from the foreheads of both the semi-savages; nevertheless they continued butting at each other with ferocious passion, until at length one of them fell exhausted to the earth. He gathered up all his remaining strength to draw his knife from his girdle, and with one determined stroke he then cut a wide gash across his throat. The physician states that the act of suicide on the part of the beaten man is to be regarded as a direct consequence of the injury done to the brain by the fearful concussions of the fight.

ONE of the passengers, on the last trip of the magnificent liner the *City of Rome* from

Liverpool to New York, as a professional ship-builder and marine engineer, took especial pains to note her performance. In fact, says an American exchange, he took passage for that purpose. He remarks that she is a fine sea boat, but that the shaking of her after body is "something frightful" when she is running at full speed; that abaft her engines the motion is greater than he could have believed would be possible, and that it cannot be a great while before she will show signs of this terrible strain, and will have to be materially strengthened to stand it. She is a well-built vessel, but rivets once started by this heavy strain cannot long withstand the cutting process, and hence she will have to be watched with more than ordinary vigilance.

A NOTICE to mariners has been issued from the Coast Inspector's Office of the Chinese Imperial Maritime Customs, referring to a sunken rock in Amoy Inner Harbour, as follows:—"Notice is hereby given that a sunken rock, conical in shape and having a depth of 11 feet on it at low water spring tides, has been discovered in Amoy Inner Harbour, bearing S. 29° E., distant about 425 feet from High Water Rock. To avoid this rock the pilot must keep Messrs. Malmcampo and Co.'s house well open to the westward of High Water Rock."

ON the subject of the "United States Tariff," as it affects the Silk industry, the *American Silk Journal* translates the following short article from the *Bulletin des Soies* of Lyons:—

The *Chambre syndicale des tissus et matieres*, of Paris, has just sent to the *Chambre de Commerce*, and to the *Chambres Syndicales* interested, a pamphlet reproducing a letter which M. Léon Chotteau has written to it on the subject of the new United States tariff. In this letter M. Léon Chotteau enumerates the raising and lowering of the new tariff so far as it concerns the tissues of silk, wool, cotton, etc. He believes that, notwithstanding a reduction in most of the duties, it will not commend itself to the exporters. He also proposes that the *Chambre Syndicale de tissus* of Paris should make inquiry in the several centres of production in order to gather the desiderata of all the industries to the end of forming arrangements tending to bring about a new lowering of duties.

It is to prepare this inquiry that the *Chambre Syndicale*, of Paris, has compiled a table comparing the old with the new duties, writing to those interested to fill in, in a column reserved for the purpose, such new reductions as they would like brought about in the American tariff.

Furnished with all the responses, M. Léon Chotteau, who will represent a large number of French exporters at Boston, proposes to stir up, either by conference or by published articles, a current of public opinion on the subject of a new revision of the duties of entry in a manner that Congress will be forced to act favorably in the matter.

We cannot but wish for a happy issue for this attempt of M. Chotteau, but with reservations relative to the specific taxation which M. Chotteau proposes to substitute for the *ad valorem* duties, to which the manufacturers of Lyons give preference as the more equitable.

SOME of the nicest points of racing turn on the accurate measurement of the height of a horse. An inch more or less may involve, or otherwise, a penalty of seven pounds; and "seven pounds often means a distance." *Apropos*, according to an Indian paper, an amusing scene was witnessed at the old stand, Calcutta, when the well known racing pony Hawk was brought up for a certificate. He was first passed at the

height he has invariably run at up-country meets; then his owners' representative, praiseworthy wishing to get him as low as possible, took him away, manipulated his heels, and brought him back again; when, lo and behold, he measured an inch more. Why? Simply because his heels being tender he stood on his toes.

A SERIOUS accident happened on Thursday on board the P. & O. steamship *Khiva*. The fourth officer was tallying cargo near one of the hatches, when he was struck by some that was being swung inboard and knocked down into the hold, striking in his descent an iron beam. He is believed to have sustained very serious injuries, including a fractured thigh. Surgical aid from the *Richmond* was at once obtained, and we believe the unfortunate man has since been removed to the hospital.

THE London *Figaro* learns from statute 19, George II., c. 21, that the price of an oath is fixed according to a regular scale. The labourer, sailor, or soldier who curses profanely forfeits one shilling. Every other person "under the degree of a gentleman" has to pay two shillings for the privilege of using bad language, and a gentleman or person of superior rank may be mulcted in five times the amount of the fine imposed upon the labourer, soldier, or sailor, which is hard upon a gentleman or a person of rank, considering that more profane swearing is certainly to be heard for a shilling than any gentleman is capable of.

THE Autumn Meeting of the Toyama Race Club opens to-day, when His Imperial Majesty the Mikado is expected to be present. His Majesty has ordered a prize to be given for an extra race on the first day for half-bred non-winners and Japanese ponies, and His Excellency Nabeshima will give a prize for an extra race (handicap) on the second day.

THE *City of Rio de Janeiro*, bringing the American mail with dates from San Francisco to the 24th ult., arrived this morning, but our advices were not delivered in time for this issue. The voyage has been somewhat prolonged on account of the weather, the vessel having encountered strong winds and heavy sea throughout the passage.

THE *Jiyu Shimbun* reports that the claim of the Lighthouse Department against the steamer *Breconshire* for sinking the Treaty Point Lightship in May last, has been adjusted, the owners of the former vessel paying \$6,000.

By the *City of Rio de Janeiro* we note the arrival of His Excellency Terashima Munenori, late Minister to Washington; also His Excellency the Korean Ambassador, Hong Yong Sik and suite.

WE are informed that the P. & O. steamship *Zambesi* left Hongkong at one p.m. yesterday for this Port, *via* Nagasaki and Hiogo.

JAPANESE PRISONS.

THE details of prison life, to whatever jail they may refer and in however impartial a spirit they may be written, must always present some features more or less shocking to readers who have never themselves been under restraint. Prince KRAPOTKIN'S wonderful stories of the miseries endured by political captives in Russia cannot have failed to stir the pulses of many English men and women, despite the powerful testimony of critics who showed that when his recitals were weeded of sensational colouring and manifest exaggeration, little if anything remained except such a measure of physical inconvenience as is certainly not inconsistent with the motives of punishment. The age in which we live is honorably distinguished by a remarkable growth of humanitarian principles, but that their development sometimes trenches on the confines of reason is nowhere more evident than in the history of prison reform. To such an extent has the public carried its morbid anxiety about the comfort and welfare of criminals, that in some parts of the world prison life is stripped of all its repugnant elements, and has come to be regarded by the pariahs of society as a happy escape from toil and want. Whether it is the intention of the law to make its penalties attractive rather than deterrent is a question concerning which many sensible persons seem to be perplexed.

It was not to be expected that the Japanese, in their almost blind obedience to the dictates of Western civilization, should entirely escape this humanitarian craze. With them, as with all Oriental peoples, criminal procedure in the old times, shrank from nothing that could intensify the terrors of law-breaking, until men learned to regard imprisonment with scarcely less horror than death. Here if anywhere there was scope for radical reform, and the task was so heartily undertaken that, while life in a Japanese jail does not yet satisfy the highest standard of civilized requirements, it has, nevertheless, undergone, during the last decade, changes which for rapidity and thoroughness have no parallel elsewhere. The history of the world is not without instances of a people living up to ethical systems considerably in advance of its written codes, and unless we assume that something of this sort was the case in Japan, it seems impossible to explain the fact that the nation has suddenly passed without any apparent effort or disturbance from the stern restraints of semi-barbarous codes to the gentle procedure of advanced

humanitarianism. Japanese prisons are not built of brick or stone, indeed, nor do they satisfy all the hygienic dictates of Western science, but the same may be said of Japanese houses in general. The inferiority of the former to the latter is probably not disproportionate to the difference that exists in similar cases among ourselves, while, on the other hand, Japan is fully abreast of modern progress in her newly developed system of teaching every prisoner a trade, or making him pursue that with which he is already familiar, so that not only are many of the prisons self-supporting, but their inmates are enabled to set aside a provision for their immediate wants after release. The points that still seem to stand in need of improvement are the treatment of prisoners awaiting trial and the want of some system of classifying convicts. The latter, indeed, is a reform which has not yet been thoroughly carried out in any country, but with regard to the former, Japan seems to be still behind the times. Before the law every man is innocent until his guilt has been established, but the stories sometimes published in the vernacular press seem to show that this principle is not fully respected by the provincial executive.

This subject is suggested by the self-related experiences of one of the staff of the *Choya Shimbun*, who underwent a month's imprisonment for violating the press laws. Translated into English his tale runs thus:—

In May last, when I wrote that editorial paragraph about the Takata affair, under the heading "Extract from the *Takata Shimbun*," I, together with Mr. Sato Tetsuya, our proprietor, was charged with libelling public functionaries. I was convicted and sentenced to one month's imprisonment and a fine of yen 50. After sentence was passed, I was shifted from the Court to the Messenger's Office, where I lunched with my companion. About one o'clock, a police inspector appeared and took me to the temporary prison, where I was handcuffed and tied round the waist, ready for transport to the Ichigaya penitentiary under an escort of armed police. The path between the Court and the Jail is about two feet wide; and the eighth turn which was performed with as much difficulty as twisting through a labyrinth, brought us to our future home. I was then conducted to the *Senjo* (the room where convicts are undressed and examined); and the handcuffs and rope were there removed. Strict enquiry was made as to my health, profession, age, name, possible previous convictions, and so forth. My apparel was then exchanged for the prison uniform, and all my clothing and property was wrapped up, sealed, and stamped to be stored away. Next, I was removed to the prison office with the same ceremony as before—handcuff and rope. I took a seat, and the jailers gave me a wooden bowl, a pair of chopsticks, and a blanket. Shortly afterward, they put me into ward No. 19, relegating Mr. Sato to No. 18. The edifice has two stories and is divided into eighty apartments or wards in all, in one of which are confined the female convicts. There is accommodation for five hundred prisoners, and the prison is used both for unconvicted and convicted persons. The ward in which I was locked up is styled the "Five Days" or the "Condemned" apartment, because here prisoners are confined for five days after condemnation in order to give them time to appeal

against their sentence. After this term they are transferred, as it may be convenient, to the *Ishikawajima* or *Ichigaya* prisons. I was confined with burglars, thieves, pick-pockets, and all other kind of criminals. The room was so small that I could scarcely move, and the stench was offensive in the extreme. During my five days I passed my existence in a constant struggle with fleas. Our ration of boiled rice was of the worst kind, and mixed with barley in the proportion of six to four. Daily each prisoner receives four *go* of this vile and scant diet, in addition to a measure of bean-soup in the morning. I could not eat for two days, till hunger compelled me. I then fully realized the old proverb "Hunger finds nothing unpalatable." The articles permitted to be given to convicts by their relatives or friends, are paper, towels, potatoes, and the like. On the morning of the seventh day after my incarceration, I was transferred in a car to the *Ichigaya* prison with twelve fellow prisoners, including Mr. Yasutake of the *Iroha Shimbun*. The gaol in question is situated on the highest part of Tanimachi and commands a splendid view. It consists of fifteen edifices, three of which are reserved for hospital purposes. There is a house of correction for boys. The large wards accommodate two hundred and fifty prisoners, and the small, from seventy to eighty prisoners. The prison buildings are surrounded by the virtual establishment, offices, and factories. Here the well-being of the poor prisoners is well provided for. They are kept busily engaged making paper, furniture, straw fancy goods, etc. As soon as we made our appearance in the office, a few warders came, and, after giving a receipt for our bodies, changed our apparel for the red prison uniform. Attached to every ward is one prisoner-monitor who directs the other prisoners in their work. He is generally a hard task-master and dispenses swift justice with his fists to those who disobey his orders. He tells them:—"I will release you through the back-gate!" This means that, if the prisoners are not submissive, he will work them to death. The corpses are carried to the cemetery through the back-gate. Hence the expression. As soon as I was put into the ward, the monitor in charge addressed me, saying that he was in for swindling, and that he was anxious to treat journalistic prisoners with the utmost leniency as some atonement for his past crimes. He begged me to be at ease. All convicts are allowed to bathe once a day. The bedding consists of only one square quilt and a wooden pillow. Three methods of punishment prevail—curtailment of rations, confinement in a dark room, and "the pole punishment" (in which a long pole is tied to the back and both arms of the prisoner). The convicts are often subjected to one or other of these penalties. Wooden clappers are used for signals. At the first signal, the prisoners must rise. At the second the gaolers open the ward doors and muster the out-door gangs. At the third signal—breakfast. After that—work. I was told off to the spinning department. At 10 a.m. there is a short rest; and dinner is eaten at 11.30 a.m. At noon work is resumed, and continued until 3.30 p.m. After supper, prisoners are at liberty to read and talk. Professional thieves are, of course, confined in separate wards, and regret leaving prison on the expiration of their term. To them, the jail is a comfortable home where hunger is unknown. "The Chief," as their best man is called, commands a respect from his fellow criminals which almost amounts to fear. The hospital seldom contains less than 200 inmates and the mortality is very great, facts which well illustrate the miserable time prisoners have.

There is not much to startle anyone in this account, but it nevertheless contains one or two points worthy of comment. First, with regard to the dimensions of the so-called "Five Days" cell, we find, on enquiry, that it measures nine feet by nine, and that under ordinary circumstances it is intended to accommodate four prisoners, temporarily. This number may, however, be increased to six on exceptional occasions, and when it is remembered that

space must also be found in the same cell for a wash-tub and other necessary vessels, no doubt can be entertained that the complaint of over-crowding is just. So soon as the convict exchanges this place of probation for a permanent prison, his troubles from want of room cease, but the preliminary crowding still remains inexcusable. Nor can we doubt that the atmosphere of such a cell must be more or less offensive: not so offensive, indeed, as to warrant the language employed in the above narrative, inasmuch as water and deodorizers are plentifully employed—but still sufficiently impure to be disagreeable and deleterious. It is a pity that abuses, so easily capable of remedy, should be suffered to exist side by side with evidences of general and earnest reform.

The question of diet is even more important. We find on reference to the dietary of the Ichigaya Jail, where the ex-editor of the *Choya Shimbun* was confined, that the prison fare consists of three meals per diem. At each meal the principal item is a plentiful supply of rice and wheat, mixed in the proportion of four to six. This is always accompanied by a quantity of pickled turnip (*dai-kon*), as well as by a bowl of vegetable soup, beans, sweet potatoes or fish. It may be presumed that editors of Japanese newspapers are accustomed to better diet, but the writer of the above narrative, while complaining on his own account, bears involuntary testimony to the general nature of prison fare when he tells us that professional thieves regret leaving jail and regard it as "a comfortable home where hunger is unknown."

The charges preferred against the monitors are of such an extravagant nature that they impugn the general accuracy of the whole statement. For several years the prisons of Japan have been under the control of the Police Bureau, and no efforts have been spared to correct abuses of the nature referred to. In 1881 an improved method of distributing the prisoners was adopted, the number of warders and other officials was increased, and the whole system of discipline as well as of supervision received thorough revision. We are assured by the prison authorities that physical violence and threats are never employed by the monitors, even towards the worst characters, and that offences of this description, if committed by the prisoners, are severely punished.

But the most serious exaggeration of the writer in the *Choya Shimbun* is his statement with reference to the health of the prisoners. "The hospital," he says, "seldom contains less than 200 inmates and

the mortality is very great." We have examined the records of Ichigaya Jail, and we find that the average number on the sick list, from January to October of the present year, was 52 per mensem, while the average number of prisoners was 1,127. May and June are excepted from this calculation. During these months the prison was visited by an epidemic of fever, and the inmates of the hospital increased to 105 and 134. The deaths during May and June were 32 and 29, respectively, and the average monthly mortality for the rest of the year was 15. These figures, though not altogether satisfactory, represent a state of affairs very different from that which the *Choya Shimbun* seeks to convey. The experiences of the writer in that journal do not seem to have taught him discretion, and while we could heartily sympathise with any earnest endeavour to expose abuses, we cannot pretend to have any respect for a journalist who seeks to pose as a martyr by exaggerating his own sufferings.

PENAL CODE AND CODE OF CRIMINAL PROCEDURE IN JAPAN.

BOOK III.—OF CRIMES AND DELICTS AGAINST THE PERSON AND PROPERTY OF PRIVATE INDIVIDUALS.

CHAPTER I.—OF CRIMES AND DELICTS AGAINST THE PERSON.

Section I. treats of premeditated murder, and other cases of homicide (Art. 292-298) essentially in harmony with the *Code Pénal* (Art. 205 &c., &c.)

Voluntary and premeditated homicide is designated as assassination, and is punished with death. Premeditated homicide by administering poisonous substances, is considered the same as assassination and is punished with the same penalty.

Voluntary homicide is considered murder, and is punished with penal servitude for life; but if it is accompanied by bodily torture or other acts of cruelty, or if other crimes or delicts precede, accompany, or follow the same, it is punished with death.

Any one who after having determined, with or without premeditation, to kill a particular person, accidentally or incidentally slays another, incurs the penalty of voluntary homicide.

Section II. treats of voluntarily inflicted blows, wounds, and bodily injuries. (Art. 299-307).

The injuries, if followed by death, entail the penalty of penal servitude for life. If the injuries result in the total loss of sight, hearing, or speech, of both hands or both feet, or one of these members, &c., the penalty of minor confinement is inflicted: in case of less serious maiming or mutilation, major detention for from 2 to 5 years.

In other cases the penalty is graduated according to whether the resultant indisposition or incapacity for labour lasted 20 days or more, or whether the loss of time was less protracted, or finally, whether a merely momentary injury or abuse resulted.—Here also, as in case of the homicide, the perpetrator is held responsible for an *aberratio ictus*.

Whoever, purposely and with criminal intent,

administers to another substances injurious to health, incurs the penalties for premeditated bodily injury, which are in every case to be increased one degree.

The regulation in Art. 308 is peculiar, according to which the penalties in this section are inflicted on anyone who, without intending to compass the death of a third party, deceitfully or maliciously advises any one to undertake a certain act which resulted directly in the death, injury, or sickness of the same.

Section III. treats of legal excuses, and exemptions from the penalties for murder and bodily injury.

An appeal for a "legal excuse" is valid:—

1. If the perpetrator was directly provoked by the gross abuse of the victim, and the act was committed in a transport of rage. The perpetrator however must not have been deserving of the provocation.
2. If, in a fracas, two or more persons shall have inflicted mutual blows and injuries, and it cannot be proved from which side the provocation was first given, all the participators shall have the advantage of the excuse for provocation.
3. If the homicide or violence is committed by a husband on his lawful wife or on her companion in crime, at the very moment that he discovers them in the act of adultery. The limitation of the *Code pénal* "in the house of the married" is excluded. The husband cannot take advantage of this excuse if he previously abetted the dissolute habits of his wife.
4. If the homicide or violence took place in day time while the perpetrator was directly resisting an escalade or a breaking through of fences, walls, or the entrance of an inhabited house or its belongings.

The existence of one of these legal excuses effects a diminution in the penalty of 2 or 3 degrees.

Complete exemption occurs in cases of self-defence against undeserved attack; and this is extended to the protection of one's goods against conflagration, plunder, or robbery, to resistance against theft or the attempt to recover stolen property, and to resistance of escalade, house-breaking, etc., by night. In case of excessive violence in self-defence instead of complete exemption a legal excuse is allowed.

Section IV. contains the penalties for death or bodily injuries resulting from negligence. (Art. 317-319).

Homicide from negligence is punished entirely by a fine (from 20 to 200 yen). Injuries of every kind resulting from negligence entail a fine of from 10 to 100 yen, considerably diminished (2 to 50 yen) if the carelessness results in mere injury to health or temporary incapacity for labour.

Participation in suicide (Section V. Art. 320-321) is punishable ("whoever intentionally instigates another thereto") and entails, as well as suicide of the consenting party ("at his earnest solicitation"), a penalty of minor imprisonment for from 6 months to 3 years and a fine of from 10 to 50 yen, which penalty is diminished one degree, in case the participator simply assisted a suicide in the accomplishment of the deed. If the instigator acted from motives of personal interest, the penalty becomes major confinement.

Section VI. (Art. 322-325) treats of illegal arrest and sequestration. In comparison with the *Code pénal* (Art. 341 f.f.) the regulations are comparatively mild. Penalties: Imprisonment from 11 days to 2 months, and fine from 2 to

20 yen, which penalties are raised one degree for every ten days of illegal arrest.

Severer penalties are incurred in cases where deprivation of liberty is accompanied by physical torture, violence, refusal of food &c. &c.—In case such treatment results in indisposition, incapacity for labor, &c., the penalties for bodily violence &c., are inflicted.

Section VII. (Art. 326-329) contains the penalties for threats of murder, incendiarism, violence, &c. It is worthy of remark that, in all cases of threat, prosecution of the offence occurs only on the complaint of the person threatened or his relatives.

Section VIII. deals with abortion (Art. 330-335). The penalties are comparatively mild as compared with the *Code Pénal* (Art. 317), for the woman herself, who intentionally procures abortion, as well as for any third party who may have produced the same, major imprisonment for from 1 to 6 months, and in case of death the time is increased to from 1 to 3 years, and even to 4 years when threats or artifice were used against the *enccinte* woman. Cases in which abortion is intentionally procured by actual abuse only are punishable by confinement.

Section IX. treats of the abandonment of children, aged, sick or infirm persons in a helpless condition. The penalty is imprisonment of various grades according to the place in which the persons (children under 8) were left to their fate. Disregard of the duty of protection voluntarily undertaken entails increase of penalty one degree. Major confinement and even penal servitude is incurred where, in consequence of abandonment in a helpless condition, permanent bodily injury or death results.

Any one who finds such helpless persons within the limits of his property or in places under his control is bound to take charge of the same and announce the fact to the authorities, failing which he is liable to imprisonment for from 15 days to 6 months. This is specially so in cases of severe illness.

Section X. treats of the penalties against kidnapping or doing away with children or minors (Arts. 341-345). There is a distinction made between children under 12 years of age and minors over 12 and under 20 years old. Prosecution results only in case of complaint by the injured party, and the penal case ceases in case of the marriage of the guilty party with the person led astray.

Crimes and delicts against good morals are dealt with in Section XI. (Art. 349-354).

Unchaste acts on children of either sex under 12 years, without violence, entail the same penalty as similar acts on adults with violence or threats. Penalty: major imprisonment for from 1 month to 1 year and fine of 2 to 20 yen.—If the act were committed on the person of a child under 12 years of age accompanied with force or threats, the comparatively mild penalty of 2 months major imprisonment to 2 years, and a fine of from 4 to 40 yen, is inflicted.

Rape committed on the person of a female under 12 years of age entails minor confinement, the same penalty results in case of sexual abuse of a sleeping person, or of one rendered unconscious by the guilty party.

In all cases of violation or rape prosecution takes place only on the complaint of the injured party or of her relatives.

Of course severer penalties are inflicted, even to the extent of penal servitude for life, according to whether the act entailed upon the injured party death, mutilation, or other bodily injuries.

Adultery in case of a lawful wife entails a penalty of imprisonment for from 6 months to 2 years on both the guilty parties. Prosecution takes place only on complaint of the husband,

and is null in case he had previously connived at the adulterous act.—Bigamy also entails a penalty (6 months to 2 years and fine of from 5 to 50 yen).

The penal regulations in Section XII. (Art. 355-361) against calumny and defamation are very limited. The delict of defamation (without a charge of dishonorable acts or of some definite vice) is only a contravention, and is punishable only so far as the defamation was made in public.

False charges before Courts of Justice (*Calomnie, dénonciation calomnieuse*) incurs the penalties against perjury.

Public calumny or defamation (*Diffamation*) of a private person with the intention of injuring him, irrespective of all proof of the truth of the statement, is punished, according to the circumstances of the declaration or the circulation of the injurious reports: 1. Major imprisonment for from 11 days to 9 months and fine of from 3 to 30 yen, if circulated by means of verbal communication or in public addresses. 2. Major imprisonment for from 15 days to 6 months and fine of from 5 to 50 yen if perpetrated by means of publications, the public press, pictorial delineations—sold or posted up, or finally by means of theatrical representations. The crime of defamation of the dead is also punishable.

Under this section come also all those delicts which arise from the abuse of confidential secrets entrusted to physicians, apothecaries, midwives, advocates, attorneys, and religious teachers. All the delicts of this section can be prosecuted only on the complaint of the injured party.

Strange to foreign ideas are the penal regulations of Section XIII. (Art. 362-365) of Crimes and Delicts of *Descendants* against *Ascendants* (ancestors). Homicide of father, mother or other ascendant relative is punished with death. Assistance in case of suicide of such only has the benefit of a mitigation of penalty of 2 degrees. Similar severity of penalty is incurred by descendants who are guilty of violence, abuse, sequestration, threats, desertion, calumny or defamation towards ascendant relatives.

Any one who intentionally refuses one of his ascendant relatives requisite food or things necessary for the preservation of his health incurs a heavy penalty. In none of these cases can the culprit claim the benefit of legal excuses or exemptions from punishment.

CHAPTER II. CONTAINS THE CRIMES AND DELICTS AGAINST PROPERTY.

Section I treats of theft (*de vols clandestins*) of a secret kind (Art. 366-377) in contradistinction to that perpetrated with force or violence (*à force ouverte ou commis avec violence*), (Art. 378-384).

The definition of a theft is that of the *Code Pénal* (Art. 379). The penalty for ordinary theft is major imprisonment for from 2 months to 4 years.

Qualified theft (that committed during a conflagration, an earthquake, a flood, or other calamity, by escalade, house-breaking, or opening of locks) entails a penalty of imprisonment for from 6 months to 5 years. Theft committed by several persons conjointly entails augmentation of one degree in the penalty; if perpetrated in an occupied dwelling house by armed persons the penalty is minor confinement.

The removal of one's own property from the custody of a creditor to whom it had been given as a security is considered theft. Attempt at theft is punishable. All persons convicted of theft are placed under police surveillance. Thefts among domestic relatives are not punishable; only in cases of co-actors (non-related) where the culprit is exempt and the co-actor incurs the usual penalty.

Robbery with violence (under threats or abuse) is punished with minor confinement; under aggravating circumstances, with major confinement; if the violence result in bodily injury, with penal servitude for life; if it result in death, the penalty is death. Any one who accomplishes a theft by depriving another of consciousness by means of narcotics or other similar substances is held guilty of theft with open force and punished with minor confinement.

Section III. (Art. 385-387) treats of Robbery of lost articles by the finder. Refers chiefly to wreckage and lost articles. Penalty 11 days to 3 months and fine of from 2 to 20 yen. The same penalty is incurred by the removal of buried or hidden treasure.

Section IV. in only two articles treats of bankruptcy (Art. 388, and 389) a penalty of imprisonment for from 3 months to 4 years is inflicted on anyone who, at the time of bankruptcy or insolvency, shall have concealed a portion of his assets, or shall have exaggerated the amount of his indebtedness. The same penalty, diminished one degree is inflicted on accomplices and assistants.

Imprisonment for from 1 month to 2 years is the penalty for having, at the time of insolvency, made away with, or secreted, mercantile books in whole or in part, or for having, after declaration of failure, paid one creditor to the detriment of others.

Section V. contains the penalties against swindling (*escroquerie*) and abuse of trust. (Arts. 390-398) a person is guilty of swindling (penalty: imprisonment for from 3 months to 4 years and a fine of from 4 to 40 yen) who excites in another fears of any imaginary impending danger, or the hope of some chimerical advantage, thereby inducing the same to deliver up to him articles in his possession or documents of any kind whatever; in the same category must be reckoned similar frauds committed by taking advantage of the imbecility or inexperience of insane persons or minors. The penalties for swindling are entailed also by a false description of the quality, weight, number or measure of articles in a transaction of sale or exchange, which may lead to actual deception. In the same category are also the fraudulent sale, exchange or mortgage of property not belonging to the person effecting the transaction, and the deliberate sale of mortgaged property under cover of fraudulent concealment of the mortgage. A person is guilty of embezzlement (*abus de confiance*) (Penalty: major imprisonment for from 1 month to 2 years) who fraudulently appropriates as his own, disposes of to others, or uses for his own benefit, sums of money, bills, or other valuables entrusted to his keeping.—This section deals also with the frustration of a security by the concealment or removal of mortgaged articles.

Section VI. deals with concealment of stolen property (Art. 399-401). The matter of this section is on a level with the latest legislation. Penalty: imprisonment and fine, and subsequent police surveillance. The penalty of the receiver is modified according to the circumstances of the crime which procured the articles. If they were obtained by fraud, the punishment of the receiver is less severe than if they were procured by robbery.

Section VII. refers to incendiarism (Art. 402-410). Intentionally setting fire to an occupied dwellinghouse entails the death penalty; if not occupied, penal servitude for life; if the buildings are not intended for dwellings, major confinement.

Setting fire to barges, ships, railway carriages, which serve for the transport of persons, entails the death penalty.

The burning of one's own buildings, which can no longer be occupied, is also punishable, penalty, major imprisonment for from 2 months to 2 years—Setting fire to buildings by negligence is punishable with a fine.

Section VIII. Of Inundations. (Art. 411-414.) The procuring of an inundation by the destruction of dykes, entails a penalty of penal servitude for life if the jeopardized buildings are occupied or are used as dwellings. If not, the penalty is major confinement; if only cultivated fields, etc. are affected, minor confinement.—The changing of a watercourse by the destruction of a dyke or sluice, when done for another's disadvantage or for one's own benefit entails a penalty of major imprisonment for from 1 month to 2 years and a fine.

We must also mention the penalties of Section IX. (Art. 415-416) against those who intentionally cause shipwreck or foundering of vessels. If one or more persons lose their lives by such deeds, the penalty is death; in other cases penal servitude for life. If there were no persons in the vessel, minor confinement is the penalty. The last Section (X.) of Book II. contains the penalties against the destruction and injury of another's property. (Art. 417-424.) There is here a six-fold distinction made in the grade of offence, and the penalty is arranged accordingly.

1. Houses and buildings of another. The destruction or injury of these entails major imprisonment for from 1 month to 5 years, and fine of from 2 to 50 yen.
2. Buildings, appurtenances of the above, such as ornaments, fences, pallsades &c., in yards, gardens, fields, &c.
3. Landmarks or boundaries of property.
4. Personal property.—imprisonment for from 1 to 6 months and fine.
5. Horses, oxen and other domestic animals. The first two are protected by severer penalties. In other cases, the penalty is only fine and results from complaint of injured party only.
6. Valuables (bonds &c.) Penalty, 2 months to 4 years and fine of from 3 to 30 yen.

BOOK IV. CONTAINS ONE SECTION ON CONTRAVENTIONS. (Art. 425-430)

This section contains only the following noticeable points.

Art. 425. No. 14 inflicts a contravention-penalty of arrest for 3 to 10 days or fine of 1 yen 95 sen on any one, who makes a false declaration in favour of a person charged with a contravention.

Art. 426. (Arrest for 2 to 5 days or fine of 50 sen to yen 1.50).

No. 12. "Whoever publicly insults a person."—An ordinary insult is thus made a mere contravention, and is punishable only when publicly perpetrated. The prosecution takes place only on the complaint of the injured party.

Art. 427. (Arrest for 1 to 3 days or fine of 20 sen to yen 1.25).

No. 9. Physicians, surgeons, midwives, whose assistance has been called in serious cases, and who, without legal excuse, refuse their services.

No. 11. Whoever by lies or false intelligence causes public alarm.

No. 12. "Those who for a consideration declare themselves ready to exorcise misfortune, to procure fortune, to foretell the future, or to fathom secrets."

Art. 428 (1 day's arrest or fine of from 10 sen to 1 yen).

No. 4. The invitation to play a game of chance, or to buy a lottery ticket on the public street; so also

No. 5. The public presentation of plays or other amusements without the prescribed permission, and the infringement of special regulations relating to the same.

No. 9. Whoever has himself tattooed or follows the business of tattooing.

Art. 429 (5 to 50 sen fine).

No. 7. Gymnastic exercises or other similar amusements continued in the public street after one prohibition of the authorities.

No. 11. Loud singing or shouting in a public place under similar circumstances.

No. 12. Sleeping in a public place or making a great noise when drunk.

Those contraventions which are not included in this penal Code, will be punished according to the regulations of local authorities intended for such cases.

REVIEWS.*

A book, able and needed, undertaken with the wish of providing both the foreign and native public with a more complete and thorough view of the social and moral questions around us, has at any time no small claim upon the thinking and educated who by their knowledge and position possess great power in directing the popular mind towards a proper and beneficial course of progress. A work of this kind, enlisting our fullest interest, especially at this juncture, is that now lying before us.

As the literature of a similar character in England and America has of late years been largely developed both as to quantity and quality, it is one of the greatest merits of this work that it is not less instructive and impressive than the best of those productions which have preceded it, while, at the same time, the subject matter is presented in an entirely independent light and with a fairness rarely paralleled. The author's thorough acquaintance with scientific and religious literature in all their varied phases enables him to treat the most absorbing questions with simple and lucid directness. Throughout the entire work he evinces also a most commendable familiarity with the great results which the activity of modern research and criticism has accumulated in various other directions, and which throw a much desired light upon subjects otherwise perplexing. That the author has known how to avail himself of such resources is not the least of his merits.

The subject of Christianity and Civilization occupies the first forty-two pages of the work, while the following two hundred and fifty-four pages contain a very thorough and clear discussion of Christianity from a scientific, philosophical, psychological, historical, religious and moral point of view. The book contains also the introductory remarks of the Hon. J. A. Bingham, United States Minister, and of Sir Harry S. Parkes, Her Britannic Majesty's Minister to Japan. Merely to enumerate some of the topics of the first two lectures will aid in forming an idea of the work itself. There are, e.g.: The Limits of Hypothesis; Phenomena do not explain Ultimate Causes; Is Man an evolved Ape? No Proof yet of Tertiary Man; Faith not unscientific; Religion must be scientifically tested; Christianity stands the Test; Basis of Science; Scientific Method; Elements of Religion; The "Origin of Species"; Theory of Physical Evolution; Globe Development; The Indeterminate Problem; Chemical Development; Thomson's Vortex; Atoms; Life Development by Artificial Selection; Development of Species by Natural Selection; Cellular Structure; Autogenesis; Spontaneous Genera-

* *Christianity and Humanity.* A course of lectures delivered in Meiji Kwaido, Tokyo, by CHARLES S. EWE, B.A., including one lecture each by Prof. J. A. EWING, B. Sc., F.R.S.E., of the Science Department, Tokyo University, and Prof. I. M. DIXON, M.A., of the Imperial College of Engineering, Tokyo. Yokohama: R. Meiklejohn & Co., 26 Water Street. 1883.

tion; The Meteoric Transfer; What is Life?; Science and Immortality; Miracle and Law; Animal Automatism and Freedom of the Will; etc., etc. The entire treatment of these subjects is intense and compact, intended to suggest, to guide and to incite, thoughtful inquiry into the foundation of Christian belief. The literary assistance rendered by Professors Ewing and Dixon has resulted in a more thorough sweep of the subjects, and a greater wealth of thought, both being gentlemen of different lines of reading and various habits of thought. Professor Ewing's lecture on "The Relations of the Christian Religion to Natural Science, especially to the Theory of Evolution" is one that breathes the true spirit of thorough scientific inquiry. We do not recollect to have ever seen the theory of evolution treated with more eminent fairness. The most enthusiastic admirer of evolution cannot read the lecture without admitting this fact. Professor Dixon, treating Christianity from an historical standpoint, has done full justice to a subject both instructing and fascinating. What he states concerning the law of the harmony of morality and the law of the community of commercial interests, is worthy of being remembered and carefully tested, whenever the reading of historical works is undertaken. We entertain no fear as to the results of such a test, however severely applied.

The work as a whole from beginning to end is fully abreast of modern thought. It nowhere enters into anything like theological discussion, but, true to its simple yet comprehensive title, it dwells on subjects of universal and unquestioned interest. Christianity is the spiritual advance of humanity by the side of the Bible, and the aim of this work is not only to show how far that end has been attained, but also to indicate the means by which the teachings of Christ may be exhibited in their true unison with every advance mankind can make in knowledge and civilization. The author has fully succeeded in proving the close relation of Christianity to Humanity, i.e., to all departments of human knowledge and life, showing that it is not limited by abstract speculation, but supplies a most direct and vital want of man in every zone and clime. It calls for a thoughtful weighing of all available evidence, based not on hypotheses and guesses, but on well established and universally acknowledged facts gleaned from almost every field accessible to the human mind. While the work has a vigor of its own, and is distinguished by forcible reasoning, its tone is far removed from even the faintest approach to dogmatism. In the present conflict of opinions, it is therefore especially adapted to serve as a faithful guide, and to enable its readers to make an intelligent decision in view of questions so highly important to the individual's weal or woe. To decide wisely and well is the duty of every one; and in the faithful discharge of such duty this work will be of inestimable service.

The typography and the style as well as the contents of the work are excellent. The print is large, the type clear, and the volume itself of convenient and attractive size. Being not a dry abstract treatise, but highly practical and to the point, there are a vivacity, vigor, and originality about it which at once interest and instruct; and while an earnestness befitting its theme pervades the work, it yet possesses the charms of variety and beauty. Its pages contain an abundance of important truths expressed in clear and pungent language. The reader feels that he is moving in the presence of living questions, discussed in "words that burn" and stirring up "thoughts that breathe." Marked by fine graphic power

and great justness of statement, the volume does not consist of declamatory assertions without logical consistency; but the whole as well as its parts show a well ordered scheme of thought, the details of which are kept in proper relation to the central idea of the work itself. We believe the author has written with a full knowledge of what was needed.

In England and America, where so much is said about young Japan eagerly devouring the scientific and pseudo-scientific productions of our modern times, no book could be thrown upon the market that would better repay a careful perusal than this. It will give readers at home a "realizing sense" of Japan's advance within the last ten years, and will modify many opinions hitherto held as correct, but based on conditions of the country that now belong to a past irrevocably gone by. To any one, either in America or England, wishing to get a good insight into the higher strata of Japanese thought we can suggest no better book; and we recommend it, strongly, to the attention of those who take a kindly interest in the spiritual struggles of a country daily receiving increased moral and religious light.

A Sketch of Japanese Fisheries. By NARINORI OKOSHI, Member of the Japanese Consulate in London. London: William Clowes and Sons, Limited, International Fisheries Exhibition, and 13, Charing-Cross, S.W. 1883.

SINCE writing in a recent issue on the subject of Japan at the International Fisheries Exhibition, we have been favoured with an early copy of "A Sketch of Japanese Fisheries," there alluded to, by Mr. Okoshi, of the Japanese Consulate in London. The interest and appropriate nature of this sketch only serve to accentuate the regret felt that the author was not at the proper time officially entrusted and furnished with the means of its preparation and issue as an Official Introduction to the List of Japanese Exhibits in the Catalogue of the Exhibition. The pamphlet is, however, published by the printers and publishers to the Exhibition Commissioners, and will no doubt form one of the series of official or semi-official publications issued under the auspices of the Commissioners. Considering the limited opportunities of obtaining materials for such a work away from Japan, the author may be congratulated on the amount and variety of valuable matter he has been able to collect in the time, and the interest with which he has succeeded in investing the statistics of his subject. Proficiency in English composition is too common now a days among educated Japanese to be a matter of special compliment to a gentleman of Mr. Okoshi's antecedents and position: it is enough to say that the style is always clear, and that the construction and idiom, though throughout sufficiently non-native to attest the genuineness of the authorship (and attesting too, not unfrequently, by the turn of a sentence, the writer's familiarity with French) is never such as to offend the English reader or to obscure the author's meaning.

In a few introductory observations Mr. Okoshi points out the enormous extent of Japan's fishing grounds and the almost universal consumption of fish as an article of diet, taking the place of meat in European countries. And here, by comparing the cheapness of fish in Japan, bringing it within the reach even of the poorer classes of the people, with the dearness which makes it chiefly the luxury of the well-to-do in England, he puts his finger,

perhaps unintentionally, on the crying economic sin, which it was one of the great objects of the present Exhibition to assist in wiping out. We observe that Mr. Okoshi concludes his introductory remarks with an appropriate expression of regret, that, with such an interest as Japan naturally takes in her Fisheries, the national section in the Exhibition should not be "so largely and well represented as might be desired."

We will not follow the pamphlet through the by no means uninteresting estimates and statistics of "Sea Produce," "Fishing Power," *i.e.*, the men and boats employed in the industry, where a statistical comparison is given with the English figures, and "Foreign Trade in Sea Produce," the most salient feature of which last is the extraordinary increase in the amount and value of the export trade during the two lustres from 1871 to 1881. Wherever they are accessible, Mr. Okoshi has recourse to official figures, such as those of the Customs Returns, and other trustworthy sources, giving references to his authorities, and frankly saying so when these fail him; so that the information given under these heads is of the kind expected of such a publication as that the place of which this pamphlet seeks to fill.

Some facts curious enough to English readers are given concerning "Fish and Shell-fish of different kinds to those usually eaten in England;" while those interested in such matters will find, under the title "Mode of Fishing" a considerable fund of information, largely supplemented by some very detailed notes (in Appendix A) furnished by Mr. K. Nabeshima, now a student in London, who has lived, as the author tells us, and we might guess from his name, among the Fisher-folk of Hizen, and been himself addicted to fishing as a sport. The subjects of these special notes are (1) "Throwing-net" (*Toami*) the construction and method of using whereof are minutely described and illustrated by figures: (2) *Ahyu* and *Ahgu*-fishing; and (3) *Bêche-de-mer* (*Namako*, or, when dried, *Kinko*). The description of the method adopted for obtaining *Namako* is particularly interesting. We can almost see the fishing-boat being paddled quietly about in calm weather and clear water, while the fisherman, armed with a bamboo having a barbed iron spear-head, "leans over the gunwale of his boat peering and prying down into the clear water with keen and practised eye." A curious use of oil on the waters is mentioned as being resorted to in this branch of fishing. The fisherman "to assist his power of vision," says Mr. Nabeshima, "adopts a peculiar expedient. He has a tiny vessel, containing oil, in the boat, from which he takes from time to time a small quantity and drops it on the surface of the sea. This . . . enables him to see the bottom so clearly that he has little difficulty in spying down with success even when the water is somewhat deep." Another peculiarity is referred to in connection with *Namako*. It is said that, so strong is the antipathy of this fish to rice-straw, that if brought into contact with it the fish positively dissolves like ice under the sun. It is added that disagreeable effects, produced by partaking too freely of *Namako* as a comestible, find an effectual antidote in the liquor in which rice-straw has been boiled. We must take Mr. Nabeshima's word for these statements.

When he comes to speak of "Fish Cookery," the author becomes eloquent under the influence of a genuine feeling of gastronomic patriotism. His mouth evidently waters for the succulent joys of Japanese-cooked fish, unobtainable, alas! in such

a country as England, where, as he pathetically observes, "fish is often boiled simply, which takes away the best part of its flavour." He is quite right; and it is, as he says, after enumerating some of the tempting varieties of form in which fish are sent to table in Japan, "almost inconceivable to the English mind, how neatly, prettily, and with what genius and excellent taste this branch of cooking is conducted in our country." Indeed, personal experience apart, after perusing Mr. Okoshi's almost poetic culinary panegyric, one feels bound to admit that the cookery of fish is, not "almost" as he too modestly claims, but altogether "an art" in Japan. He suggests, with the proselytizing zeal of a genuine enthusiast, that it is worth while for our countrymen to study the art of Japanese fish-cooking with a view to its adoption in England: and we have no hesitation in saying that, in some respects, though we could not certainly go much further, we might very well fare worse: still there are one or two points about fish-eating in Japan at which most people at home would be inclined to draw the line.

One very practical and it may be pregnant suggestion is made both by the author and by Mr. Nabeshima, regarding the alleged superiority of the method used in Japan for imparting strength and the power of resisting the action of the water to lines and nets. In England, it appears, this object is sought to be attained by tanning; but it is said to be far more effectually compassed in Japan by applying a varnish of the juice of unripe Kaki (persimmon) called "Shibu." It is claimed for this treatment that it not only better stiffens and preserves the fibre from the destructive action of water, especially salt water, but prevents the tendency to swell, upon getting wet, thereby ensuring to nets greater expedition in sinking. If this be so, a profitable industry might, as Mr. Okoshi points out, spring up in the chemical preparation in Japan of persimmon-juice suitable for export. It is a pity that no specimens of the compound as used are to be found in the Japanese Section of the Exhibition.

In conclusion, we can only tender our congratulations to Mr. Okoshi on his successful little compilation and cordially recommend its perusal to our readers.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinion of our Correspondents, for the accuracy of their assertions, for or the deductions they may choose to draw therefrom.]

THE "RETROSPECTIVE RAMBLER."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—“Number 68. Saturday August 4, 1859.” So reads the heading of a paper in the *Idler* from which, now, on August 4, 1883, the following Extract is made:—

“The Arabs were the first nation who felt the ardour of Translation; when they had subdued the Eastern Provinces of the Greek Empire, they found their captives wiser than themselves, and made haste to relieve their wants by imparted knowledge. They discovered that many might grow wise by the labor of few, and that improvements might be made with speed, when they had the knowledge of former ages in their own language. They therefore made haste to lay hold on Medicine and Philosophy, and turned their chief authors into Arabic. Whether they attempted the Poets is not known;

their literary zeal was vehement, but it was short, and probably expired before they had time to add the arts of elegance to those of necessity." So far, the old time *Idler*.

Now, this discovery—that "many might grow wise by the labour of few"—is what some of the sons of Old Japan would seem to have made anew; much as Columbus "discovered" America, though the Red Indian was there long before him: nevertheless, it was a true discovery in both cases.

As to "growing wise," however, there is room for doubt whether the information—call it *knowledge* if you please—which comes by mere translation of words, and transfusion of ideas, really *cultivates* to any good degree; certainly it does not tend to develop the mental character: nay, it even dwarfs some of the most important faculties, and entirely blights originality. Our eye falls on the *Chrysanthemum* for September, 1882, where we find the subject of "Translation" treated of—more, however, as to the *style* to be adopted than with reference to the value of translated books. And what does the writer advocate? To translate for the Japanese in the style which employs most Chinese! What a comment upon the impoverishment of native thought, resulting from the neglect of their own language, through having borrowed from, and leaned upon, the most objectionable of all tongues—which indeed, is not a "tongue" at all, in its true sense; for one (I mean, two) cannot converse in it by vocal speech, but must see with the eye, as well as utter with the lips, before the intended meaning can be conveyed from mind to mind. It cannot even claim to be the Algebra of thought; for Algebra *spoken* is quite intelligible.

Now: there is no comparison between the two languages, *as such*. The Japanese is syllabic, inflectional, melodious, and expressive, in all which respects it contrasts favorably with the Chinese, which is insoluble, rigid, inharmonious, and insusceptible of expression, by reason of the appropriation of *tones* (which is the natural medium of emotion) for the purpose of distinguishing meaning. Moreover, it is hard and tedious to learn, and very easy to forget; operose and difficult to write, and—if written in the cursive style—indefinite in the reading; if terse, then ambiguous; if verbose, then inelegant; if accurate, then uncouth.

In short, as some one has well said, "the Chinese language is an epitome of all the curses of Babel," and I cannot imagine a greater national misfortune than that a people who have a charming tongue of their own—flexible, mellifluous, expressive—should burden themselves with such an intellectual yoke; or, being burdened, not have wisdom and energy enough to throw it off.

What the Japanese language wants is simply the development and culture of its own resources. Let the knowledge of facts, and truths, and principles, and of the thoughts of all the ages, be borrowed from any and every source—Chinese, Korean, Dutch, Russian, Portuguese, French, English, American—anywhere, everywhere; but let the expression of all these be in the tongue wherein the people were born. Develop it, mould it, expand it, enrich it, as has been done with our own English tongue, and this beautiful Island Empire, "the Great Britain of the North Pacific," shall then have a language, and in due time a literature, of its own, which will be something worthy to take its place alongside of Spanish for beauty, French for refinement, German for strength, and English for general usefulness. But, let the straight jacket of Chinese rigidity be retained, and

then—farewell to force, originality, and development!

"Ling-So was a man who wanted to have a road by which he could travel conveniently from his own house to a distant point, and back again; which was a journey he needed to perform constantly—every day, indeed. There was already a natural path, but with that he did not feel satisfied, though it was beautiful in itself, and could have been made excellent in all respects, if he would only have taken the trouble to improve it. But he said, No: I have an old neighbour who uses loose pebble stones for his highway: and I will get some from him and make my road like his, as near as I can. So he left his own path, with its wooded shades and pleasant meadows; its streams, and glens, and mountain views; and made a straight, hard road of large loose pebbles, three feet deep; and over this road he preferred to drag himself and his vehicles for many years; while the natural path remained neglected, overgrown, and unimproved.

In process of time, certain friends of his, observing Ling-So's infatuation, ventured to remonstrate, and counselled him to reconsider his plan, and to take a fresh survey of his whole domain, especially of the old pathway, so that"—

The MS. leaves off here abruptly, and we are left to conjecture what course Ling-So concluded to adopt. Perhaps we may one day find out what was the sequel of the story. Let us hope it was a happy one!

Your obedient servant,

RETROSPECTIVE RAMBLER.

THE "CHOYA SHIMBUN" AND THE "YEKI."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I was very much interested in and amused by a translation from the *Choya Shimbun* on the "Ebb and Flow of Society Matters," which appeared in the *Japan Daily Mail* of the 7th instant. Not that I have any fault to find with the remarkable predictions contained in that article, but what I do most thoroughly condemn is the manner in which the writer deduces his predictions; for it is as inaccurate as it is absurd. If the Editor of the *Choya Shimbun* admires the *Yeki*, let him use it by all means; but it may interest him to hear that the *Yeki* is known to people outside of the editorial precincts, and that when he announces a prophecy he will be expected to base it upon a *bond fide* method of divination,—or to keep his prophetic discoveries to himself.

In the first place, I know of no Chinese mantic method consisting in the "drawing" of "dots," although I am well acquainted with the first of the two calculations mentioned by the *Choya*. From time immemorial the three principal Chinese methods of divination have been as follows:—the scorching of the tortoise-shell, sortilege, and the use of the mystic *tsa*. Again, I fail to comprehend what is meant by the "Twelve Diagrams." There were originally four symbols 四象, afterwards increased to the eight trigrams 八卦: the four symbols being reducible to two primary forms — and —, which represent the first division of the *yin* and *yang* from Unity: the male and female, or active and passive principles of the Universe. In addition to the eight trigrams, Fuh-hi, or one of his immediate successors, is said to have enlarged the basis of divinatory

calculation by multiplying the original number with eight, the result being the 六十四卦 sixty-four hexagrams. A further multiplication of these with six gives the 384 爻, which complete the number to which the diagrams are practically carried. There are, it is true, a few other numerical methods of divination, but none of them is based on the number twelve. Ching-fang 京房, a scholar of the Han Dynasty, used the sixty-four hexagrams in his famous division of the year. This division was based on the seventy-two *ku*. The Taoist Tang Hsiang invented a new method of divination called the 太玄經, in which there were four strokes in each diagram instead of six; his computation containing in all eighty-one diagrams. The number twelve is employed exclusively in astronomical and astrological treatises: there are, for example, twelve divisions of the ecliptic, twelve symbols of the Zodiacal Cycle (the Duodenary Cycle), and twelve symbols for the months.

The first of the prophetic "calculations" is still more remarkable than the second. From the translation I gather that the writer announces this calculation as his own, and makes his prophetic explanation dependent upon the position of the dots in the diagram. The calculation as such is simply a thorough-paced hoax; for the diagram is nothing more or less than the *ho-fu* 河圖, or "Plan of the Yellow River," the invention of a famous Chinese sage, one Shao Yung, who flourished about A.D. 1150. The *ho-fu* is generally combined with the *loh-shu* 洛書, or "Plan of the River Loh," and its present accepted form is said to be the work of Ts'ai Yüan-ting, a contemporary of Shao Yung:—

It appears, however, that Ch'en-twan, a Taoist priest, brought a magic square of fifteen into the *Yeki* as early as A.D. 960 (see the *Japan Weekly Mail*, June, 11th, 1881). These two diagrams are now-a-day necessary prolegomena to the study of divination.

Chinese philosophers tell us that the *ho-fu* and *loh-shu* represent the systems of diagrams and arrangement of the ordinal numbers which were revealed to Fuh-hi and Yü in a supernatural manner. The scholars of every age since the revival of Chinese learning under the Han Dynasty have busied themselves with the restoration of these two mystic diagrams, while, from the supposed principles expressed by the two supernatural revelations, the learned men of the Sung Dynasty devoted themselves to the elaboration of a system of ontology in connection with the philosophy of divination and of numbers. It is stated that until the reign of Sung Hwei Tsung (A.D. 1101-1125) no delineation of the *ho-fu* was made public; but during this period and immediately afterward sages and scholars were busy with its form, and several arrangements of its supposed series of numbers were attempted by students of the *Yeki*. In Shao-Yung's—and the *Choya Shimbun's*—diagram, the total number of dots or spots is fifty-five. The odd numbers—1, 3, 5, 7, 9, making a total of 24—are the "heavenly numbers" 天數, and represent the active principle of the universe. The even numbers—2, 4, 6, 8, 10, or 30 by addition—are "numbers of earth" 地數, or 陰 numbers of

the Confucian Commentary. By a synthetical process, based upon the 易經, the numbers in the *ho-t'u* are reconciled with the eight diagrams, and again with the five elements 五行, which give the starting point for the entire Chinese theory of nature.

I regret that the Editor of the *Choya Shimbun* is so little progressive that he is willing to pose as the inventor of a mystical diagram seven hundred years old; and I would call his serious attention to the well-known proverb, *ron-go yomi no ron-goshiradan*.

Yours, &c.,

F. W. E.

Yokohama, 13th November 1883.

TRANSLATIONS FROM NATIVE JOURNALS.

THE SUSPENSION OF THE *Fiji Shimpō*.

(Translated from the *Fiji Shimpō*.)

This journal was suspended on the 31st of last month by an order of the Metropolitan Police Board to the effect that No. 505 of the *Fiji Shimpō* is calculated to disturb the national tranquillity, and therefore its publication should be prohibited until further notice. On the night of 6th instant, however, the suspension was removed, and we immediately set to work to resume publication to-day (7th instant). We sincerely apologize to our readers for having failed to report any news during the interval.

The cause of the suspension is to be found in No. 505 of the issue, but we are not informed whether it is the leader, domestic news, or foreign news. It is, however, plain that the said number is our sole offence. Our duty is, and will be, to observe more reserve. Journalistic difficulties are numerous. Editors are not always endowed with extensive knowledge; reporters lack literary talent: domestic news is liable to be clothed in error: foreign always reaches us after long delay. But the most urgent of all our troubles is the matter of finance. Outlay exceeds income. No newspaper can make a profit unless it be run on the joint capital of many shareholders, or by a few rich individuals, or with a subsidy from above. The *Fiji Shimpō* was started by the combined efforts of a few poor scholars, who each borrowed a small sum of money from their friends. They gave their labour for nothing. Thus, our independence is maintained by the arduous struggle of a few poor men. The *Fiji Shimpō* is, therefore, the poorest of all journals. Our embarrassment is augmented when suspension is imposed upon us. Our daily loss then amounts to more than *yen* 150; or more than *yen* 750 in the five days which were the period of our recent punishment, Sunday and the Mikado's birth-day excepted. This is too heavy a loss for such poor students as we are. Composers, pressmen, and messengers were thrown out of employment. They could not find another situation, as the times are hard. Their condition was most pitiful. What, then, was the cause of this action? The answer is that we wrote something in the *Fiji Shimpō* that was calculated to disturb the national peace. The Editor is convinced that he was guilty of a political offence and of depriving the employes of their food. Had he been aware of the consequences, he would have refrained from writing anything obnoxious. His repentance, coming too late, is of no avail now. It only remains for him to acquaint the public with his idea of what he will do in future. He entertains no pernicious designs whatever toward the

common weal. He is the most ardent well-wisher of Japan in the matters of commerce, education, politics, and military organization. To him there is no country but Japan. Whatever class may hold the reins of administration or politics, he cares not. He is only anxious to see Japan enjoy the utmost commercial prosperity possible: to cultivate friendship with foreign nations, and keep ready to confront any of them, if necessary, to maintain her national prestige. When these objects are consummated, his desire is achieved. Nevertheless, there are some who attribute our frank words to a desire to assume the control of affairs ourselves. It does not follow that because a man discusses, he desires to have a share in, or control of, public business. Thus, we speak of commerce, but in practice we can have no part in it. We assume the rôle of a scholar, but are clothed only in the rags of scholarship. How much more would this apply to us in the case of military science whereof we have not the slightest knowledge. What functionaries of responsibility have to do is to accept or condemn the opinions of outsiders as the occasion demands. This affords an immense benefit to the nation. If our readers doubt this, let us seek an illustration in the vulgar world. Men discuss women's subjects; but they are not animated by any desire to adopt female costume or otherwise to assume the ways of the weaker sex. Again old men remonstrate with children. This they do without intention to deprive the youngsters of their toys. The sole intention is to tell them of their faults. Females and children are benefited by advice. This being the case, there is no doubt that functionaries may derive advantage from fairly expressed opinions on commerce, manufacture, military subjects, politics, and so forth. It is not our intention to wrest anything from the hand of others. The world is wide and occupations are numerous. Pleasures accompany the faithful pursuit of any profession whatsoever. This is man's freedom. What a world of pleasure! There is a wise saw that a man who does not eat the globe-fish cannot appreciate its delicate flavor. Those who have no knowledge of others' means, cannot envy them. Merchants are merchants: scholars are scholars: politicians are politicians. Each has his own way and knows it. It is only after men have applied themselves to a task that they appreciate it. They must taste in order to relish. But they are wrong to think that others must have an appetite for what they desire. Men have different standings; and according as they cultivate their minds they are capable, not only of abstaining from envy of, but of feeling pity for, others. Thus, the soul is elevated. Can it ever be said to have reached the highest point of refinement. According to Chinese and Japanese history, the dominant element of society in ancient times was the political, which was fostered under the oligarchical governments; and yet even in those days, skill in classics and music commanded great respect and consideration from monarchs. In the present enlightened age professions are numerous. Politics are no longer the sole ruling passion of society; they are but part of man's life. Politics, the military system, commerce, manufactures, and learning, constitute the business of the world, and each of them may bring wealth and fame. There is no necessity for men to pay exclusive attention to one subject. We earnestly hope that the public will take a broad view of matters, and refrain from wasting their brain-fibre over trivialities.

This is and has been our constant idea. We shall not leave to others a monopoly of patriotism: we possess as much of it as any one else. On this

point, no one will disagree with us. Hence, that the *Fiji Shimpō* should have been suspended for publishing something injurious to the national welfare sounds strange, but is not so, after all; because it is for functionaries to decide what things are fit for comment, whilst we are mere outsiders. Be it, however, observed that the opinions of outsiders are likely to be correct if they are independent. On the other hand, the political machinery is so complicated that no outsider can see its working. It is, therefore, not unlikely that in political discussion a newspaper may commit a blunder. Our recent punishment must be thus accounted for. But we entertain no ill feelings any more than we are actuated by avaricious motives. Our only aim is to strengthen the foundations of civilization, and to cause its benefits to be available for ever.

JAPANESE IDEAS OF NEWSPAPER ADVERTISEMENTS.

(Translated from the *Fiji Shimpō*.)

A correspondent says:—In your journal of the 16th of October last, I read a leader headed "Advice to Merchants," in which the secret of how to accumulate wealth is revealed. I have long been convinced that the object of trade is to gain riches; and that, in order to accomplish that, I must make my business flourishing. To render trade prosperous, honesty is essential: still more so is it to acquire from the public a reputation for fair dealing. There are various ways of advertising; but the most effective is that by means of the newspapers. You pointed out that newspapers are the best and cheapest medium. This fact I myself have experienced. You have further pointed out valid reasons for advertising; how to write the notice in an attractive manner; and how to save expense. What you said was mostly new, and consequently instructive, to me. That you should have demonstrated the necessity for advertisements, is not, of course, endeavouring to feather your own nest; but purely disinterested, and intended merely to confer great benefits upon the tradal community, and show the secret of making money; and is also an action of unqualified excellence. I offer my best thanks to the *Fiji Shimpō* for having instructed the mercantile class upon the subject.

So far, you have exhaustively dealt with the necessity of advertising. In my opinion, it is also equally important to read advertisements and acquaint oneself with the condition of the markets. A person wishing to advertise in newspapers, should read the notices first, and judge for himself whether he is selling cheaper than others, or whether his articles are better than those of his neighbors. For instance, a publisher issues a book without knowledge that a similar work has been already published and sold at a cheaper rate than his. Contrary to his expectation, he finds no purchaser, and wonders why his effort meets with no public encouragement. By and by he will regret that he spent a large sum of money in advertisements. On the other hand, those who read the journals are thoroughly acquainted with the prices at which others are selling their articles and making a profit. Ignorance of the matter is not due to any fault on the part of the newspapers, but to the readers who do not pay attention to the advertisements. It is, therefore, most important for all traders to advertise in the public press, and to read the notices.

I have been informed by a European friend that, in foreign countries, all matters concerning trade, and all other business of importance are conducted through the newspapers. The opening of companies, the price of goods, the sale of second-hand furniture and clothing, demands for labour, inquiries for lost articles, etc., are advertised in the papers. Advertisers and the public should both take equal pains to search the journals, which are nothing less than a big registry-office where houses, servants, clerks, book-keepers, and everything else, are all assembled to meet the demand of customers. Altogether, the scene is busy and full of confusion. But trouble is saved, and one can do one's business with great facility. Recently, Japanese journals have been filled with notices of patent medicines and the publication of books. But yet business matters are not advertised to their full extent. It appears as though people were ignorant of the importance of the press. This may be partly accounted for by the fact that business is not good in Japan, and that there are many who have abundant leisure to spend in rumaging about for anything they want. It is to be sincerely hoped that Japanese merchants will learn to advertise in foreign and native papers just as their Western *confrères* do. It is hardly necessary to say that those who read the advertisements always keep themselves well informed of the condition of the markets, and consequently enrich themselves. Speaking egotistically, it suits me to advertise and make money while my countrymen are sleeping; but this cannot always be realized in practice. Unless the whole community is in a flourishing condition, it is impossible to make continuous profits. I, for my own part, fully recognize the necessity of newspaper notices, and will not fail to insert advertisements in all the papers. As regards the style and method, we have at hand the example of Western nations, the result of many years' experience. We should do well to devise such a method as practice demonstrates to be effective. I hope you will spare no effort to give me the necessary instruction on the subject.

[In the article "Advice to Merchants," the editor of the *Fiji Shimpō* clearly pointed out the necessity of advertisements in a tone similar to that of the above letter. His chief anxiety was to remind his readers that journalistic profits are the most laboriously earned of all, and that public liberality in the matter of support of the press will remove many inconveniences.—TRANSLATOR.]

CORRESPONDENCE FROM KOREA.

(Translated from the *Fiji Shimpō*.)

A Chinese man-of-war arrived in Koyo on the 16th ultimo with a mining engineer, who started for Sōul on the ensuing day. It is said that he is accredited with power to adjust commercial matters between China and Korea, as well as to exploit the mines in the latter country. The Koreans regard him as a Chinese official to whom the working of their mines has been entrusted. In our opinion, he is nothing more than a petty Chinese mandarin. A newspaper will be published shortly. On the 16th of October, an English vessel arrived in In-chōn. His Excellency Takezoze, Minister to Sōul, was to start for Japan on the 17th of October, but his departure was postponed until the beginning of November. The trouble arising out of the recent affray between Chinese and Japanese sailors, has been amicably settled. On the 17th and 18th of Octo-

ber, an examination of candidates for military rank was held in the Palace in the presence of the King and Korean and Chinese high dignitaries.

Lately, when I called upon Councillor Kim Pyōng-kuk, I found the gate closed and saw about a hundred people who wore big bamboo hats, straw sandals and ragged clothes, swarming around the place. On inquiry, I found that they were farmers living in the vicinity, who had come to the city to complain to the Councillor about the heavy taxes imposed upon them by their local officials. One of them was honoured with an interview by the statesman, who took a favorable view of their complaints. Occurrences like these are very frequent in Korea. On the 18th October, Japanese troops held a sham fight at Nanzan Hill. They were divided into two parties and indulged in a discharge of blank cartridge. This was the first review of the Japanese troops since the soldiers were stationed in Sōul. The Chinese troops number thirty times as many as ours, and consequently they make a much more gallant show. They are supplied with abundant ammunition, and have target practice almost daily; they also fire a time-gun at noon: altogether their movements cause envy among the Japanese soldiers from Nagoya who relieved the old garrison. The review at Nanzan gave great rejoicing to Japanese residents, especially as such a magnificent spectacle was never witnessed there before. Our sole regret is that their number was so small and is in course of gradual decrease. On the 16th of October, Mr. Aston arrived in In-chōn in an English man-of-war. Prime minister Hong Sun-mok has not yet entirely recovered from illness. In my former report about the presentation by a Chinese of the New Testament to the King, I made a mistake. The correct version is that the Chinese forwarded a copy of the New Testament to the Foreign Office, requesting it to be presented to the King. The officers burnt it and afterward informed His Majesty of the event. They further urged that the Roman Catholic faith is, and must be, prohibited by all means; that the religion works great harm to the nation; and that it was a heinous offence for Korean officers to be made the agents of presenting a religious book to the King. They advised him to exile the Chinese who committed the grave offence. The potentate has not as yet given his decision in the matter. As, however, the affair was reported to Go Chokei, the Chinese general, it is believed that the offender will be sent back to China, as was the case with Ma Ken Tsung. He is one of Li's men, and held an important position in the Korean Government when Ma assumed the temporary control of foreign affairs. At that time this mandarin enjoyed a high reputation. The Koreans believed that Ma's appointment in the Foreign Office would be productive of immense benefit to their country. The said offender's (O Rosho) appointment in the Home Office was likewise regarded with great favour. But the hope was not fulfilled. Ma was accused of insulting the Royal Master and of licentious conduct, and returned to China. O Rosho is about to follow the fate of Ma. On the 14th of October, the Korean Government prohibited the people from coining any copper money secretly. This is looked upon as the result of anxiety on the part of the authorities to prevent the fall in value of old copper coins, which will certainly ensue in case of the abundance of copper money. The Tradal Associations that are worthy of the name, are the Merchant Steamship Company and Shoen Kiyoku, a cigar factory. The former has the capital of fifty thousand taels subscribed by

fifty shareholders, including Nin Yong-sik and Li So-yen. The latter has twenty shareholders and a capital of six thousand riyō, which is now in course of increase. There is one photograph shop owned by Koreans and directed by two Japanese. Some of the prominent Korean officers are making preparations to start a new trading company. A scheme is also afloat to establish a hospital. On the 18th of October, Riutei Shun, who was receiving instruction in Mr. Fukuzawa's school *Keio-gijiku*, was appointed to the Mint which was lately opened for making copper money. Only the director has been appointed up to the present, and his subordinates are not as yet engaged. A great many years ago, the King imported a Chinese translation of foreign books treating of the advantages of steamships, telegraphs, etc., and caused it to be translated into the Korean language. This valuable work was distributed among the inhabitants of the eight provinces. But at that time, the Koreans unanimously regarded it as a book on foreign religion, and condemned it as utterly worthless. Recently, however, the desire to read the work has greatly developed among them. Necessary efforts are, therefore, being made to publish the book so to meet the great demand for it.

THE LOSS OF THE "AKITSUSHIMA MARU."

MARINE COURT OF INQUIRY.

MONDAY, NOVEMBER 12TH, 1883.

A Marine Court of Inquiry was held in the Marine Office of the Agricultural and Commercial Department (Noshomusho) Tokiyo, to investigate the circumstances of the loss of the Mitsu Bishi Mail Company's steamer *Akitsu-shima Maru* whilst prosecuting a voyage between this port and Hakodate. The site of the wreck is about fourteen miles south of Siritaya-seki on the coast of Nambu.

The Court was composed of Geo. Ramsay, Esq. (President), Lieut. J. H. James, R.N., and A. MacNab, Esq.

The President announced that the Court had been assembled by order of the Noshomusho, and proceeded to read Section 10 of the English translation of the Japanese Government Regulations for the examination of Masters, Mates, and Engineers of vessels of foreign form of Construction. It reads as follows:—

Section 10.—If the Agricultural and Commercial Department has reason to believe that any master, mate, or engineer is, from incompetency, gross carelessness, or misconduct, unfit to discharge his duties, the Department may cause an investigation to be instituted, and may suspend or cancel the certificate of any master, mate, or engineer in the following cases:—

1st.—If upon investigation he is found to have been guilty of drunkenness, misconduct, gross carelessness, disobedience of orders, or negligence of duty.

2nd.—If upon investigation it is found that the loss or abandonment of, or serious damage to, any vessel, or loss of life, or serious injury to any person, has been caused by his wrongful act or default.

3rd.—If he is shown to have been convicted of any crime greater than a misdemeanor.

Next the President asked the officers to hand in their certificates of competency, and read the form of application under which they were engaged. It is in these terms:—

To the officers of the Agricultural and Commercial Department.

GENTLEMEN,—Being desirous of obtaining a certificate as a ——— of the ——— grade, I hereby signify my request to undergo the necessary examination for that purpose; and I herewith deliver my testimonials of character, service, &c., as per list on the opposite side, and numbered: ———. And I hereby agree to accept the said certificate subject and liable to such regulations as are now in force, or may hereafter from time to time be made by His Imperial Majesty's Government; and I further declare that I will deliver the

said certificate to the Agricultural and Commercial Department (Noshomusho) or to whomsoever they may direct, whenever I may be called upon so to do.

I am, Gentlemen, Your obedient servant,

Johannes Frahm (Master), J. C. Werner (Chief Officer), H. F. T. Moldt (Second Officer), and Rodger Hamilton (Chief Engineer) handed their certificates into Court. One of the Engineers was absent, and of the other officers present none hold permanent certificates.

Captain Frahm before being examined asked to be presented to the officers of the Court. This done, he asked that a master of the Mercantile Marine be associated with the Court. Captain Ramsay explained that he, himself, was a master of the Mercantile Marine, and that the Court was constituted according to the regulations of the Marine Office of the Agricultural and Commercial Department. It would be open to Captain Frahm, if dissatisfied with the result, to appeal to the Commissioner. The inquiry was then commenced.

Johannes Frahm's examination was first proceeded with. He admitted the accuracy of a copy produced of his report of the wreck addressed to the directors, with one correction. That being made the letter reads thus:—

"AKITSUSHIMA MARU,"

October 10th, 3 p.m.

To the Directors of the Mitsu Bishi Mail Steamship Company, Tokio.

GENTLEMEN,—It is with feelings of the utmost regret that I have to report the grounding of this steamer at 4.45 a.m. to-day about 14 miles south of Siriya-saki, on the coast of Nambu.

After having experienced a very stormy passage the weather at last moderated at midnight, and we were able to steer the steamer and proceed on our voyage. Our position was then according to D.R. Lat. $41^{\circ} 13' N$, and long. $142^{\circ} 15' E$. From hence steered a magnetic course W. by N. $\frac{1}{2}$ N. in order to sight Siriya-saki light, the weather being clear, at 3 hours 40 minutes still no light in sight, slowed down engines, headed steamer to eastward and at 3 hours 58 minutes stopped, ordered third officer to haul in the patent log and take a cast with the deep sea lead, and 4 hours 2 minutes slow astern in order to stop steamer's headway while sounding, a minute or so later sighted what I and everyone else on board that saw it thought to be Siriya-saki light bearing magnetic west and, as I judged about 18 miles distance, was so sure of it that I told the third officer, never mind the lead now, put engines full speed ahead, helm hard a starboard and steered at N.W. by W. Chief officer now on watch, weather clear, and I, having been without rest or sleep for the last 48 hours, now left the bridge for that purpose and gave the chief officer my instructions for the safe navigation of the ship. The next thing I heard was a blow from the steam-whistle and the sound of the telegraph gong. Rushed immediately on the bridge found the steamer about 100 fathoms from the beach, and engines going full speed astern; after engines having gone full speed astern some time, found it useless, she was hard and fast on a level sandy ground, covered with small boulders, which latter, I suppose, must have made several holes in her bottom as she rapidly begun to make water, after hold and engine room; uncoupled main shafting from engines, and worked same with bilge injection, but all in vain, at 10 hours 25 minutes the water extinguished the fires. We can do nothing now to float her until assistance arrives; as per my to-day's telegram; are meanwhile engaged landing cargo and stores; the weather is fine, and W.N.W. of the land.

The chief officer says, he lost sight of the supposed Siriya Saki Light shortly after I left the bridge, but did not call me because he thought we were clear of everything. Had he called me, according to my orders given to him, I feel confident this sad accident would not now have to be reported by yours,

Gentlemen, obedient servants,

(Signed) JOHN FRAHM.

(Signed) JOHN C. WERNER, Chief Officer.

(Signed) R. HAMILTON, Chief Engineer.

Witness also admitted the official log and rough log. He said:—The Chief Officer kept the deck log. The charts produced are those used on the *Akitsuishima Maru* on her last voyage. The deviation card has been left on boardship. There is no space in the log-book for the entry of the deviation. The number of my Certificate is 11, granted in 1875. I have been commander of the *Akitsuishima* for four years and a half. The Chief officer has been with me since October, 1882, with the excep-

tion of a period of sickness in February and March last. I left Yokohama last on the 6th of October at 5 a.m. bound for Hakodate. The weather then was showery, with a strong wind from the North-east, force about "4." To Kinkasan we had the same wind with a high sea. At 4 a.m. on the 8th I was three miles off Kinkasan, and thence steered a North-by-East course by the standard or bridge compass, by which I set the course, and the vessel is steered. The error was 11 degrees easterly. I continued on the same course until it got thick and rainy, when I hauled the ship out a little and then stood in again so as to make a N.N.E. course good. The day was so thick that we got no observations. At 3.45 p.m. Miako Head was West three miles of us. It was rainy and thick, and I set the patent log. I steered then N. $\frac{1}{2}$ W. by compass. The wind was Easterly and rapidly increasing. During the blow I took hourly observations of the barometer. Off Miako (to the best of my recollection (I have no record left) it was 29.95, inclining to fall, sea rising rapidly but not confused. I allowed half a point till 6.30 p.m. on the 8th. The speed was by the patent log about 8½ knots average; but the sea, Easterly, every now and then checked the speed. The hand-log was never used. At 6 a.m. on the morning of the 9th we saw the top of the land. Below was hazy and we could not make out where we were. I had hauled in toward the land at 1.30 a.m., steering good N.N.W. $\frac{1}{2}$ W. (by bridge compass N.N.W. error $\frac{1}{2}$ Westerly) until 6 a.m. The distance run between 1.30 and 6 a.m. was 43 miles by patent log. I have known my patent log choked. In such case I should estimate my speed by guess. From 6 to 9 a.m. I made good a W.N.W. (magnetic) course. I cannot say exactly the speed at the time, wind and sea increasing so rapidly and the ship making half a point leeway. The ship made 11 miles in the three hours. After that the ship would not steer and was unmanageable owing to the force of the sea and wind, the latter blowing a hurricane. Sometimes the ship would come up as close as eight points to the wind, but she would fall off quite three points. She was in the trough of the sea. Her lee-way then must have been about four points. She was making headway at the time through the water. From 9 a.m. to 5.30 p.m. on the 9th she made 42 miles, on a N.E. by N. course. Couldn't work up the course as I was too busy with the vessel, and could hardly get into the chart-room. The chief-officer was equally occupied. The ship's position at 5.30, as marked on the chart, is estimated by me. The weather was moderating and the wind beginning to haul to the West. At 5.30 I wore round. The vessel remained unmanageable until midnight (9th-10th). The sea was then moderating, wind N.W., weather pretty clear. I could see land about three miles distant: the stars were visible. The track was marked on the chart from time to time with the ship's position. The horizon was not clear enough for any stellar observations, neither then nor up to 4 p.m. of the 10th. From midnight I stood in towards the land until 3.40 a.m., when I stood out, steering out on a starboard helm to sound, expecting every moment to see Siriya-saki light. The weather was then pretty clear. I was sure I could see land about three miles away. I could then see three miles. Then I stood in to the land, my course was W. by N. $\frac{1}{2}$ N. northerly (error 6 degrees). The wind was moderating very fast. I had been 48 hours on deck, with the sole exception of when I had to consult the barometer or charts. The greater part of the time I was on the bridge. My reason for preparing to take a cast of the lead is that I had been moving in expecting to see Siriya-seki light; and I thought that from wind and current I might be further north than my supposed position. I might have been in the Straits of Tsugar. Had I got soundings I should probably have kept to the Eastward. I was the first on board to see the light from the bridge. I watched it eight or nine minutes. It showed clear and bright bearing magnetic W. The ship was heading E. by N. (error 11 degrees easterly). I could not take the light's bearing by compass as the funnel was in the way. I was certain that the light was Siriya-seki, as during seven year's experience on the coast I have never seen another light in the vicinity. Soon after I saw it the third officer reported it to me. I did not take a cast of the lead as I knew there should be no bottom. I countermanded the or-

der to sound. Nine or ten minutes elapsed from the time the light was reported to when I gave charge of the deck to the chief officer. The course I gave to the men at the wheel, and after to the chief officer, as N.W. by W. (error 11 W.) I steadied the ship myself on this course. It was then six or seven minutes past four. I kept looking at the light both before and after I had steadied the ship. My orders to the chief officer were to keep the ship steady, and to keep a good look-out. I didn't tell him what time to call me, as I had no intention to go to sleep, but only to change my clothes, and lie down in the chart-room for a little rest. I did not consult the chief officer about the ship's position. I should be sorry to have to consult him about the navigation. He had a chart; but not the one on which I had marked the course. The officers of the watch had access to the charts in the chart-room. I account for the vessel stranding through the false light. It was so clear that I was as sure it was Siriya-saki as I have ever been of any light. When she stranded I came on the bridge, and for a long time kept the engines going full speed astern, until I found it useless. Then I ordered the boats to be got ready and the wells to be sounded. The report was "no water." I put out a kedgie with two six inch lines fixed to the steam-winch. The wind was aback, and the square sails were set aback, and I hauled on the lines and took a turn or two full speed astern with the engines. (The bow was afloat about 100 fathoms off the beach.) I sounded round the ship and found from 15 to 18 feet. The ship was ashore fore and aft from the bridge. I heaved on the kedgie until she made so much water that it would have been dangerous to get her into deep water. The engines were stopped from going full speed astern by my orders. The surf was too high to get out a bower anchor and chain. I ceased going full speed astern because I found that the vessel must sink if she got into deep water. I worked up the ship's dead reckoning daily at noon and gave it to the chief officer. The second officer had instruments and used to take observations. The vessel was last swung two years ago to ascertain deviation. I swung her and calculated by object (Fujiyama) distant about 40 miles. Azimuths and amplitudes were taken whenever opportunity offered. The log-book (produced) was kept by the chief officer. It was not kept to my satisfaction, so I seldom asked for it and did not sign it. In the Mercantile Marine the captain and the chief officer are together responsible for the log; but I do not think this is the case in the Mitsu Bishi Company. (Captain Frahm, questioned why he thought this, did not give any satisfactory reply). The chief officer holds a certificate of competency to keep a log. If I were to sign this log I should have to alter so many things that I should be constantly in hot water with him. (Captain Frahm admitted many omissions in the log-book.) I frequently examined the needles; and the deviation was posted in the chart-room and open to the inspection of every officer. During the past twelve months I have had two chief officers, and one, each, second and third. The officers keep four-hour watches, first 4 to 8, second 8 to 12, third 12 to 4. I found out the site of the wreck from the natives; they called it Odogosawa. The false light has since been seen from the *Takasago-maru* by the Captain, by Captain Hog, myself, and the second mate of the *Takasago*. The Captain of the *Takasago* admitted that in my circumstances I was justified in taking it for Siriya-saki. A Japanese naval officer who visited my ship after she was stranded, as I understood him, said that the light had been put there by his orders for fishermen's guidance, and that it was a red light. When I left the vessel there was only a little water in the main hold, and none in the fore hold. Water first entered in the after hold and then in the engine-room.

To Lieutenant James—From 9 a.m. to 5.30 on the 8th the average course was about N.N.W. On the chart the course is N.N.E. I account for the difference by lee-way. With the average speed 5 knots per hour, the wind S.W., ship heading N.N.W., I do consider that the ship could make four points lee-way. From 5.30 till midnight, the course in the log book is S.S.W. $\frac{1}{2}$ W.; on the chart it is S. by E. $\frac{1}{2}$ E. This difference I account for by lee-way. With the ship heading S. by W., wind N.W., two points aback the beam,

wind and sea moderating, I consider that I was justified in allowing 4 points lee way, the sea being on the bow, and the stern very much down. When we left Yokohama the ship's trim was, 10ft.4 forward, 17ft.2 aft. The *Akitsu-shima* was supplied with a pole compass, and one compass aft and one on the bridge—the steering compass—which last I found the best. The pole compass I could not depend on; and the after compass was so placed as to render an all round azimuth impossible. There is no wheel-house on board.

J. C. Werner, Chief Officer of the *Akitsu-shima Maru*, deposed. When we passed Kinkasan the weather was moderate up to Miako. The speed was about seven knots by patent log and bearings. No bearings were taken for position. I never had any conversation during the bad weather with the captain about the ship's position. My watch is from four to eight in the morning and evening. The ship has not been swung in my time. I did not take any azimuths or amplitudes; but worked up the position by bearings: not by the sun, or the log-book, or otherwise. At noon daily I received a report from the captain to enter in the log-book. I did not take the sun's altitude, as I have not had an instrument for three years. I never took the latitude by a star; but examined the compasses before the ship left port. I am not aware that any compass-book has been kept on board. I kept the log, and, I consider, correctly. I have not much experience in keeping such books, but in this case followed the rules of the *Akitsu-shima*. The barometer is not accessible to the chief officer. The captain used to give me the distance daily. (Witness failed to explain why the columns for distance, deviation, etc., were not filled in.) The captain said it was unnecessary for him to sign the log-book, the chief officer's signature being sufficient. I had no access to the charts by which the ship was navigated. I never asked the captain to let me see them. He did not tell me the ship's position when I took charge of the deck on the 10th. On the night of the 9th it was blowing hard, thick and cloudy weather. At 8 the stars were visible. The course was set southward and westward till midnight. I was told so by the officer of the watch. During my evening watch on the 9th the ship's speed was about 4 knots through the water with four points lee-way. She was not steering, and was heading S.W. No canvas was set. When I took charge on the morning of the 10th, I saw a light bearing about W. by the bridge compass. The captain used to set the courses by that compass, which is the standard. He steaded the ship on a N.W. by W. course before going below. One quarter-master and a sailor were at the wheel: a quarter-master and a sailor were on the look-out in the bow. I estimated the light to be from 10 to 15 miles distant. I took its bearings when I came on the bridge, and again just as it disappeared in the fog. I took charge immediately I came on deck, after going forward to see if the mast-head light was burning. The captain ordered me to keep a N.W. by W. course, to keep her steady, and a good look-out. The speed was estimated, by patent log, about 7 knots. The third officer when I relieved him said he had seen Siriya-saki light and gave me the course. He made no remark about heaving the lead. No night order-book was kept. The standing orders were to keep a steady course, a good look-out, etc. The cargo was thrown overboard when she struck. I don't know why a bower anchor was not carried out. The sea was completely smooth; and it would have been possible to carry out a bower. The sea was not sufficient to endanger the boats. I made no suggestion at all: simply obeyed orders. We steamed full speed astern: hoisted all sail: the wind was about N.W.: got out a kedge about 2 cwt.: two lines were laid and bent on to the kedge, which was taken to the full length of the lines; and then hove away. These was a good strain on the lines. I believe the time was twenty-five minutes past 4. The light was bearing W. by S. about twelve miles off. We lost sight of it in the haze. I did not report losing sight of it to the captain. I thought it would clear again directly. There was no fog, only haze. I could not see the land. About a mile inland the land is high. There were no breakers: the ship's boats could land anywhere on the beach. The look-out quarter-master reported the land to me after I had seen it. When the ship struck I didn't touch the helm, but

rang "full speed astern." When the breakers were first seen I stopped her, and blew the whistle for the captain. The master had been on deck without rest or sleep for about thirty hours. He was much on the bridge. The log-book was written up by me the same day the vessel went ashore. I never checked the courses by the chart, but did not consider that it was impossible for the captain to make a mistake.

To Lieut. James—From 9 a.m. to 5.30 p.m. on the 9th the weather was very stormy, with wind from S.W. The vessel was heading N.N.W. falling off and coming up; the speed was 3 to 4 knots, and she was making about 4 points lee-way. The *Akitsu-shima Maru* would make four points lee-way going four knots an hour and with the wind abaft the beam. It was my watch when she was brought round on the other tack. The wind began to moderate about ten o'clock. Up to midnight the ship was not steering and making about 4 points lee-way.

To Captain Frahm—I had not access to the chart-room or barometer. You never refused me; but I didn't ask, knowing the experience of former chief officers. I might have had access if I had wished too. The light that I lost sight of at 4.25 in a haze bore about W. by S. $\frac{1}{2}$ S. I ascertained the bearing by the bridge compass. That would be 4 points on the port bow. I took the bearings as well as I could, although the weather cloth was up between the compass and the object, and do not know how much I may be out. The vessel's full speed in moderate weather would not be more than eight knots. When I said that she was going about seven knots on the morning of the 10th I meant seven or eight. I do not know whether one of your standing orders is, "If you see anything, or think you see anything, do not stand and look at it, but stop and reverse the engines if necessary, and if I do not then come on deck blow the whistle." I have had that order several times, but I do not recollect that it is a standing order. That is the reason why I did not include it in my description to the Court of your standing orders. It would have been difficult even with the lifeboat to get out a bower, when the vessel stranded; it might have been done on the port-bow. I am not aware whether you had any rest between Kinkasan and Miako. You had none during the blow.

At one p.m. the Court adjourned until 2 p.m.

On resuming Hans T. F. Moldt was examined. He said:—I hold a master mariner's certificate and have been second officer of the *Akitsu-shima* for 22 months. I keep watch from 8 p.m. to 12. Off Kinkasan the weather was rough and the wind strong. No observations were taken that day, I had not seen the ship's position marked on the chart. It was not pointed out to me. To my knowledge the captain was on deck for 48 hours, owing to the state of the weather. My watch on the morning of the 9th was from 8 to 12. It was blowing a typhoon. I do not remember how the ship was heading. The speed was from 2 $\frac{1}{2}$ to 3 knots. At night she was heading S.S.W. $\frac{1}{2}$ W. during the whole of my watch. The ship did not have any steerage way until 5 minutes to 12. I mean that she would not come up to the wind. The helm was hard a port all through my watch. She was making about 4 points lee-way. The wind was N. W., blowing strong till half-past ten when it began to moderate. The engines were going full speed. The sea was on the starboard quarter. There was no sail on the ship, which is schooner-rigged, with a top-sail fore-yard. The course was by the bridge compass that was steered by. It was set by the captain. I don't know what the deviation was during the night watch. If I had wanted to work up the true course, at midnight, I should have found it S.S.W. by W. The deviation-table was hung up in the chart-room. I never looked at it because I never went into the chart-room. The courses are entered in the log book after the watch is ended from the bridge compass. I did not enter the distances. I never took azimuths or amplitudes; but the sun very often. I had no chance to do so this last voyage. The weather was pretty clear at midnight; but no stars were visible; it was somewhat hazy. The captain was mostly on the bridge after the ship struck to get the boats ready. There was not very much sea: it would have not been possible to carry out

a bower anchor with the ship's boats; it was too heavy—about 2,200 lb. No attempt was made. I had not access to the charts of the ship, and never asked the captain to let me see them. I never laid off the position on the charts, nor worked up the ship's position by dead reckoning. After the ship struck and while standing by the *Akitsu-shima Maru* I never saw the light again. I did not look for it.

To Captain Frahm—From my former experience of the ship, I do not think that she was going more than from 2 $\frac{1}{2}$ to 3 knots on the morning of the 9th; I think certainly that she was not going more than 4. I never asked you to let me look at the charts or deviation table. If I had done so I suppose I might have seen them. Supposing that the boats were strong enough, when the ship had struck, to take out a bower anchor, even the lifeboat—the largest we had—would not have stood taking it in under the bow in the condition of the sea.

Thomas Williams, third officer, deposed:—I hold a temporary certificate, granted by Mr. Knipping. I could not pass my examination as second officer. I kept the watch from 12 to 4. During my last watch (on the 10th) the sea was rough but the wind had died away. I relieved the second officer, and got his orders for the course W.N.W. I do not know what the deviation was. The speed was about 7 $\frac{1}{2}$ knots. I guessed it. The captain was on the bridge the whole watch. The engines were slowed down about 4 o'clock, for a cast of the lead. One quarter-master and one sailor were on the look out on my watch: one quarter-master and one sailor at the wheel. The ship's head was put eastward at 4, when the captain ordered me to haul in the lead. The chief officer made my entries in the log, because I cannot write very well. At 4 o'clock I reported a light to the captain. I said it was Siriya-saki: and the captain said, "All right! I know it." As officer of the watch I could go into the chart-room at any time. I had no conversation with the captain as to position. I have never taken any observations on the *Akitsu-shima*. I saw the light when I went below. I don't know how it bore; but should think it was about four miles away. It was a big bright light, and I took it for Siriya-saki which it is very like. It was on the port quarter. I went to my room immediately I was relieved by the chief officer. The captain was on the bridge. I gave my relief no orders beyond the course. I had no conversation with him. No sail was set.

To Lieutenant James—The previous day in my watch the ship was hove to, and making pretty fair weather but some lee-way. She was too light not to make lee-way. The deepest I've seen her is 19 ft. 10 in.

To Captain Frahm—It took me about twenty minutes to get the deep sea lead ready for a cast, and five minutes to haul in the log—in all twenty-five minutes.

Captain Frahm explained that at this time the ship was slowed down and had her head put to the eastward.

Witness—I cannot take observations. The light when I first saw it was "a good bit up;" but I cannot say how many feet above the horizon. I couldn't see the horizon, but the light was a good height above the water.

Mr. Werner, recalled, to Lieutenant James—The light was about twelve miles away—a degree or two above the horizon. I did not see the horizon. On an ordinary fine night and an ordinary voyage, Siriya-saki may be seen at a good distance. Sometimes it shows high and sometimes low. I thought this light was Siriya-saki. I did not think we were getting too close to the land, although the ship was going at eight knots and N.W. When the light disappeared I did not think it necessary to call the captain, as I expected the light to appear again directly.

Captain Frahm asked the Court whether it would kindly request the attendance of the captain or officer in charge of the deck of the *Takasago Maru*, who saw the same light as that referred to subsequently to the wreck of *Akitsu-shima*.

The Court, after promising to consider the matter, adjourned until 9 a.m. next morning.

TUESDAY, NOVEMBER 13TH, 1883.

On the opening of the Court, Captain Frahm asked permission to recall the third officer.

The President informed him that his request would be considered later on.

Rodger Hamilton, late Chief Engineer of the *Akitushima Maru*, said—I hold a Chief Engineer's Certificate, No. 64, and have been Chief Engineer of the vessel for about five months. The engineers' watches were:—third 12 to 4; second 4 to 8; first 8 to 12. The *Akitushima's* nominal horsepower was 200. On the 9th of October the weather was bad: the skylight was down; and the engine-room door was closed. All the Engineers were more or less on constant duty for two days until 9 o'clock on the night of the 9th instant. Two nights before stranding we had to stop for two minutes on account of a hot crank-pin. There was nothing else wrong. From the time I left Yokohama the only conversation I had with the captain was about driving the ship as much as I could, on account of the gale. That is all, to the best of my recollection. The engines were reduced before stopping on the 10th of October between 3.40 and 3.58 a.m.—eighteen minutes. With that exception we went, as far as we could, at full speed. On the morning of the 10th the weather was fine from midnight. The vessel was stopped from 3.58 to 4.02, when the engines went astern until 4.05, and then full speed ahead. The revolutions were 52 per minute. Shortly after noon on the 6th, the engines began to race and only stopped racing on the 9th at midnight. At 4.45 a.m. on the 10th I stopped the engines, and then went astern till 5 a.m. when they were finally stopped by the Captain's orders. I presume because it was useless to continue. I suggested to the captain that pumping out the after tank would be the best chance of getting the vessel off. That was done: it took about three hours to pump the tank out. We only pumped out the one tank. Pumping out the two would have left the vessel in the same position as she was. It would take five or six hours to pump out the two tanks. The after tank contains 133 tons: the forward 95. I cannot give any opinion as to the speed of the ship on the morning of the 9th: the engines were racing too badly. On the morning of the 10th the speed was about nine knots. I do not think it was possible to get the ship off with the engines alone. At 10.18 a.m. the fires were extinguished. The water first came in aft, from the tunnel. It came into the engine-room through some damage to the ship's bottom. The water-tight door and sluice-bars were closed. My cabin was situated about two feet aft of the engine-room. I heard the telegraph. I was in my cabin. The third engineer put the engines astern. I got to the engine room immediately. During the bad weather, for two days, I was almost constantly in the engine-room—until the night before striking—only leaving occasionally to take my meals.

To Mr. Macnab—There was no counter in the engine-room. I arrived at the revolutions by the engineer timing the engine hourly with a watch. During the bad weather I had no means of taking the revolutions; the engines were racing too badly. The pitch of the propeller is, I believe, 19.5: the slip about 10 per cent. The slip is more when the ship is dirty than when clean: more in stormy weather and a head wind than when fair. I got the distances I have entered in the log from the captain; to whom at noon daily I reported the revolutions.

Paul Helm, late third engineer of the *Akitushima*, was next questioned. He said:—I hold no certificate. On the morning of the 10th of October I was on watch from half-past four to five. The average revolutions were 53. I was in the fire-room. The steam pressure was 56. About ten seconds elapsed before the engines went astern from the time the telegraph rang. I reversed them. They went astern for about 15 minutes. I felt no shock, as I was working the engine at the time the ship struck. In a minute after the bell rang, the chief and second engineer were down below. I saw water coming in through the tunnel, which was a water-tight one. I do not know exactly what time the fires were put out. We all remained below till the water drove us out. At first the water came in slowly: afterwards very rapidly.

To Mr. Macnab—We always kept a log slate in the engine-room. I counted the revolutions every half hour, and put them down on the slate. (Referred to the log book.) The entries "revolutions

various" for my watch were made by the chief engineer from my statement.

To Captain Frahm—By the tunnel being "water-tight," I mean that it was not in connection with the after-hold. I have the impression that it was not; but never examined it. No water came in through it before we struck.

To Mr. Hamilton—The ship was making (referring to the log), when she struck, 52 revolutions—not 53 as I said before.

Mr. Hamilton, with reference to the engineer's log, remarked that he had had to write it under great difficulties during the storm.

Lieutenant James explained that what the Court wanted specially to arrive at was the speed of the ship during the voyage, and there appeared to be nothing in the deck-log, or the engine-room log, or anywhere else to show that.

At this stage the Court was cleared for a few moments.

On re-opening the President announced that the Court, having deliberated on Captain Frahm's request to recall the third officer, had decided that, as there had been an adjournment for one day, it would not be advisable to take further testimony from him.

Captain Frahm was then recalled by the Court and asked, among others, the two following questions:—

What reason do you assign for not consulting with your officers in reference to the navigation of the ship, especially after the dirty tempestuous weather of the 8th, 9th and 10th of October?

Having taken the entire navigation of the ship upon yourself, never having consulted with your officers, why, after the first bearing, did you not remain on deck sufficiently long to take a second bearing of the light, and then mark her correct position on the chart and ascertain if the course already shaped was a correct one?

He replied:—My chart-room is on the main deck below the bridge, two or three feet forward of the bridge. My cabin is aft. I generally use the chart-room to lie down in at sea. I did not consult my officers even after the dirty, tempestuous weather of the 8th, 9th, and 10th, because if they had differed in opinion from myself I should still have thought it my duty to keep to my own opinion as I was the responsible person. Having taken the entire navigation of the ship upon myself, and not having consulted with my officers, when I had first taken the bearings of the light seen on the 10th, I did not remain on deck to take a second bearing, because after consulting the chart I was sure and satisfied that it was the Siriya-saki light, and made certain that, even if the distance were less than half that I judged, the course would still be clear of all dangers. I looked at the light through a glass. The bridge screens are about 31 feet high, and are not fitted with corner pieces. The compass is amidships. It is protected by another screen, about six feet high from the bridge, and extending for two feet on each side of the pole on which the pole-compass is fixed. This screen reaches about six points on each bow from the compass. The helm was kept hard a starboard all the time from 9.30 a.m. to 5 p.m. on the 9th. The ship is two-masted and schooner-rigged. At that time, if it had been possible to set the main trysail, she would have been brought nearer the wind. It was not set because I knew it would blow away instantly. Any trysail would have blown away. We had no storm main trysail: only a main staysail, which we bent and set on the 8th. The helm was hard a port from 5.30 p.m. till a few minutes before midnight on the 9th. The lee-way was ascertained by judgment. I could see the ship's wake about a ship's length astern. I instructed the chief engineer on the 8th, when the wind had increased so that the ship would not steer, to drive her as hard as he could with safety. I did not ask him what speed the ship was making. The speed was reduced for a short time, by my orders, on the 9th for soundings only. After the ship struck I sounded round her myself, in a boat for three or four hours. I also sent the second officer. Soundings were taken by me to a distance of a cable and a half from the vessel. Shortly after she struck she was making water so rapidly that I knew it would be useless to transfer cargo from aft forward. Assistance arrived from the shore about eight o'clock in the morning, when boats came to save cargo. At noon we had laborers from shore to help us on board to discharge cargo. The vessel was laden in Yokohama under the direction of the

chief officer. I had ordered how she should be trimmed. The purser had said we should have 500 tons of cargo. I therefore told the chief officer to stow the heavy cargo aft and to fill the forward tank. We arrived in Yokohama one morning and had to leave the next. The mate acted as he was told; but as the weather was bad, he was informed at night by the purser that he would not receive all the cargo spoken of. I then told him to fill the after tank, so that the propeller should be immersed. I considered the vessel safe even in typhoon weather when six feet down by the stern. The cargo was 50,000 bricks and about 220 tons measurement goods. I have only my chart to remind me of courses and distances. I decline to say whether I consider the chief officer or second officer capable of taking command of the ship in case of my being disabled. (The witness was pressed on this question but would not answer it.) I had confidence in my officers to a certain degree. In thick or rainy weather I preferred to be always on deck myself. I had no certainty of the ship's position at midnight on the 9th. I could have seen land at least three miles away at that time. I turned the ship's head seaward when about to sound to make sure that she would not drift into danger—as a precautionary measure, in case I found myself on soundings. I laid the bearing and distance of the light, when I saw it, on the chart, and allowed less than the presumed distance. I had not complete confidence in my first officer when close to danger. I would trust him within two or three miles of the land. Had I been on deck when the light was lost sight of I should have immediately turned seaward.

The Court adjourned at noon in order to endeavor to procure the attendance of the Japanese witnesses who were on deck at the time of the disaster.

Wednesday, November 14th, 1883.

Nakashiyo Chojiro was examined, after due caution to speak the truth. He said:—I was a seaman on board the *Akitushima Maru*, and was on deck on the morning of the 10th of October. The weather was not very good until about 5 a.m. I was at the wheel, and had been on deck an hour from 4 to 5. I saw a light which I took for Siriya-seki. I so took it on account of the bad weather prevailing for four days and this light showing up. Both the quartermaster at the wheel and myself saw it; but did not hear it reported. It was the general belief on board that the light was Siriya-seki; but I did not hear the quartermaster say that it was. I have seen Siriya-seki Light twice at night. It is a red one. The light now alluded to was red when first seen: it disappeared. I knew it was a red light, because I could see that it was of a red color. It disappeared about half an hour after I had first seen it. I saw the land immediately afterwards. The vessel struck before the land was seen.

The chief officer was recalled, and the interrogatories and answers of the last witness were read. Neither the chief officer nor the captain had any questions to ask this witness.

The chief officer was then re-examined by the Court. He said—The light was white. The exact time of the ship striking, as given from the engine-room, was 4.45. I should say from 15 to 20 minutes elapsed from the time of losing the light to the ship's striking. I should think the vessel ran about two miles from the time the light was lost to that of striking.

This closed the evidence, and the Court reserved judgment.

His Majesty the Mikado, being pleased with the establishment of a German School in Tokyo, has announced his willingness to grant an annual subsidy of yen 2,400 for the next ten years.

Thirty-eight students have graduated at the Dendrological School and received certificates of competency.

According to the Custom Returns, the total amount of exports and imports during the month of September last were as follows:—Exports yen 3,064,477.077; imports yen 2,401,627.917; excess of exports yen 662,849.17; export duty yen 116,936.383; import duty, yen 111,333.46.—*Hochi Shimbum*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, NOVEMBER 9TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokiyo, Japan.

REMARKS.

Heavy line represents barometer.

Light continuous line—maximum and minimum thermometers.

Dashed line—represents velocity of wind.

Dotted line—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in inches. † Direction of Wind. ‡ Weather.

Maximum velocity of wind 20.5 miles per hour on Friday at 6 p.m.

The highest reading of the barometer for the week was 30.079 inches on Friday at 11 p.m., and the lowest was 29.603 inches on Thursday at 3 p.m.

The highest temperature for the week was 68.7 on Monday, and the lowest was 58.8 on Wednesday. The maximum and minimum for the corresponding week of last year were 63.8 and 57.3 respectively.

The total amount of rain for the week was .071 inches, against 1.843 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30,* 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00,* 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, yen 70.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

Tokio Maru, Japanese steamer, 1,146, R. Swain, 15th November, — Shanghai and ports, Mails and General.—Mitsu Bishi M. S. S. Co.

LATEST SHIPPING.

FREIGHTS.

No improvement to note in freights, and business on the smallest scale. The German bark *Peter*, which sailed on the 15th instant with a cargo of wheat for Amoy, got only 10 cents per picul, but that does not represent the rate at this port, as the vessel was chartered on the other side. For London via ports, the *Flintshire* sailed on the 10th instant from Kobe. The *Canton* and *Breconshire* occupy the berth, the former for New York and the latter for London. The bark *Sagitta* for Havre and London left this to-day.

ARRIVALS.

Alma, American schooner, 45, Brassey, 10th November,—Kurile Islands, Furs.—J. D. Carroll & Co.

Per French steamer *Mensaleh*, from Hongkong: Treasure, \$69,000.00.

REPORTS.

The Japanese steamer *Niigata Maru*, Captain J. C. Hubbard, reports leaving Kobe on the 13th November, at 5 p.m. with variable winds and fine weather on the first part to Oo-sima; thence strong easterly winds and fine weather. Arrived at Yokohama on the 14th November, at 10.30 p.m. Passed the British steamer *Cairnsmuir* off Ovari Bay.

The American steamer *City of Rio de Janeiro*, Captain Robert R. Searle, reports leaving San Francisco on the 24th October, at 3.15 p.m. with strong winds, heavy sea, and a low area of low barometer throughout the whole passage. Passed Cape King on the 16th November, at 5.30 p.m. Arrived at Yokohama on the 17th November, at 8 a.m.

LATEST COMMERCIAL.

IMPORTS.

During the past week the previously reported stagnation has continued, and with scarcely any fresh business, quotations are nominally unchanged.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |

| Nailrod, small size - | 2.85 to 3.15 |

KEROSENE.

Sales during the week have been 16,500 cases, and deliveries 16,000 cases. The Market is weak at the following prices.—

| | PER CASE. |
|----------|-----------|
| Devos - | \$1.67 |
| Comet - | 1.64 |
| Stella - | 1.50 |

SUGAR.

The commodity is firmly held for the following prices, but the market for all grades is very dull on account of buyers holding back. All the late receipts have gone into godown, but the Stock on hand is not large.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.25 to 8.30 |
| White, No. 2 - | 6.75 to 7.00 |
| White, No. 3 - | 6.30 to 6.40 |
| White, No. 4 - | 5.75 to 5.90 |
| White, No. 5 - | 4.70 to 4.90 |
| Brown Formosa - | 4.25 to 4.30 |

EXPORTS.

SILK.

There has been only a moderate business during the week, and Settlements for that period do not exceed 600 piculs of all descriptions. At one time purchases had almost ceased, but there has been more disposition to buy the last few days at a reduction on former quotations. Export to date is 16,194 bales, against 11,952 bales to same date last year, and the outgoing *Khiwa* is expected to take a fair quantity. Direct shipments on native account have been exceptionally heavy both to Europe and America by recent steamers; but in spite of this outlet Stocks are increased to nearly 6,000 piculs. Prices are not strong and actual purchases would probably make a still further impression on quotations given herewith.

Hanks.—There is now more disposition to operate in these at reduced rates. Among recent sales we note Tomiyoka \$490, Annaka \$440, Hachoji \$415; Shinshu sorts are in demand at the present low rates.

Filatures.—Not very much doing in these at present, buying for the American mail not having yet commenced in earnest. We note transactions at \$610 in best No. 1—fine size—tailing off to \$600 and \$590 according to quality. In coarse kinds the principal business has been in Medium to Common at \$540 down.

Re-reels.—Small business in these, hardly sufficient to test the Market. Good Maibash, like Katsuyama and Five Girl, are obtainable at \$575 or thereabouts.

Kakeda.—Moderate purchases have been made on basis of \$530 for Niwatori, with Common at \$510, Chocho might be got at \$575.

Hamatsuti.—Some little passing at about former prices. *Sodai* a parcel noted at \$410. *Nambu* good has been done at \$395.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$430 to 490 |
| Hanks—No. 2 (Shinshu) - | 475 to 490 |
| Hanks—No. 2 (Joashu) - | 465 to 470 |
| Hanks—No. 2½ (Shinshu) - | 455 to 465 |
| Hanks—No. 2½ (Joashu) - | 440 to 450 |
| Hanks—No. 3 - | 430 to 430 |
| Hanks—No. 3½ - | 400 to 410 |
| Filatures—Extra - | 610 to 620 |
| Filatures—No. 1, 10/13 deniers - | 600 to 605 |
| Filatures—No. 1, 14/16 deniers - | 590 to 600 |
| Filatures—No. 1½, 14/17 deniers - | 575 to 585 |
| Filatures—No. 2, 10/15 deniers - | 570 to 580 |
| Filatures—No. 2, 14/18 deniers - | 560 to 570 |
| Filatures—No. 3, 14/20 deniers - | 540 to 550 |
| Re-reels—No. 1, 14/16 deniers - | 580 to 590 |
| Re-reels—No. 1½, 14/17 deniers - | 565 to 575 |
| Re-reels—No. 2, 14/18 deniers - | 550 to 560 |
| Re-reels—No. 3, 14/20 deniers - | 540 to 550 |
| Kakedas—Extra - | 600 mom'l |
| Kakedas—No. 1 - | 565 to 575 |
| Kakedas—No. 2 - | 530 to 540 |
| Kakedas—No. 3 - | 500 to 510 |
| Oshiu Seesai—No. 2½ - | 470 to 480 |
| Hamatsuki—No. 1, 2 - | 465 to 475 |
| Hamatsuki—No. 3, 4 - | 420 to 440 |
| Sodai—No. 2½ - | 410 to 420 |

TEA.

The tone of our Market has improved since the date of last report. Settlements amount to 1,725 piculs chiefly of the lower grades. Prices have consequently advanced, and at the close are steady at quotations given below. Supplies from the country come in slowly, and Stocks amount to only 4,100 piculs.

QUOTATIONS.

| | |
|---------------|--------------|
| Common - | \$10 & under |
| Good Common - | 11 to 13 |
| Medium - | 15 to 17 |
| Good Medium - | 18 to 20 |
| Fine - | 23 to 25 |
| Finest - | 28 & up'ds |

EXCHANGE.

Rates have declined during the week, and the business transacted been on a small scale. There have been few Settlements of Bank Paper, and quotations at the close are steady.

| | |
|-------------------------------------------|--------------|
| Sterling—Bank Bills on demand - | 3/8½ |
| Sterling—Bank 4 months' sight - | 3/9 |
| Sterling—Private 4 months' sight - | 3/9½ |
| Sterling—Private 6 months' sight - | 3/9½ |
| On Paris—Bank sight - | 4.68 |
| On Paris—Private 6 months' sight - | 4.80 |
| On Hongkong—Bank sight - | 1/2 o/o dis. |
| On Hongkong—Private 10 days' sight - | 1/2 o/o dis. |
| On Shanghai—Bank sight - | 73 |
| On Shanghai—Private 10 days' sight - | 73½ |
| On New York—Bank Bills on demand - | 90 |
| On New York—Private 30 days' sight - | 91 |
| On San Francisco—Bank Bills on demand - | 90 |
| On San Francisco—Private 30 days' sight - | 91 |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|--------------------------------|------|
| Monday, November 12th | 107 |
| Tuesday, November 13th | 109 |
| Wednesday, November 14th | 108½ |
| Thursday, November 15th | 108½ |
| Friday, November 16th | 111 |
| Saturday, November 17th | 112 |

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,

23c, Forston Street, London, N.

May 1st, 1883.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, NOVEMBER 24TH, 1883.

DEATH.

At 41, Tsukiji, Tokijo, on the 19th November, GRACE MARTHA, only daughter of the Rev. W. T. White, aged 3 years and 7 months.

WEEKLY NOTES.

On Sunday last there occurred in this Settlement a disturbance of unusual magnitude. The parties principally concerned were Russian sailors and jinrikisha coolies. A number of the former were assembled on the English Hatoba waiting for man-of-war's boats to take them off at the expiration of their furlough, when one of their comrades arrived by jinrikisha. The new comer was more or less intoxicated, and so, it appears, were the majority of those on the Hatoba. A dispute arose about the fare, and the sailor attempted to escape without satisfying his jinrikisha-coolie's demands, whereupon the latter seems to have seized the former's cap as a hostage. What happened after this is not exactly clear. A general *milie* took place between the liberty-men and the coolies, and the trouble was rather aggravated than quelled by the interference of the police, who were not

in sufficient force to deal with rioters so numerous and so violent. Several men on both sides were severely injured, notably a sailor who was stabbed in the back, and Sergeant James, an European constable, whom a Russian knocked down with a stone. The disturbance was finally brought to a termination by some Russian naval officers who succeeded in getting their men into the boats. The chief reflection suggested by the fracas is that similar affairs are always possible in this Settlement. It is obvious that if fifty or sixty liberty-men take it into their heads to commit an outrage or to be the violent assertors of their own fancies, there is not, there cannot be, in a petty sea-port town, any police force capable of restraining them. To what dimensions a riot like that of last Sunday may at any moment attain, none of us can pretend to prophesy. Russian sailors do not enjoy an enviable reputation, but we doubt whether they are much worse than the sailors of any other nation. At all events whatever moral distinctions may exist, are not likely to survive the levelling effects of the liquor sold in Yokohama grog-shops—liquor which is subject to no sort of examination and whose retailers are free from every restraint other than the insensible prickings of a publican's conscience. In 1881, when the Russian squadron was at Nagasaki, strange accounts reached us of the liberty-men's doings, and after every allowance had been made for the exaggeration of rumour, it was plain that the peace and order of the port were virtually at the mercy of these boisterous holiday-makers. Here, too, from one to three hundred men may come ashore any day to disport themselves, and once ashore, they represent a temporarily uncontrollable force, capable of wrecking half the Settlement before any competent authority could cope with them. Fortunately such things do not occur, because the men are generally orderly and good-humoured, but the possibility is always before us. The experience of last Sunday may at any moment be repeated on a larger and much more disastrous scale. The obvious inference is that ships allowing a large number of men to go on furlough should be obliged to provide for the discipline of the sailors while on shore. Elsewhere it is customary to send an armed picket with instructions to see that the liberty men behave in an orderly way, and though such a measure must be preceded, in the case of a foreign port, by the permission of the local authorities, that permission could easily be obtained here. Even if steps were taken to remove the ridiculous and childish ob-

structions which render the efficient exercise of municipal control impossible in our Settlement, it would still be to the advantage of Japanese and foreigners alike that the duty of dealing with riotous English, Russian, or French sailors should be undertaken by the men's respective nationals.

The riot of last Sunday offered another illustration of the strange tendency existing in this Settlement to abuse and condemn the Japanese police. There is no reason whatsoever to suppose that the police behaved improperly in the fracas at the Hatoba. They certainly used their batons, but it was in self-defence, as the severe injuries they themselves suffered at the hands of their opponents amply testify. The statements of the Russian sailors are not yet before the public, and it would, therefore, be premature to form any opinion as to the origin of the disturbance, but there is sufficient testimony to show conclusively that police interference was imperative and that the Russians resented it with reckless violence. Doubtless if the police had not interfered they would have escaped a good many wounds and contusions, but they would have received, instead, a chorus of abuse for inefficiency and partiality, and in this instance the condemnation would have been just. The police, however, are not popular with the "patriotic" element of Yokohama. Nothing Japanese is popular, and it would have been quite inconsistent with the traditions of this class had last Sunday's disturbance been suffered to pass without hostile criticism. We were not surprised, therefore, when, at the investigation held by the Russian Consul, one of the witnesses, describing himself as a newspaper proprietor, endeavoured to lay the whole blame on the shoulders of the police. This person's evidence was very sensible and far-seeing from his own point of view. But its effect was somewhat marred by the extravagant demands it made upon public credulity. Few human beings outside a nursery will be found to believe that the police proceeded to arrest a Russian sailor because he had "accidentally struck a Japanese coolie with a piece of orange skin," and that they followed up the proceeding by "brutally assaulting" the man's comrades. Yet this revelation was subsequently repeated in another form by apparently the same witness under the *alias* of "an independent spectator," who commenced by declaring that "an unjustifiable assault was perpetrated on a body of Russian seamen," and then went on to describe the condition of the seamen with admirable ac-

curacy:—"They had consumed a quantity of the poison sold them as spirits, too potent even for these hardy sons of the north," and had "become more or less irresponsible for their actions," nevertheless, "so far as a casual spectator could judge, they were as tractable as such a body of men on such an occasion could be expected to be:" all that they did was to throw oranges, crackers, bread, etc., and "while this harmless play was in progress," the Japanese police attempted to arrest some of them, whereupon a free fight ensued. Up to this point "independent spectator," was consistent enough, but he now went on to say that "the trouble had its origin in a dispute between a jinrikisha-coolie and a spectator," whereas, before, it was the police who arbitrarily attempted to arrest men engaged in harmless play. We do not doubt that this witness was quite as capable of appreciating facts as "such a man on such an occasion could be expected to be," but for the sake of his reputation as a story-teller we could wish that he had not published his latest experiences, or capped his history with the verdict that "had the police refrained from interfering with a lot of men in the condition in which the majority of these obviously were," nothing extraordinary would have happened. What condition that was, we are at a loss to divine. It was a complicated condition at all events—the condition of men who "had consumed a quantity of poison too potent for them;" who were "more or less irresponsible for their actions;" who were nevertheless "as tractable as could be expected," and who were obviously in a state not warranting police interference. It is well that the public should be amused, but on no other grounds can we explain the freak of throwing open newspaper columns to such a fabulist as "independent observer." "Another eye-witness" does not command greater confidence. He, too, thought "the whole affair could easily have been stopped at the start had it not been for the unwarranted proceedings of the police, whom he saw with his own eyes provide jinrikisha coolies with stones and brickbats with which to attack sailors." Wonderful eyes they were, those of this observer. They enabled him to see everything that happened to Sergeant James so accurately that Sergeant James himself contradicted him in every detail. Let us not be understood as seeking to cast doubts on the honesty of either "an independent spectator" or "another eye-witness." We do not in the smallest degree question these gentlemen's sincerity, but we do distinctly charge them with bias. Were it not the fashion in this Settlement to ridicule and abuse the police, such versions of an easily understood affair would never have been offered to, or accepted by, the local press. Whether the police are good or bad is not the question. It is, whether they get fair play, or whether the treatment measured out to them is any sense worthy of an intelligent community.

It is the custom when posting sentries or placing policemen on their beat to provide them with a

schedule of instructions for their guidance. The practice, we understand, has not been neglected even in Yokohama, though, as the local press constantly assures us, the police there are like the cat's tail in the proverb, their presence and their absence are equally inconsequential. Whether well or ill carried out, however, the instructions themselves, in the form to which they have gradually been reduced, are worthy a moment's study. Epitomized, they run thus:—"To check dishonesty and to arrest thieves but to remember that each house in the foreign Settlement is an inviolable sanctuary for law-breakers: to seize all offenders against municipal regulations unless they are foreigners or Japanese within the limits of foreign compounds: to see that sanitary and hygienic arrangements are duly carried out, but on no account to enter the precincts of foreign residences for that purpose: to prevent everything calculated to offend decency and public morality, but to be very circumspect in molesting offenders against one or the other since the majority of them are armed with foreign certificates which place them beyond the reach of Japanese control: to remove whatever impropriety disfigures the environs of the Settlement, but to be exceedingly careful that the process does not extend to places where residents of note, officials and private persons alike, are wont to enjoy their hardly earned recreation: to exercise a rigid supervision over grog-shops but on no account to examine the quality of the liquor sold there or interfere in any way with the conduct of their proprietors: to arrest all drunken disturbers of peace and order unless they happen to be liberty men who by imbibing poison too strong for them have become "more or less irresponsible for their actions," and are "obviously not in a condition to be interfered with:" to arrest or otherwise check all jinrikisha coolies who by offering their vehicles to foreigners are guilty of the implied insult that the latter are not competent to ask for what they want; and, above all, never in any way to interfere with the rights which individual foreigners may conceive themselves or their *employés* entitled to exercise, since the observance of Japanese municipal regulations by Western residents is purely a matter of courtesy." It is understood that these instructions are not yet complete. The course of daily events and the comments they evoke, constantly suggest new additions. Japanese intelligence, however, or to be more explicit, the degree of intelligence which consents to be associated with a baton on a beat, is finite, and apprehensions are beginning to be entertained that the supply may prove inadequate to the demand unless some limit is imposed upon the latter.

THE Korean embassy has returned and will conclude its mission by a somewhat protracted stay in Japan. The public is still ignorant of the purpose of H.E. Min Yong-Ik's visit to the United States. And this ignorance is likely to be permanent unless the public consents to accept the only reasonable version of the affair, namely, that the Ambassador and his suite went

westward with no more serious intent than Lord Bateman avowed when he "shipped himself all aboard of a ship some foreign countries for to see." Yet to the last the American journals kept up the farce of accrediting the peninsular statesman with weighty business. Each day their readers were informed of the visits the Ministers paid to public buildings and other miracles of civilization; of the discussions they held with their attachés, of the notes they took and of the questions they asked. Only, amid all this curiosity and comment, the Great Min Yong-Ik himself held firm to the object of his journey, and "directed his interest to the execution of the duty assigned him by his Sovereign." This manifest steadfastness to a mysterious purpose raised the diplomatic *débütant* many degrees in public estimation, and environed him with all the halo of reverence that encircles official mystery. As a pleasant set-off to his awe-inspiring self-restraint, we have the ingenuous prattle of the other members of the Embassy, their astonishment at everything they saw, culminating when they found themselves in the hotel at San Francisco, with its "lofty ceiling supported by such slender pillars; its great clean white walls; its sunlight which, shining through large window-panes, turned the pillars and white walls into a light pink colour; its elegantly decorated cornices; its rich furniture and table-appointments; its wonderfully beautiful women and strong-figured, wise-faced men; and, above all, its black waiters, whose great white shirts made their faces very black and their eyes an unearthly white." On these things the travellers were always glad to discard, and their interest in Indians and Indian relics seems to have been unbounded. In the presence of the electric light they became practical. "In Japan" said the attaché, Mr. Yu Kil-Chun, "we saw some electrical apparatus, but could not be told what electricity was, though we were left to understand that nobody knew, and that it was a force controlled by devils and not surely under human control. We learn, however, from what we see of its use in America, that it may, like water, be poured from vessel to vessel, and is controlled and used in safety." Later, having observed the inferiority of gas, as shown by a street gaslight standing close to an electric light, Mr. Yu remarked:—"We will begin with the electric light in Korea. In America you have demonstrated that the electric light is cheaper and better than the lights of gas and kerosene, and therefore we need not make the experiment. We will begin where you have arrived." When Mr. Yu gets home he will doubtless make a requisition upon the State strong-box (of which the Commissioner of Customs keeps the keys), for money to buy electric lights, and before long visitors to Seoul will be able to examine the evidences of that city's opulence and cleanliness by the strong illumination of a thousand-candle Brush burner.

Questioned on the subject of printing, the Envoy is reported to have said:—"We have type in Korea, but no printing presses. More

than two hundred years ago a king of Fah Chosun made a great number of iron types, and since then such type have been used in our country." To which statement the *New York Herald* adds the following:—"The type spoken of are those of Chinese characters as shown in several books brought with the Embassy from Korea. That Koreans should have invented movable iron type at so early a date is a remarkable fact when it is considered that such type were never invented by the Chinese or Japanese, those in use in China and Japan at present having been first made by European missionaries since 1830." As might have been expected, the New York journalist gets out of his depth the moment he ventures into Chinese or Japanese waters. The Korean statesman's account of his countrymen's invention of movable metal types is over-modest. It is now well known, chiefly through the researches of Mr. Earnest Satow, that such types were used in Korea 470 years ago. The whole account of the invention and its first employment is given in the *Transactions of the Asiatic Society of Japan* (Vol. X. Parts I. and II.). But it also known that the Japanese, too, possessed movable metal types at the beginning of the seventeenth century. Their own antiquarians speak of a much earlier date (1394), and having regard to the intercourse between Korea and Japan, it is difficult to suppose that any invention appreciated by the former could have long remained unknown to the latter. But it is at any rate certain that, whether imported from Korea or invented in Japan, a considerable quantity of movable metallic type was in stock in Yedo at the beginning of the seventeenth century, while of block-printed books there are examples dating as far back as 1157.

On the happily vague authority of "it is generally understood," but yet with a certain show of assurance and conviction, the *North China Daily News* forecasts a number of impending changes in the Japanese Cabinet. Mr. Mori, now representing Japan in England, is to have the portfolio of Foreign Affairs, its present holder, Mr. Inouye, going to Washington. Admiral Yenomoto, now at Peking, is to succeed Mr. Mori, while Mr. Takezoye, Minister at Sôul, is to proceed to Peking. Our readers will remember that these changes were announced some time ago by a vernacular journal, and it would appear that our Shanghai contemporary's informant derived his inspiration from the same source. So far as we have been able to ascertain, however, the only basis of the rumour is Mr. Terashima's return from Washington, and that, as we have already explained, was necessitated by illness. Mr. Terashima's health is seriously impaired, and some apprehension exists that he will not be able to resume duty anywhere for a considerable period. Mr. Mori's return from London has been talked of for some time, but we are in a position to say that even that is not yet determined, still less the name of his successor.

NOTES.

On the 3rd of October, the sale of tickets for the first series of Henry Irving's performances in New York was opened at the theatre selected for his appearance. Tickets for separate representations, the price of which is \$3.00 each, were reserved for future disposal. For the entire succession of evenings, twenty-four in number, \$60.00 are demanded,—a singularly moderate sum, considering the enormous expense incurred by Mr. Irving in carrying his complete company, stock of scenery, etc., to America. In fact, this fee is simply the equivalent of what is nightly required for stalls at the regular performances in the Lyceum; and is only one half as much as the charge during Edwin Booth's memorable season with Irving. At first sight it would appear that the visitor from England must inevitably lose money; but all danger on that score is doubtless averted by the superior "holding" qualities of the American theatres. No London play-house, even with the four or five tiers of the old pattern, can seat nearly as many spectators as the average New York establishment, with its three divisions. This is chiefly owing to the absence of boxes, which in England occupy disproportionate space, and accommodate comparatively few auditors. Moreover, when the seats are all taken in a British theatre, the house is filled,—the lobbies and passages being totally unavailable. Theoretically this is the more correct system, but a dozen practical reasons could be bought forward in favor of the freer and more open style of construction. The latter is an enormous advantage to the manager, when he has a good entertainment to offer, for it often happens that nearly if not quite as many as those who sit, will be content to witness the proceedings standing. The consequence is that the receipts are usually twice as large in America as in England. A "two hundred pound house," in London, is greatly above the average. Only the most powerful "stars" can draw such, continuously. In New York, a nightly return of \$2,000, is not extraordinary, when the attraction is of the highest class. The inspiring effect, upon the actors, of audiences like those which gather on especial occasions in America, can hardly be realized by players whose experience has been confined to the older country. Irving has had wonderful triumphs, and enjoyed "receptions," at home, more enthusiastic than have been accorded to any other British actor of the time; but he never knew what it was to have a greeting like that which awaits him from the New York community. The hearty spirit of American hospitality would ensure that, under any circumstances; but the remembrance of his courtesy and true comradeship toward Booth, when the latter was in grief and trouble, will intensify the warmth of his welcome a hundred-fold.

We have spoken of the theatre "selected" for Irving, but in point of fact there was probably little choice. Few of the New York managers could afford an opening to so costly an *entour-*

age as that of the distinguished English star. Mr. Wallack, the *doyen* of his calling, happens to have two houses, from one of which he personally withdrew a few years since, finding it too far "down town,"—that is, too near the business part of the city,—although when built, twenty years before, it was the uppermost place of amusement on Manhattan Island. This he now gives up to occasional visitors. Under ordinary conditions its position might be considered a drawback; but the exceptional circumstances of Mr. Irving's advent removes this disadvantage. It is not one of the largest of New York theatres; but at the prices fixed, it will seat \$3,500, and contain \$5,000. If the visitor can be sure of even \$3,000 each night in New York, whereas the limits of his London house prevent his taking much above \$1,000, he will have no financial reason to regret his foreign tour. Of course the figures just mentioned represent only the legitimate receipts,—the amount with which Mr. Irving's treasurer will have to concern himself, when each night's business is over and done with. The actual sum paid for tickets, at least the first few representations, will be nearer \$12,000 than \$5,000. The band of brigands known as "ticket speculators" have taken measures to secure the whole body of seats, with the expectation of retailing them at prodigious profit. It is alleged that no degree of precaution can prevent this abominable imposition. The sale opened, as has been said, on October 3rd. Throughout the previous day, the large iron gateway of the establishment was besieged by hired men and boys, waiting for the first places in the *queue* of purchasers. These were paid thirty cents an hour or \$5.00 for a day and night. Most of them slept on camp-chairs provided by their employers. At nine o'clock on the morning of the 3rd, the doors were opened, and the line of approach was formed. At the proper time, each supposititious applicant would yield his place to the real buyer. It was announced that no individual should be allowed more than ten season-tickets; but this rule was easily circumvented, and it is known that one adventurous investor secured upward of \$10,000 worth. Altogether, on this opening day, the sales were 511 in number—amounting to \$30,660. Four-fifths of the buyers were speculators.

SOME weeks ago, reference was made in these columns to an opinion delivered in Boston, Massachusetts, by Justice Nelson, of the U.S. Circuit Court, in the case of a ship-carpenter of Chinese descent, who was born in Hongkong, and to whom the law excluding Chinese laborers was therefore declared inapplicable. According to this decision, in which Justice Lowell of the same Court concurred, a native of Hongkong, being a British subject, is not liable to the provisions of an Act directed against Chinese immigration. Most persons, outside of California, will be surprised to learn that this simple and apparently sound conclusion has been set aside by Judge Field, of the U.S. Supreme

Court, sitting in banco with Judge Sawyer, in the city of San Francisco. Most persons, indeed, will be a good deal more than surprised at the learned Justice's ruling "that the fact of a Chinaman being born in Hongkong does not constitute him a British subject." That is a question, we should fancy, concerning which the view of the British Government might be supposed to take precedence over that of Judge Field. It is highly improbable that the point will ever be raised, but we are strongly inclined to believe that any individual of Chinese parentage, born in Hongkong since that island became an English possession, who should undertake to assert his privilege of admission to the United States, as a British subject, would be sustained to the fullest extent by the Government of Great Britain; and that this latest San Francisco decree would be found to have the precise value of a piece of waste paper. The several inane arguments by which Judge Field attempted to sustain his position hardly require examination, but as an example of what a professional logician may be reduced to when he sets out to propound a legal absurdity, we quote the following:—"The coming of Chinese laborers to the United States, without any limitation as to the countries from which they may come, is suspended." "In respect to the Restriction Act no consideration is deemed necessary to the position of other Governments regarding the Chinese within their borders." It is almost needless to say that this theory, if carried to its ultimate consequences, might produce the gravest international dissensions. The United States Government once deliberately invited war with Austria, in defence of the rights of a person of Hungarian birth, who had not—if memory serves us correctly—even become an American citizen, but had only declared his intention to be naturalized. On that occasion, Austria yielded;—as the United States would be required to yield if the pretence were made of sustaining the doctrine laid down in California,—provided that doctrine were boldly confronted and defied by anybody sufficiently interested to force the matter to a definite issue.

The question may reasonably be asked,—“What could have possessed a Judge of the Supreme Bench of the United States to risk his reputation and weaken the dignity of his office by so extraordinary an enunciation?” It is not for us to supply the answer; but by briefly describing the political attitude in which the learned gentleman now stands, we may enable readers to form their own opinions on the subject. Judge Field is one of that too numerous body of prominent American citizens who are inflamed with Presidential aspirations. He has long been a candidate for nomination, though never a nominee. He is without strength or influence in any other part of the country than the extreme Western States, and is unsupported by a single newspaper except the *Alla California*. It is openly proclaimed, we regret to say, that he has secured the advocacy of this sheet by serving, in his judicial capacity, certain local

interests on the Pacific Coast. This charge may, or may not, be true. It would be lamentable to see it verified. But of the facts that he is striving for the Presidency; that he has no following but in one or two Western States; and that the people of those States are as reckless in their animosity against the Chinese as he himself is in his struggles for the Chief Magistracy,—of these things there is no possibility of doubt. By the light which they afford, the decision reversing Judge Nelson's rational opinion may perhaps be accurately interpreted.

The career of a China-ware vendor in Shanghai seems to be exposed to vicissitudes. A few days ago, one of these gentlemen was quietly carrying his wares along Foochow Road when a foreigner coming along, gave him a shove which produced fatal effects among his crockery. The pedlar, laying down his load, followed his assailant to ask for redress which he received in the shape of half a dozen sound strokes from the other's cane. Satisfied with this, he was about to resume the fragments of his load when a policeman appeared upon the scene, and to him the injured man exposed his wrongs. The policeman was a person of quick resolution. He immediately began to abuse the pedlar “in the foulest language,” and told him that unless he wished for a good clubbing and to be locked up, he had better take himself off at once, which advice the China-vendor wisely followed. The details of this interesting scene were communicated to the *North China Herald* by a Chinese correspondent, who explains that had the policeman followed the foreigner, “he would have himself received a good caning or whipping” at the latter's hands. This Chinese gentleman—a remarkably good English scholar, apparently—takes occasion to regret that the scheme of importing Sikhs to police Shanghai failed. He says that the Chinese constables only enforce municipal regulations against those whom they do not care to offend, and that the Superintendent of Police has acquired a reputation which exercises a deterrent effect on Chinese complainants. Native residents of Shanghai are evidently becoming dangerously exalted. They begin to imagine that Chinamen are included in the application of the principle, “all men are equal before the law.”

The *Mainichi Shimbun* has a report of a banquet given by the Japanese Chamber of Commerce at Pusan, Korea, whereat the principal guests were officials, including Mr. Robert, commissioner, and other officers, of the newly organized Korean Customs Service. The event was on the 26th of October, and its principal incident appears to have been an address by Mr. Yamada, President of the Chamber. He reminded the convives that eight years had elapsed since the conclusion of the Commercial Treaty between Japan and Korea in the ninth year of Meiji, and that during the interval the condition of trade had not been altogether decrepit. Meanwhile no duty had been imposed

upon either imports or exports. Hence the Treasury was neither benefited nor the reverse, whether trade declined or prospered. This, thought the speaker, was the real cause why Korean officials failed to recognize the benefits of international trade, which they regarded with invidious eyes. It was regrettable that a Custom House had not been earlier established for the plenishment of the coffers of the Korean Government, which would soon become aware of the importance of international trade. He congratulated the Government upon the organization of a Custom House under competent and experienced officers. He was certain that they would spare no effort to promote the interests of foreign merchants. Mr. Robert replied, reciprocating the sentiments of Mr. Yamada, and affirming that, in accord with the instructions of his chief, Mr. Yamada, he would spare no effort for the encouragement of foreign trade.

The experiment of the new U.S. postal note, which was expected to serve as a convenient auxiliary to the money-order system, does not prove as satisfactory in operation as it appeared to be in theory. It was intended to simplify the transmission of small sums—less than five dollars—and to enable minor debts at a distance to be paid without the complicated formalities of the more familiar method. The law authorizing the use of postal notes was passed in the early part of this Congressional year, and went into effect in September. It provides that any applicant may purchase, at a money-order office, notes for amounts as high as \$4.99, for each of which a fee of three cents is charged. These are payable “to bearer,” at any duly specified office in the United States, “within three months from the last day of the month of issue.” No identification of the collector is required, his signature to the note alone being demanded. In case the period of payment should be allowed to go by, the note may be exchanged, either at the issuing office or that of liquidation, for a new one of similar value, at a further expenditure of three cents. The apparent advantage of the new expedient is its freedom from intricate details and its cheapness,—the cost of a regular money-order being nearly three times as large. When first proposed, and before it had been practically tested, it was hailed as an unquestionable public benefit; but after a month of trial, its efficacy begins to be doubted. A general call has arisen, if not for its abolition, at least for radical changes in its plan. The complaints appear, however, to be caused by carelessness on the part of the postal clerks, and by the insecure quality of the notes provided, rather than by any distrust of the scheme itself. Ordinary printing paper and common ink being used, the opportunities for forgery and alteration are abundant, and the few safeguards attempted are wholly insufficient to defy the manipulations of expert rogues. The blunders of country postmasters, moreover, are found to involve almost as much danger as the ingenious devices of counterfeiters. If the new system is to be continued, the Government will probably find it

necessary to recall all the blanks thus far supplied to the various offices, and replace them with more trustworthy forms. This will involve considerable expense, as no less than forty millions of blanks have been distributed. It will also be desirable, it is supposed, to dispense with the signature of the payee, on collection, and to allow the vouchers to be presented by any holder, at any money-order office in the Union. Then, it is anticipated, the postal notes will become really serviceable mediums of exchange.

If the withdrawal and destruction of this large number of forms is unavoidable, we shall have another instance of the singular lack of foresight displayed in the issue of U.S. Government tokens. Apart from the errors and imperfections detected from time to time in the paper currency, for which reasonable excuses could be offered, the examples of impracticable coinage have been sufficient to constitute a minor department of numismatic curiosities. Without much effort of memory we can recall discarded half-cents; three or four varieties of the three cent piece, neither of them entirely satisfactory; two cent and five cent pieces now nearly forgotten; two issues of silver dollars which are not tolerated by the community; and, latest of all, a five cent coin which in size, colour, and workmanship so closely resembled the standard five dollar gold piece that its circulation had to be summarily stopped within a month of its first appearance. For premature deliveries of this description, the U.S. Treasury seems to have an especial proclivity. It would be easier to understand them if it were not universally known that both the artificers of the Mint and the engravers of the Currency Bureau have, on occasion, produced work the design and execution of which their most artistic European competitors would have difficulty in rivalling.

THE *Mainichi Shimbun* gives the following particulars of the recent fire in the Miike Coal-mines:—On the 21st of September last, the convicts employed in the mine rose and set the oil cases (stored in the mine to be used for mining purposes) on fire. The flames immediately spread to the timber stacked in the vicinity and thence to the pits. At the time, there were over three hundred and fifty men working in the pits, including convicts and free laborers. Two hundred and eighty-three escaped, the rest were burned alive. No means for extinguishing the fire being available the pits were all closed; but in vain. The smoke from the Mitsuyama shaft ascended into the air to the height of 1,300 feet. There was no supply of water, or of engines either, for the matter of that, to flood the mines. Carbonic acid gas was freely pumped into the shafts with the effect of reducing the combustion below. The loss of mining machinery and the destruction of the coal beds is great. Three hundred tons of coal have been hitherto turned out daily from this mine. The expenses were about *yen* 1 to *yen* 1.50 for each ton of coal. But since the fire it has cost *yen* 2

to *yen* 2.50 to obtain the same amount. Hence the rise in value of the fuel in question.

FROM Tientsin a correspondent of the *Shanghai Mercury* writes that M. Tricou was leaving the Northern port on the 29th October:—"As far as is known Li Hung-chang has firmly refused all the propositions and demands of the French Minister, even Abbé Couraux's claims and Mr. Dillon's expenses to Manchuria and back." And, again, "Our Chinese friends inform me that the White Flags who have joined the Black Flags, have defeated the French troops, and that the Black and White flags have surrounded Hanoi, but *not taken it*. It is said that on account of this news China has assumed such a firm attitude towards France." The correspondent concludes by mentioning *an adit* "that the Emperor of Japan has invited M. Tricou to be a guest of his while passing through Japan."

THE Messageries Maritimes Company have now been running steamers to Melbourne and Sydney for some time. In a recent Sydney paper we find the following account of a race between the P. & O. steamer *Clyde*, and the M. M. steamer *Salasie*, both new boats, down Hobson's Bay:—"An interesting steamship race took place between the P.M.S. *Clyde* and the M.M.S. *Salasie*, from Williamstown to the Heads. Some time ago the P.M.S. *Shannon* and the *Salasie* had a similar race, the former winning. On this occasion the *Salasie* put off into the stream at about 1 p.m., and waited about half-an-hour for the *Clyde*. No sooner had the latter started than the *Salasie* put on steam and shot away at once, gaining the lead. Both vessels are regarded as exceptionally fine steamers in their respective lines, but the *Clyde* was heavily loaded, while the *Salasie* has discharged part of her cargo. It is pointed out that the rules of the P. and O. service forbid racing, and it is represented that the captain of the *Clyde* had no intention of anything of the kind; but it was noticed by persons who went down to the Heads on the *Clyde* that the vessel was going at a great pace, and was quivering with her powerful engines at work. The *Salasie* fully intended to race, and altered her time of departure, and waited for the steamer to start. Once under way, she gained perceptibly, and arrived at the Heads 20 minutes before the *Clyde*, the respective times being—*Salasie*, 4.10 p.m.; *Clyde*, 4.30 p.m."

WHILE the Parisians are discussing the possibilities of a war with China (says the Paris correspondent of the *Standard*), they are overlooking a very serious and much greater danger nearer home. The interviews between the German and Austrian Emperors, between Prince Bismarck, Count Kalnoky, and General Manteuffel, and between Prince Hohenlohe and the King of Italy, ought to have warned them that there was danger at hand far nearer home than China. Roumania, Servia, Italy, and Spain have now become members of the Austro-German Alliance, and I have reason to

believe that this alliance will very shortly have a practical result. It may not be next week or next month, but it will certainly not be long delayed when the German Government will take the initiative of a proposal which will have a startling effect throughout Europe. I am assured by a person whom I know to be in the confidence of Prince Bismarck that Germany has agreed with Austria and the other members of the alliance, which now embraces the whole of Continental Europe, excepting France, Russia, Denmark, and the Scandinavian Kingdoms, to propose a general Congress, with a view to a mutual and general disarmament. As to the time at which this thunderbolt of war is to be launched under pacific pretences I cannot say. But I am assured it has been assented to by Austria, Spain, and Italy, and I can hardly suppose that some inkling of the matter has not reached Her Majesty's Government. Some knowledge of it has certainly reached Russia, and it would render the *coup d'état* in Bulgaria intelligible enough. On the other hand, a Madrid correspondent telegraphs that public opinion in Spain has so strongly pronounced against any German alliance that the official organs have declared that King Alfonso's journey to Berlin and Vienna is not likely to lead to any treaty or alliance at present.

It seems scarcely necessary to contradict the story circulated by a Shanghai journal to the effect that M. Tricou, during his stay in Japan while *en route* for Europe, is the guest of His Majesty the Emperor. Having regard, however, to the exceptional nature of M. Tricou's recent mission to China, as well as to the part he is accredited with having played in the dispute between the latter country and France, we have thought it worth while to ascertain, by direct enquiry, whether any grounds whatsoever exist for such a rumour, and we are in a position to state, on the best authority, that our Shanghai contemporary is wholly misinformed.

In translations of notes from Japanese papers, published in the *Japan Daily Mail* of the 20th instant, was one of a paragraph in the *Hochi Shimbun* announcing that the corpse of a young man, supposed to be a student, had been found near Masago-cho, Hongo, Tokiyo, seamed with wounds, and close by him was a long sword. The *Hochi* of the 20th relates that the lad was murdered and that his assassin was arrested promptly after the commission of the foul deed, which was perpetrated on the 17th instant. The criminal is a paper-hanger employed in the Agricultural and Commercial Department, where the butchered lad was in service as a messenger. Matsumoto, for that is the name of the assassin, a man of thirty, had scraped acquaintance with his victim, whom he endeavored to persuade to steal all or as much as he could of the salaries of the officers of the Department, who are paid on the 17th of each month. Hatano Kinya, aged seventeen, stoutly refused to be a robber and a dupe, and was waylaid at night on his

way home and stabbed to death by his tempter. But this human fiend had only half finished his work. There was another young messenger, Nawasaburo by name, more susceptible to his influence, and who succeeded next day—when the murderer coolly returned to his work—in abstracting seventy-five *yen*, only twenty of which, however, he handed to Matsumoto. This latter expended the whole of the money swiftly; and then, fearing disclosures and consequences, caught his second victim unawares, stabbed him, and flung him into the Castle moat, near Kudan, whence he was rescued, still living, by the police. He confessed his own guilt and gave such information as led to the arrest of the murderer, who is now charged with his double crime.

REFERRING to a scheme for the employment of female doctors in India, the *Spectator* says that it is one of the few thoroughly sensible plans recently started by philanthropists, and seems likely to be a success. A sum of a £4,000 has been raised in Bombay, to guarantee salaries for two or three years to English ladies—one of them is Miss Pechey, M.D., a most successful student, who fought through the great Edinburgh fight—and £20,000 to start a native hospital for women; while in Madras, four ladies have been admitted to practise by the local Medical College. One of these is that remarkable woman, Mrs. Scharlieb, who came to England to perfect her medical education, and distanced all competitors at the London University. Lastly, Mr. Rivers Thomson, Lieutenant-Governor of Bengal—and we may remark, the firmest opponent of the Ilbert Bill—in a minute full of clear sense and sympathy for native suffering, has over-riden the opposition of the Council of the Medical College, and ordered the admission of female students, if qualified by general education. The number of entrances is certain to be large, and in a few years each of the Three Presidencies will have a staff of female doctors thoroughly familiar with the language and inured to the climate. They will reduce the sum of human misery far more than a dozen orders admitting lads with an English veneer on them to positions for which they are hopelessly disqualified. We are glad to notice also that the new doctors intend to make a business of their work, to claim fees from those who can pay, and to earn if they can good incomes for themselves. One fortune made by a woman as a doctor in Calcutta will keep the supply more regular than any amount of philanthropy in individuals, who after a few years die out.

WE learn with some surprise, from the columns of the *North China Daily News*, that the last Consular Trade Report for Yokohama has been omitted from the recently published Blue Book. Commenting upon this omission, our Shanghai contemporary says that, "without a report on the trade of Yokohama, the Commercial Reports from the Consuls in Japan are as incomplete as those from their brother officials in China, minus that from Shanghai;" and then proceeds to observe that, although the Report for

the Yokohama trade is doubtless a much lengthier document and requires longer time to prepare than those from the smaller ports, "the Consul at Yokohama might surely have completed his labours in time to have allowed his paper to appear with those of his colleagues." This is a little hard on the Consul for Yokohama, and at the same time argues a very uncharacteristic want of information on the part of our Shanghai contemporary. For surely the latter ought to know that the Kanagawa Trade Report was published months ago in the columns of the *Japan Mail*, as part of the series which goes home in pamphlet form every year from Her Majesty's Legation in Tokiyo. It is quite true, as the *North China Daily News* observes, that "business men have no time to throw away upon reports on trade a twelvemonth old;" and that "it cannot be pleasant to a Consul to know that his labour has been as good as lost." But with these facts in view our Shanghai contemporary behaves somewhat inconsistently when it proceeds, in November, to discuss Reports which were published here in June, and at the same time shows the Consul for Kanagawa that his labour has really been "as good as lost" so far as the Shanghai foreign press is concerned. If the *N. C. Daily News* will refer to the files in its own office, it will find that there was no delay on the part of the Kanagawa Consul, and that all the reports from Japan now embodied in the Blue Book were in the hands of the foreign mercantile community of China and Japan half a year ago.

THE feeling of mutual uneasiness prompting, as the telegraph has just informed us, angry polemics between France and Germany, receives practical demonstration in the former country's budget. The revised estimates show a deficit of 55 million francs, chiefly owing to the enormous military expenditure. Five hundred and ninety-three million francs is the sum appropriated for the two services, and of this amount the supplementary budget embraces three hundred millions, viz.:—110 millions for fortifications and war material; 11 millions for construction of ironclads; 140 millions for dockyards and canals; 3 millions for underground telegraphs, and 36 millions to cover the deficit in 1883.

THE *Nichi Nichi Shimbun* reports that, shortly after 7 a.m. on Tuesday, the 18th instant, an attempt was made by a man at Kanda, Konyacho, Tokiyo, to murder the wife of one of his neighbours. The woman's cries soon attracted a crowd of persons to the place, where the pavement, and the lintels of the house, were found spattered with hair and blood. The outrage arose out of a domestic squabble. The would-be assassin had some time previously met and quarrelled with his wife, who had abandoned him, leaving a number of children with him to support. He became desperate and commenced a search for his wife, with motives of revenge. Wandering about, he heard, issuing through the door of a house,

the voice of a woman which he mistook for that of his faithless consort. Bursting into the tenement he seized a woman by the hair, and drawing a dagger from his sleeve, inflicted several wounds upon her face and head. It appears that at the climax of the assault he discovered his error; for before he had effectually completed his bloody work he dropped his victim and ran away. The police are said to be on his track.

WE are informed that the state of the subscription lists for a testimonial to H.E. Sir Harry S. Parkes is as follows:—Hongkong, \$50; Shanghai, \$105; Nagasaki, \$99.50; Kobe, \$120; Tokiyo and Yokohama \$1,171; Total, \$1,645.50. The lists sent to London and New York have not yet been returned.

THE frequency with which new applications of the electric current is being recorded is evidently greatly in excess of the number which capitalists and others have perfected and introduced. The latest is exceeded in novelty, perhaps, only by Edison's phonograph, which, while it promised to revolutionize the art of recording vocal utterances, has proved of no practical value beyond exhibition purposes. Gentilli's glossograph, now at the Vienna Electric Exhibition, is a little instrument by which speech is automatically reproduced as soon as uttered. There is an apparatus which may be placed in the mouth of the speaker so as to come in contact with the roof, lips and tongue "without inconvenience," and which when connected with an electro-magnetic registering appliance "commits the sounds to paper." It reproduces the whisper as well as a shout, and works five times as rapidly as the fastest short-hand writer. It differs from the phonograph in depending on a law of acoustics, and the characters made in recording sounds are of a size to permit easy reading—that is, so soon as they have been translated. The *Pall Mall Gazette* expresses the view that a second instrument may be constructed to translate the characters of the glossograph into type-writing. The only essential to the successful operation of the glossograph is distinct articulation.

THE following curious story is taken from the latest issue of the *Kapunda Herald*:—"For some time past the telegraph line between Kapunda and Freeling has been working very badly, and repeated attempts to unravel the cause have proved unsuccessful. The evil increasing, Mr. Rutter, telegraph operator stationed at Kapunda, was on Tuesday, August 21, dispatched to closely inspect the line with a view to its remedy. After proceeding a few miles Mr. Rutter unexpectedly discovered the source of all the trouble. He found at the top of one of the telegraph posts a magpie's nest, in the building of which the bird had displayed considerable ingenuity. It had forcibly wrenched away with its beak the wire which bound the line to the insulator, and, after fixing the wire in a suitable position, had commenced to build its

future home. When it is remembered that it is impossible to unbind the wire without the use of pliers, the difficulties with which the magpie had to contend will be better recognised. There were eggs in the nest. Mr. Rutter removed the obstruction and repaired the line, which is now restored to its normal condition. On reporting the matter to head-quarters the authorities confessed themselves sceptical of the account given by Mr. Rutter, and suggested that that gentleman had discovered a mare's nest, not a magpie's. Mr. Rutter assures us that the facts as related by him are quite correct."

HOWEVER indefensible the conduct of the Parisian mob may have been during the King of Spain's brief and inharmonious visit to the gay capital, it did not altogether become the newspapers of England to denounce the French Government for failing to foresee and guard against the disturbances. *The Times*, in particular, held forth upon this subject in a tone of superior propriety calculated to convey the idea that such irregularities were possible only in France, and could never by any chance occur upon the tranquil and orderly soil of Britain. As a matter of fact, there is not a city in Europe where the vagabond element may not be found in sufficient force to set the laws temporarily at defiance; and riotous demonstrations against individuals obnoxious to the rabble have been at least as frequent in London as in any other metropolis. Unwelcome visitors from abroad have not been the only objects of popular disfavor. The impartial mob has been quite as ready to lavish its attentions upon domestic, as upon foreign, victims. The iron shutters of Apsley House stood for many years in testimony of the Duke of Wellington's disagreeable experiences, and if Mr. Gladstone does not resort to the same measures of protection, it is because he prefers the risk of an occasional extra glazier's bill to the permanent disfigurement of his residence. A complete list of London outbreaks during the present century would stretch to as great a length as any similar catalogue of continental uprisings. They have not generally been considered very harmful, and in some cases have actually tended to the public advantage, by giving timely warning of the necessity for political concessions too long withheld. But while they remain in common recollection, it is ridiculous for the leading journal to lay down police-laws for a neighboring community, and undertake to show wherein its preventive methods are defective. The London pot does not shine a bit brighter, in this respect, than the Parisian kettle; and it would puzzle an expert in weights and measures to determine the difference between the mote on one side of the Channel and the beam on the other.

There is one point, however, in connection with this over-criticized incident at Paris, which deserves consideration in this part of the world. It does not matter a particle, so far as the reputation of a city for good government is

concerned, whether the object of a vulgar assault is a King, or a body of police, or a squadron of cavalry. The unexpected outbreak has simply to be put down, as speedily as possible. But it matters a good deal for the character of the community in which the outrage occurs. It is the baseness and the cowardice of an attack upon a person who, from the nature of his position, can take no active step in self-defence, which will be remembered against the city of Paris, and not the inability of the local magistrates to prevent the demonstration. A monarch situated as the King of Spain was, during his visit in France, is entitled to all the privileges of honourable weakness, if we may so express it, and should be as naturally exempt from molestation, in every decent man's judgment, as a feeble woman or a helpless child. The creature who would thus take pleasure in insulting the Sovereign of another country would delight in beating his wife or making sport of the infirmities of age. This is the opinion of civilized humanity; and to the same sentiment we may trace the indignation and horror which thrill through the world when attempts are made upon the lives of rulers, rather than to a survival of the ancient spirit of blind, unreasoning loyalty. It is a wholesome conviction, and may be safely reckoned upon in most places where intelligence and enlightenment have made their way. To find it wanting in any community composed of representatives of European and American advancement, is by no means an agreeable sign. It would almost appear that, in some minds, any release from the legal and social restraints which prevail at home, awakens a latent propensity to licence and grossness. For it is undeniable that the tendency exists, both here and in China, among a considerable class, to exhibit an amount of coarse insolence and brutality toward those in authority which would neither be tolerated nor attempted in places under less imperfect control than these extra-territorialized settlements. Nowhere else are the military and civil functionaries of nations subjected to such ill-treatment by irresponsible aliens as in China and Japan. Here, in particular, we have seen the advisers of the Sovereign held up to obloquy by ignorant defamers, and the Sovereign himself made the object of vulgar and silly jests. The men who engage in this ignoble revelry are of precisely the same stamp as those who might be seen hooting at Alfonso's carriage, smashing windows in Carlton Gardens, or shrieking filth at their Queen, on Westminster Bridge. They know that those whom they assail are defenceless by reason of their station, and, believing themselves safe from punishment, they pursue their cowardly game, secure from the only consequences that would weigh with them. Thus it follows that we behold an order of beings, in the Far East, making it the business of their lives to practise a wantonness which the veriest dastards of Europe would be ashamed of, while a larger circle stimulates and encourages them in poltrooneries which every reflecting man knows to be mean, vicious, and degrading, not alone to those who get their livelihood by

them, but equally to those who supply the means of such basely earned subsistence.

THE 20th instant being the birthday of Her Majesty Queen Margherita of Italy, Her Majesty the Empress of Japan caused the following telegram to be forwarded to Rome:—

TO HER MAJESTY QUEEN MARGUERITE OF ITALY.

Accept my sincere congratulations upon the auspicious recurrence of Your Majesty's birthday. May Your Majesty enjoy continued prosperity and happiness.

HARUKO, EMPRESS.

Tokyo, Imperial Palace, November 20th.

The next day, the following reply was received in Tokyo:—

TO HER IMPERIAL MAJESTY THE EMPRESS OF JAPAN.

Deeply moved by the kind wishes of Your Majesty, I thank You most sincerely.

MARGHERITA.

Monza, Royal Palace, November 20th, 1883, 7.05 p.m.

This is the first occasion on which Her Majesty the Empress has addressed a similar congratulation to an European sovereign, and we trust that the happy precedent may be often followed in the future. Japan's recent history justly entitles her to feel that distance no longer bars her admission to the family of Western States and her sympathetic participation in the events of their histories.

It is not easy to see why the luxury of divorce should be more accessible or more sought after by Protestants than by Roman Catholics, yet such is certainly the case in Switzerland. In the Roman Catholic cantons, the number of divorces does not average one per cent. of the marriages, whereas in the Protestant cantons the maximum is 13, and minimum, 4, per cent. On the whole, Switzerland is essentially the land of divorce. Berlin is the only place that can compare with it. The compilers of statistics in the former country have shown pretty clearly that the confessional is in some degree responsible for conjugal disagreements. Their figures are thus:—in every hundred marriages, where both husband and wife are Catholics, the divorces only amount to 0.7; when both husband and wife are Protestants, the number is 2.8; when the husband is Catholic and the wife Protestant, 3.2, and when the husband is Protestant and the wife Catholic, 4.5.

A RECENT number of *Harper's Weekly* contains several sketches from the seat of action in Tonquin and Annam, the fidelity of which seems open to no question. As is almost invariably the case, even in literal reproductions of Oriental scenes, the peculiarities of landscape and architecture convey an impression of far greater picturesqueness than an inspection of the original would justify. The view of a street in Hué, the captured capital of Annam, presents similar general features to those of a busy, spacious thoroughfare in some Japanese town; but observers who are familiar with the region depicted are aware that its dirt, dilapidation, and squalid monotony have no parallel in this more thrifty empire. A temple of the same city is reproduced so as to indicate a certain ingenuity of design, but the eye accustomed to such struc-

tures, in South Eastern Asia, at once detects the shabbiness and insignificance of the reality. The port of Haiphong and a village rendezvous of the "Black Banners" suggest nothing distinguishable from the average type of Chinese scenery, and the only tolerably effective illustration is a group of the "Black Banners" themselves, apparently on picket service, but not particularly attentive to the duty of the hour. The central figure of this party fairly represents the ideal of a semi-savage Asiatic warrior, though he might perhaps be equally acceptable in the character of a gnome in a pantomime, or as a fiend of the supper scene in "Don Giovanni." Altogether, these first fruits of the pictorial correspondents in Tonquin are rather disappointing.

Wx have recently had occasion to speak in plain terms of the gross misrepresentations practised upon the American public in connection with the Japanese exhibits in the Foreign Exposition recently opened at Boston. The general ignorance concerning details of Japanese workmanship doubtless enables interested speculators to impose upon newspaper reporters to an extravagant extent; and we need not be overwhelmed with surprise at seeing the fantastic inventions of unscrupulous pedlars,—whose absurd fables are recited with every pretence of grave authority,—reproduced in journals which have no means of testing the information dealt out to them. But it is truly pitiable to find a person like Mr. J. J. Jarves, an expert and an acknowledged arbiter in questions of European art, allowing himself to be used as an instrument in these unworthy deceptions. Mr. Jarves has contributed to a New York periodical a series of articles upon the Exposition, signed with his own respected name, in the course of which Japan is frequently mentioned. Among his allusions the following is prominent:—

Japan makes, perhaps, the most conspicuous exhibit of all countries, being a governmental affair. It embraces both her ancient and modern art and industries, giving a complete view of her past and present civilization.

This was written and published some time before the Exposition was opened. It is reasonable to believe that Mr. Jarves had made no examination of the Japanese section, and accepted, without inquiry or scrutiny, such statements as were forced upon him by those who may have been most directly concerned in misleading the public. He is too experienced a connoisseur not to discover the true quality of the contributions from this country, when he comes to look at them, and he will then regret—a little too late, unfortunately—that he was led to characterize the display as a "complete view of her past and present civilization"—an announcement as remote from the truth as the assumption that it is "a governmental affair." The misfortune of such unwarranted statements is that, by awakening just suspicion, they throw discredit upon the entire exhibit, and possibly detract from the value of what it may contain in the way of genuine and meritorious productions,—of which we believe not a few have really been sent to Boston by private collectors.

THERE ought not to be much difficulty in determining whether adultery or contempt of court is the heavier crime, yet it appears that the ideas entertained upon this subject by some French magistrates do not accord with the vulgar theory. A gentleman of a somewhat humble rank, while serving a term of three years' imprisonment in the jail at Clairvaux, managed to discover that his wife was not entirely faithful to him during his absence. The lady and her lover, were cited before the Correctional Tribunal of Sainte-Menehould, whereupon the former, not only avowed, but vaunted her error. "Yes, Mr. President," she said, "I admit the charge, and I hope that the intimacy complained of many long continue. I cannot choose but love the man who raised me from the condition of a miserable beggar to be a happy woman; who took my baby out of the straw and gave it a comfortable bed; who clothed me when I was almost naked, and who has never failed to minister to my wants. My husband is a wretched thief: my lover, a brave and honest workman. It is not difficult to choose between the two." The Tribunal, unmoved by this reasoning, sentenced the woman to be imprisoned for three months and the man for six days. Thereupon the former raised her voice and denounced her judges, calling them a pack of bandits, and bidding them punish her as much as they pleased, but not commit the revolting injustice of imprisoning an innocent and noble man. The reply of the Tribunal was directed to the gendarmes, who laid hands on the lady and provoked her to utter fresh abuse. Ultimately she gave herself up to tears and silence, and the Tribunal proceeded to judge her second offence. A lawyer who was present took pity on the woman and pleaded her cause, urging that she ought not to be held accountable for conduct which was obviously hysterical. But the Tribunal, taking a different view, sentenced her to four months' imprisonment in addition to the previous penalty. It was thus established that impertinence to the Bench is a graver sin than adultery. The Parisian journals, however, refuse to accept this ruling, and earnestly call upon the President to exercise his right of pardon. It is to be hoped that he will do even more.

STRANGE instances of superstition crop up from time to time even in civilized Europe. A belief in the miraculous power of certain shrines seems, if possible, to be gaining ground, and the possibility of holding converse with the spirits of the dead is an article of active faith with many good folks. Faith in demoniacal possessions is, however, rarer, and the following well-authenticated case is worth nothing:—A young girl in the neighbourhood of Pratinolo, Italy, having the misfortune to be epileptic, the chief groom of Prince Demidoff, and a priest named Ranfagni, took it into their heads to exorcise the evil spirit that possessed her. They accordingly seized her and carried her to the shrine of the Madonna of Bocca di Rio, where, after the recital of numerous prayers, they saw

a brick in the pavement pushed aside and there emerged a black cat, which of course was the devil himself. The girl's fits, nevertheless, continued, and as it was plain that the whole family of evil spirits had not been driven out, the good father Ranfagni, confessing himself a defective *chasseur des diables*, summoned a colleague from Bologna, and the two have addressed to the archbishop of the diocese a petition praying for permission to proceed with the necessary rites of exorcism.

Wx learn that the Great Northern Telegraph Company's steamer *Store Nordiske*, now engaged in laying the submarine cable between Japan and Korea, has successfully completed the section between Yobuko (Kiushiu), and the Island of Iki. The progress of the work has been much interfered with by a continuance of very bad weather.

A *New York Sun* correspondent has been told by a revenue officer that as many as a thousand Chinese have already entered the United States from British Columbia since the passage of the Restriction Act.

THE American ship *Clarissa B. Carver*, Captain L. Dow, arrived at the anchorage last evening after a fine weather passage of 166 days from New York. The Captain remarks that he has not shipped a bucket of water on deck for over forty days. This vessel came by way of Australia, and seems to prove without a doubt that this route, although considerably further, is far preferable at this season of the year coming through the China Sea, where vessels have to contend with a strong adverse monsoon (N.E.), and are fortunate if they escape a typhoon or two, as is proved by the reports of vessels which have arrived of late by the latter route. The vessels seem to make better passages and avoid considerable heavy weather by coming the former route.

THE British bark *Cross Hill*, which arrived here yesterday from Cardiff, has had a long and tempestuous voyage. She had two men washed overboard and then washed back again, but the second officer was not so fortunate, being washed over the other side of the vessel, and was never again seen. The vessel's report will be found in the shipping column.

Wx are happy to learn that Mr. Lindau, the officer of the P. & O. steamer *Khiosa*, who was seriously injured on board that vessel on the 15th instant, while tallying cargo, is progressing favorably toward recovery under the skillful treatment of the surgeons of the General Hospital.

Wx hear that the schooner *Mary C. Bohm* was seized yesterday, immediately on her arrival in harbour, at the request of the Manager of the Chartered Mercantile Bank of India, London, and China; and that some litigation on the subject is pending before H.I.G.M. Consul, the nominal owner, Mr. P. Bohm, being a German subject.

MARITIME DISASTERS ON THE COAST OF JAPAN.

THE series of misfortunes experienced by the vessels of the Mitsu Bishi Company during the past twelve months are less to be regretted from a pecuniary point of view than because of the loss of reputation they will inevitably entail upon the *personnel* of the Company's fleet. Exactly a month ago, a Marine Court of Inquiry, having investigated the circumstances attending the wreck of the steamship *Sumida Maru*, decided that "ordinary caution and attention to the rules of navigation would have saved the ship from the disaster which overtook her," and further placed on record their opinion that "the Captain navigated his ship from the time of passing North Shiroshima in a most unseamanlike and irregular manner." The strong terms of this finding were amply justified by the facts elicited at the investigation, and if the public were astonished to learn that such a verdict was possible in the case of an officer hitherto enjoying a high reputation for competence and caution, they were also, it must be confessed, a little startled by the apparent disproportion between the sentence of the Court and its finding. The lessons of experience are not likely to be quickly forgotten after they have been inculcated by a calamity like the casting away of a fine vessel, and from this point of view a year's suspension was perhaps sufficient to meet the requirements of the case. But it scarcely comes within the functions of a Marine Court to attach weight to these prospective considerations. The master of the *Sumida Maru* is understood to have owed the leniency of his punishment to the influence of a recent precedent, in itself open to criticism. Our English common law, after all, is little more than a code of precedents, and there is no reason why maritime law should be less dependent. Yet it does seem a little contrary to the dictates of sound sense, a little like building fallacy upon fallacy, that an exceptional precedent should be taken as a guide to the possible perpetuation and multiplication of error. On the other hand, practically speaking, the degree of punishment inflicted by a Court in these cases is not of paramount importance. The consequences entailed by an adverse finding, the loss of reputation and probably permanent loss of employment except in an inferior grade, are penalties which, following of themselves, wholly outweigh the written sentence. What the public has chiefly to consider is the thoroughness of the investigation and the competence of

those that conduct it, and in these respects the recent inquiries held in Tokiyo leave nothing to be desired.

It was hoped that the investigation into the loss of the *Akitsushima Maru* would have the effect of removing the unfavorable impression produced by the *Sumida Maru's* case, and of proving that the second disaster was in no respect referable to careless or unskillful seamanship. But unfortunately the result has not confirmed this hope. The facts elicited at the three sittings of the Tokiyo Court during last week show that the system of navigation and discipline pursued on board the *Akitsushima Maru* was in the highest degree unsatisfactory. So far as concerns the train of events which led immediately to the loss of the vessel, we do not propose to speak. Nobody can fail to sympathise with the master, who after forty-eight hours of sleeplessness and watching, at last saw his ship saved, as he believed, from the perils that had menaced her, and retiring for a brief rest, was roused to find her hard ashore. Too much experience sometimes produces carelessness. Captain FRAHM had a seven years' acquaintance with the seas he was navigating, and it is not wonderful that he trusted his judgment to the neglect of aids which might have averted the catastrophe. But whatever verdict may be pronounced in this matter, there can be no second opinion as to the rashness, we had almost said the recklessness, of a master who excludes his officers from all participation in the navigation of his ship. Captain FRAHM seemed to take a pride in engrossing the whole responsibility of navigating the *Akitsushima Maru*. He never consulted his chief officer, and declared that "he should have been sorry to have to consult him," an equivocal statement which seemed to have reference rather to some romantic sentiment of independence than to any suspicion of the chief officer's incompetence. The consequence was that the chief officer never saw the chart on which the ship's course was marked. Had he been required at any moment to take charge of the vessel, he must have found himself gravely embarrassed. The barometer was not accessible to him, and for three years he had not used, or even possessed, a sextant. He kept the log, entering in it, amongst other things, certain reports which he received from the master, but his method of performing this duty gave so little satisfaction that Captain FRAHM "seldom asked for the book and never signed it." Mutual independence could scarcely have been carried any farther. The captain acknowledged that in

the Mercantile Marine he would have been jointly responsible with his chief officer for the log, but did not think, and could give no reason for not thinking, that this was the case in the Mitsu Bishi Company. Failing any satisfactory explanation of such an unwarrantable hypothesis, we can only conclude that Captain FRAHM's idea of the duty he owed to his Japanese employers was in a measure based on the fact that they were Japanese. The second officer's story was not less extraordinary. He never looked at the deviation-table; never went into the chart-room; had no access to the charts and never asked the Captain to let him see them. These two men, being habitually excluded from every thing that concerned the navigation of the ship, were not consulted as to her position during the thick weather that ended in her loss. They were not consulted because, according to the Master's admission, whatever their opinion might have been, he would still have thought it his duty to abide by his own. Whether or no these officers were capable of taking command of the ship in case of his being disabled, he declined to say, but admitted, when pressed, that he had not complete confidence in his first officer, though he could trust him within two or three miles of land.

It must be plain to everyone reading this evidence that, from the master downwards, the officers of the *Akitsushima Maru* were more or less under the guidance of an every-man-for-himself principle. The master took no care for anything outside his own immediate responsibilities. He excluded his officers from all the higher functions of their posts, and thus virtually incapacitated them to replace him in the event of an emergency. His confidence in their competence was limited, and he never seems to have reflected that he was adopting the surest plan to render them incompetent. The officers, on their side, appear to have accepted this position without remonstrance. They never asked to see the charts; were content to accept, without query, the distances and courses given by the master, and did not even seek information as to the ship's whereabouts. A narrower and more perfunctory interpretation of duty, it is impossible to conceive. At first sight the impression conveyed is that the master must have been an exceptionally anxious, pragmatical sort of person, who could not endure to entrust to others any office he was capable of performing himself. But looking a little farther, we are disposed to suspect that Captain FRAHM ought not to be solely blamed for this unreasonable dis-

tribution of authority. We doubt whether any officer who really felt himself master of his ship and thoroughly recognized that the ultimate charge of every part of the vessel, as well as of everything that happened on board, must rest with him, could ever have become reconciled to such an anomalous state of affairs. Captain FRAHM did his own duty, stoutly and earnestly enough according to his lights, but beyond that he gave himself no thought, and the same may be said of his officers. A service where neither reciprocity of responsibility nor interchange of confidence exists, cannot be said to be in a very satisfactory condition. It may be worth while for the Directors of the Mitsu Bishi Company to consider whether the system obtaining in the *Akitsuishima Maru* was referable to the idiosyncracies of the officers or to the peculiarities of the administration under which they served.

FRANCE AND CHINA.

THE telegram which we publish this morning explains the rumours that have circulated here during the past two days. As might have been anticipated, the reality does not justify the reports that preceded it. China has not declared war, nor is there any immediate prospect of her doing so, though the position she now takes is strong enough to suggest a purpose by no means peaceful. The first portion of the telegram contains nothing new. China has always advanced her claim to the suzerainty of Annam with a resolution worthy of a more substantial title, and her formal protest against the treaty of Hué is understood to have been entered immediately after the signature of that document was announced. But the telegram becomes more difficult to interpret when it speaks of "Chinese positions in Tonquin." Up to the present we have not heard much of any places which come under that definition, nor, indeed, are we in possession of any definite information as to the movements of the Chinese troops that crossed the frontier some months ago.

The course of the negotiations in Paris and Peking has been so devious, and the information supplied to the public so meagre, that it is scarcely possible to be quite sure of the position really taken up by each party. A careful comparison of the telegrams published in the latest American journals enables us to say, however, that China's proposal at the beginning of October was that the Red River should form the boundary line between her terri-

tories and the provinces occupied by the French. Everything to the north of that river was to be Chinese; everything south, French. This determination of the boundary would have excluded France from nearly the whole delta of the River, that is to say, from the district most rich in mineral resources and, therefore, most coveted by her. M. FERRY accordingly replied by proposing an important rectification. China was to occupy the district north of the river as far as Hung-hoa—a town lying a little above Sontai—but from the delta itself she was to be entirely excluded. France, on the other hand, was to occupy the whole littoral of Tonquin, and her possessions on the north of the Red River were to extend inland as far as a line drawn from Hung-hoa through Tuyen-Kwang to Ko-bang, a town lying in the mountains which form the boundary of Kwantung. This arrangement would have thrust China out of Tonquin altogether, since the only portion remaining to her would have been a small triangular space, of which the Red River and the above line would have constituted the sides. The Cabinet at Peking rejected the memorandum embodying M. FERRY'S proposals, and put forward a counter proposition of the nature of a compromise. The water communication between Haiphong and Hanoi is by a canal called the Thai-binh Canal. This canal China suggested as the limit of French occupation to the north of the Red River, while, with regard to the river itself, she proposed that the navigation of its lower waters should be free as far as Tung-hoa, at which place a Custom House should be established. The result of this modification would have been to divide the delta between the two parties. China, in short, by offering to concede half of the French demands, showed her willingness to arrive at an amicable solution. This counter-proposition seems to have been formulated about the 6th of October, and it was immediately announced that France, no longer regarding the negotiations as serious, was resolved to precipitate a settlement of the question by vigorous operations in Tonquin itself. A menacing exposition of his programme seems to have been the last act of M. TRICOU'S somewhat theatrical performance in China. Faithful to the farcical rôle he played from the first, he is said to have introduced himself to Prince KUNG, not as a diplomatist charged with the conduct of the Annamite negotiations, but as a distinguished traveller whose visit to the Chinese capital had no other object than an inspection of the Great Wall.

Ultimately, however, he is understood to have announced his Government's intention to postpone all further discussion of the question until France should have exterminated the Black Flags and obtained possession of the whole of Tonquin, to achieve which feats the army of occupation was to be immediately raised to a strength of from twenty-five to thirty thousand men—African troops and native contingents included—and measures of the most vigorous description forthwith adopted. It does not appear, however, that these announcements seriously perturbed the T'sung-li Yamèn. They had probably come to regard M. TRICOU as a species of mercurial menace-monger whose airy thunderbolts were too unsubstantial to disturb the serenity of the political horizon. Nevertheless, in this instance, France's temporary intentions had received correct interpretation, and when the T'sung-li Yamèn finally ascertained that the idea of the French Cabinet was to prosecute a policy of aggression in Tonquin without further reference to China, the manifesto which forms the subject of Reuter's telegram this morning was issued.

It follows, then, that the "Chinese positions" referred to in the telegram are the northern portions of the delta of the Red River, and more especially the town of Bac-ninh, which is said to be actually garrisoned by the van of the Chinese regular army. Our readers will doubtless remember that a reconnaissance in force was undertaken against the latter place about a month ago, with the result that its attack was indefinitely postponed, as the nature of the defences and their armament implied a task too difficult for the scanty force at the disposal of the French General. This was probably fortunate. A collision between the two armies would immediately have removed the question beyond the range of amicable discussion. Still it will be seen that the limit of concession has been reached. China's claim to the northern half of the delta is now based upon actual military occupation, and, if the French attempt to proceed with their programme, "armed resistance" will be the inevitable result.

Our private information is to the effect that the manifesto of the Chinese Government was issued on the 18th instant, that is to say, on the very day when, as the telegram informed us yesterday morning, the final resignation of M. CHALLEMEL-LACOUR was formally announced. Later on in the same day we learn that negotiations were resumed be-

tween M. FERRY, the new Minister for Foreign Affairs, and the Marquis TSENG. Now, apart from the fact that M. CHALLEMEL-LACOUR has always been regarded as the great obstacle to an amicable solution, there can be no doubt that the manifesto of the T'sung-li Yamèn was in M. FERRY'S hands when he resumed negotiations, the obvious inferences being that the resignation of the bellicose Minister and the issue of the manifesto stood to one another in a very close relation, and that China's resolute assertions of her rights did not prove a serious obstacle to the re-opening of the conference. On the whole, then, we shall probably be right in not regarding this manifesto with much apprehension. It cannot fail to accelerate a solution, but that that solution will be of a warlike nature we see no valid reason for anticipating.

THE JAPANESE DRAMA.

A celebrated antiquarian of Kiyoto, discussing the date of his countrymen's earliest efforts in the Ceramic art, gravely placed among historical evidence the story of the earthen pots in which the Emperor God Susa-no-wo stored the blood of the miraculous dragon he had slain. Such fables are received with a derisive smile by the practical philosophy of the Occident, and those that believe them are apt to be classed with simpletons. But it would be a difficult question to determine towards which side the balance of credulity sways. The marvellous traditions, alike inconsistent with the dicta of science and repugnant to common sense, which constitute the staple of our most cherished creeds, are not less dependent upon an unreasoning exercise of bigotry and superstition than the myths among which the Japanese annalist discovers the germs of his political and religious systems. Japan was once trodden by divine feet; so was Palestine: Japan was once the scene of miraculous manifestations; so were the places visited by the Children of Israel; the heaven of Japan was once the arena of disputes among the divinities, ending in the expulsion of some of their number; so was the heaven of Christians: in short the curious student will find, when he comes to compare the faiths of the Occident and Orient, that both are pretty equally poised on similar substrata of superstition, and that whatever may be the relative merits of the later aspects of the two, neither has any valid cause to be disdainful of the other's fabulous heirlooms. Even though this were not so, it will manifestly repay us best to consider the story of the Japanese drama from a Japanese point of view, since no otherwise can we understand its true relation to the spirit of the people and their traditions.

The story of the retirement of the Sun

Goddess into a rocky cave, and of the device resorted to by her brother and sister divinities to entice her from her retreat, is already familiar to many foreign students of Japanese mythology. The deities, finding themselves condemned to live in darkness during the absence of their light-giving sister, could conceive no better way of dispelling her ill-humour than by holding a sort of noisy revel outside her cave. Their only accessories were a number of cocks, which by some means or other, they persuaded to crow, so that the Sun Goddess began to think the day was dawning without her. Hearing, too, the sounds of merriment, her feminine curiosity overcame her. She pushed aside the door of the cavern just sufficiently to peep out, whereupon the God of Strength, who had been stationed at the threshold, thrust his fingers into the crevice and pulled away the rocky barrier completely. The Sun Goddess stood once more revealed, and in the path of her effulgence was seen her sister divinity, Ama-no-Usume, dancing with more resolution than reserve. This curious tradition, quite as rational in its way as the vagaries performed by the celestial luminaries at Joshua's command, constitutes one of the most revered chapters of Japanese mythology, and is avowedly an article of faith with all the disciples of the Shinto creed. By them the Sun Goddess is regarded as the ancestress of the present Imperial Family, and her shrine at Ise has no rival. The interest of the story in this context is that the dance executed by Ama-no-Usume before the cave is regarded as the origin of theatrical performances in Japan. Any one who chooses to visit a Shinto Shrine on a day of festival will see there a girl, dressed in white with a branch in her hand, dancing a simple but graceful measure to the music of a drum and fife. This ceremony dates from the birth of the Shinto creed. It is a humble imitation of Ama-no-Usume's traditional performance, and like the latter, its intention is to propitiate the deity of the Shrine.

In a subsequent century, when the sceptre of Japan had already been swayed by several generations of heaven-descended monarchs, the throne came to be shared by two brothers, of whom the elder, Hono-susori, was a skilled fisher, and the younger, Hiko-hoho-semi, a mighty hunter. One day, from some unexplained freak, the two agreed to exchange their professions. Hono-susori took his brother's bow and arrows and set off to hunt, while Hiko-hoho-semi repaired to the sea with hook and line. But it fell out with these demi-gods as it has always fallen out with weaker mortals who neglect the wise maxim, "*ne sutor ultra crepidem*." Both failed equally. Then the elder, reconciling himself to his incapacity, restored to his brother the implements of the chase, and desired that his own fish-hook should be given back to him. But the hook was not forthcoming. It had been dropped into the sea. Hiko-hoho-semi, with much trouble, manufactured a substitute which he offered to his brother. Hono-susori, however, declined to be satisfied, and became

violently unreasonable when the other sought to make good the loss by forging a number of new hooks. At last Hiko-hoho-semi, unwillingly convinced that it was his brother's resolve not to be appeased, gave up the attempt, and wandered disconsolately along the sea-shore. Every wave that surged at his feet cast up on the beach some useless waif, but never among them all could he discover the object of his search. "They do but mock me, these unpyting billows," he thought, and turning away in despair was about to retrace his steps, when a voice, called him by name. Looking back, he saw, standing by the margin of the waters, a hoary-headed old man, in answer to whose sympathetic enquiries the prince told the story of his dilemma. Thereupon the old man offered to conduct him to the palace of the Sea God where he would certainly recover the lost hook. Hiko-hoho-semi readily consented. His reception at the palace of the marine deity was most gracious, and his host having summoned the vassal fishes, one by one, for examination, the lost hook was at last found. The prince, meanwhile, had fallen in love with the daughter of the God of the Ocean, and receiving her to wife, lived happily for some time under the sea. But the fair land he had left was never entirely absent from his thoughts, and his faithful bride, sympathising with his regrets, supplicated her father to let him go. The Sea God consented. Bidding good-bye to his guest, he presented him with two precious stones, one of which was endowed with the property of making the tide flow, the other, with that of causing it to ebb. The recovered prince, bearing these precious jewels and hook, returned to his native land, only to find his brother as implacable as ever. In vain he tried to pacify him, until at last it became necessary to have recourse to the miraculous jewels. No sooner was the tide-urging gem produced, than the waves of the ocean came surging up from the shore, and surrounding Hono-susori, began to buffet his life out. In this deadly peril the morose demi-god was constrained to humble himself and beg for mercy, but for a time his entreaties were disregarded, until at last he vowed that if his life were spared he would become his brother's servant and mime. Then Hiko-hoho-semi produced the tide-restraining gem, and the waves, receding, left Hono-susori safe. The younger brother now called on the elder to fulfil his promise, and the other, after some hesitation, smeared his face and body with red clay, and performed a dance in imitation of the straits to which he had been reduced in his struggle with the waves, and his vain attempts to escape from them.

To this tradition is referred the origin of the tragic pantomime, even as that of the comic is found in the dance of Ama-no-Usume. Little, however, is recorded of the stages by which these dances passed from purely religious rites into devices for popular entertainment. It seems pretty clear that, during the middle ages, performances, somewhat resembling the masks fashionable in Europe at about the same

period, occasionally took place before the Emperor or members of his family. Murasaki Shikibu, one of the greatest of Japanese authoresses, tells of a Genji Prince who thus acted in the presence of the Mikado, and it is easy to understand that there would have been nothing incongruous in the proceeding, since the Emperors were the reputed descendants and acknowledged representatives of the deities. It was not, however, till the days of the Hôjô Regents that this class of entertainment became at all common, and the form it then assumed, under the name of *Nô*, subsequently underwent but little modification. The actors uttered no sound; their gestures and postures alone were in unison with the spirit of their parts. At one side of the stage sat a company of men who, keeping time to the music of drums and flutes, recited an elaborate and often highly poetical narrative of the circumstances of the piece. This narrative really constituted the essence of the *Nô*, for the dance itself was mechanical, unnatural, and incapable of expressing emotion or enlisting sympathy. In order to relieve the monotony of the piece, there was introduced a species of interlude, when the actors, finding their voices, uttered a series of jokes which to modern ears sound, for the most part, clumsy and inept. It is not, indeed, possible to assert with confidence that this was the exact form of the *Nô Kiyôgen* in the time of the Ashikaga and Hôjô Regents, but it is the form recognised by later generations, and reproduced to-day chiefly, if not altogether, for the sake of its antique associations.

The incalculable influence for good which the celebrated Hideyoshi, better known by his official title of Taiko, exercised upon all the arts and sciences of his time, is equally conspicuous in the case of the drama. There lived at the Court of Nobunaga, in the middle of the 16th century, a maid of honour by name Ono O-Tsû. Her literary abilities, no less than her graceful manners, won for her the favorable notice of the Lady Yodo, Hideyoshi's consort, who, with the design of making the beautiful girl's accomplishments better known, commissioned her to choose her own subject and write something of a more important character than she had yet attempted. The result was a twelve volumed historical romance founded on a tradition that Yoshitsune, the most celebrated of Japanese warriors, when travelling, as a mere boy, to take refuge with Hidehira, Duke of Oshiu, had fallen in love with the daughter of a wealthy yeoman of Yahagi in the province of Mikawa. To every Japanese, and indeed to every foreign student of Japanese history, there is a wonderful charm in the most trivial incidents of this Oriental Bayard's life, whose dauntless courage, noble chivalry, and tragic fate will be remembered so long as his country lasts. The Maid of Honour's book, when completed and dedicated to the Lady Yodo, excited the latter's admiration so much that she presented it to Hideyoshi, and he, in his turn, struck by the artistic arrangement and flowing diction of the work, ordered a blind musician of the Court, by

name Iwafune, to adapt it to music. It happened that, a short time previously, there had been imported from Riukiu a new instrument called *Jabisen*. It had only two strings at first, but very soon another was added, and its name was thenceforth changed into *Samisen* (from *san* three.) To the accompaniment of this instrument, in the use of which he was eminently skilled, Iwafune sang O-Tsû's libretto, thus inaugurating a class of performance which to this day enjoys undiminished popularity under the title of *Jôruri*, as Yoshitsune's early love was called. O-Tsû's romance is no longer extant, though it enjoyed undisputed popularity at the time, and many a minstrel made his living in after years by singing to Iwafune's music the words of the girl dramatist.

To trace the connection between the *Jôruri* and the regular play, it is necessary to refer here to the story of a woman called O-Kuni, who visited Kiyoto some years before O-Tsû's romance was composed. A native of Idzumo, where one of the chief Shintô Shrines stands, she had been accustomed from her childhood to dance before the tutelary deity, as Ama-no-Usume had danced before the cave of the Sun Goddess. O-Kuni had the genius of an originator and the face of even such a perfect woman as Ama-no-Usume herself might have been. She soon conceived and elaborated a dance far more graceful and intricate than the solemn paces and stiff gestures of the traditional performance before the shrine. Ambitious of gaining wider applause for this new accomplishment, which the people of her time regarded as something wonderful, she travelled to Kiyoto, and obtained an introduction to the Ashikaga Regent, Yoshiteru. The nobles of the capital were not slow to appreciate her talents and she was summoned, time after time, to dance before the magnates of the Court. Among Yoshiteru's officers was a handsome youth, Nagoya Sanza, who also was noted for his histrionic ability. He was the author of two or three historical dramas, which, with the aid of his friends and O-Kuni's party of actresses, were performed after the most approved fashion of the *Nô Kiyôgen*, to the great satisfaction of the Regent and his nobles. But life had its real, as well as its theatrical, side for O-Kuni and Nagoya. They fell in love with one another, and their secret correspondence having been discovered, to the great scandal of the austere courtiers, they were both expelled from the Court. Necessity now compelled them to convert their previous pastime into a means of livelihood, and a few years later, by permission of Nobunaga, they established a theatre at Kitano in Kiyoto. This was the first theatre in Japan. The performances carried on there, however, had nothing in common with the modern drama. They were simply dances—elaborate displays of that music of motion, so captivating to Japanese eyes, so difficult of appreciation to European. After the death of his friend and protector Nobunaga, Hideyoshi, munificent patron of everything that deserved patronage,

summoned O-Kuni to dance before him. It was the custom of this remarkable man to bestow titles of distinction upon those who excelled in their various arts and professions, and on this occasion he declared that O-Kuni was "peerless among women," adding, with a sincerity which the story of his life endorses, "would that I were equally a man among men!" The details of the dress worn by the great *dansusee* at this performance are minutely recorded, but her most interesting ornament was a rosary of crystal balls, which Hideyoshi, condemning as not sufficiently magnificent, caused to be changed for a rosary of coral beads equally large.

O-Kuni had a daughter, who inheriting her mother's name and a great part of her talent, carried on the theatre at Kitano with success and no little renown. But in truth the performances presented to the pleasure-seekers of those days scarcely possessed the embryo of dramatic art. They were nothing more than elaborate dances; not such rapid and violent muscular achievements as the fashion of the Occident approves, but even such solemn measures of "woven paces and of waving hands" as Vivien may have trodden in the "wild woods of Broceliande" when she charmed the hollow oak into a tomb for Merlin. Soon, however, this barren accomplishment was to be supplemented by another element which opened up a new field for the Japanese stage.

Contemporaneous with O-Kuni the younger was a woman by name Shimada Mankichi, celebrated for her mechanical ingenuity. It does not appear that she ever attempted to employ her ability in useful directions, and, indeed, the conditions of the time were not likely to encourage such an essay. At any rate her reputation chiefly rests upon a species of puppet show which she is said to have invented. It consisted of a number of wooden figures, fashioned and attired so as to represent characters from the *Jôruri* of O-Tsû and Iwafune. Worked partly by mechanical contrivances, partly by concealed assistants, these puppets moved and gesticulated in unison with the recitation of the *Jôruri*, and thus, for the first time, there was introduced upon the public stage a performance which embodied the rudiments of acting as the word is now understood. Another innovation devised and successfully employed by Shimada was the curtain. It is easy to see that something of the sort was essential to the successful management and disposition of the different puppets employed in different scenes. The curtain became from that time an important item of stage paraphernalia, but its advantages were never sufficiently evident to overcome the conservatism of the *Nô Kiyôgen*. To this day the classic mime despises any adjunct not sanctioned by the traditions of barbaric days. At the close of a scene, the sick, the wounded, and the slain all get upon their legs and walk stoutly off the stage.

Shimada's puppet-show soon acquired a wide-spread popularity, and in proportion as its hold upon the fancy of the public became conspicuous, the art of composing

and singing *Jōruri* was gradually developed, until at last there was found among its votaries a man whose works still occupy a prominent place in the repertoire of every Japanese musician. Chikamatsu Monzayemon was born at Hagi in the province of Chōshū and received his education at a Buddhist temple of Karatsu, in Hizen. The events of his younger days, as well as the chain of circumstances which induced him to devote himself to literary pursuits, are not accurately recorded. We find him, when he had reached man's estate, journeying to Kiyoto and there taking service in the household of a well known nobleman. In this position he remained for some years, but at the close of the seventeenth century he resigned his office, and thenceforth the composition of *Jōruri* engaged his whole attention. About a hundred dramatic pieces flowed from his nimble pen. One and all possessed undoubted merit, but the most celebrated among them was the *Jōruri* of *Kokusenya*. The downfall of the Ming Dynasty of China was but a few years old and its events were still fresh in the memory of the dramatist's generation. Among those who through evil report and good report had remained faithful to the dethroned family and exhausted all the resources of ingenuity and heroic devotion to retrieve its fortunes, was Teiseiko (Chinese Ching-shin-kung) or *Kokusenya*. This prince of loyal servitors was born in Japan. His father Teishiriu (Ching-chi-lung), had lived for some years in exile at Hirado, an island off the coast of Hizen, and there married a Japanese lady. Their son Teiseiko was thus half a Japanese, and his extraordinary career, distinguished as it was by the display of qualities dear to the heart of every true *Samurai*, stirred the deepest sympathies, and entranced the attention, of the whole Japanese nation. It was when this excitement was at its keenest that Chikamatsu produced his drama, embodying the chief incidents of *Kokusenya's* story. It was published in the year 1705, and some idea of the popularity it acquired may be gathered from the fact that, despite the miserable histrionic resources of those days, the piece occupied the stage at Kiyoto continually for three years. Chikamatsu died in 1724.

Here, however, it is necessary to note that the theatre itself had not remained unchanged up to the time of Chikamatsu. After O-Kuni the elder and her lover Sanza set up their play-house at Kiyoto, others were not slow to follow their example, and the Western capital possessed, before long, quite a number of these establishments. At some of them the performances were limited to puppet-shows, while at others the entertainment consisted of *Kabuki*, as the dances of O-Kuni's company were called. In the early times of its development, the *Jōruri* was put upon the stage at the former class of theatres alone, the *Kabuki* retaining its original independent character. Little by little, however, the dancers of the *Kabuki*, obeying the popular taste, began to follow the example of the puppets, and thus at last the *Jōruri* came to be acted by living men and women. It

will be seen from this retrospect that the elements of the Japanese drama, as it now exists, were developed, in some sort, independently. First, we have the solemn measures which, nominally descending from the mythological era, formed a portion of the Shintō ritual, and constituted the basis of the classic *Nō Kiyōgen*. Then we have O-Kuni's modification of these, presented to the public under the name of *Kabuki*. Then we have Shimada Mankichi's puppet shows, adapted to the *Jōruri* of O-Tsu and her successors. And finally we have the *Kabuki* and the puppet-shows combined to produce the essential features of the modern drama.

At this point the law interfered to effect a change which thenceforth passed into a distinguishing characteristic of the Japanese stage. For reasons not recorded but easily divined, the Government, about the year 1630, prohibited women from taking any part in theatrical performances where men were engaged, and this prohibition, never subsequently annulled, led to the development of a race of male actresses, who carry the realities of their rôle to such lengths that their sex is popularly supposed to become a matter of uncertainty to themselves. A few years later the growth of the drama received a much more serious check. The theatres were everywhere closed by order of the authorities. This veto was motivated by a desire to check a species of immorality which, originating in the perpetual camp and barrack life of the preceding generation, found exceptional facilities among the followers of the dramatic profession. But public opinion did not support the legislature in this ill-judged measure. The theatrical companies, deprived of their source of livelihood, petitioned the Government, and were allowed to resume the practice of their profession under assumed names.

Twenty-four years after the death of Chikamatsu, (1748), Japan's greatest dramatic work, the *Chiushingura*, was published. Its author was Takeda Idsumo, of whose life but few details have been transmitted. He is the Shakespeare of Japan, and like Shakespeare his story must always remain a matter of conjecture to his countrymen. It is true that few writers of plays have ever been furnished with such a theme. The story of the Forty-seven Loyal *Ronin* has no parallel in the history of the world, and though the suicide of these heroes was forty-seven years old when Takeda wrote, their memory had lost nothing of its hold upon the national affection. Three or four attempts had already been made, with more or less success, to dramatize their story, but when Takeda's work appeared, everything that had preceded it ceased at once to be remembered. The unanimous verdict of his countrymen immediately crowned him king of the drama, and his right to wear the laurels is still unchallenged. The *Chiushingura* has been translated into English, but it has been stripped of all its flesh and blood and transformed into a mere skeleton in the process. The fire and imagination of the

original; its rich and nervous diction; its stirring pathos, and the sunny vein of laughter that peeps out here and there among its graver scenes, have all disappeared. That they could be preserved and made familiar to European readers there can be little doubt, but the pen that accomplishes the task must be little inferior to that of Takeda himself.

Associated with the great dramatist in the compilation of this *chef d'œuvre* were two lesser celebrities, Naniki Senriu and Miyoshi Shoraku; but whether their share in the work was large or small, their names have never emerged from the shadow of their coadjutor's renown. To Chikamatsu, on the contrary, the author of *Kokusenya*, many critics assign a still higher place. And in some respects not without reason. For while Takeda Idsumo has the advantage in solidity of style, carefulness of composition and faithfulness to the soundest canons of dramatic art, Chikamatsu is unquestionably superior in point of brilliancy, fertility and originality. Again, while the latter's unaided pen enriched the literature of his country by more than a hundred plays, Takeda, with the assistance of others, all more or less distinguished writers, produced a far smaller number. On the whole, the position of Chikamatsu Monza, as father of the Japanese drama, seems to have survived the competition of his renowned successor.

Besides the *Chiushingura*, Takeda Idsumo composed two celebrated plays called *Ten-jinki* and *Kagami-yama*—plays in which the hand of the master is unmistakably discernible, though they belong to a much lower grade in the dramatic literature of his country than that universally assigned to the "League of the Loyal Ronins." Among the best remembered names of his immediate successors we find those of his son, Takeda Koidzumo, of Hasegawa Senshi, and of five or six others whose works, though famous in their day, have not survived the test of time.

Meanwhile numerous theatres had been established in the three capitals, and various improvements introduced in scenic arrangements and other details. The most important change was the separation of the drama proper from the *Jōruri*, though the exact time when this separation was accomplished, as well as the manner of its accomplishment, are difficult, if not impossible, to determine. Up to the days of Chikamatsu, and probably to a still later period, there were always present on the stage *Jōruri* singers, who described every process and action of the piece in recitative, only pausing when the characters had something to say for themselves. A similar custom obtains even at the present day whenever the old classical pieces, or others modelled on the same lines, are performed. In short the early dramatists, or, to speak more accurately, the writers of *Jōruri*, were obliged not only to compose the dialogue of their pieces, but also to describe the scenes in detail and to analyse the motives of the characters. Subsequently the functions of the dramatist were limited to writing dialogue and accompanying it

with a few stage directions, so that their works scarcely differed from those of their Occidental *confrères*. But if this was an undoubted gain from a histrionic point of view, it was an equal loss from a literary. For the Japanese language does not lend itself to the production of anything great in dialogue. Its finer qualities can only be displayed in narrative; and, by the elimination of the latter, the drama of the country was inevitably deprived of its poetic elements. The essence of the piece survived, indeed, but the beauty of its form was lost.

Since the era of Chikamatsu and Takeda, undoubtedly the golden era of Japanese dramatic composition, many authors of note have attracted public attention, but the most distinguished names among them are Hiraga Gennai, Tsuruya Nanboku, and Kawatake Shinshichi. The first of these, though not a writer of plays by profession, was a man of rare artistic ability; the second is famous for the originality of his plots and their wealth of incident, while the third, Kawatake, is still alive, and though fully seventy, betrays no diminution of literary ability.

Hitherto we have spoken of theatres at Kiyoto only, because in a historical notice that city naturally presents itself first. But if the Western capital claims to be the birth-place of the Japanese stage, the Eastern can boast a stage that was born when the great city was still in its infancy. One day, nearly three centuries ago, Iyeyasu, the first and most renowned of the Tokugawa Shoguns, paid a visit to the workmen who were engaged in laying the foundations of the Castle of Yedo.* Among all the monuments of power and prosperity erected by the feudal chiefs throughout the provinces, there was none comparable with the huge structure which Iyeyasu projected for his stronghold and the colossal blocks of granite destined for the battlements of the eastern gate, had just arrived from Osaka when the Shogun came to examine the progress of his pet scheme. It was a sunny morning in early winter, and the chronicle says that the builders, dressed in parti-coloured holiday attire, chaunted a lusty refrain by way of welcome to the "divine warrior," as they swung their mighty rammer over the future bed of the granite boulders. Iyeyasu paused a moment to listen, and presently, among the chorus of chaunters, his quick ear distinguished a rich, sonorous, and exceptionally musical voice totally unlike anything he could have expected to hear in such circumstances. Listening curiously, he soon observed that this maker of unwonted melody was a workman fantastically attired and wearing a monkey-faced mask. The Shogun advanced to the side of the platform on which the builders stood, and touching the singer's shoulder, complimented him on his skill, before—so the story runs—the other was aware of his presence. Almost terrified by this august propinquity, the man dropped on his knees, and snatching off his mask, displayed a face whose frank and comical expression was improved rather than marred by the

* Now called Tokiyo, or Eastern Capital.

confusion of the moment. Experience and necessity had made Iyeyasu a quick interpreter of character. He questioned this whimsical builder, and learned that the man, an actor by profession, had voluntarily come from Kiyoto for the sake of taking a share in the erection of the fortress planned by Japan's greatest soldier and statesman. Iyeyasu acknowledged this proof of devotion by appointing the stranger to be an overseer of works, and in this capacity the some-time actor showed himself well worthy of the trust reposed in him. Judging by the light of subsequent events, however, we may infer that his visit to Yedo was not altogether so disinterested an undertaking as his own statement implied. For after a time we find him soliciting official permission to set up a theatre in the new city. He did not base this request on purely selfish grounds, but boldly declared that the stage was an essential instrument in developing popular intelligence, and that every large town ought to be provided with a theatre—an opinion which the illustrious Hideyoshi had practically endorsed by sanctioning the erection of a theatre in Osaka. Whatever influence this reasoning exercised upon the authorities, it is certain that they offered no opposition to the enterprising actor's proposal, and shortly afterwards a theatre was established in Sakaicho, under the management of the sweet-voiced overseer, Nakamura Kan-zaburo. Nakamura-za, as the new playhouse was called, is still a favorite resort of Tokiyo pleasure-seekers, but its management has long passed out of the hands of its celebrated founder's descendants. Its success was immediate and signal, so that Nakamura's example was shortly afterwards followed by two other speculators, and in a few years Yedo possessed three theatres Nakamura-za, Ichimura-za and Morita-za. Subsequently a decree was promulgated, limiting the number of playhouses in the capital to three. Historians attribute this order to official apprehensions lest the multiplication of these places of amusement should injure the morals of the people, but it seems more probable that the Government's action was inspired by a petition from the theatrical folks themselves.

Our attention at this stage naturally turns to the actors themselves, and to the curious chapter of accidents which resulted in their degradation to the lowest ranks of the people. "Dressed in embroideries, living in luxury, and yet—a beggar," was the soliloquy of a famous actor, who, when overtaken by a mortal sickness, saw himself debarred from procuring the assistance of a court physician. Readers of the vernacular press to-day, finding it recorded that this actor was present at such and such a social gathering, or the other invited to the house of a prominent statesman, scarcely remember that until the Restoration, fifteen years ago, the occupants of the Japanese stage were only a shade higher than the very dregs of the populace. Such, however, is the fact, and the fall of "the children of the pear orchard"—as the Chinese call them—to this low estate is said to have been entirely

unconnected with either their own merits or conduct. The first theatre Kiyoto, and therefore Japan, possessed, was set up by the river's side in a plain called Shijogawara. This place had long been noted as the chief resort of the city beggars, and a facetious citizen one day conceived the notion of calling the players themselves "men of Kawara." The nickname, little by little, ceased to be used in jest, and was ultimately recognised as a correct description by the law itself, which relegated actors and their followers to a rank between the lowest order of Japanese proper and the outcast class of *Yeta*. Despite this ban of proscription, religiously observed as it was by every Japanese with any claim to respectability, the actors appear to have preserved all their pride of descent, and to have waited patiently for the day when their traditions should be respected by the public no less than they were revered by themselves. In no country, perhaps, and among no class of experts, has the theory of transmitted talent been more unhesitatingly accepted. Each representative of a great name based his hopes of success not less on his genealogy than on his abilities. An outsider, whatever his skill, could not look to be admitted into the ranks of the pedigreed magnates until a life devoted to the unswerving pursuit of his profession had qualified him to be himself the founder of a race of actors. For those, on the other hand, who were born to distinction, the stage was a sort of mimic kingdom, and from all its denizens they received an amount of respect and obedience which doubtless went far to restore the respectability denied to them by popular caprice. It cannot be questioned that these habits imposed a certain restraint upon the development of histrionic skill, if indeed they had not sometimes the effect of substituting tradition for ability. But they helped, on the other hand, to hold the society of actors far above the class to which they legally belonged, and to prepare them for the place they were destined to occupy in later and more liberal times.

Unfortunate, however, as was the social lot of actors up to recent years, it must not be supposed that their popularity was seriously affected by their position. On the contrary, the people have never withheld from them a liberal measure of esteem. Their lives, their adventures, and their idiosyncracies have always been matters of household tradition, and their memories are held in affectionate respect. On the whole, indeed, they have less cause to complain than the dramatists whose works are the foundation of their art; for while not one Japanese in a hundred is familiar with the names of Chikamatsu and Takeda, even the very children call the heroes of their nursery tales Yebizo and Danjiuro. Fame, in truth, has been singularly unjust to Japanese dramatists. The works of their greatest representatives have never yet been collected and published, while scarcely ever does the name of an author figure upon the title pages of the *Joruri* books from which Japanese maidens learn to lisp

their first songs. Not that the educated Japanese is indifferent to the efforts of his countrymen. On the contrary, he demands for them a high place in the ranks of intellectual achievements, and stoutly disputes the notion that either they or their *confrères* of the Middle Kingdom, were a prosaic, unimaginative race. The present generation of Chinamen, he will tell you, may be a people without inspiration or ideality, but the history of their ancestors shows a succession of ages rich in poets and literati, whose writings, to those that understand them, need not fear comparison with any standard. In point of dramatic talent, however, precedence is claimed by, and justly belongs to, Japan. Such dramas as the Chinese possess are frigid and artificial, scarcely rising above the level of the old English miracle play, whereas the library of Japan comprises in this section, works which, though they lack the elaboration and classical finish of their Western rivals, are certainly not wanting in *verve* and originality.

As might have been expected, the restoration of the actor class to its proper social status gave a considerable impetus to theatrical enterprise, especially in Tokiyo, where several new companies were formed. But the conservatism of Japanese histrionic art has naturally limited the number of its acknowledged representatives. There are not many names sufficiently great to warrant their possessors in attempting to fill the *roles* of the heroes and heroines of the historic drama. A Japanese audience is critical. It has its standards, traditional standards, some approach to which is imperatively necessary in the *tachi-yaku*, or leading characters, while even in the minor parts a certain measure of skill is essential. Moreover, the Japanese are not really a theatre-going people. Whether old prejudices still survive, or whether the true dignity of the drama has never been recognised, the upper classes regard the play as a pastime unworthy of educated men, while even the middle and lower classes, since a visit to the theatre occupies a whole day from sunrise to sunset, are content to see a piece once, or twice at most. These various causes have combined to limit the number of theatres to four in Tokiyo, three in Osaka, and one each in Kiyoto and Nagoya. The actors of the three last, or the Western School, are considered to excel in accuracy, grace and fidelity, but to those of Tokiyo, or the Eastern School, the palm is accorded for realism, vigour, and originality. The rivalry between the two schools was very keen after the Restoration, but the celebrities were inevitably destined to gravitate to Tokiyo, which now possesses incomparably the best theatre in the Empire, that of Shintomiza—as well as the best actor, Ichikawa Danjiuro. This actor is the ninth of his race. All his ancestors were more or less famous, but to his father Yebizo is unanimously accorded the leading place on the Japanese stage. Yebizo's conceptions of historical characters have ever since been accepted as standard models,

and he is accredited with the first successful attempt to introduce a natural element into the canons of his art. There is still a considerable margin of exaggeration and grotesqueness that might be lopped off with advantage, but the quiet, self-contained style of the present Danjiuro promises to achieve reforms scarcely second to those of his father. Yebizo was not only an actor, but also a noted scholar, and the versatility of his talent enabled him to achieve considerable reputation in the sciences of fencing and equestrianism. But the luxurious fashion of his life attracted the unfavorable notice of a Government which carried paternal arbitrariness far enough to visit with severe penalties subjects who ventured to transgress its economical ordinances. Yebizo was banished from Yedo, and his compulsory departure still continues to be recorded among the calamities of the city's past history. He settled in Nagoya, leaving behind him his son, Ichikawa Danjiuro. The latter, a man of singular comeliness as well as exceptional ability, is said to have turned the heads of half the female population of the capital. Japanese ladies are never slow to appreciate the graces of a great actor. The romantic girl has no larger praise for a gallant than to liken him to Gado, Tokizo, or some other stage celebrity, and many a servant maid, who has never entered the door of a theatre, hides among the treasures of her wardrobe a penny portrait-book of histrionic magnates. Of the opportunities thus afforded Japanese actors have seldom been slow to avail themselves, and it is much to the credit of Ichikawa Danjiuro that, in spite of exceptional temptations, he never allowed himself to be contaminated by the licentious habits of his craft. His life was pure, and his frugal unostentatious ways won for him recognition and reward at the hands of the same Government which had decreed his father's expulsion. Danjiuro's end was very sad. When his fame was at its zenith he visited his father in Nagoya after a separation of many years. The old man, though pecuniarily independent, seems to have longed to repeat the triumphs of his younger days, and, perhaps, to be avenged, after a fashion, upon the city that had cast him off. At the time of his son's visit to Nagoya there happened to be present there the manager of an Osaka theatre. This man sounded Yebizo, and finding that his advances were not rejected, conceived the enterprising idea of engaging the services of both father and son. The scheme, had it succeeded, would have immediately given the Osaka stage conspicuous precedence over that of Tokiyo. Yebizo was entranced by the prospect of gratifying his pique and his vanity at the same time. He refused to listen to his son's remonstrances, and conjured him, in the name of filial piety, to accept the engagement at Osaka. Determined not to forsake the colours of his school, and equally reluctant to disobey his father, Danjiuro escaped both alternatives by committing suicide. His place in Tokiyo was filled, not unworthily, by his younger brother, of the same name, whose reputation, as an

artist and a man alike, is scarcely second to that of any of his predecessors.

Of the drama as it exists to-day, and of the modifications it has undergone during the past decade, space fails us to speak. The subject is full of interest, but those features which, while requiring most accurate delineation, will also best repay examination, necessarily fall without the limits of a newspaper essay.

CORRESPONDENCE.

THE ROW ON THE HATOBA.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Will you allow me through your columns to make a few corrections of the versions given in the *Japan Gazette* of the 19th instant of the affray which took place on Sunday afternoon. I read, for instance:—

One strong, handsome looking Russian came down the Bund, apparently perfectly sober and certainly not knowing what was going on; and when he passed the gates of No. 1 I tried to persuade him to come in and await the termination of the tumult, when a coolie came up from behind and knocked him insensible with a stick, which was of course the sign for a renewed effort on the part of the Russians. Sergeant James, for instance, did not receive his wound from a sailor but from a policeman; when struggling with a tar, a so-called guardian of the peace, armed with a stone, came up, and in trying to strike the sailor on the head, hit Sergeant James such a tremendous blow that I thought it would finish him.

The spot where I was first struck was exactly at the corner of the English Consulate, which is opposite the main entrance to the Custom House sheds and wharfs. At this point a Russian sailor, who with a comrade was pursuing a Japanese policeman, overtook him, and, striking him over the back of the head with a heavy stake, felled him to the ground. I rushed forward, but was too late to avert the blow, and the sailor turned on me and aimed a violent stroke at my head. I raised my right arm, holding the staff, and protected my head, but my arm was virtually disabled. My assailant then turned and ran towards the hatoba, I in pursuit; but he got away and on to the wharf, as I was met by two of his comrades, one of them armed with a stone as big as a brick, which he carried raised in both hands. Thus I fought my way close to the wall and round the Custom House corner to the new red brick office opposite Messrs. Jardine, Matheson & Co.'s red brick godowns. At this point, I being still close to the wall, and just against the pillar post-box, the Russian with the stone got behind me and let it fall on my skull. I fell, and he on top of me. Then he seized my staff, which he tried to wrench from my hand, succeeding in doing so only after he had broken by sheer force the strong lanyard by which it was secured to my wrist. At this moment, if some jinrikimen had not come to my assistance and caught hold of my assailant, I am pretty sure he would have battered me to death with my own club. However, they held him long enough to allow my comrades of the Japanese police to come to my rescue, and they had to beat him off me. I cannot say if I received one of the blows meant for him, but I am sure that not one was aimed at me. I was then put into a jinrikisha and taken away helpless and almost senseless to Dr. Wheeler, who dressed my wounds.

I will add that I fail to understand how any person standing at the Bund entrance to No. 1, could have seen me when I was first assailed at the corner of the English Consulate opposite the main gate of the Custom House, or even when I was knocked down and prostrate against the brick office at the Custom House. A glance at the site of the fight, or even at a map of Yokohama, will show what I mean.—I am, Sir, your obedient servant,

THOMAS JAMES,

Acting Sergeant, Foreign Municipal Police,
Settlement Police Station, Yokohama,
November 20th, 1883.

THE CHINESE LEGITIMISTS.

Above the signature of "I. MYSELF," in the *Moniteur des Consuls*, is a curious article on the Legitimists of China. If we might hazard a guess, we should ascribe it to the pen of Mr. Maurice Jametel, whilom interpreter to the French Legation in Peking, a young man of great promise and research, and at present a frequent contributor to the columns of the *Economiste* and other leading French journals on matters relating to the Middle Kingdom. Be the author, however, who he may, his contribution is of great interest. He heads it.—"The Secret Society of the 'White Lily'—The conspiracy of the 'Hats' at Wuchang—Panic in Northern China—The New Taipings—Plan of the latest Rising—Chu denounces the Plot—Arrest of the Conspirators—Numerous Summary Executions—The Penalty of the Fifth King of Hades—Vast Organization of the 'White Lilies' throughout the Empire—The aborted Plans of the Conspirators at Wuchang." The annalist then writes as follows:—

A vast insurrection of the Chinese against the Tartar-Manchu element, in a measure resembling the great Taiping rebellion, has been on the point of breaking out at Wuchang against the constituted authorities. And although it was provided against in that town, it is believed apparently that serious troubles may occur in a great number of provinces, simultaneously, with no less an object than the overthrow of the present Manchu-Tartar line. We know that this dynasty reigns over the Chinese Empire by right of conquest, and not by that of birth; and that, many centuries ago, the victorious Tartars replaced the Chinese family by that of their own chief upon the Imperial throne of the Son of Heaven. The rebellion of the Taipings, whose emperor succumbed at Nanking, was a formidable attempt on the part of the Chinese to restore to the rulership of the Empire a National Emperor. The present confederation has the same object. The members appear to have chosen as the time wherein to put their scheme into execution that when the supreme power will be placed in the hands of the young Sovereign who is within a short time of his majority. It is, to say the least, singular that the Celestial Legitimists should have adopted the same emblem as that of France and Navarre.

Subjoined is the story of a Chinese correspondent of the Wuchang plot. We will follow the text as literally as possible. The date is May, 1883:—

"On the 28th of last month a certain number of the alumni of the 'Secret of the White Lily' invaded the town of Wuchang, giving themselves out as students who had come to compete at the examinations. They hired a house situated at the rear of the prison and contiguous to the Chefu's Yamén, posting outside a placard announcing that this house was a place of meeting for good men.

"A person named Wong opened a bean shop on the ground floor. His son, named Sheng, was in the service of a small mandarin, and had been, for some time, a member of the Society. When the conspirators came to hide themselves in the town, he acted as their guide, and served them in everything to the best of his power.

"He had been notified that the rising would take place on the 28th of the third month, at the fourth watch of the night, and that the burning of the prison would be the signal of the insurrection.

"A man of the name of Chu, who had quite recently belonged to the garrison of the town, and had received a commission as lieutenant for meritorious service, had just opened a draper's shop near Wang-shan-men. As a matter of course he had daily relations with his customers, among whom was a member of the White Lily Band, who undertook to enroll him in the society. Chu pretended to assent.

"Consequently, he was presented at a meeting of the confederates, and received the regalia of the association. First of all he was invested with the cap (or hat) adopted by the members of the sect, and resembling that formerly worn by the servants and partisans of the Ming dynasty. He also received a written talisman of the following form:—Above,

the character for 'Feng' (the wind); in the middle an innumerable quantity of small dots, with a number of circles joined together in a chain; and at the foot, the characters for 'Chi-king,' or Imperial Order.

"As soon as he was in possession of these material proofs, Chu, leaving his house furtively at bed-time, hurried to denounce the plot to the Commander of the Garrison, who, troubled and alarmed, instantly communicated the revelation to the Viceroy T'u Tsung-ying, who ordered the arrest of the confederates.

"These latter being taken unawares, were unable to arrange for either resistance or escape, and spread through the town in disorder, hastening toward the gates. The soldiers succeeded in arresting forty of them. Those who succeeded in escaping were very numerous.

"The prisoners were taken to the Yamén of the Chefu and subjected to rigorous torture. Some confessed that one of the sections of the secret Society had established its head-quarters in the Buddhist convent of Shu-chwang-t'ai. An armed descent was accordingly made the same night upon this nunnery. Four conspirators and all the nuns were arrested and carried off to the Yamén. In the convent a large quantity of kerosene oil and the ashes of paper which had been burned after drenching in the same inflammable liquid were also seized.

"The Fan'tai, the Tiet'ai, Tao'tai Titu, the Chefu, and the Che'sien, then all met in the Court of Justice, and proceeded to the interrogatory of the prisoners. Some confessed immediately: others were proof against all kinds of torture, while some affirmed that the son of a certain unattached Tao-tai, named Ting-ching-ho, and his cook were affiliated to the band.

"Soldiers were sent to surround the yamén of Tao'tai Ting, and the young man and the cook were brought before the tribunal. Ting accompanied his son. The judges were much embarrassed by this proceeding, and did not know how to act according to precedent. Nevertheless the young man was immediately examined and then taken to prison.

"The declarations made by the mass of the confederates were so contradictory that the judge, begged the Viceroy to draw up a memorandum for their instruction. Then followed numerous executions. Between noon and six o'clock at night thirty-five conspirators were decapitated. Their bodies were piled up in the middle of the Courtyard of the Chefu's yamén. One could hear the blood spouting. The heads were nailed to the gates of the town, as an example to the people. Wang ghan was among those executed. In the evening the corpses were carried out of the town by the East gate. At nightfall a peace-officer arrested one of the supposed rebel chiefs, and took him to the Chefu's yamén. His name was Teng.

"He was the fifth of his line, and was known as Yu-Yen Wang—the Fifth King of Hades. After having been tightly bound, hand and foot, he was cast into the dungeon with the other prisoners. During the night the sentinels yelled at frequent intervals and banged their gongs in order to give proof of their vigilance.

"The urban population were allowed to look after their daily business just as usual; but the nine gates of the city were rigorously closed, and no one could either enter or leave. However, on the 30th, very early, two gates, the Han-Yan and the Wang-Shang, were half opened to allow passage to the water-carriers. The precaution was taken to connect the two leaves of each gate by a strip of printed paper, in order that they should not open too widely, and should only allow room for one person at a time to pass through. Everyone who went by was closely searched: the gates were closed at four o'clock in the afternoon.

"According to what has transpired from the avowals of the confederates, it appears that the organization of their brotherhood is of vast extent, and that they have fastnesses and numerous alumni in every province of the Empire. Hence it happens that, no matter how many arrests may be made, the number of the confederates cannot be materially diminished. At the moment of his being taken into custody, the Fifth King of Hades, otherwise the 'Incarnate King of Hell,' as some call him, wore a long silk garment, a purple robe, and satin shoes. When he crossed, for the first time,

the gate of the town, his gait was firm and haughty. But when he arrived at the Yamén in sight of the heap of corpses thrown higgledy-piggledy one on the other, he changed colour. Lifting his eyes, he cried aloud:—"The azure sky will never stop my career." The mandarins questioned him very briefly and then incarcerated him. At midnight he was dragged out of prison, and, without any form of trial, beheaded before the gate of the Tien-fu temple, immediately behind the Yamén.

"Now, if we can believe the gossips of the streets, Teng was in no way affiliated to the sect of the White Lily; but he had never pursued an honest calling, living, on the contrary, by swindling. He was well learned in the law; and his subtle tongue always got him out of his scrapes, the magistrates being unable to accumulate proofs against him. It is for this reason that the opportunity of a plot against the dynasty was availed of in order to get rid of him. Indeed, it is beyond doubt that this man had done nothing to deserve death; and, nevertheless, he died unpitied on account of the criminality of his life. At ten o'clock on the following morning six other associates were arrested and taken to the Chefu's Yamén. The corpse of him who had been the 'Incarnate King of the Shades' was borne out of the town.

"At the present time the authorities redouble their zeal for the arrest of suspected persons; and soldiers of the garrison patrol all night long in the hope to effect other arrests. The reason of this is that the organization of the Society is vast and has spread over the whole Empire. The first rising should have taken place on the 25th. It did not occur on that date for the simple reason that all the confederates had not met at Wuchang. Owing to this misadventure it was postponed by their chief to the 28th, in the fourth watch. The Tower of the Yellow Stork, and the Convent of Shu-Chwang-Tai were both simultaneously to have been inundated with kerosene and set on fire. The light thus produced would be the signal to the people of Hankow to take part in the strife of Chinese against the Tartars.

"The plan of the *émeute* was as follows:—To open the prisons and free all the prisoners: to massacre all the magistrates: to storm the arsenal, seize the arms and distribute them among the confederates: to take possession of the town, to hold it and make it a base of operations in the war against the Manchu Emperor. This effected, confederates were to have been sent in all directions with orders to raise levies, liberate all the prisoners confined without the capital of the province, demolish the jails, and massacre all the Imperialist mandarins. "Happily," the celestial chronicler concludes, "the conspiracy was discovered. The conspirators were arrested two hours before the moment decided upon for the rising. This brief interval renders it impossible to divine what might have happened at Wuchang in case Chu had not revealed the plot. Among the talismans seized were found some inscribed with certain symbolic words, as 'Command,' 'Control,' and 'Act.'"

Here closes the Chinese narrative. This confederacy of Chinese Legitimists or Nihilists (which you will) proves one thing, to wit:—that a party, strongly organized throughout the Empire, is ready to profit by the least reverse of the Tartar dynasty to raise anew the standard of the Taipings.

H.I.H. PRINCE ARISUGAWA'S TRIP TO EUROPE AND AMERICA.

The subjoined paper is translated from the Narrative of Lieut.-Colonel Yamato, and Secretaries Nishi and Hayashi, and addressed to his Excellency Tokudaiji, Minister of the Imperial Household Department:—

On the 18th of June 1882, at about twenty minutes past seven a.m., the Prince accompanied by his suite, consisting of Hayashi Tadashu (Secretary to the Engineering Department), Nishi Tokujiro (Secretary to the Mining Department), Hayashi Ki (Imperial Physician), Yamamoto Kiyotaka (Lieut.-Colonel), and Kato Maro (an officer of the Department for Foreign Affairs), left the Palace at Akasaka, and at eight a.m. entered a special train provided for them in which they arrived at

the Offices of the Port Admiral, Yokohama. After a short rest the party embarked on a steam launch which conveyed them to the French steamer *Tanis*. Many distinguished visitors, including Princes, Sangi, and Ministers, came to say farewell to the illustrious traveller. At 10 a.m. the vessel steamed out of the harbor. As the object of the trip was private, no guns were fired to ruffle the peaceful repose of the sea. The weather was overcast and drizzly. Fellow-voyagers with the Prince were H.E. Asano and his consort, on their way to Italy, His Excellency having been appointed Minister to the Court of that country. Some students going abroad for education were also on board. We experienced a storm between Yenshunada and the north of Formosa. On the afternoon of the 25th the steamer arrived in Hongkong, where the (acting) Governor, Mr. Marsh, with Major Hamilton, and our Consul, Mr. Ando Taro, came to welcome His Highness, whom the Administrator begged to accept the hospitality of Government House, an offer which was gladly availed of. As we could not all be accommodated in that residence, Hayashi and Yamamoto only accompanied the Prince, the others of our party lodging at the Hongkong Hotel. Our trip being unofficial, salutes were dispensed with at our request. Four sedan-chairs were provided for us. The bearers were dressed in crimson livery and wore hats of ceremony. Mr. and Mrs. Marsh received the Prince at the door of Government House. After some conversation, we adjourned to the dining-room where our host and hostess and their nephew Mr. Townton entertained us at one table. Subsequently Mrs. Marsh and Townton played some music with which we were much pleased. Breakfast was served in private to the Prince; the Marshes were not with us. On the 26th we visited the Public Gardens and several other places of interest. On the 27th we had the pleasure of witnessing, in the Governor's grounds, the game of lawn-tennis, played by resident ladies and gentlemen, who were thus offered an opportunity of being presented to the Prince.

On the 28th we again visited the Public Gardens. The day being the Queen of England's Birthday, we were able to witness a parade of the garrison, the Prince being received on the ground by General Sargent, with whom he dined the same evening, twenty-eight gentlemen having been invited to meet him.

On the 29th we bade farewell to the Governor; and by 11 a.m. went on board our steamer which left the harbor at noon. On the 2nd of July we arrived in Saigon, when we were visited by an aide-de-camp of the Governor, on whose part the Prince was invited to pass the time of the vessel's stay at the Palace, a courtesy accepted by His Highness, who landed in a native-built boat, and was conveyed in a carriage to his destination, where he was received by the Governor, Mr. Emile Delepere in person. The Prince and his party were lodged upstairs. Carriages were always at their disposal, and availed of to visit the neighboring towns, which are mostly of Chinese style. What most struck us was the luxuriance of the tropical foliage. In the evening we were entertained at a banquet; and then followed an hour's conversation on the topics of the day.

On the 3rd we visited the Botanical Gardens, the Military Hospital, and the town generally. After the mid-day meal we thanked the Governor for his graceful hospitality, and returned to our steamer which left the harbour at 3 p.m. While in Saigon we heard of the trouble in Egypt, and were told that the Suez Canal was closed—a rumour that we failed to reduce to any certainty.

At 7 a.m. on the 6th we reached Singapore. As the Governor, Sir Frederic Weld, was absent, Mr. Cecil C. Smith (the Colonial Secretary) came to welcome us instead. On shore the Prince was received by a guard of honor, through whose ranks he was conducted to the carriage which conveyed him to Mr. Smith's residence. Under Mr. Smith's guidance the Prince, Hayashi, and Hayashi Ki paid a visit to the town. In the evening we returned to the steamer.

On the 13th we arrived at the harbor of Colombo. Officers came off to the steamer, on behalf of the Governor, to take the Prince's orders. Although we had declined any ceremonial reception, yet a salute of twenty-one guns woke the echoes of the harbor. After lunch we visited several places,

returning at 2 o'clock to the steamer. We heard by telegraph that the English fleet had bombarded Alexandria, and closed the Suez Canal. At 4 p.m. we left the harbor.

On the 21st the ship reached Aden. During the voyage thither from Colombo, we experienced a trade wind, and were not much troubled by the heat. One of the passengers came from Batavia where cholera was raging; and we were consequently compelled to remain on board the vessel. The Governor wrote to the Prince expressing his sorrow at being unable to visit him. We heard a salute of 21 guns. An English major-general came on board. We sailed on the 23rd from Aden, and came to Suez on the 28th. The neighborhood was a great battle field; and all Europeans had escaped on board their ships. At one p.m. our steamer entered the canal, which had been opened after the battle of Alexandria, and was now guarded by the English and French fleets.

We arrived at Port Said on the 29th and were boarded by the Italian Consul, who requested the Prince to inform him when he expected to arrive in Naples, whither he had orders to telegraph His Highness's approach. The steamer left at 6 p.m.

On the 2nd of August we arrived at Naples. Colonel Kontobera (?) and Lieutenant-Colonel Kanjani (?) visited the Prince in full dress uniform. Prince Biyokui (?) (Secretary of the Foreign Department), Satsuko (?) (Controller of the Imperial Household), and our own Secretary of Legation, Saito, also came to escort us to the Palace. This edifice was built externally with a view to durability, but inside it is splendidly furnished. Three carriages were always at our disposal; and our food was of the most sumptuous kind. On the 4th we took carriages and drove to Vesuvius, whence we went to Pompeii. The day was very hot; and we were much fatigued by our journey. On the 5th, starting at 6 a.m., we went in a man-of-war to Sorrento where we put up at a hotel. The scenery of the place is splendid; and we had fine views of Naples and the volcano. In the afternoon we visited the island of Capri, where there is a cave thirty feet high, but with an entrance only three or four feet wide. Thence we went to a village called Ptsuori (?) where we found the ruins of Emperor Nero's famous bridge. In returning we saw the big drain, twenty feet high and ten feet wide, built by the ancient Romans.

On the 6th we were taken to the Dockyard, where we saw the *Italia*, probably the largest man-of-war in the world, then still in process of construction. As it is said that when she is commissioned she will probably sail round the world, we may expect to see her in Japan. During our stay in Naples we visited Museums and many other places of interest.

On the 7th we set out for Rome, accompanied by Robera (?), and Kanjania (?), in a special train at 6.30 a.m., arriving at about two o'clock in the afternoon. Yanagiwara, our Minister to Russia, came to meet us. He was leaving for St. Petersburg on the morrow. We went in carriages to the Palace, which was built of old by one of the Popes of Rome, and is one of the most splendid edifices in Italy. On our installation in our quarters the Foreign Minister came to see the Prince. After we had taken some refreshment we visited the Cathedral of St. Peter, and the site of several historical buildings. As a serious disease was prevalent in the capital, and we were told that the King of Italy proposed to meet His Highness on the 10th at Monza (?), we hastened to return.

On the 8th we came to Florence, where we stayed and explored all day; on the 9th to Milan, where the Duke of Genoa received the Prince at the Railway Station, and where a Band of Music was playing. The two Princes went in the same carriage to the Palace. At three p.m. the King, attired in morning dress, came to visit His Highness.

By order of the King, the Duke presented the Prince with the insignia of the Annonciado; and at 11 o'clock in the morning His Highness went by special train to the Palace at Monza. The King met him at the station and rode in the same carriage with him to the Palace. The town was gaily decorated. We banquetted in the Palace, and afterwards each received a decoration in honor of our visit. Again entering the same carriage, His Majesty and Prince Arisugawa drove to the Gardens and thence to the station, where they parted, the King expressing to His

Highness his regret that he could not accompany him any farther, as the visit of a German Prince was expected. Having cordially thanked the King for his kind reception, the Prince, accompanied by the Duke of Genoa, entered the train, and the party returned to Milan just as the clock was striking 3 p.m. At night the citizens showed their appreciation of the Prince's visit by illuminations and fireworks. The Duke of Genoa's place of usual residence is Turin, whither he would have been accompanied by the Prince; but as the latter was very anxious to pass through the Saint Gothard tunnel, he had reluctantly to decline this invitation.

Leaving on the 12th, we passed through the tunnel connecting, through the Alps, the countries of Italy and Switzerland, and presently found ourselves at Lucerne in the latter country. And here we desire specially to acknowledge the kindness that we experienced in Italy. On the 14th we ascended the Righi Kulm. On the 15th we arrived at Berne, where Ida, our Minister to France, received us. As the President of the Helvetic Republic was absent from the city, the Prince visited the Vice-President only. On the 16th we reached Lucerne; on the 17th Geneva where we went to Touro (?) and inspected the watchmaking establishments.

We set out from Geneva on the 19th, and arrived in Paris at 11 o'clock that night, where H.E. Ida was waiting to receive us. The Prince lodged in the Legation. The Japanese Prince Ito, who was then residing in England, came across the channel to visit H.I.H. Arisugawa. Sangi Ito had also despatched Saionji to meet us, suggesting that it would be well to send Mr. Secretary Nishi to Russia as the Prince's forerunner. This was done, and the messenger left Paris for St. Petersburg on the 22nd.

On the 24th we went in carriages to the house of President Grévy, where we were received by General Chanzy, and the Master of the Ceremonies, Morel. After we had waited about fifteen minutes, the President came to meet the Prince, and shortly afterwards Madame Grévy led us to her salon. We returned to the Legation, and some three hours later the President visited the Prince, and appointed Major——— to provide for our amusement. He accompanied us in our excursions; but no special entertainment was provided for us by the French Government.

A sad event occurred on the 30th. Our physician, Mr. Hayashi died. The expenses of the funeral, the cost of the monument, etc., were all defrayed by the Government. Sangi Ito visited the Prince.

On the 9th of September we set out from Paris. We had intended to go to Germany, but Mr. Aoki, our Minister at Berlin, advised the Prince that he would do better to visit Russia directly, as the Kaiser was absent from his capital and the Czar's coronation had been indefinitely postponed. The Prince decided to follow this counsel; and on the 10th we arrived at Hanover, where Aoki met us. We left on the following day, he accompanying His Highness. On the 12th we reached Kaisburg (?); and left it on the 13th, soon afterward, passing the Russian frontier, where we were received by Lieut.-Colonel Ramsdorff. The people welcomed us joyously, and showed us great respect.

On the 14th at about five p.m. we arrived at St. Petersburg, where Yanagiwara, our Minister, and Nishi who had preceded our party, met us. The Band began to play as the train stopped. We were received by two Russian Ministers of Department and the Prefect of Police, and escorted to the Winter Palace. The streets were thronged along the route. The Prince, accompanied by us, visited the King of Montenegro, who was then in the Palace. The Prince's apartments were on the first story—and were the same, it is said, as those which the Crown-Prince of Russia used to occupy. Splendid views were commanded from them. The approaches were guarded by sentries and policemen. In the afternoon the King of Montenegro, the Minister, and second Minister, of Foreign Affairs, called on the Prince.

On the 16th, at about 11 o'clock, we started for Peterhoff by special train. Here stands Alexander's palace. The journey occupied about thirty minutes. The high officers who came to receive us wore splendid uniforms. A brother of the Russian Emperor walked in advance followed by Princes Reilutenburg (?), and Oldenburg, Ministers of State, and others. After taking a brief rest, we

started for the Palace, where the Czar himself received the Prince, and the two talked together most intimately.

The Prince spoke to the following effect:—

Our Emperor having heard of the approaching ceremony of the coronation of the Czar of Russia, and desiring to offer his congratulations upon the occasion, has deputed me to be present as his representative. I regret extremely that the rites have to be postponed, and the more so because I cannot remain until the period now appointed for them. Nevertheless, I congratulate myself upon my admission to your Majesty's august presence, and on the opportunity thus afforded me to express my Sovereign's regard for you.

His Majesty replied in terms of great kindness, thanking H.M. the Emperor of Japan for the thoughtful sympathy displayed in this visit, and regretting that Prince Arisugawa was unable to remain in Russia to be present at the coronation. The Prince then offered the compliments and felicitations of the Empress of Japan to the Czarina, who replied cordially. A general conversation upon the events of the Prince's voyage ensued, until we adjourned to dinner, after which the Prince went back to his quarters in the Winter Palace, where the Emperor soon after paid him a visit.

On the 17th we returned to St. Petersburg, where His Imperial Highness called upon the Austrian Prince then residing there, and presented him, on behalf of our Emperor, with the Order of the *Chrysathemum*.

On the afternoon of the 23rd we left St. Petersburg, and arrived the following day at Moscow.

Here Prince Arisugawa was received by many distinguished individuals of literary as well as official standing. He was lodged in the Kremlin Palace; and the hospitality we enjoyed was of the same kind as that shown us in St. Petersburg. A national Exhibition was being held during our stay; and was visited by the Czar. It was therefore arranged that the Prince should in Moscow take his final farewell of the Czar, who had announced his intention of visiting the Prince in reply to a question from the latter as to when he should have the honor of calling upon the monarch. While His Highness was exploring the wonders of the Palace, Mr. Giers, Minister of Foreign Affairs, came to him and presented him and the members of his suite with sundry decorations, on the part of His Imperial Majesty. In the evening the Emperor, himself, arrived and requested the Prince to offer to the Mikado his sincerest regards and good wishes. He then bade *adieu* to the Prince and his party. On the 24th and 25th, we visited the Exhibition and other places of note; and on the 26th left Moscow, *en route* for Warsaw, escorted as far as the station by several officials. The people on the route seemed as glad to see us as were those who greeted us on our first arrival in Russia.

On the 28th, at about 1 p.m., we reached Warsaw, where the Governor and other distinguished personages at the head of a body of troops welcomed His Imperial Highness, and escorted him to the Imperial Palace. After dinner we were taken to the theatre where we witnessed a ballet. On the 29th, after visiting the Governor, the Prince made a tour of the sights of the town, including the Public Gardens, returning in the evening. The morning of the 30th we went to the Emperor's garden. We dined in the evening with the Governor, after which we left Warsaw by train for Vienna.

Early on the morning of the 31st we arrived in Austrian territory; and hence the Prince sent a telegram to the Czar announcing his safe arrival, and thanking His Majesty for the kindness he had experienced during his sojourn on Russian soil. Lieut.-Colonel Ramsdorff bade us farewell at this point.

On the 1st of November we reached Vienna, the capital of Austria, where Ito (Sangi) and Honma and Ida (Ministers) received the Prince, who took up his abode in the Japanese Legation. As the Austrian Emperor happened at the time to be travelling in his dominions, the Prince awaited his return, and in the interval we visited the Gun Factories, the Imperial Stables, and the Hydrographical Office of the War Department.

On the 8th the Emperor, having returned to his capital, sent carriages to convey the Prince and the rest of us to the Palace, where His Highness was at once ushered into the Imperial presence, the courtiers remaining in the anti-room. A moment later the Prince came thither, and there received the

Emperor, who thus returned the compliment of the Prince's visit. The Prince was invited to dine with the Sovereign in the Palace of Schönbrunn. The King of Saxony and the grandson of the Emperor of Germany were also guests, and conversed intimately with our Prince, after being introduced to him. Shortly afterwards dinner was announced. On the right of the Emperor sat the King of Saxony; on his left the Prince; then the Prussian Prince, and Ito, Sangi. After dinner the conversation was general and unrestrained.

On the 9th Major-Generals the Princes Karl and Ludvig (the brother of the Emperor) called on the Prince at the Legation. The Austrian Prince remarked that he had three sons, one of whom he intended to travel in Japan. There were no other entertainments than the one mentioned above in the capital; but the Emperor invested the Prince with the Order of Leopold the First, and the members of his suite with other decorations.

On the 12th we left Vienna. Our first intention had been to leave for Germany on the 9th; but Aoki, our Minister to that country, had written to the Prince, recommending him to postpone his visit a little as the Emperor was absent at the Hot Springs, and His Majesty wished to treat him with all possible courtesy in return for the kindness his own grandsons had experienced in Japan. Hence we determined to visit Holland before going to Berlin.

On the 13th we arrived at Mayence: 14th Frankfurt and Wiesbaden. On the 15th we sailed down the Rhine to Cologne, where Sakurada, our Minister, received the Prince.

On the 16th we arrived in the Netherlands Capital, and were welcomed by Consul Bodin. On the 17th the Minister of Foreign Affairs and Major Seizen-Brod (?) called upon His Highness. The King was in the country suffering from indisposition, and so was unable to receive the Prince. The citizens had reminded the Government of the intimate relations that had long subsisted between Holland and Japan, and requested that the Prince should be treated as the guest of the nation; but the request was not complied with. During our sojourn of three days we visited several places of interest. The King conferred the distinction of the Lion of the Netherlands upon His Highness. On the 19th we reached Amsterdam, where we visited many of the "lions" of the place. The next year a Great Exhibition was to be held there and the buildings were (at the time of the visit) in course of construction.

Leaving Amsterdam on the 21st, we arrived at Berlin on the following day. H.E. Aoki and the German Prefect of Police received the Prince. The treatment we received was not exactly what we had been led to expect. We were lodged in the Japanese Legation. On the 24th the Emperor of Germany having returned from Baden-Baden, Prince Wilhelm called on Prince Arisugawa, inviting him to the Palace on behalf of the Emperor, who sent a carriage to convey him thither. The reception much resembled that in Austria, the principal difference being that the German Kaiser's bearing toward the Prince was more distant than that of the Austrian; and the persons present were much more numerous. The ex-German Minister to Japan, Baron von Eisendecker, was there. On the 25th, by invitation of the German Crown Prince, we went to Potsdam, and were handsomely entertained. One thousand soldiers were mustered for Prince Arisugawa's inspection. The Crown Prince accompanied His Highness back to Berlin, where the Emperor conferred the order of the Great Red Eagle upon the latter, presenting his suite with decorations.

We left Berlin on the 27th, and arrived in Brussels, the capital of Belgium, at 2 p.m. on the 28th. The King happened to be absent from town on a hunting excursion at the time; but returned immediately he heard of the Prince's coming in time to receive him that day and to return his visit.

On the 29th the King presented the Prince with the insignia of the Grand Military order, and other Orders were conferred upon the rest of us. In the evening we were entertained at a banquet in much the same style as in Austria and Germany, with the difference that, in Brussels, Her Majesty was present. After the dinner we went to the theatre, accompanied by several of the people of the Court. The Prince occupied the Royal Box. All next day was occupied in visiting Arsenals,

Dockyards, and other Government establishments, under special introduction by the authorities. When the Prince entered a gate a band of music played. We inspected also the Central Prison with its bath-rooms, kitchens, and lavatories. We were conducted round the Forts by the Minister of War, and to the Iron Foundries by the Vice-Minister for Foreign Affairs.

On the 2nd of November we left Brussels, and passing through Paris, went straight on to Bordeaux, where we arrived on the 3rd. We inspected the establishments of several famous wine-makers, and attended an International Exhibition of wines and liqueurs. This being our Emperor's birthday we kept holiday. On the 4th we left Bordeaux by rail.

We reached Madrid on the 15th; and next day witnessed a bull-fight. The arena was circular with a circumference of about ten cho (660 ft.), enclosed by a palisade 5 ft. high, outside which were the seats of the spectators. There were two gates facing each other in the enclosure. Above one of them was an estrade for the musicians. In the arena were two horsemen, each armed with a lance, and their chargers' eyes bandaged with black stuff; and some six or seven very peculiarly dressed men on foot, standing here and there, holding in their hands pieces of red blanket. After the band had played, one of the gates was opened, and behold! a burly bull with wide-branching horns rushed into the arena. Each of the horns must have been at least two feet long. The footmen got in front of him, waving their red rags, till the beast was angry and charged them. Nimbly did they elude him, one after the other. Then the horsemen in their turn assailed the bull. We were told that one of these animals had been known to kill fifteen horses in one day. We saw one bull destroy three horses. When the bull became exhausted one of the men on foot killed him with a sword about two feet long. Bull after bull appeared, all with much the same result, until eight had been murdered and dragged away. This sport was on a Sunday; and simultaneously with the bull-fighting Christian services were being conducted in a Christian country. What a wicked custom do Christians here perpetuate!

On the 7th the Prince was invited to the Palace, a carriage being sent to convey him thither. He was escorted by two high functionaries of the Court to the throne. On the 8th the King returned the Prince's visit; and in the evening His Highness dined in the Palace, sitting between the Queen and the King's sister. Several of the Court ladies dined with us. Great intimacy seemed to obtain. After dinner the King led the Prince to another room and carried on a confidential conversation with him for some time; afterwards adjourning to the armoury. His Majesty expressed great admiration of Japanese arms and armour. The Prince promised His Majesty that he would send him a collection from Japan after his return to that country. We then left the Palace, the Prince taking leave of the Queen and the sisters of the King. Her Majesty's condition at this time was interesting. It has long been a custom with Spanish Royalty whenever a child is born to the reigning House for the King to show it, lying on a silver-cloth pillow, to the Ministers, at his Court, of Foreign Powers. As it happened our Minister, Ida, was invited to be present on the recent occurrence of this ceremony in Madrid. We hear that the custom had its origin in the time when it was the law that no girl could ever succeed to the throne of Spain. It was in Portugal that we heard of the birth of Her Majesty's daughter.

On the 9th we visited the Military Depots and public exhibitions. The King decorated the Prince with the insignia of the Grand Order of Charles III.

We left Madrid on the 10th, reaching Lisbon on the 11th. Next day the Prince went to the Palace. No carriages were provided. We were all admitted to the presence of the King and Queen. This royal lady is the daughter of the late King of Italy, and has a reputation for great sagacity. The Prince's visit was returned by His Majesty. We observed that the Palace was a building of great simplicity.

Starting from Lisbon on the 13th, and passing through Madrid and Bordeaux, we arrived on the 16th in Paris where we put up at the Grand Hotel. We left again on the 19th for England. On our arrival at Folkestone we found Prince Iun and H.E. Mori, Minister to the Court of St. James's,

awaiting us; and the same night we arrived at the Legation in London. No provision had been made by the British Government for the Prince. Our baggage which had been forwarded from Belgium was detained for examination. The Minister represented to the Government that the effects of Royal personages were allowed to pass through Custom Houses duty-free. He was not listened to, and the baggage was examined.

On the 24th the Prince, by invitation of the Queen, went to Windsor Castle. We had heard that special trains were provided for such occasions; but when we arrived at the station we found that the railway-carriages were common for the Prince and everyone else. When we alighted at Windsor we found three carriages waiting to take us to the Castle. Arrived there, the Prince was conducted at once to the dining-room by the Foreign Minister. The repast had already commenced. We hear that a demand was made for railway fares. During our stay in London no Royal or official personage visited us. We went about the city. On the 30th we left London for Liverpool, where we inspected some cotton factories on the 1st of December. About 4 p.m. on the 2nd, we embarked on board one of the Cunard Line steamers *en route* for the United States. During several days we experienced wind and rain-storms.

On the 15th of December we arrived in New York, and were met by Terashima. The Prince and his suite were lodged in the Windsor Hotel. General Grant sent his son to call on the Prince, and placed two carriages at His Highness's disposal. Japanese merchants resident in New York provided an entertainment for the Prince on the 17th; and on the 19th General Grant organized a banquet in his honour at the Club.

Leaving New York on the 20th we visited the falls of Niagara, and arrived in Washington on the 23rd. On the 26th the American Home Minister called for the Prince, whom he accompanied in a carriage on a visit to President Arthur. On the 27th we made a trip to Washington's old house at Mount Vernon, by the authority of the President, who, however, was not one of the party, being represented by the Home Minister. The representatives of several foreign States were with us, and there was saluting, music, and feasting.

We departed from Washington on the 28th of December, 1882, and reached San Francisco on the 3rd of January, 1883. We devoted the whole of one day to visiting objects of interest. On the 9th we went on board the steamer *City of Peking* and passed the night in harbour. Leaving on the 10th we encountered a succession of storms in the Pacific.

At 9 p.m. on the 1st of February we arrived in Yokohama; and at half-past eleven landed in the steam launch of the Port Admiral, and took train for Tokyo. On the 2nd at two o'clock in the morning the Prince entered the Palace at Akasaka. On account of the hour, several rites usually observed were dispensed with.

On the 11th we were received in audience by the Emperor, and afterwards entertained in the Palace.

APPENDIX.

The Royal Palaces in Europe are for the most part constructed with a view to strength and durability, and hence are not remarkable for external elegance. Yet beauty and elegance are cultivated within. Style and plan are much the same in all countries we visited. In all there are massive flights of steps from the carriage drive to the portico. The buildings contain drawing-rooms, guest-chambers, large and small dining-rooms, bed-rooms, and a throne-room. These are all on the second storey. The ground floor and the third storey are mostly reserved for offices, and the use of attendants and musicians.

The demeanor of Emperors and Kings alike was very courteous and friendly, and not in the least ceremonious. When entertaining guests they generally dress in plain uniform. In Italy the King wore a plain morning dress: the Portuguese monarch wore a common navy coat.

While we were in Madrid the French Minister visited the Spanish King. He had four carriages. In the first, drawn by six horses, he rode himself; the Secretaries occupied the next, drawn by four horses. An escort of cavalry accompanied them, and some ten men on foot. The officers who received our Prince were of the rank of Grand Marshal, Grand Chamberlain, attendants

of first and second rank, and some military officers.

The return visits of the Potentates were usually made within an hour of the Prince's. In Spain, however, the King did not return his call until the following day. When officers are admitted to the presence they stand, and the sovereign with his consort walks down the line exchanging a greeting with each individual. At a banquet the royal pair sit face to face at the middle of the board. The principal guest is seated at the right of the Queen; or if the august lady is not present he occupies her seat. The rule is that she should attend should she happen to be in town; but in Belgium the Queen gave a separate entertainment. Splendid carriages and horses, such as were placed at the Prince's disposal, are attached to every Royal establishment. Sometimes the Prince rode in the special carriage of the Sovereign.

TRANSLATIONS FROM NATIVE JOURNALS.

THE NAKASENDO RAILWAY.

(Translated from the *Nichi Nichi Shimbun*.)

The Government has decided to proceed with the construction of the Nakasendo Railway, and has instructed the Public Works Department to make an extra appropriation of yen 500,000 for the 19th fiscal year (1884), so that the work may be commenced at once. The idea is excellent. According to the best authorities this line is to connect with the Nippon Railway at Takasaki, whence it will run *via* Inagori to Tanaka, Shinshu, and thence to Matsumoto, Nakasendo, Ogaki Gifu, in the province of Mino, and there join the Sekigahara line, thus linking together the Eastern and the Western capitals. The principal iron-ways at present in full working order are:—(1) the Tokiyo-Yokohama, length 18 miles; (2) Kobe-Otsu, 58 miles; (3) Tsuruga, 41 miles; (4) Tokiyo-Mayebashi, 51 miles; and (5) the Temiya line from Sapporo, 37 miles. This last mentioned road, being in Hokkaido, does not particularly concern our present discussion. The Tokiyo-Yokohama Railway was built in 1872, and is one of the most important of all. The second was laid under Government auspices—the section between Kobe and Osaka having been completed in 1874; that between Osaka and Kiyoto in 1876; and that from Kiyoto to Otsu in 1879. This road ranks next to the Tokiyo-Yokohama one in point of importance. The third line likewise is a Government undertaking, and is already under traffic with the exception of that portion through and beyond the Yanagase tunnel which is rapidly approaching completion. The fourth mentioned enterprise is a private one; and trains are already plying as far as Honjo, with a prospect that they will reach Mayebashi before next summer. The Nippon Railway Company will shortly join this line at Shinagawa to the Tokiyo-Yokohama road, thus reducing the time of travel between Yokohama and Takasaki to a few hours. When the Yanagase tunnel is completed, goods can be sent by rail from Kobe to Otsu, *via* Osaka and Kiyoto, and thence to Tsuruga by steamer across Lake Biwa and thence again by rail to Sekigahara. This journey can also be accomplished in a few hours. The net-work of railway communication thus established will remove many obstacles and difficulties hitherto inseparable from intercourse between the East and West of the main island. Formerly two days were occupied in travelling from Takasaki to Sekigahara by way of the Nakasendo. Infants can realize the advantages to be gained by the proposed change in the method of locomotion; and it is only reasonable that the Government should realize its project promptly. The main obstacles in the line of work are the hilly region of Iwagori and Mount Kiso, where engineering operations will be arduous and

the expense enormous; but that is no reason for the adjournment of the undertaking. It is not too much to say that, however large a sum of money the country may have expended upon railway works, the benefit accruing is not half what it might be, owing to the absence of connection between the lines—a defect which will be happily remedied by the construction of the Takasaki-Sekigahara route. Meanwhile, considering the state of the national finances, the expenditure on the part of the Government of half a million yen in the nineteenth fiscal year on railway construction is an act of resolute policy which we cannot too much admire; and yet the sum in question is barely one per cent. of what is actually required. Unless more than yen 500,000 is yearly disbursed on similar undertakings, it will be long before our railway system becomes a boon. The loss arising from lack of facility for traffic and the conveyance of mails so long as the lines remain incomplete is inestimable. From the mere stand-point of national economy it is desirable that the railway system of this island should be perfected with the least possible delay. The outlay heretofore made by the Government in the construction of iron roads, including the sums paid for land, rolling stock, etc., is as follows:—Tokiyo-Yokohama line, yen 3,038,672; Kobe-Osaka, yen 4,484,228; Osaka-Kiyoto, yen 2,817,845; Kiyoto-Otsu, yen 786,134; and Temiya-Sapporo, yen 785,161, making a total of yen 11,912,143. This is by no means a trifling amount. Although the full possible advantage has not yet been secured owing to the short length of the lines and their isolation from one another, yet they yielded a total income of yen 1,792,551 for the year ended June, 1882. The expenses incurred in working them during the same period were yen 759,382; so that the net profit is yen 1,033,169 or ten per cent. on the capital. In the beginning, useless expenditure was incurred owing to the heavy cost of the staff. But as employes are now thoroughly acquainted with all the details of their work, the expenses will be curtailed to a great extent and the work will be completed in a satisfactory manner, as indeed we may affirm from the demonstration of present experience. Difficult as the construction of the Takasaki-Sekigahara line must be, the officers will prove fully equal to all emergencies; and it only remains for us to hope devoutly that the necessary funds may be raised as speedily as possible. When the line is completed, a great change, for decline or prosperity, as the case may be, will be manifest in the regions of commerce, agriculture, and manufacture. The result, however, causes us no apprehension whatever; and so long as the completion of the line means the removal of impediments, we must look upon it with the greatest satisfaction. The mail service, and all kinds of traffic, will be facilitated even to the extent that we shall be able to visit Kobe in a day, and do ample justice before bed-time to the savory viands for which each city is famous, after feasting our eyes upon the glories of the cherry-blossoms on the banks of the Sumida River. Our means of pleasure will augment in proportion to our material progress.

THE FILIAL DUTY OF JAPANESE FEMALES.

(Translated from the *Fiji Shimpō*.)

"We receive our being from our parents. Hence an essential part of our duty, as descendants, is to preserve that being from injury." This precept, although a mere Chinese dogma handed down from olden time, yet contains a fraction of truth. The duty of mankind in respect of parents, is obedience to their orders—except if such be utterly unjust and unreasonable—and to share their sorrows as well as their joys. The recognized rule of human society is that children should share equally the reverses and the good fortunes of father and mother. This is also the prime source of social harmony. Does a family fall into indigence? Each one of its members has to take his or her share of the consequent misfortunes: it is not blame-worthy for women to sell their clothes in order to

provide food for their relatives. But should they betake themselves to a life of infamy we must censure them, however laudable their intention may be. Even their bodies are a sacred heritage from their progenitors, which their filial piety alone should protect from abuse. The sale of their persons is therefore a violation of dutifulness, and in our opinion the most serious infraction of any. In Western countries, however poor a family may become—though its women may sell not only all their ornaments but the clothes from their backs—they will not vend their persons. But, in Japan, the girls who are held to have carried their devotion to their parents to the sublimity of virtue, are those who seek voluntary exile in the quarters of shame. What a mistaken idea of duty! Certainly Japanese women are ignorant of the inner meaning of filial piety!

If we search for the origin of this custom we shall find it in popular novels and stage-representations. Doubtless, these instructors of the public aim at the encouragement of well-doing and the correction of evil—fostering loyalty, virtue, and truth; and censuring malice and falsehood. As a natural consequence, the extremes of good and ill are sometimes so forcibly delineated as to be really inconsistent with the occurrences of every-day life. Virtue always commands the loud applause of the universe: vice its sternest reprobation. The object of romances and plays is to work upon the imagination; and, with this in view, the novelist would fain portray the filial affection of women, in their voluntary prostitution, as an expression of self-sacrifice worthy of admiration. Thus he incites dutiful maidens to condemn themselves to a life of infamy in order to rescue their indigent parents from distress. The injurious effects produced are daily before our eyes. Successive generations have come to look upon female venality as a type of children's duty; and the girl members of poor families consider their degradation not only in the light of a necessity prescribed by filial devotion, but as an honorable estate. The public, also, has been taught to regard the practice with genuine approbation, just as it applauded the self-immolation of the faithful *samurai* beside the corpse of his lord. The public has never realized the fact that prostitution is a violation of the filial relation. The misconception here indicated has given rise to a vile custom which has lost all the hideousness of its real aspect to the eye of a Japanese—a result which must be attributed to the endeavors of novelists and dramatists to secure the approbation of the public in representing the extreme phases of human life.

Since the abolition of the feudal system, since the Restoration, no suicide as a token of respect for a deceased master is known to have occurred. But, on the other hand, the sale of human-beings, from a mistaken idea of the dictates of filial piety, is far from having been abolished. Instances of its occurrence are daily reported in the newspapers. What can be the reason of this? Political ideas change with a change of policy; but social customs are not so easily altered. This is a universal rule. The practice of suicide at a master's death has fallen into desuetude since the Restoration; but the interpretation of the meaning of filial piety has undergone no amelioration whatever. True, ten years is not long enough to destroy a popular credence so deeply rooted as this; but we are inclined to believe that the special custom we allude to has not only not received one germ of decay, but even flourishes with increasing vigour. This is the fault of our learned men. Editors of journals are credited with knowledge; and are consequently responsible for the rectification of social evils. The error is that they applaud the conduct of those loyal females who sacrifice their virtue on the altar of their filial devotion. These writers borrow their language from the old novelists, and their work is thus but a reproduction of ancient literature. This has the effect of encouraging prostitution; for the time-honored tomes referred to had already so largely disseminated the evil that no modern journalistic effort is needed to its increase. Should the idea embodied in the practice become more firmly rooted than now in the brain of the vulgar, nothing will be able to eradicate it. The whole matter is a source of great grief to us; and we deem that the first duty of our educated men is to do their best to rectify what is a dreadful social evil.

MARINE COURT OF ENQUIRY.

THE LOSS OF THE "AKITSUSHIMA MARU."

The Court assembled yesterday at ten o'clock, at the Marine Bureau, Tokyo, to deliver judgment in the above case, as follows:—

The *Akitsushima Maru* was an iron screw steamer, built at Glasgow, December, 1873, of 1,146 tons register and 200 horse-power, and owned by the Mitsu Bishi Mail Steamship Co. of Tokio.

She left Yokohama on the 6th of October last, at 6.15 a.m. bound for Hakodate, having 50,000 bricks on board and about 220 tons of measurement general cargo stowed in the after hold, the trim of the vessel being aft 17 feet 2 inches and forward 10 feet 4 inches, she thus being 6 feet 10 inches by the stern. The ship was commanded by Mr. Johannes Frahm, who held a master's certificate of competency, No. 11.

On the morning of the 8th at 4 a.m. the vessel was 3 miles east of Kinkasan, she having experienced strong N.E. winds accompanied with rain and dirty thick weather. At 3.45 p.m. on the 8th she was 5 miles east of Miyako Head.

From this time the wind increased rapidly and veered to the eastward, and at sunset the vessel was hauled off the land until 1 a.m. on the 9th, wind being south, when a N.N.W. course was shaped, the weather having moderated somewhat. The land was sighted at 6 a.m. on the 9th, when a W.N.W. course was shaped by the bridge compass (which was also used as the standard compass) until 9 a.m. when the wind having veered round to the S.W. it blew with great force; ship fell off into the trough of the sea, was heading then N.N.W., having the helm hard a starboard, ship making by master's judgment 5 knots an hour, and 4 points leeway. The speed of the ship was estimated by the officers at 2½ to 4 knots. The log was never hove.

On the 9th at noon the position of the ship was not worked up by any one.

By 5.30 p.m. on the 9th the ship had made 42 miles on a mean N.N.W. course (by bridge compass) the wind veering to the westward; she was then put on the starboard tack and made a S.S.W. course (by bridge compass) having the helm hard a port, 4 points leeway being allowed by the master. Wind at N.W., up to midnight, she had made by the master's reckoning 22 miles as shown on his chart.

During the latter part of first watch the weather moderated rapidly, and at midnight a W.N.W. course (by bridge compass) was shaped, and speed increased to 8 and 9 knots.

Shortly before 4 a.m. on the 10th, the master feeling uncertain as to his position, gave orders to take a cast of the lead, and turned the ship's head to the eastward and stopped the engines. At this instant a light was seen by the captain and third officer simultaneously, judged to bear west distant 18 miles according to the master's estimation; 12 and 4 to 5 respectively according to the 1st and 3rd officer's evidence.

The light without any hesitation the master assumed to be that of *Siriya-saki*, and he at once countermanded the order to sound; put the engines full speed ahead, set the course N.W. by W. (by bridge compass) and steadied the vessel himself, and after watching the light (as by his own evidence) for 8 or 9 minutes he went below for rest, &c., leaving the chief officer in charge of the deck.

At 4.25 a.m. the light was lost sight of; and at 4.45 a.m. the land was sighted right ahead, engines put full speed astern, but she had taken the ground at a point about 15 miles south of *Siriya-saki* where she eventually was abandoned, the efforts to float her having failed.

Between the ship's movements as recorded in the log-book and those shown on the chart by which the master navigated the vessel, there exists a serious discrepancy. In the log-book the mean of the courses is N.N.W., while the track on the chart is N.E. by N. ¼ N.; again, from 5.30 p.m. to midnight the course in log-book is S.S.W. and S. by W. ¼ W. and on the chart it is S. by E. ¼ E.

This the master explains to be due entirely to leeway which he allowed in laying down his track. In his evidence the master states he allowed a speed of 5 knots for the same intervals, and not

withstanding his peculiar trim, being 6 feet 10 inches by the stern, we find it difficult to believe that a ship moving at that speed through the water, and having the wind 2 points ahead the beam could possibly make so much leeway. From this we are of opinion that the master committed a grave error in judgment in allowing so much leeway as 4 points, combined with a 5 knot speed, and point out that a reduction in either of these elements in his calculations would have given him a much more correct position at midnight on the 9th of October.

Here we would remark upon the irregular manner in which the navigation of the ship has been apparently habitually conducted. The log-book has been kept very irregularly, as it shows no record of the speed per hour, error of compass, barometrical readings; neither is any account of the ship's position at noon, bearing a distance at noon entered, and only one remark as to leeway. The master appears to have trusted entirely to his knowledge of the land, having lost sight of it for a few hours, and the log-book affording him no guide, he is obliged to rely upon his own judgment and memory; he never considered it necessary to consult his 1st or 2nd officers.

We are further of opinion that, considering the great uncertainty of the ship's position at midnight on the 9th and the fact that land could not be seen at a greater distance than 3 miles, it was imprudent in the extreme to shape a direct course for it at such a speed, from 8 to 9 knots.

The fact that the ship's head had been turned to the eastward at 4 a.m. on the 10th with the intention of taking a cast of the lead, shows that the master was still uncertain of his position; consequently to have accepted the light seen as that of *Siriya-saki* so unhesitatingly and without further verification than that of 8 or 9 minutes' watching, and immediately to have gone full speed ahead again on a N.W. by W. course, was perfectly reckless.

By leaving the bridge at this critical time the master committed a grave neglect of duty from which his long exposure and want of rest did not exonerate him in the least, particularly as from his evidence we gather an entire want of confidence in the abilities of his officers.

We are also of opinion that the vessel, being 6 feet 10 inches by the stern, was not in a perfect seaworthy condition, particularly during the typhoon season.

JUDGMENT.

We find the master to have been guilty of:—
1st. Error in judgment by over-estimating the speed and leeway on the 9th of October.

2nd. Imprudence in shaping his course direct for the land at a speed of 8 knots from midnight of the 9th of October; and also for running the ship at the same speed on a N.W. by W. course immediately after sighting the light at 4 a.m. on the 10th of October.

3rd. Neglect of duty in leaving the bridge and deck when so uncertain of his position and distance from the land while the ship was steaming full speed towards it.

We therefore advise that his certificate of competency as master be suspended for 12 months.

Also we consider the chief officer, Mr. John C. Werner, to have contributed in a great measure to the disaster in neglecting to call the master when the light disappeared, in not turning her head to seaward or not reversing the engines to full speed astern. Consequently we recommend that his certificate of competence as first mate be suspended for 6 months.

In both cases the suspension to be from date of judgment.

G. E. O. RAMSAY, President.
THOS. H. JAMES } Assessors.
A. F. MACNAB }

I hereby approve of this decision and direct that it be carried out accordingly.

SAIGO TSUKUMICHI,
Minister of Agricultural and Commercial Department.

Tokio, November 19th, 1883.

The certificates of Rodger Hamilton, chief engineer, and Hans F. S. Moldt, second officer, were returned to them.

In answer to an enquiry from Captain Frahm, the President stated that, according to section 13 of the rules which applied to foreign built vessels

he could appeal against the present decision. It would be necessary for him to do so within a week, and he would have to address his request, in the first place, to the Minister of the Agricultural and Commercial Department, stating the grounds on which he based his appeal. He would afterwards be informed to whom further to apply.

CHESS.

Problem by W. B. MASON, Nagasaki.

There was a display of electric light in Awoyama Palace the night before last. Their Majesties the Mikado and the Empress and Empress Dowager witnessed it. The naval Officers and Privy Counsellors who were present were afterward entertained at dinner, which was enlivened by the music of the Marine Band.

His Majesty the Mikado paid a visit to the Nobles' School yesterday and witnessed equestrian exercises, fencing, and gymnastics by the students. Mr. Harmond, of the Naval Department, has been appointed to the *Tsukushi Kan*.

The *Kamei Kan*, a building to be devoted to the reception of foreign visitors, will be formally opened on the 27th instant. Invitations will include the *corps diplomatique* and distinguished foreigners.

H.E. Terashima, Minister to the United States of America, is now in Tokyo, under medical treatment.—*Mainichi Shimbun*.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, NOVEMBER 16TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokijo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.

Percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.

• Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 23.3 miles per hour on Friday at 6 p.m.

The highest reading of the barometer for the week was 30.43 inches on Sunday at 11 p.m., and the lowest was 29.819 inches on Friday at 6 a.m.

The highest temperature for the week was 62.3 on Wednesday, and the lowest was 33.3 on Sunday. The maximum and minimum for the corresponding week of last year were 65.3 and 33.0 respectively.

The total amount of rain for the week was 0.058 inches, against 0.00 inches for the corresponding week of last year.

London, November 16th.

FRANCE AND GERMANY.

There is a renewal of angry polemic between France and Germany, the latter adopting a threatening tone.

London, November 18th.

RESIGNATION OF CHALLEMEL-LACOUR.

The final resignation of M. Challeml-Lacour has been formally announced, and M. Ferry has been appointed Minister of Foreign Affairs.

FRANCE AND CHINA.

The London papers comment on what is described as the enigmatical policy of France with regard to China.

Later.

Negotiations have been resumed between M. Ferry and the Marquis Tseng.

More troops have sailed for Tonquin.

London, November 20th.

The Chinese Government has issued to the different Powers, including France, a manifesto in which the claim to suzerainty over Annam is reiterated, and protest is made against the action of France with reference to Annam, and more especially with regard to the treaty of Hué, which fails to recognise such suzerainty. The manifesto intimates that an amicable solution is still possible, but it adds that if France still farther extends her unlawful operations to (*sic*) the Chinese possessions in Tonquin, armed resistance will be the consequence, for which France alone must assume the responsibility.

London, November 21st.

The *Daily Telegraph* has published a telegram from Paris in which the Marquis Tseng has declared that a French attack upon Bach-ninh would be considered a *casus belli*. Meanwhile, orders have been given to Courbet to attack.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30,* 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00,* 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, sen 70.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.

ARRIVED.

Per Japanese steamer *Tokai Maru*, from Iterup via Hakodate: — 3 Japanese.

Per Japanese steamer *Hiogo Maru*, from Hakodate via Ogino-hama: — 60 Japanese.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi: — 58 Japanese.

Per Japanese steamer *Takasago Maru*, from Kobe: — 4 Japanese in cabin; and 189 Japanese in steerage.

Per Japanese steamer *Horai Maru*, from Sendai: — 5 Japanese.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports: — Governor Hara, Governor Kitagaki, General Nozaki, General Yamaji, Mrs. Hitchcock and daughter, Lieutenant R. D. Hitchcock, U.S.N., Dr. Rodgers, U.S.N., Captain Byrne and servant, Messrs. Elliot, Goto, Oyamuchi, Tanaka, Utsumi, Mayeda, Shin, Harada, Matsumoto, Okabayashi, Sato, and Akiyama in cabin; and 1 European, 3 Chinese, and 170 Japanese in steerage.

Per Japanese steamer *Seirio Maru*, from Yokkaichi: — 80 Japanese.

Per Japanese steamer *Yechigo Maru*, from Awamori: — Captain Carter and 20 Japanese.

Per Russian steamer *Kamtchatka*, from Kobe: — Mr. Komareff.

Per French steamer *Mensaleh*, for Hongkong: — Messrs. H. Degron, Roberts Twiss, Hynes Marrot, T. Marsu, and Hanajima in cabin.

DEPARTED.

Per British steamer *Khiwa*, for Hongkong via Kobe and Nagasaki: — Mr. and Mrs. Lucy, Mr. Melbye and servant, Miss Lockyer, Messrs. A. C. Reed, J. Wilson, G. Mayezono, Mow Thong and 3 children, Loe Him Thing, Kock Sin Char, Ah Num, and Ah Yen in cabin; and 9 Chinese and 16 Japanese in steerage.

Per Japanese steamer *Tokio Maru*, for Shanghai and ports: — Rev. and Mrs. G. M. Fisher, Mrs. A. O. Stevens, Mrs. Klempermer, Rev. C. R. Mills, Rev. J. J. Alexander, Captain G. J. Burdis, Messrs. A. H. Jack, G. Sale, G. Zancolo, G. Kleinwachter, W. H. Percival, C. D. Hoffmann, C. Vercoe, G. Richter, E. B. Jenkins, J. Taylor, Tanomitch, Tcherymakowsky, Matsumoto, Itakura, Midzutani, Ogasawara, Kaio, Saito, Suzuki, Sone, Kiyooka, Honjo, Kawasaki, Watanabe, Koshikabe, Harima, Okiyama, and Ogasawara in cabin.

Per American steamer *City of Rio de Janeiro*, for Hongkong: — Mr. H. T. Creswell, and Oscar Jackson in cabin; and 640 Chinese in steerage.

CARGOES.

Per British steamer *Khiwa*, for Hongkong via Kobe and Nagasaki: — Silk, for France, 555 bales; for London, 148 bales; Total, 703 bales.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports: — Treasure, 120,000.00.

Per French steamer *Mensaleh*, for Hongkong: — Silk for France, 634 bales; for England, 133 bales; for Italy, 10 bales; for Switzerland, 17 bales; Total, 791 bales.

REPORTS.

The British bark *Cross Hill*, Captain John Smith, reports leaving Cardiff on the 4th June with light N.E. trades in North Atlantic Ocean; crossed the Equator on the 8th July in 29 deg. W. long. Had the S.E. trades well from the southward in the vicinity of the Cape of Good Hope; had violent gales from the south with heavy seas and unsettled weather accompanied with much thunder and lightning. On the 6th August, during a hard gale from S.W., a whirlpool crossed the ship's bows, travelling at the rate of about 30 miles per hour; on the 7th still blowing heavy; on the 8th increasing with high cross sea running; towards midnight moderated somewhat and squalls less frequent. At 10 p.m. wind fell light and veering from W. by S. to S.W. by S. and blowing in furious gusts from each quarter; a tremendous sea running and ship laboring heavily and constantly filling her decks with water; in endeavouring to wear ship all hands were washed about and two men washed overboard, the next sea bringing them in board again. Mr. Hoffmann, the second officer, was unfortunately washed overboard on the port side at 11 p.m., the only indication we had of missing him was a cry from astern, and under the circumstances we were unable to do anything for the poor fellow; it would have been madness to have attempted to lower a boat in such a sea on a dark wild night and not even a star visible, moreover no one volunteered and nothing could be done to rescue him; on the 9th gale moderated which continued to Sunda Straits, through which we passed; on the 15th September came through Gaspar Straits, on the 18th September into the China Sea, through which we experienced very unsettled weather. On the 1st October barometer falling, weather looking suspicious, with signs of a typhoon, made our preparations; sent down top-gallant masts and yards and hove ship to; at 8 p.m. blowing hard from N.W. by W. and veering to S.W. and S.S.W. with high confused sea, ship filling her deck; put small bags full of oil over the side, which had the desired effect. Ship eased considerably; on the 2nd weather moderated, kept ship away and stood to the north and eastward, ship taking large seas on board both sides fore and aft. At noon on the 3rd settled down to a light S. wind with clear sky; sea going down sent masts and yards aloft and made all sail. On the 15th October came through Ballanting Channel into the Western Pacific Ocean, and thence to port have experienced a succession of adverse winds with unsettled weather. Arrived at Yokohama on the 23rd instant after a trying passage of 170 days.

LATEST COMMERCIAL.

IMPORTS.

During the past week there is nothing of interest to report, business generally continuing in an extremely depressed state. Yarns are quite unsaleable, and for Piece Goods the sales made have been of a trivial character. Metals are quiet, and the few Settlements reported do not show any change in prices.

COTTON YARNS.

| | PER PICUL. |
|----------------------------------|------------------|
| Nos. 16 to 24, Common to Medium- | \$25.00 to 28.50 |

| Nailrod, small size - | 2.85 to 3.15 |

KEROSENE.

No business has transpired in Oil during the past week beyond the sale of 2,000 cases Stella (rather stained), at \$1.44 per case. Deliveries have been only 10,000 cases. The *Clarissa B. Carrer* has arrived with 40,500 cases, making present Stock some 667,000 cases of sold and unsold Oil in first hands. Quotations remain:—

| | PER CASE. |
|----------|-----------|
| Devos - | \$1.67 |
| Comet - | 1.64 |
| Stella - | 1.50 |

SUGAR.

The small transactions that have been put through during the week have been at late rates, and no change in prices has to be noted. Recent arrivals have been small.

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.25 to 8.30 |
| White, No. 2 - | 6.75 to 7.00 |
| White, No. 3 - | 6.20 to 6.40 |
| White, No. 4 - | 5.75 to 6.00 |
| White, No. 5 - | 4.70 to 4.90 |
| Brown Formosa - | 4.35 to 4.30 |

EXPORTS.

RAW SILK.

The present week has witnessed a very large business in this staple export; some buyers have entered the market at the very low prices ruling and any further decline is for the time being arrested. Settlements 17th to 23rd inclusive are returned as 1,482 piculs. The total export to date is now 17,691 bales, against 12,579 to the same date last year. Direct

shipments continue; but not on so large a scale as a fortnight ago, and with the heavy business of the week Stocks are reduced to 4,700 piculs. Buying for the American Mail has been brisk; there is some disposition on the part of Japanese to make considerable shipments also in the same direction, and doubtless the *Oceanic* circulated to leave on the 27th instant will take a large quantity.

Hanks.—There are signs that these have touched bottom for the present; still the rebound (if any) has been very slight; fully half the total Stock consists of this class. News from home is not particularly brilliant, and with any falling-off in the present demand prices might resume their downward course. Among the transactions of the week we notice Shinshu ranging from \$455 for good to \$485 for "Shiban." Shimonita \$470. Chichibu \$440, fair Joshi \$430. Hachoji \$415 down.

Filatures.—The best chops have been rather neglected, the trade running on Good to Medium sorts. A parcel of Tokosha was reported early in the week at \$595, a long price, if correct. Other chops, ordinary to good No. 1, have found purchasers at \$580 to \$585, while large parcels of Hida and Mino sorts have been taken at \$570 to \$530, according to grade.

Reels.—These also have been enquired for to some extent, and fair to ordinary "Zaguri" have had the preference over the better kinds. Katsuyama is reported sold to a native shipper, price unknown, but supposed to be the equivalent of \$570 or thereabouts. Five Girl might probably come at about the same figure; Bushu and Yehigo descriptions have found takers at \$530, \$512½, and \$500.

Kakada.—There has been some little business done in these, but again the best kinds have been least sought after, and sorts costing \$540 to \$520 have had the preference with buyers. There is not much change in the nominal quotation for the higher qualities, but there has been no business in them to test the market.

Hamatsuki.—One of the features of the week has been the heavy settlements in this branch, nearly 500 piculs having changed hands at prices ranging from \$470 to \$370. In medium *Sendai* a few transactions reported at \$460. *Taysam* sorts have been dealt in at \$380 for Tajima, and \$360 Shimada.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1½ - | \$480 to 490 |
| Hanks—No. 2 (Shinshu) - | 475 to 480 |

| Oshiu Sendai—No. 2½ - | 460 to 470 |
| Hamatsuki—No. 1, 2 - | 455 to 465 |
| Hamatsuki—No. 3, 4 - | 400 to 420 |
| Sodai—No. 2½ - | 400 to 410 |

WASTE SILK.

Business in this branch has been active also, transactions for the week are returned as 1,100 piculs, bringing the total settlements for the month up to close upon 4,000 piculs. All descriptions, from Mawatta and Filature Noshi down to low Kibiso and Neri, have participated in the movement. Prices, speaking generally, are lower than they were a month ago, but, with an active market and reduced Stocks, buyers find it difficult to make any further impression.

Pierced Cocoons.—The better qualities are now practically finished for this season, and the parcels remaining in stock are of a light yield. There has only been one small transaction during the week, but anything over 70 per cent. would be worth \$105.

Noshi-ito.—About 300 piculs reported sold during the week: good Oshu done at \$140; good Filature kinds in small quantities at \$130 to \$115; Shinshu, assorted, \$95 to \$110; Joshiu, ordinary to best, \$75 to \$100.

Kibiso.—Some business in Filature kinds at \$117½ for best; Oshu, fair to good, \$90 to \$95; Shinshu, well cleaned, \$75; Mino, ordinary, \$70; Shinshu, second quality, \$50; Koshu, \$40; Joshiu, ordinary, \$30; Hachoji, \$20 to \$15; Neri, \$18; and \$14 for fair to good Shinshu district. Settlements of all kinds 600 piculs.

Mawatta.—Last week saw some rather heavy purchases at \$185; for best Oshu this week there has only been one transaction noted at \$172½, and this is supposed to be for Shinshu.

QUOTATIONS.

| | |
|----------------------------------|-------------|
| Pierced Cocoons—Medium to Fair - | \$90 to 100 |
| Noshi-ito—Filature, Best - | 150 |
| Noshi-ito—Filature, Good - | 130 |
| Noshi-ito—Filature, Medium - | 110 |
| Noshi-ito—Oshu, Good to Best - | 140 to 145 |
| Noshi-ito—Shinshu, Best - | 110 |
| Noshi-ito—Shinshu, Good - | 100 |
| Noshi-ito—Shinshu, Medium - | 90 |
| Noshi-ito—Joshiu, Best - | 100 |

| Noshi-ito—Joshiu, Ordinary - | 75 |
| Kibiso—Filature, Best selected - | 115 to 120 |
| Kibiso—Filature, Seconds - | 110 to 105 |
| Kibiso—Oshu, Good - | 95 |
| Kibiso—Shinshu, Best - | 75 |
| Kibiso—Shinshu, Seconds - | 50 up |
| Kibiso—Joshiu, Fair to Common - | 50 to 30 |
| Kibiso—Hachoji, Medium to Low - | 30 to 15 |
| Kibiso—Neri, Good to Common - | 30 to 12½ |
| Mawatta—Good to Best - | 175 to 185 |

Exchange has not fluctuated much during the week, but closes fairly strong. London credits 4 m/s, 3/9½; New York 30 d/s, 91½; 60 d/s, 91½; Paris 6 m/s, fcs. 4.81. The native Specie Banks have been competing for business and have done a considerable quantity of paper at about 1 per cent. under the rates here quoted. Kinsatsu, yen 110½ = \$100.

Export Tables Raw Silk to 23rd Nov. 1883:—

| | Season 1883-84. | 1882-83. | 1881-82. |

| | Piculs. | Piculs. | Piculs. |
| Waste Silk - | 9,847 | 7,557 | 5,842 |
| Pierced Cocoons - | 1,378 | 2,447 | 1,433 |

TEA.

The closing week shows an activity even greater than that commented on in our last Market Report, and Settlements since the 16th instant amount to the large total of 2,435 piculs, comprising all grades. Prices as quoted below must be considered nominal. Our supplies again are coming in very slowly, and it is evident that native dealers this season intend to supply only the Yokohama Market in such quantity as will meet the immediate requirements of purchasers, and thus avoid any large accumulation of Stock at this port. Good Medium and Fine grades are now very scarce, and it seems impossible that the bulk of these have already come forward to Market. Teas in Stock in Yokohama are estimated but 2,800 piculs.

QUOTATIONS.

| | |
|---------------|--------------|
| Common - | \$10 & under |
| Good Common - | 12 to 13 |
| Medium - | 16 to 17 |
| Good Medium - | 18 to up'ds |

EXCHANGE.

Rates have slightly advanced during the week, but the business transacted has been considerable. At the close rates are firm.

YOKOHAMA: SATURDAY, DECEMBER 1ST, 1883.

DEATH.

At Stoke Newington, near London, on the 26th instant, MARY, relict of the late JOHN GRIFFIN, in her 76th year. (By Telegram.)

On November 30th, at 7 a.m., at the Yokohama General Hospital, of dropsy, R. B. CUTHBERTSON, aged 35 years.

WEEKLY NOTES.

A MEETING was held in the Chamber of Commerce Rooms on Thursday afternoon to consider the advisability of maintaining in Yokohama a church and clergyman of the Established Church of England. The monthly expenditure in connection with this institution is \$270, including \$175 as salary to the chaplain, and there is a debt at present of \$600. The meeting did not appear to be either able or willing to face these pecuniary responsibilities, and for a time it seemed as though the evil days which have overtaken the Settlement would deprive its community of a luxury enjoyed by almost every English village. The debt is now borne by the treasurer, Mr. Edward Whittall, a gentleman

whose name is honorably associated with all Yokohama's charitable undertakings, and the meeting was naturally anxious that some means should be devised for discharging this liability before Mr. Whittall's departure from Japan. It was pointed out, with much force, that little if any difficulty is experienced in procuring subscriptions in Yokohama for purposes of amusement, but that the burden of charitable works generally falls on the shoulders of the same persons, the older members of the community. An addition may be made to this statement—namely, that in no part of the world does an appeal on behalf of a case of real distress meet with a more generous and rapid response from all classes of residents. Reduced to a question of simple arithmetic, however, the difficulty about the Church assumes this form—that three hundred persons must be found to subscribe \$10 each, or one hundred and fifty to subscribe \$20 each, per annum. The former sum is little more than a fifth part of what so many of us pay for the privilege of reading the newspapers at the Club, and the latter is less by one half than the aggregate of the yearly subscriptions to the Boat, Tennis, and Cricket Clubs. The Church, then, must fall to the ground because we value it very much less than our places of recreation. This is an unpleasant truth, but it is a truth nevertheless. Possibly its contemplation may help to swell the list of gentlemen who have come forward as part guarantors of the money required for next year's service.

ON Wednesday evening the Rokumei-kwan, or new Reception Hall, was opened in Tokiyo. At the inauguration banquet the Minister for Foreign Affairs made a remarkable speech, evidently inspired by a most cordial desire to promote friendly relations with foreigners. His Excellency pointed out that the original intention of the building had been to provide a suitable place for receiving distinguished visitors, but that as the work advanced, its projectors become more and more cognisant of the advisability of contriving some means of bringing the Japanese and the foreign residents into closer social contact. With this object the dimensions and arrangements of the edifice had been altered, so that it can be used not only as a reception hall but also as a club, to which foreign members will be admitted as well as Japanese. The project is most excellent, and we trust that it will be fully carried out. The results attained will not, perhaps, be

sensibly great, but a hearty welcome is due to every plan for enabling Japanese and foreigners to mix more freely and learn more of each others dispositions and peculiarities.

AMONG the outward-bound passengers by the P. & O. mail steamer to-day (Saturday), is Mr. Fred. Lowder, legal adviser to the Bureau of the Imperial Government in Yokohama, who returns to England on leave of absence. Few residents of this Settlement enjoy a larger share of the Community's respect and affection, and these sentiments found most hearty expression at a farewell dinner given in Mr. Lowder's honour by the members of the Yokohama United Club on Friday evening. We hope soon to hear of Mr. Lowder's restoration to perfect health, and to welcome him back to a Community which could ill afford to lose so genial a friend and so able a barrister.

VARIOUS reports of a warlike tendency have reached us during the week, some going so far as to announce positively that China has declared war. These alarms are, of course, inevitable under the circumstances. The principal parties in the Tonquin dispute have now brought their disagreements to a crisis which must speedily end one way or the other, and since the French and Chinese forces are within easy reach of one another in the contested territory, rumour has more reason than usual to be an alarmist. But, as we have already pointed out, there is no ground for immediate apprehension. The French have let their opportunity slip. Had they moved resolutely against Bac-ninh three months ago, it can scarcely be doubted that they would have obtained possession of the place without any of the complications which its attack will now entail. But while they occupied themselves with fruitless assaults upon Sontai, the Chinese troops moved quietly down and secured the great advantage of being first on the field. From the outset the French had no serious opposition to apprehend on the part of the Annamites, or even of the Black Flags. The former were incapable of military cohesion, and the latter were, after all, only a handful of men. China was the real difficulty, and since it was well known from the time of the Bourrée treaty that her pretensions would be limited to the district north of the Red River, the French force could have been employed with most foresight and effect in that part of the country. Were the invaders stationed at Bac-ninh now instead of the invaded, things would

present a very different complexion for China. It would be for her to support her protest by aggressive measures, and thus assume the responsibility of striking the first blow, whereas, under existing circumstances, she can challenge the French to dislodge her from the district which she claims the right to protect. At first sight this retrospect seems to impugn the ability of the French commanders in Tonquin. But the inference would be unjust. They have accomplished quite as much as was possible to men who had to fight against heavy odds, against a terrible climate, and against a vacillating policy. Comparing the military programme with the tone of the negotiations in Paris and Peking, one is puzzled to discover any evidences of a common plan. Diplomatically France refused to acknowledge that China had any right to a voice in the pending issues. The Annamese, by the treaty of 1874, accepted a French guarantee of their independence in exchange for a promise to conform their foreign policy to that of France. Thenceforth they were directly answerable to France, and the latter was no more bound to consult the Cabinet at Peking because the former chose to send a tribute-bearing embassy thither, than she would now be bound to negotiate with the Sultan of Turkey did the Bey of Tunis despatch an envoy to Constantinople. But France has not been consistent in her policy of ignoring China. Within a short time after the signature of the treaty of 1874, her Consul at Canton concluded with the Viceroy a Convention which distinctly recognised Chinese rights in the districts of the upper reaches of the Red River. Further, it appears that whenever an Annamite embassy visited Peking, the French Legation offered some species of remonstrance, or made some attempt to prevent the delivery of the tribute, thus perpetually recalling to the Chinese Government's recollection a state of affairs about which the apathetic statesmen of the Middle Kingdom would probably have given themselves no concern whatsoever had they been permitted to ignore it. Nepal and Burmah were included, equally with Annam, in the list of lands that owned Chinese suzerainty, yet the English Foreign Office never took any steps *vis-à-vis* China either at, or subsequent to, the time when the whole of the former and half the latter State passed under British protection. Moreover these errors of French diplomacy were shown to be the outcome, not of accidental bungling, but of a real uncertainty with regard to China's rights. For in a work* published by the chief interpreter of the French Legation in China, the question of the suzerainty of the Middle Kingdom over Annam was discussed after a fashion that gave acknowledged weight to China's claims. All these things considered, French diplomatists' recent attempt to ignore China altogether in their relations with Annam, was attended with considerable difficulty. From the first M. Tricou seems to have adopted this policy unflinchingly. But, he too, was somewhat

* *Histoire des relations de la Chine avec l'Annam-Vietnam*, par M. Devéria.

handicapped. He was obliged to confess that, if he did not come to Shanghai to negotiate, he had no object whatsoever in coming there, and that his visit to Peking was motivated solely by a desire to see the Great Wall. The Chinese statesmen were too astute to be deceived by these shallow pretences. Nevertheless had the policy M. Tricou represented been resolutely pursued both in the field and in the Cabinet, France's position to-day would be much simpler. Had the expeditionary forces made it their first business to occupy the districts to the north of the Red River, they would not only have anticipated China, but also interrupted the reinforcements and munitions of war she undoubtedly sent to the assistance of the Black Flags from time to time. But such a programme demanded a vigour and unanimity of resolution which were unfortunately wanting in the French Cabinet. When Tonquinese affairs were brought before the Chambers last spring, the dangers threatened by China's pretensions, then too tangible to be ignored, were carefully concealed, and the subsidies asked for were too small to accomplish anything decisive. Thus, while a handful of French troops have been bravely struggling to obtain possession of Sontai and other strongholds of the Black Flags, the latter's communications with Canton, *via* Bac-ninh, have remained open, until at last the Chinese troops have marched down and occupied a strong position in the disputed territory. We cannot too much regret this strategical blunder, if such it may be called, for while fully recognising China's right to be heard in a question that concerns the territories bordering her own, it is quite certain that the cause of peace and civilization would be best served by the successful accomplishment of France's designs. Now, however, an immediate advance against Bac-ninh would be little short of madness. Since the beginning of the campaign in Tonquin up to the present time, a total of about 5,000 French troops have been sent there. A considerable fraction must be deducted from this number on account of casualties, while fully three thousand are required as garrisons for the ten posts occupied by the French. Probably the largest body available for operations in the field does not exceed twelve hundred men, a force utterly inadequate to undertake anything against the Chinese. We may be sure, therefore, that even supposing France is willing to engage in a struggle with China, her commanders in Tonquin are instructed carefully to avoid a collision until they are in a position to assume the offensive with some hope of success—that is to say, until they can put, not one, but ten, thousand men in the field. Even so long ago as the end of October, they were engaged in an operation which to military eyes suggests a defensive rather than offensive programme, namely, the construction of a *fil-le-du-pont* at the point where the road from Bac-ninh crosses the Red River. China, on her side, can afford to remain quiet. She occupies the disputed zone of territory, and a forcible attempt to dislodge her from it is the only contingency that need

precipitate war. On the whole, therefore, the first news of any serious change in the existing state of affairs may be expected to come from Paris, and for our own part, we do not look to receive any such news.

THERE have been two tolerably severe shocks of earthquake during the week, but on the whole the present year has, so far, been exceptionally free from seismic disturbances in Japan. It would almost appear as though the force that causes these catastrophes had temporarily exhausted itself elsewhere. In addition to the disasters in Ischia and Java, we have now to hand the particulars of a terrible catastrophe which, on October 16th, visited the Island of Chios, the entire coast of Anatolia and a considerable portion of the interior of Western Asia Minor. The first, and by far the most serious, shock is said to have lasted only quarter of a minute. It was followed by three lesser shocks in quick succession, which were only about half the duration of the first. Thus in less than a minute all the villages between Chesmeh and Vouria were completely wrecked, and at least 2,000 persons buried under the ruins. The *New York Herald's* telegraphic account of the catastrophe at Smyrna and elsewhere is as follows:—

The loss of life in the city of Smyrna proper was not very large, the wave seeming to have spent its force before it reached there; but the scenes among the people were far beyond description. The fear and consternation were terrible. The most resolute persons dare not stay to rescue friends in danger, though many lives might have been saved by so doing. The first thought of all seemed to be self-preservation. Crowds of men, women, and children rushed into the open spaces and the middle of the streets. The caravans bridge was crowded with a motley lot of people, and the camel grounds adjacent were completely thronged with human beings. The castle on the summit of the hill was thrown down with a tremendous crash. The large Roman Catholic Cathedral, a comparatively new building, was damaged considerably, one of the towers falling and killing some eight or ten people who were running wildly from their homes near by. The railway station was badly damaged, and the tracks of the road are so much torn out of line and torn up that it will be impossible to run trains for several days to come. About an hour after the first shock several fires broke out amid the ruins, and added for the time being to the terrors of the situation, but they were put out before serious damage had been caused.

A wave of inky blackness swept from the *Ægean* Sea through the Gulf of Smyrna, bringing disaster to a number of the many vessels in the magnificent harbor. Several ships were carried far upon the shore and landed high and dry in places from which it will cost hundreds of dollars to get them afloat again. The city is in a great state of confusion and uncertainty, and nobody ventures to sleep in houses. Hundreds of rude and impromptu tents have been put up in the suburbs, and large numbers of people who cannot be accommodated even in these meagre quarters are lying upon cots, and even the bare ground, rather than return at present to their more dangerous habitations in the town. The tide, which is ordinarily but twenty-five inches, rose to a height of more than seven feet, sweeping away much of the portable property on the shore as well as a number of fishermen's huts. Several thermal springs in Budja were intercepted for the time, but appeared again shortly afterward of the color of blood. The extent of the field of action shows that the forces which produced this great earthquake were manifested deep in the interior of the planet, and not on the surface only. The pecuniary loss to the city of Smyrna will be very great, but the loss of life will hardly exceed three hundred persons.

In the island of Chios, in the archipelago, a few miles beyond the promontory on which Smyrna is situated, the shocks were felt with terrible severity. The first one occurred almost simultaneously with that felt in Smyrna. The entire four hundred miles of territory of Chios seemed to be for the time but one undulating sea of earth waves following each other

rapidly, like the swell of an ocean storm. The subterranean rumble was followed so quickly by the terrible shock that the people were given neither time to fly nor to throw themselves into the arms of loved ones and bid them an everlasting adieu. Frightful noises succeeded the shock—the terrified cries of human beings and crushed animals. A thick dust was diffused into the air and the sky was darkened as on the darkest night.

The limestone rocks dotting the island were rent asunder. The beautiful valleys were seamed with enormous fissures. The course of the streams which irrigate the fertile plains were suddenly changed. Nearly all of the extensive wine cellars on the island were utterly ruined and the loss to the owners will aggregate an enormous sum. At Kastro, the capital of the island, the castle built in front of the city as a means of defence in the olden time was levelled to the ground. Three small silk factories were totally destroyed, and one cotton factory was damaged almost beyond repair. Of the town's population but few people escaped.

The loss of life in Kastro will aggregate fully nine hundred souls. Most of the dead are Turks. In other parts of the island over thirteen hundred people are so far reported killed, and it is feared that the number will greatly exceed the present estimates when all the outlying territory is heard from. It is, of course, very difficult to get reports from places at a distance from Kastro owing to the difficulties attending travel and the excited state of the populace. Along the coast of Western Asia Minor, or Anatolia, the shocks were felt with great force, and the latest reports indicate that the effects of the earthquake were very severely felt as far into the interior as Kula—over ninety miles east of Smyrna. There is no doubt that when the results of the disaster are fully made known the loss of life and the damage to property in the territory west of the Halys, the Karajah Dag and the continuing range as far as Lake Iber will be very great. All the villages between Cheshmeh and the Voula are totally wrecked, scarcely a house being left standing to mark the sites of the many thriving places which on Monday were scenes of life and bustling activity, for this is one of the busiest seasons with the people of the peninsula. It is estimated that about three thousand persons lost their lives in this part of the country.

The earthquake waves seem to have followed the coast line all the way from Alva to Melissa, and the whole territory over which the great shocks extended was at times rocked simultaneously and sensations similar to sea sickness were experienced by nearly all the inhabitants. Those who watched the sky noticed that the drifting clouds seemed at times to be arrested in their motion. Advices from the interior indicate that the loss of life in that section may reach 4,000 souls, and will certainly number fully three-quarters of that estimate. The number of maimed will be very large. At Eskihissar the dead are about one hundred and fifty. From Sart the loss of seventy-five lives is reported. In Melissa the damage was slight, and the loss of life will not number over fifty, the earthquake seeming to have spent its force near that point. At Gena the dead number about eighty. From many other villages similar reports are constantly coming in at Smyrna, and it is very difficult at this time to make an approximation even of the loss of life. The Porte has issued an appeal to the people to assist the sufferers by the earthquakes, stating that 20,000 of the survivors of the disaster in that region have been rendered homeless.

Anatolia, a large part of which seems to have been devastated by the earthquake of Tuesday, is a peninsula forming the western extremity of Asia. It comprehends various Turkish vilayets and islands, and in its wildest sense appears to include all Asiatic Turkey. Anatolia proper is included between the thirty-sixth and forty-second parallels of north latitude and between the twenty-sixth and forty-first meridian of east longitude, and is bounded north by the Black Sea, the Sea of Marmora and the Dardanelles, west by the Grecian Archipelago and south by the Mediterranean. Its greatest length is about seven hundred miles and its greatest width some four hundred and twenty miles, giving it an area of 270,000 square miles. The surface may be termed an elevated plateau dotted with salt lakes and enclosed by two ranges of offshoots of the Armenian mountain system. Everywhere lofty mountain masses, more or less connected, are to be met with. Much of this formation is of a volcanic kind, and traces of igneous action extend over a considerable space. The total population of the country has been estimated at 4,500,000, of which some the Ottoman Turks constitute about nine-tenths; the remainder are Greeks, Armenians, and gypsies. Agriculture (sugar cane growing) is in the most rude and primitive state, and roads, as understood in civilized countries, are unknown. Manufactures are practically unknown. The village of Cheshmeh is in Asia Minor, opposite the

island of Scio, forty miles south-west of Smyrna. It has a population of six or seven thousand and a large citadel, the residence of a Turkish Governor. It was at Cheshmeh, in 1779, that the Russians burned the Turkish navy.

A LETTER from Saigon to the *France*, speaking of terrible cruelties committed by the French soldiers in Tonquin, appears to have excited great astonishment and indignation in Paris. Our readers will remember that when the news of the capture of Hué reached Yokohama, we commented on the strange fact that while the French casualties only amounted to one man wounded, the Annamites were reported to have had twelve hundred killed. This discrepancy seemed too great to be accounted for by mere superiority of weapons or tactics, and rumours were subsequently circulated to the effect that great and unnecessary mercilessness had been displayed by the attacking force. The letter referred to above accuses Admiral Courbet of issuing a general order that no quarter should be given to men, women, or children, and then goes on to say that three hundred Annamites who had taken refuge in the Bay of Thouan, were shot down to a man, while one hundred and fifty more, who were drifting in a junk, without arms or oars, were also massacred. The *Temps* denies that Admiral Courbet gave any such order; but admits that 1,200 of the enemy were slain at Thouan. The *Figaro*, on the other hand, seems to credit the charge against the Admiral, and declares that he permitted these atrocities, at the instance of Commissioner Harmand, in order to terrorize the Annamites. We do not attach the slightest faith to such accusations, so far as the French officers are concerned, but it is difficult to avoid a conviction that the conduct of the men has not been worthy of their nation. A letter, of which we published a translation some days ago, contrasted the discipline of the military and naval forces very unfavourably to the former, and said that the troops at Hué were entirely beyond control. The history of campaigns is seldom free from some incident showing that when men's combative instincts are roused, the thirst for blood often becomes an uncontrollable mania. But these savage propensities are fortunately not easy to excite. In the circumstances of the attack on Hué and in the nature of the resistance offered by the garrison, there was certainly nothing to warrant a display of ferocity such as that attributed to the French soldiers. Additional and much stronger evidence is, therefore, necessary before credence can be given to rumours of this disgraceful character. Meanwhile, we observe that a reward of two thousand dollars is still set upon the head of the leader of the Black Flags, Lun-vinh-Phuoc, by the French authorities. Yet the writer of the letter exposing and condemning the cruelties supposed to have been perpetrated at Hué, finds a valid excuse for French fury in the fact that Commandant Riviere's head was carried off as a trophy by the enemy.

An extraordinary story has been telegraphed from Vienna to New York. A girl of great

beauty, who occupied the post of *demoiselle de comptoir* at the Volksgarten, was loved by the son of her employer, Herr Szabo. The young couple announced their intention of getting married, whereupon Szabo dismissed the girl from his service. As this measure proved ineffectual, his wife subsequently wrote to one of her friends, an inspector of police, declaring that the beautiful waitress was ruining young Szabo, and begging the inspector to find some means of removing the girl from Austria. Upon the receipt of this unsubstantiated denunciation the inspector ordered the waitress to be arrested. She was taken from her humble lodging at night and placed in a cell with the lowest class of female criminals. The next morning she was informed by the Police Commissioner that unless a remittance she expected from her mother in Bavaria arrived within twenty-four hours, she should be sent out of Austria in charge of a gendarme. Overcome with grief and shame the unfortunate girl drew a revolver which she had concealed on her person, and placing the muzzle against her breast, shot herself dead. The event has caused a terrible sensation in Vienna, where the citizens are said to be at fever heat against the police—the only institution of the Austrian Empire that has undergone no improvement since the days of Wallestein or Prince Eugene.

NOTES.

We read in a French journal that China's relations with Russia are not of the most amicable character. In the beginning of July last, it is stated, a Chinese dignitary, the military Governor of Hun-chun, arrived at Vladivostock with a brilliant staff, and demanded an audience with the Russian Governor, General Baranoff. Admitted to the latter's presence, the former, in an arrogant fashion, required the restoration of a village called Savelofka, which the Russians have occupied since 1864. General Baranoff replied that he was not empowered to deal with such a question, and that if China had anything to complain of, the Cabinet of Peking should address itself to that of St. Petersburg. Thereupon,—so the story runs—the Chinese officials marched out of the room without saluting or paying any regard to the commonest forms of courtesy. The General was a little shocked by this procedure. He sent an aide-de-camp to inform these extraordinary ambassadors that unless they quitted Russian territory within twenty-four hours, he should send them to the frontier under escort. In connection with this story, we are informed that Russian troops are embarking at Odessa for Vladivostock, and that an iron dock has just been despatched from England to the same place, but we do not apprehend that the relations between the two empires are likely to be disturbed by a mere question of *savoir-vivre*.

THE Pope's liberality in opening the Papal archives to students of history will probably be the means of adding largely to the historical treasures of the nineteenth century. Strange

stories are told about the documents composing these archives. It is said, for example, that the Jesuits have obtained possession of all the papers which concern themselves, and, again, that many important writings lie buried in the garden of the Vatican. Recent telegrams from London, also, speak of systematic efforts on the part of the clergy to hide away the archives lest the Italian Government should carry out its rumoured intention of assuming their custody. The archives of extraordinary ecclesiastical affairs, of the Propaganda, of the Inquisition, and of the Congregation of the Index Expurgatorius are said to have been thus served, and many others are believed to be concealed on secret shelves within walls or behind masses of papers. What the library does contain, it would be very difficult to tell. The documents recently made away with by the clergy were originally kept in the Palace of the Quirinal, where they would have fallen into the hands of the secular power had not a Papal emissary obtained permission to remove them by persuading the Commander of the Italian troops that it was simply a question of baptismal registers without historical value. Even if these are missing, there still remains a goodly array of documents stored in the three floors of one of the Vatican buildings called the "Specola." "The first floor, consisting of eight rooms, is called the "Department of Avignon," and is entirely taken up with the rescripts, bulls, briefs, and apostolic letters collected by the Popes at Avignon during the period of the schism. The four large rooms into which the second floor is divided contain what are called the archives "del Castello," a collection of documents referring to the temporal power. The collection derives its name from the fact that it was formerly kept in the Castle of St. Angelo. The space on the third floor is entirely devoted to the correspondence of the Popes with the Nuncios credited to the different foreign Powers." The mere recital of such historical treasures is enough to throw students into a flutter, and we may expect to hear, one of these days, that the "Specola" has well repaid earnest research. It will be no easy matter to consult the archives, as they are not catalogued, and the only attempt hitherto made to divide them has been their classification by countries. But difficulties of this sort are not likely to deter explorers when rewards so large are in prospect.

THE holiday experiences of Mr. Thomas Hughes in New York constitute a chapter of solace to those who believe that the world of the nineteenth century, in its merciless rapidity of motion, has shaken off all the simplicity and freshness of its more restful days. Mr. Thomas Hughes left Ireland in 1849. The gold-fields of California were the object of his travels, and after a few years of persevering industry, he became possessed of a valuable mine. Money soon came in as fast as he could gather it, accompanied by the honours it always brings in its train, as, for example, the presidency of the board of aldermen of Tucson. In 1883 the successful digger grew home-sick, and thought

he would pay a visit to the places of his nativity. As a necessary preliminary, he put fifty-two thousand dollars in his hand-bag. Then he started for New York, and arriving in the great city on the 21st of September, lost not a moment in going out to see the sights. During his residence in the West he had heard splendid tales of the Bowery, and had learned to believe that a man need only walk a few blocks of that celebrated thoroughfare to see "bald-headed snipes of the prairie" making targets of each other, or policemen clubbing "snoozers from the upper trail." But the Bowery was not true to its reputation on the day of Hughes' visit. He saw only busy wayfarers and hurrying citizens. Wearied and disappointed, his eye at last fell upon a saloon window with the name "Mike Cleary" blazoned in golden letters. The returning patriot felt that the owner of such a title must be a chip of the true old Hibernian block. He stepped in and invited Mike to drink. The invitation was accepted, repeated, returned, and *vice versa*, until Hughes became communicative. He wanted to see the city, he wanted to have a good outing, but above all, he wanted to witness a genuine pugilistic set-to. Mike was most obliging. He was charmed with the ingenuous old geologist, and longed to introduce him to a benevolent friend, by name William Bennett. The ceremony was performed that evening, the three men examining one another repeatedly over their little fingers. Then they began to do the city, and so thoroughly did the two chaperons discharge their duty in this respect, that before half a dozen days were past the miner had disbursed three thousand dollars on account of cigars and drinks alone. Then his combative proclivities asserted themselves vehemently. He grew enthusiastic about prize-fighting, and said he would give anything to see a thorough-paced mill. Mike thought there would be no serious difficulty. It was only a question of money, but he was politely sceptical as to the ex-alderman's willingness to put up the necessary amount. Thus challenged, the old miner produced a certified cheque for \$10,000, and handed it over as security that he meant business. Another introduction was now accomplished. The miner was presented to "a responsible gentleman of sterling integrity" who had consented to act as stake-holder. This was a householder by name "Shang" Draper, a burglar and ex-convict, who made no difficulty about taking charge of a thousand dollars, the preliminary deposit. Articles of agreement were now drawn up for a match between Sullivan and Mace, for \$10,000 a side, and on the 4th of October the miner handed over his second deposit of \$4,000. The final deposit of \$5,000 was to have been paid on the 6th, but on the 5th, Mr. Hughes learning something of "Shang" Draper's real character, became alarmed and went off to Washington to see Sullivan himself. Sullivan told him that Cleary had no authority to make any match of the sort, and recommended immediate proceedings to recover the \$5,000 already deposited. The old miner hastened

back to New York, only to learn, however, that as he had failed to pay up the second \$5,000 on the appointed day, all the previous deposits were forfeited. It was an artistic plant, which Hughes should have thankfully included among the experiences he had come to enjoy. But he appealed to the Tombs Police Court, and the magistrates put Cleary, Draper, and Bennett under heavy bail to appear for subsequent examination. The defence was that the intentions of these gentlemen were honest, and that a fight would actually have been arranged. Mr. Thomas Hughes showed himself game to the last. He didn't care a cent about losing the money, he said, but he did care about being "played for a sucker." We can only hope that in Ireland his American disappointments may be compensated by the sight of some bailiff-beating or landlord-shooting.

THE love of litigation is a strange fantasy. Mr. Abraham B. Miller is a warehouseman, doing business on the East River front both above and below the lately constructed New York and Brooklyn Bridge. Shortly after the building of the bridge began, he instituted a suit to prevent its erection in the manner proposed. The Act of Congress authorizing the structure provided that "it should not obstruct, impair injuriously, or modify the navigation of the river." This Act was referred to the Secretary of War for arithmetical interpretation, and he decided that a height of 135 feet above mean low water in the centre of the span would satisfy the provision. Even with that height, however, it is plain that vessels having very high masts could not go under the bridge without striking or lowering their upper spars, and upon this fact Mr. Miller based his suit, which he has carried on for years alone and unaided. Meanwhile the roadway of the bridge has sunk about 4 feet, but as it was originally raised more than 139 feet, it is still above the minimum height, though its descent has proved fatal to the masts of more than one vessel. The strangest part of the business is that if Mr. Miller gains his suit, the only result will be another Act of Congress legalizing the bridge as it stands. The worthy litigator is well aware of this. He has before his eyes the case of the Wheeling Suspension Bridge, which had to be thus converted from a law-breaking, into a law-fulfilling, structure. Yet he goes on spending his money on the costly whim of compelling the legislature to legalize its error. It is a pity that such a superabundance of public spirit is not better directed.

THE New England Reform League is a body composed of about fifty gentlemen, "eminent in their several callings," who formed themselves into a league a year ago with the object of "promoting an improvement in public sentiment and legislation on the subject of divorce." The League has a valid *raison d'être*. Statistics have been collected showing an immense increase in the number of divorces that take place in the United States. In Maine, Rhode Island, and New Hampshire there is now one divorce

to every ten marriages. In Ohio the rate has risen from 1 in 26 to 1 in 17. In Chicago, Louisville, Connecticut, and Michigan, it is 1 in 13, while in San Francisco and several counties it is 1 in 6. The investigations of these fifty gentlemen go to show that the number of divorces is directly proportionate to the legal facilities for obtaining them. It may be presumed that if the law offered no difficulties whatsoever, conjugal constancy would be unknown in the West. We trust that things are not quite so bad as this, but they are certainly in a condition with which the much-abused customs of the Orient will bear momentary comparison.

In the *North China Herald* we find a note with reference to the relations that exist between the *Japan Mail* and the Japanese Foreign Office. It seems a little strange that a subject of this sort should be so constantly brought forward, but public curiosity requires aliment of some sort. The *North China Daily News*, too, approaches the question in a fashion that does not entirely preclude discussion, and leaves us free, as we were always quite willing, to state the simple facts. When the *Japan Mail* passed into the hands of its present proprietor, the support it received from the Japanese Government was not more than that afforded to any of its local contemporaries. Three months afterwards the official subscription was largely increased, but the increase was neither solicited nor accompanied by any conditions expressed or understood. Had it involved any sacrifice of independence, it would certainly have been rejected. Nevertheless, since in past years some relations were known to have existed between the Foreign Office and the *Mail*, the proprietor deemed it advisable, while acknowledging the Government's support, to disavow all contingent responsibilities. On that plain footing the relation has ever since stood. We leave it to our Shanghai contemporary to determine for himself whether, under these circumstances, he rightly describes the *Japan Mail* as "an organ of the Gwaimusho," or whether he is justified in speaking of its "accepting duties that pertain to a kept paper." It is difficult to devote space to these explanations without an uneasy feeling that we are egotistically obtruding upon our readers' notice matters of no public interest whatsoever. Our desire has always been to address ourselves through these columns to men who value reason and logic too highly to ignore both on account of a suspected motive. Yet since our private affairs do seem to possess some interest for our neighbours, we will venture to trespass still further on our readers' indulgence, and to explain, that of the proceeds of the Government's subscription every dollar has been expended upon the improvement of the paper. Nothing whatsoever has gone into the pocket of the proprietor, who by endeavouring to supply the foreign residents of Japan with a journal worthy of their intelligence, has so far exceeded the support they were able to offer that he finds himself to-day a much poorer man than when the *Japan Mail* first came into his possession. It is a little hard to be obliged

to take the world into one's confidence in these respects, but it is still harder to be openly accused of sacrificing self-respect and independence to conditions which have neither material value nor real influence. The editor of this journal has lived many years in Japan; has devoted much time to the study of the people and their language; has made many valued friends both among official and unofficial classes. That he heartily sympathises with the aspirations of the nation and its efforts, and that he regards with regret and humiliation the illiberal and injudicious policy pursued towards it by many Western States, he frankly acknowledges. He does not hide from himself that the Japanese case presents weak points, and that the Japanese methods of urging it are sometimes open to criticism. But, in all verity, there are fault-finders enough in the field. Were there none to say a friendly word or advance a just plea on behalf of this people, they might properly regard us as the captious and inimical aliens our pretended representatives try to make us appear. The true interest of foreigners in Japan is identical with the interest of the Japanese themselves. Neither can be materially advanced until the unhappy obstructions set up by race prejudice are cleared away from the path of free intercourse. Japan is earnestly anxious to get rid of those obstructions. Many foreigners act as though they were equally anxious to perpetuate them, and the result, disgraceful alike to our intelligence and our civilization, is a miserable deadlock which we shall spare no efforts to remove whatever Ministers may be in power and whatever support they may extend to the *Japan Mail*.

PUBLIC attention in the United States has been recently directed to the extortions practised by Custom House officials. Mr. Francis Whiteley, a merchant of New York, was the first to bring the matter to the attention of the authorities by preferring a charge of black-mailing against a Customs Inspector who had refused to pass his baggage without a fee. Subsequent investigations tend to show that fees are expected as a matter of right by many officials, and that failing such douceurs they will not hesitate to annoy, and even to insult, a passenger. Mr. Whiteley's example was followed by a Mr. Donat, who said that when, in company with his partner, he landed in New York a year ago, he was accosted by a tall well-dressed, authoritative looking man, who told him plainly that he had better pay something to the inspector or look to be detained a long time. The traveller was reluctant at first, but finally nodded acquiescence, upon which the tall man called an inspector and Mr. Donat's luggage was marked "passed," without undergoing any examination whatsoever. The inspector then asked whether the money was ready, and being answered in the affirmative, put out his hand, took what he was given and transferred it without examination to his pocket. The New York merchant says that he "got even" with his black-mailer by handing him a shilling instead of a sovereign, but a well-known Custom House

official has emphatically recorded his disbelief in this story on the grounds that an inspector "would know the difference between the feel of a shilling and a sovereign on the darkest night you ever saw." In Mr. Donat's case the baggage examiners extended their system even to his cab fare. They were very polite about procuring a vehicle and then demanded double the proper fare. These disclosures furnish material for a little newspaper agitation, but to the public in general they convey no intelligence. A protective system may be a good device for revenue purposes, but its effects upon commercial morality are matter of history. If abuses of this nature flourish in America, it is not, we presume, because American officials have less regard for probity than officials anywhere else, but because their temptations to be dishonest are stronger. At the same time it is only fair to observe that Americans themselves do not admit the impeachment. They say that the habit of offering bribes to custom house inspectors has been introduced from Europe, where, in the words of the *New York Herald*, "you've got to see everybody wherever you go, government officials and all." In support of this assertion the same journal tells a story of a New Yorker whose first travels took him to London on a day when the Queen happened to open Parliament. Being a little "full" as he stood in the crowd to see the Royal procession pass to Westminster, and being, moreover, "disgusted with the universally outstretched hand for the inevitable fee," he determined to take time by the forelock for once, and accordingly threw a sovereign towards Her Majesty as she rode by, shouting:—"There you are! Take your share, — you!" The date of this event is not recorded, but the evil effects of European, and especially English, example were evidently felt very soon in America. Twelve years ago a gentleman arrived in New York with a dozen pairs of fine razors among his baggage. He declared the razors and asked how much duty he should have to pay, whereupon the inspector put two of the razors into his pocket with the remark "this makes it all right." It is very proper and pleasant that attempts should be made to correct these abuses, but on the whole the effect of the effort will probably be to increase the perquisites of the black-mailers.

NEWSPAPER fictions are always considered safe when Japan is the theme. No writer with a taste for the marvellous need be at a loss so long as this Empire is within reach of his pen. Among the "literary notes" floating through the press of England and America, we find the interesting statement that the Mikado is so much enraptured with Mr. Edwin Arnold's poem, "The Light of Asia," that he has written a private letter of congratulation and eulogy to the author. This may fairly be held up to admiration as the prize Oriental falsehood of the year. Other fables may have some conceivable, even if illusory, basis to rest upon; but this possesses the pleasing singularity of being utterly destitute of credibility, in whatever aspect it may be

regarded. The inventor's imagination has carried him to a point beyond the widest stretch of possibility.

THE mania for mastering the Niagara whirlpool is unsubdued, and the record of attempts to repeat Captain Webb's undertaking is becoming a little wearisome. All hazardous swimming exploits in the river are now forbidden by authority, but efforts to achieve distinction by other methods are not wanting. The skeleton boat, constructed in imitation of the *Maid of the Mist* having once passed safely through the perilous gorge, was carried back to the starting point and launched again, a few weeks ago. On this occasion, considerable difficulty was caused by the endeavours of various individuals to take passage on the fragile craft. One man, named James Scott, belonging to the neighborhood, succeeded in concealing himself until the last moment, and was highly indignant at being compelled to abandon his project. The vessel accomplished her voyage in much the same manner as on the first trial, suffering no serious injury at any part of the course. But a smaller and much stronger boat, fourteen feet long, which was sent on the same errand, immediately after, was seized by the revolving current, whirled around with immense force, and finally dragged beneath the surface into depths from which it did not reappear. So the question as to the navigability of the lower rapids is a trifle more unsettled than ever.

THE geography of Tonquin is so little familiar to the general public that few persons find it easy to appreciate the relative positions of the French and Chinese, or to follow the course of the negotiations that have taken place between the Cabinets at Paris and Peking. The rough sketch given below will, perhaps, help to elucidate the situation. The dotted line passing through Hung-hoa, Thuyen-kwang, and Kobang is the limit proposed by the French for their protectorate in Tonquin, a proposal that excludes China from the whole province with the exception of the triangle, of which Sontai forms the apex, while Laokai and Kobang lie at the extremities of the base. China's counter-proposal is that the French protectorate should be pushed back to the canal of Thai-Binh, which constitutes the water-way between Hanoi and Haiphong, and that a custom house should be established at Hung-hoa. According to this scheme of partition, France would occupy the whole province to the South of the Red River, and about half the delta of the stream. Meanwhile the van of the Chinese army is posted at Bac-ninh, a town situated on the main road from Hanoi to the province of Canton, and about the centre of the disputed district. Bac-ninh appears to be strongly fortified. A recent reconnaissance showed Krupp guns in position there and resulted in a resolve to defer further operations. According to the telegram received on Saturday last, Admiral Courbet had received orders to advance against the place, but this rumour does not appear credible. What-

ever may be the ultimate consequence of the Chinese manifesto, its immediate effect will be to temporarily check French advances northward of the Red River. Admiral Courbet's handful of men would doubtless be ready to undertake an expedition to Peking itself if they were directed to make the attempt, but there are limits to human capabilities, and it is not likely that a force which is scarcely strong enough to hold its own against the Black Flags, will be ordered to engage the Chinese army also. On the other hand, Bac-ninh and Hanoi are so near that a collision between the forces occupying the two places is at any moment possible, and we are disposed to think that M. Ferry and the Marquis Tseng, recognizing the imminence of this peril, will spare no pains to bring the negotiations to an amicable termination. The scheme of deferring further discussion until after the extermination of the Black Flags and the occupation of the whole province by the French did not include the contingency of a Chinese army posted in the middle of the disputed district.

HEREDITARY mania in the United States sometimes takes the form of recklessness in the use of pistols and shot-guns. The Redmond family's case is in point. John Redmond's two nephews were building a fence, when their uncle was rash enough to dispute the line they followed. They settled the question by silencing him in perpetuity with a shot-gun. The occurrence did not attract much notice, as all the Redmonds were known to be desperate men. John Redmond junior was no exception. On the 15th of October, he visited Satesville, and finding an immense crowd of country folk who had assembled to see a circus, he rode among them, flourishing pistols and defying everybody. By and bye he espied a coloured man, Charles Campbell, with whom he was not on pleasant terms. He, therefore, took two shots at the negro, but missed his aim. Campbell then opened fire with varied success. His first bullet lodged in the abdomen of an old gentleman who was standing by. His second entered the leg of a little child, and his third pierced Redmond's heart. Campbell was carried off to jail, but Redmond's friends took him out the same night and lynched him. It is exceedingly rash on the part of coloured men to resort to violence in defence of their lives.

THE Chinese Consul in New York, speaking of the probable effect of a war between France and China, said, on the 3rd of this month:—"The

trade between China and the United States is very large and likely to be affected by a general war, but the ports of China are so directly connected with foreign interests, that to blockade these ports would be to affect foreign interests to such an extent that the French would hardly dare to attempt it. The principal mail port of China is Hongkong, and to blockade the river to Canton would necessarily cut off Hongkong from foreign intercourse. He did not think the French would be likely to get their country into a quarrel with England and the United States, as well as other nations, by blockading this port, for, by so doing, they would shut out the greater portion of trade. He believed before the war reached such a stage the other nations affected would intervene and put an end to the strife. New York merchants were interested. Before a general war could take place it would be necessary to give ninety days notice to foreign nations, during which time the United States could get out all the teas and silks, required for a year, and although it would cause a rise in teas and silk, no actual scarcity would be felt for that length of time. The United States could also export to China large quantities of American products. It was, however, believed France would hardly dare to close up the Chinese ports, especially Hongkong, and so long as that was kept open American trade would not be seriously interfered with." It is possible that the American interviewer may be ignorant that Hongkong is a British, and not a Chinese, port; but a Chinese Consul is hardly likely to fall into such an error. The charlatanism of reporting personal conversations, as worked by the Americans journals, is daily more apparent.

THE report of the proceedings of the Dai-Sek-kiyo-kwai, on the 19th and 20th instant, is not pleasant reading to those who, as friends of Japan, have some respect for her reputation. No incident in the history of this country's recent progress has moved the outer world to more earnest and just admiration than her display of religious tolerance. When we remember that aversion to Christianity—an aversion founded on the political intrigues of Jesuit propagandists—was at the root of all her anti-foreign prejudices, it seems only logical that in divesting herself of the latter, she should lay aside the former also. But when has religion shown itself submissive to the rules of logic? Even at this very moment of writing, a majority of the English people practically declines to admit that a man can honestly discharge the duties of a member of parliament without subscribing to the forms of a faith in which his conscience forbids him to believe. Japan may fairly claim to have advanced a step farther than that. She has removed every barrier to freedom of thought. Disciples of Christianity are not less eligible for secular offices than followers of the Buddhist or Confucian creeds, and foreign missionaries are permitted to preach the faiths they profess wherever they please throughout the Empire. No more convincing evidence could be furnished of the Government's sincere adherence to the

principles of progress. But with the student class a different spirit seems to prevail. If we may judge by the conduct of the youths who disturbed the proceedings of the Sekkiyo-kwai, they have so misread Mill, Huxley, and Spencer, that their idea of supporting the cause of reason is violently to impose silence upon every expression of adverse opinion. They will do well to reflect whether the materialistic doctrines they themselves so ardently support, could now be publicly avowed with safety had not the progress of thought been long ago freed from the restraints of intolerance and prejudice. The philosophy of Mill and Spencer did not grow up under the shadow of an Inquisition or within sight of the stake and the rack, and when the disciples of that philosophy have recourse to the repressive policy of the past, their conduct is at once unworthy of their masters and false to the spirit of their faith. There is but a small interval between the displays that disgraced the synod of the Sekkiyo-kwai ten days ago and the pitiable fanaticism that consigned Cramer to the flames and Galileo to a dungeon in past centuries. There will doubtless be persons ready to condone such youthful intemperance, and to attach little importance to the demeanour of a party of students. But we cannot forget that these young men who refused to allow their own countrymen a fair hearing, are in a measure representatives of the generation that is growing up under the influence of Western civilization. It is for that generation to show what the world may expect of Japanese intelligence and we can assure them that their recent exhibition of rude intolerance, however much of it may be attributed to the giddiness of youth, is inevitably significant of their incomplete adaptation to the improved social conditions of their country.

PROBABLY the largest piece of casting ever manufactured in Japan was accomplished at the Mitsu Bishi Engine works on Thursday in the presence of a number of visitors. It is a cylinder for a compound engine, and weighs about five tons. The directors of the work deserve great credit for the perfection of their arrangements.

A TELEGRAM from London to the New York Associated Press dated the 5th of November says that "the dispute between China and France has reached the verge of open warfare." The most explicit and positive instructions, looking to the proper and thorough conservation of British interests, were yesterday and to-day issued to all the departments. Inquiry at the Admiralty Office, where during the past forty-eight hours unusual activity has prevailed, elicited the fact that the Lords of the Admiralty had been directed to proceed at once to completely re-enforce the British fleet in Chinese waters. It is understood that the majority of the heavier vessels of the British fleet will be divided between the Chinese ports and the remainder maintained on rapid cruising duty, and British traders and residents at different ports will be at once offered shelter. A rumor is current in this city to-night that orders have been issued

to naval commanders to resist all attempts on the part of the French to blockade any Chinese ports where there exists actual British interests. It is reported that a conference has been arranged between the Marquis Tseng and Earl Granville, Minister of Foreign Affairs, Lord Harrington, Minister of War, and Lord Northbrook, First Lord of the Admiralty."

THE annual report of the Washington Mint Director shows that the gold received and operated upon during the year was valued at \$49,000,000, while the silver amounted to nearly \$39,000,000. The coinage for the year was valued at \$66,200,704, the total gold coinage being \$35,936,927 and the silver \$28,835,470, of which \$28,111,119 was standard dollars. The profits on the coinage of silver dollars amounted to \$3,701,331, and the silver profits of the last five years amounted to \$13,860,310. The silver circulation, the Director says, is in excess of the requirements, and he expresses a belief that the equal coinage of both gold and silver by all nations is desirable. He suggests that Congress should consider the question whether the law directing the monthly coinage of two millions of silver dollars should not be modified or repealed. The Director recommends that the coinage of the gold dollar and the three-cent nickel piece be discontinued, and the repeal of the Act authorizing the coinage of the trade-dollar and that the latter coins be sent to the mints and exchanged for other silver dollars. The production of gold during the current calendar year will be about \$32,000,000 and silver about \$49,000,000 and silver about \$49,000,000. The estimated circulation of coin on October 1, 1883, was \$544,512,699 gold, and \$235,291,323 silver.

MAN has been so much accustomed, "since Adam dug and Eve span," to wear the skins of the beasts that he has conquered in the chase, that it is not astounding by any means to find him more or less consciously wearing the skin of his deceased fellows. The practice of tanning human hides dates back at least as far as, if not farther than, the time of Ziska, who ordered that part of his epidermis should be made into parchment for the cover of a drum, so that his carcass though dead might yet speak to his soldiers. Now-a-days, if we may believe General Butler, one of the best of American strategists, and a hero of the great war—a dead pauper's skin is an article of value as mere peltry. The General appears to believe that many a pretty woman in New York is gloved and booted with the hide of her antecedents. A Boston telegram to a Chicago newspaper, dated the 20th of October, says:—"Before the Senate Committee on Education and Labor this morning, Charles T. Chance, a Somerville tanner, testified:—"The men complain some about this tanning human hides. I saw hides myself as much as five or six years ago, and know men who heard of them eleven years ago, and knew men who heard of them eighteen years ago. The business has been increasing ever since, until lately. Three

or four months ago it was stopped. I have seen several whole hides of women that had been tanned. They were perfect and looked as natural as life. I have seen them at Muller's tannery at Cambridge, the last one about a year ago. Dan McDermott of Somerville saw one; also a man named Warster of Somerville. Dan McDermott cut a piece off and carried it in his pocket two years. The proprietors must have known of it. Men told me the proprietors did most of the work on these hides with their own hands. There are plenty of men who could tell all about this, but they don't dare." But the *New York Nation* ridicules General Butler's idea. It says:—"Butler's strange infatuation for his 'tanned human skin' issue has received another shock. It was shown long ago that the specimens which he exhibited as evidence of the horrible uses to which the bodies of paupers were put by the people of Massachusetts, never had any other origin than the freakish desire of a medical student to see what kind of leather the human skin would make. There was no evidence that the skin used had been taken from a Tewksbury pauper. Yet Butler goes on talking about it, circulating campaign documents with pictures of it, and even printing a Republican ballot on paper which is colored like it. He also paraded before the investigating committee a shoe which he said was made of human skin. The firm of tanners from whom the Governor obtained all his 'samples' now come forward, and say that he is wilfully misrepresenting the facts about them, and that 'there is no more human skin about the Tewksbury shoe than there is about a buffalo robe,' it being made of dog-skin. Yet we doubt if Butler will abandon his 'issue' even now. It is about all he has, and he has succeeded so well in the past by appealing to the prejudices of the lowest and most ignorant voters that he has little faith in any other kind of campaigning."

THE instinct of the public is seldom entirely at fault. When a civilized and intelligent community assumes the duty of executing its criminals without waiting for legal sanction, it may fairly be presumed that there is real need of sterner and swifter restraint than that provided by the written codes. This is forcibly illustrated in some of the police records of the United States. The people have no solid confidence in the vitality of official justice, so they take upon themselves the duties of judging and punishing offenders. The third page of the *New York Herald* of October the 13th offers suggestive evidence upon this point. We read there, first, of the execution of a man called Ellis Craft, who, in company with one William Neal, broke into a cottage in Ashland, Kentucky, criminally assaulted two girls, and then having murdered them as well as their brother, a cripple, set fire to the house. These men were arrested on the confession of one George Ellis, who declared that he had been an unwilling witness of, and to some extent a participator in, the crime. Ellis was condemned to life imprisonment in the

penitentiary, but this sentence did not satisfy the mob. They took him from jail and hanged him, and the propriety of their act was acknowledged by the man himself, who, with the rope about his neck, declared that he justly merited the severest penalty. Popular opinion was equally resolute, though its practical expression was less successful, in the case of Craft and Neal. Their immediate death was demanded, without the formality of a trial, and the State employing military power to protect them, three men were killed and twenty wounded in the controversy that ensued. Craft was executed on the 15th of October, two years and ten months after the perpetration of his crime, the greater part of that interval having been occupied in trying him twice over, once in the ordinary course and once on appeal. Neal is still to be retried. No wonder that people who dislike revolting crimes chafe a little at such cumbrous and tardy processes. Reading on a little farther in the same sheet, we learn that Henry Kyle, an eighteen-year-old negro boy, was seized, on the 11th of October, while assaulting a five-year-old girl, and given in charge of two bailiffs. The officers had reached a ferry below Spring Creek when they were overtaken by a band of mounted masked men, who demanded that the prisoner should be turned over to them. The bailiffs declining, a fight ensued, ending, of course, in Kyle's capture. The next morning, the negro's lifeless body was found in the creek "riddled with bullets from head to foot." The telegram adds:—"No steps to make any arrests have been taken and none are anticipated."

On the same day two drunken negroes, of Russellville, shot and killed a white man who was also drunk. The negroes were incarcerated, but a mob took them from jail, a few hours afterwards, and hanged them. The mob is said to have been "composed of good citizens." Frequent as are these applications of Lynch law, we never hear of any penalties inflicted on the lynchers. It ought to be possible to arrest and convict them, but no efforts seem to be made with that object. The people decide for themselves who shall be summarily punished and who shall be left to take the many chances of escape offered by ignorant or partial juries and dædalian processes. Their decision is virtually final, absolutely so where a negro is concerned, and their arbitrary assumption of jurisdiction leads to nothing more than some half-hearted expressions of order-loving citizens' regret.

A WRITER in a Hongkong contemporary, exponent perhaps of colonial opinion, seems to think that the importation of jinrikishas into the Island of Fragrant Streams is not an unmixed good. He observes that to "drive through the labyrinth of Queen's-road jinrikishas is beyond a joke, as I have recently had occasion to practically prove. To drive at snail's progress is about the only speed that can be adopted without risk of hurling jinrikishas and their happy (?) occupants to the realms of Heaven-knows-where. The

trouble is, that the more cautious one is, the more considerate one may be, the more one is imposed upon by downright refusal to make way an inch for one's self and quadruped. It is the old story of boats and junks crossing a steamer's bows at imminent danger distance, just for the fun or the luck of the thing. I should not hesitate to teach the jinrikisha coolie a practical lesson not to bar my progress by blocking up the left, middle, and right of the road, did I not refrain out of consideration for the unfortunate occupants of his vehicle. It is not pleasant to see a stout Dutch captain and a still stouter Dutch captain's wife, in a chaotic state in the gutter with their jinrikisha topsy-turvy and the bearer flattened to the consistency of a pancake by the united weights of the captain, his wife, and the jinrikisha being precipitated on the top of him. And yet, this may be the result of a mere touching of jinrikisha wheels by an endeavour, by no means reckless, to penetrate the present every evening confusion of the Queen's-road jinrikisha traffic. Heaven help the general state of things if the tramway and jinrikisha traffic are *both* to flourish in the early coming by and bye."

The same writer asks:—"Has anyone ever studied the effect produced on an individual by being run into by a jinrikisha?" He answers:—"I have. The temper it gives rise to is something astonishing to behold. Of one special occasion I may say, however, that had the jinrikisha coolie, who was so summarily dealt with, turned round and given his maltreater a jolly good licking, I should have stood by and said—it served him jolly well right. No man is justified in giving way to his temper to the extent of beating a coolie unmercifully with a by no means small cane, because he happens to be run into—he being in fault the whole time by walking in the road."

Or late years there have occurred many deaths from hydrophobia in Shanghai. At the latest meeting of the Shanghai Municipal Council a curious application from the Chinese officer in charge of the "Dog Refuge" was read. We quote from the *Mercury*. The "native asked for permission to send two or three coolies into the Settlement with a box for the purposes of catching stray dogs, which would afterwards be taken to the Refuge, and be kept and fed." The Conscrip Fathers decided not to grant the permission asked for, and informed the applicant that "when the dogs at present in the Refuge are sent away into the country, the Council will consider whether they can allow those subsequently caught by the Police to be taken there."

THE Paris correspondent of *The Times*, writing early in October on the Franco-Chinese embargo says:—"The Marquis Tseng has not yet received a reply to the French memorandum, nor even any acknowledgment of its receipt. Not only, however, has the memorandum certainly reached Peking, but M. Tricou must have been informed of the impression of the Chinese

Government after having received it. M. Ferry must therefore have learnt from his own Ambassador at Peking, as well as from the Chinese Ambassador here, what China's resolution is, and that she is resolved, if not to claim Tonquin for herself, at least to allow no European Power to possess it. . . . It is not, moreover, on the Black Flags that the question depends. It has all along been known that they are merely the vanguard or a screen disguising the eventual Chinese army, which army would have to be faced if the Black Flags were not there to defend the territory in the name, or on behalf, of China. The Black Flags may, possibly, be discouraged; but the question is whether they are still encouraged by China, who does not conceal that she has hitherto encouraged them as constituting the vanguard of her own army. However, the matter is that France is confronted by China, and with her she must come to an agreement, unless she is strong enough to dispense with an agreement. What is now clear is that the influence of the Marquis Tseng has not been duly appreciated. The settlement between France and China mainly depends upon him. It is his opinion which will prevail at Peking, and with him the question must be settled, for any convention that may be concluded will be in a spirit impressed by him on the Chinese Government."

Of the recent importation of English policemen into the British Settlement at Shanghai the *Mercury* of the 14th instant says, that the steamer *Bellerophon*, from Liverpool, brought out twelve policemen from home, for the Municipal Police Force. If size is a sufficient guarantee to put fear into mortals, these new arrivals will certainly succeed; they are an exceedingly fine lot of men.

WE are requested by Mr. Hoffman to state that the loss sustained by him in the recent burning of his store is not covered by insurance. He says that he allowed a policy of \$4,000 to lapse the other day. The actual insurance on his property was only \$6,000 at the time of the disaster.

THE British ship *Haddon Hall*, Captain Leighton, was towed to the outer anchorage this morning, and will sail for Hiogo on Monday with a portion of her original cargo from Mid-dlesbro'. She will afterwards proceed to Manila, to load for Europe.

A WELL-ATTENDED and pleasant meeting was held yesterday evening in the Union Church, the object being an endeavor to devise means whereby the sale of spirituous liquors shall be restricted. Captain Skerrett, U.S.N., presided.

THE laying of the submarine telegraph cable between Japan and Korea was successfully completed on the 23rd instant, and the line will no doubt be opened for traffic very shortly.

DR. BUTCHER, Dean of Shanghai, contributes a paper to the *Fortnightly Review* on the "Copts and El Islam."

THE ABUSE OF EXTERRITORIAL PRIVILEGES.

THE employment of exterritorial privileges in the foreign Settlements of Hiogo and Osaka as a means of enabling Japanese to evade the laws of the land, is another characteristic episode in the history of the unfortunate system foreigners have introduced into this country. For the past two years the Japanese Government has been at considerable pains to check gambling operations in paper money. As a general rule, legal restraint cannot be successfully applied to such operations, but an exceptional responsibility devolved upon the administration of this empire, since the evil had been fostered, if not chiefly developed, by the unsound financial policy of past years. It was inevitable that speculators should take advantage of opportunities furnished by a currency subject to constant official manipulation, and Ministers whose predecessors had contributed to attract speculation into this pernicious channel, were in a measure bound to divert it, if possible, into healthier directions. Whether wisely or unwisely, however, the law has imposed its veto upon Exchanges where gambling on margins is carried on, and the police have been actively engaged in searching out and punishing offenders against this prohibition. But the police have no access to foreign premises, and foreigners, Americans excepted, claim exemption from all Japanese laws and regulations. It follows, therefore, that if Japanese speculators and European residents are so minded, they can combine to defy the laws, these by converting their houses into gambling exchanges and those by going there to gamble. This is what appears to have happened in Hiogo and Osaka. Japanese tradesmen and Portuguese householders have made arrangements to convert the latter's premises into asylums for exchanges of which the police had succeeded in purging the native towns.

This is not surprising. Were there no disposition to violate the laws, there need be no laws. If there is profit to be made by prostituting the privileges we have usurped in Japan, there will certainly be found persons to prostitute them. When Consuls issue notices politely requesting their nationals to observe certain local regulations of the Japanese Government, the public treats this official farce and its subject alike with smiling unconcern. That the regulations, themselves, being generally designed to confer a public benefit, are not obstructed, does not lessen the absurdity of the proceeding. The fact remains that

obedience or disobedience is wholly a matter of option. This was the case with all the sanitary regulations enacted during the cholera epidemics of recent years. Out of the eighteen nationalities represented in Yokohama, the Ministers of one or two at most were competent to make the regulations binding upon their countrymen. With the rest, it was a matter of chance. And in one instance, it will be remembered, the officers of the Sanitary Board could not obtain permission to disinfect the premises of a foreigner who had died of the disease. Consular authority declared itself unable to sanction any such step. Public opinion, too, displayed complete apathy. Respectable residents did not dread the cholera, and saw no reason to sympathise practically with Japanese administrative disabilities. But the case is different with the Hiogo and Osaka Exchanges. Two foreign journals have taken up the subject with commendable warmth, and condemned the offending Portuguese in no measured terms. Yet the language employed by these very journals is, if possible, more suggestive than the abuse they denounce. For while both of them agree that the conduct of the Portuguese will receive universal censure at the hands of respectable residents, neither has any better remedy to offer than "an unequivocal expression of public opinion." These foreigners, who for a pecuniary consideration assist Japanese to violate their country's laws, are to have their names published in the newspapers and "their conduct thoroughly exposed," which sentimental penalty will, it is hoped, induce them to turn from the error of their ways. They are to be taught by journalistic essays or correspondence—for we fail to discover any other method of expressing public opinion on such a question—that local society will close its doors upon persons who by abusing the privileges of exterritoriality imperil the permanence of that precious system. It is unnecessary to dwell upon this aspect of the affair. Reason and justice find no place in the arguments of men who venture to maintain that respect for public opinion is the only barrier which the Treaties suffer to exist between pecuniary gain and conspiracy on the part of foreign residents to assist Japanese violations of Japanese law.

But, speaking practically, is this the only barrier existing at present? Is it really true that the preservation of good order in Japan depends upon the disposition of the foreign residents? Are we soberly asked to believe that any

Portuguese, or let us say, British, resident, is at liberty to convert his house into an asylum for Japanese law-breakers unless his conscience is still sufficiently sensitive to be pricked by fugitive expressions of local journalistic disapproval? The idea sounds laughable. Few of us will be disposed to admit that the system a handful of strangers have set up for their so-called convenience and security in Japan, entails consequences so disgraceful to the civilization we represent. It happens, however, that the public is in a position to forecast the exact issue of this Hiogo and Osaka abuse. A precisely analogous case occurred some four years ago in Tokiyo, and was made the subject of strong comment in these columns. We will repeat the main incidents of the affair briefly, in order that our readers may be able to answer the questions propounded above.

In October, 1874, there was issued, over the signature of the First Minister of State, a notification forbidding the establishment of Exchanges for carrying on speculative transactions in rice, kerosene, and certain other staples, except under the special sanction and supervision of the authorities. In July, 1880, it came to the knowledge of the Tokiyo Municipality, that a British merchant, residing in the Foreign Settlement at Tsukiji, had there established a Kerosene Oil Exchange, in partnership with a number of Japanese citizens, who, being thus removed beyond the immediate reach of the police, were daily carrying on an illegal traffic with impunity. The Governor of Tokiyo lost no time in communicating the fact to Her Majesty's Consul, requesting him to restrain his national, so that the regulations enacted by the Japanese Government for the order and general welfare of its subjects should not be rendered abortive. The reply of the Consul was that he had no power to comply with such a request, since the business in question, though unlawful for Japanese, was legitimate for Englishmen and did not conflict with any existing provision of English law. The Governor may well have been perplexed by this rejoinder. It suggested a new interpretation of a treaty of friendship. In common with all his countrymen, he had been accustomed to regard exterritoriality as a device for exempting foreign residents from Japanese jurisdiction and Japanese legal penalties only, not as a scheme for relieving them of any obligation to respect the laws and customs of the country whose hospitality they were enjoying. Yet the Consul's answer upset this theory completely, and virtually laid down the principle that Englishmen living

in an Oriental country are not required to regard any laws save those that exist in their own land, and may even carry their independence to the length of assisting Japanese subjects to violate Japanese laws. A further communication was now addressed to the Consul, informing him that the law in question had for its object the suppression of gambling transactions injurious to public morality and calculated to cause financial distress, and that being a general law, British subjects living in Japan were not exempt from its operation. The Consul, however, had no authority to revise an interpretation given to the treaty by Her Majesty's Minister. Desiring, as all British officials earnestly desire, to co-operate heartily with the Government of this country in preserving order, he was, nevertheless, obliged to repeat that Englishmen in Japan could not be prohibited by any English law from establishing and carrying on oil Exchanges, were they so minded, whatever might be the provisions of Japanese law. All that he could do was to inform the Tsukiji merchant that his associates were violating the laws of their country, and to advise him to prevent their resort to his premises. This advice was followed, so that, practically, the desired end was attained, but the fact remained that it was attained solely through the good-will of the Consul and the complaisance of his national. Upon the voluntary exercise of these qualities, and not upon the sovereign rights of an independent State, had the Japanese Government been reduced, by treaties of amity and commerce, to depend for the enforcement of its own laws within its own territories.

It may well be supposed that the question was not allowed to rest there. Absolute lawlessness and possibly grave public danger might at any moment result from the position assumed by the British authorities in this discussion. The Japanese Government could scarcely assent to the monstrous proposition that a business prohibited in general terms by the laws of the Empire, as detrimental to the public welfare by whomsoever conducted, may be freely carried on by Englishmen living in Japan simply because the social conditions of the British Isles do not necessitate a similar prohibition there. Such a contention was sufficiently outrageous to have brought about a final settlement of some sort, and doubtless it would have had that result, but for the imminence of treaty revision. The prospect of that long-deferred operation offered a reasonable ground for postponing

all discussions involving large issues. The treaties, however, are not yet revised, nor is there any evidence, so far as we know, that Great Britain, at all events, is disposed to modify her interpretation of the privileges of extraterritoriality. Her Representative found Japanese statesmen visionary and unwise because they did not direct all their efforts to obtaining an increase of three or four per cent. in the tariff, rather than to clearing away obstructions which, by preventing the opening of the country, cripple the growth of commerce, and render friendly and unrestricted intercourse impossible.

Perhaps the Portuguese authorities will take a different view of their treaty obligations. Perhaps they will restrain, and even punish, their nationals for themselves violating, and enabling the Japanese to violate, the laws of the Empire. Meanwhile, these events are not wholly regrettable, since the honest and unreserved expressions of condemnation they have evoked from two English local journals will help to convince the Japanese, if they are not already convinced, that English opinion, though apparently indifferent to a glaring error of theory, will never sanction its practical consequences. Abuses such as those reported from Hiogo and Osaka will soon convince all honest-minded persons, that the Japanese cannot possibly throw this country open to men who confess that their obligation to respect the laws of the land is measured entirely by caprice or convenience.

THE DISTURBANCE AT THE DAI GAKU.

NOTHING can be more lamentable than a revolt against order and propriety such as has recently thrown into confusion the operations of the University in Tokio; and nothing is more certain than that the only chance of remedy in the present case and of immunity from similar disturbances in the future lies in a firm and resolute enforcement of the laws which have been ruthlessly and wantonly violated. The evidence which we have been able to gather, from various sources, admits of no other inference than that the outbreak was utterly without substantial cause, and can be traced to no legitimate grievance, either real or imaginary, on the part of the students. Those who participated most actively in the demonstration do not pretend that they had wrongs to redress, or were actuated by any motive beyond the mischievous impulse of the moment. It is believed that a few of the prominent instigators had certain

private vexations, more or less genuine, but it does not appear that these were shared in common or were made the pretext for combined aggressive action. All subsequent inquiries have failed to elicit any ground of general complaint, or any testimony indicating a pre-arranged conspiracy to attack the University or its officers. The disturbance seems to have been the result of a series of accidental causes, to which no deep-seated animosity towards institutions or individuals contributed.

That there were a few dissatisfied and querulous members of the upper classes, such as no University is free from, the authorities have always been aware: but they have been equally aware that these malcontents were never formidable, and probably had no intention of making themselves appear so. On the day selected for the graduating ceremonies, October 27th, arrangements were made by a large body of students for a festival of their own, at a house of resort outside the city limits. The cheer at this establishment was too liberal, and the majority of those present lost their heads. Whether the few ill-disposed seniors, previously alluded to, deliberately took advantage of the opportunity, or were merely impelled by vicious influences to expound their troubles for the edification of the multitude, remains a matter of doubt; but it is recorded that the whole body started forth, after further indulgence in wine and oratory, in a condition of abnormal effervescence, intent upon projects which none of them could well have contemplated beforehand, and which, certainly, none would have dreamed of executing in their sober senses. Fresh stimulants were consumed on the way, which, while incapacitating some from subsequent action, additionally excited others. The whole performance seems to have been as discreditable as, we are assured, it was exceptional. The students marched as nearly in procession as they could to the University, arriving at which the temporary fury of some of them was aggravated by discovering that refreshments, which they were not invited to partake, were in course of consumption by native and foreign visitors. Without warning, and apparently without definite plan, they then began to break down fences, force doorways, and destroy such furniture as they could lay their hands upon. All efforts to induce them to desist proved unavailing, and it was finally found necessary to call in the police, before whom the offenders retired, and the tumult ended.

What followed was the most unfortunate

feature of the affair, in the estimation of the Japanese officials. Always lenient, and especially so when unusual excesses may be ascribed to influences outside of their immediate jurisdiction, they would have abstained from extreme severity; and, after proper acknowledgment of error and avowal of contrition, the students would, for the most part, have been permitted to resume their positions and proceed with their course of education. But it seemed as if the organization which was lacking before the event, had been carried into effect afterward with such completeness that nothing could be extracted from a single participator in the commotion. Every mouth was sealed. No student would divulge anything which might implicate one of his fellows. Deep regret at what had occurred was manifested by many of the younger rioters, and not a few acknowledged their shame and grief at having been led into such disgrace; but nothing could be discovered as to the alleged or supposed cause of the assault, nor could any clue to the identity of the ringleaders be gathered. The utmost consideration was shown throughout, and the way was made as easy as it possibly could be, with due regard to discipline, for the return of all; but with rare exceptions, they obstinately refused to yield a point. The half dozen who are suspected of having instigated the onslaught are supposed to have taken the ground that the authorities would certainly set aside their own dignity as well as the rules of the institution, sooner than lose so large a proportion of the inmates,—not less than one-third of the total number being involved; and by disseminating this view among the majority they perhaps found it easier to hold them to their pledges of secrecy. Whatever the reasons, it is certain that, after a fortnight of fruitless investigation, no course remained open but that of expelling nearly one hundred and fifty scholars, including many of the most advanced and promising, whose previous record had been unimpeachable, as regards both scholarship and deportment. The University is thus crippled to a painful degree, hardly a single class being free from a derangement which may call for complete reorganization.

Singular as it may seem, the majority of those concerned in the disturbance,—while mortified at what has befallen them and remorseful at having inflicted sorrow and distress upon their best friends,—utterly refuse to look upon their conduct as seri-

ously reprehensible, or as calling for extreme measures of punishment. Not a few of them, through some distorted conception of college habits and usages in Western countries, are beset with a wild notion that an occasional "row" is the correct thing in an institution of learning, and ought rather to be encouraged than forbidden by the authorities. One of the agitators declared, on examination, that neither he nor any of his habitual associates were especially inclined to join in a rebellion, but they had understood from remarks let fall by certain professors, that the scholars of the Dai Gaku were altogether too tame and spiritless, and needed a little of the animation displayed by boisterous and insubordinate sophomores in Europe and America. On that hint, it was averred, they acted; and no suspicion that their escapade would be harshly dealt with ever occurred to any of the particular party in question. This ridiculously frank avowal may serve to indicate the purposeless and incoherent character of the whole proceeding. As it was an attack without an aim, so, they supposed, it would be without grave consequences. And, although their eyes are now opened to that part of their mistake, they still obstinately decline to admit that they have been guilty of more than a trifling and harmless, though perhaps indiscreet, freak. In this defiant spirit they continue to hold themselves, many proclaiming and apparently really believing, that the faculty will even yet give way, and re-admit them without further sign of penitence. In this, however, they are totally at fault, and it is becoming a serious question whether they will ever, by any means, regain their lost stations. They can do so only by presenting themselves at the next examination of new candidates, when after proper submission, they may take such places as they are found qualified to fill. Their course of study being broken up, they will probably at the best, be thrown back a term or more, unless they can secure private tuition which will enable them to keep pace with their former fellows. It is unfortunate, in every respect, that so stringent an exercise of authority has been found requisite; but it is next to a certainty that, if discipline had not been duly enforced in this instance, orderly government would have been at an end forever in the Tokiyo Dai Gaku.

CHINESE IN AMERICA.

THE vexed question as to the admission of persons of Chinese birth to citizenship in the United States continues to be agitated in Philadelphia, where the discussion first arose over the case of an intelligent and prosperous laundry proprietor, as already described in these columns. The manner in which the subject is treated by the Courts of that city betrays not only inconsistency, but also a singular ignorance of the laws relating to naturalization. On the 4th of October last, a Chinaman named CHUNG KEE presented his petition to a certain Justice ARNOLD, and, after the requisite formalities, received his certificate and went forth, as he supposed, an American in every legal sense. On the very next day, CHUNG KEE's brother, CHUNG LAM by name, appeared before the same Court, for the same purpose. Another magistrate, Justice YERKES, was sitting in place of Justice ARNOLD, and by him the application was summarily rejected. In this instance, the decision was not based upon the naturalization laws of 1870 and 1875, but upon the law of 1882, especially restricting Chinese immigration. The fourteenth section of this Act provides that "hereafter no State Court or Court of the United States shall admit Chinese to citizenship, and all laws in conflict with this Act are hereby repealed." There is no room for doubt about the meaning of this language, and it is certainly extraordinary that the terms of a statute so recently passed should be unknown to any judge in Philadelphia—or in the whole country, for that matter. As it happens, however, many Chinese have received diplomas of citizenship during the past year; paying, therefor, the required fees. If CHUNG LAM had gone with his brother, on October 4th, instead of waiting till next day, he would have been admitted, and Justice YERKES would have had no occasion for reversing the action of his learned brother. Justice ARNOLD, on receiving information of the adverse decision, issued an order revoking the papers which he had granted the day before. It would appear as if the Courts generally were disposed to consider the petitions of respectable Chinamen in the light of plain reason and common sense, unconscious of the fact that a national law compels them to act as the instruments of a narrow and illiberal prejudice which never had a real existence, excepting in two or three extreme Western States. A judge in the enlightened regions of America may perhaps be pardoned for doubting the possibility that "hoodlum"

hatreds can be made, by law of Congress, to interfere with the administration of justice three thousand miles away from California; and for failing to examine the records which point out so gross a perversion of legal and moral principles.

We observe that while the leading American newspapers accept Justice YERKES'S mandate as inevitable, they generally express regret at its necessity, and acknowledge the unsoundness of a statute which thus discriminates against an inoffensive race. We also observe with satisfaction that Justice FIELD'S decree in San Francisco, excluding a British subject of Chinese birth, named PONG AH LUNG, is treated—excepting by one prominent journal—with the contempt it appears to deserve. The exception, strange to say, is the *New York Tribune*, which, during the lifetime of its founder, HORACE GREELEY, would as willingly have advocated an absolute monarchy at Washington as it would have approved a decision so obviously inspired by political motives as the one we are considering. It is hardly necessary to point out why the *Tribune* just now stands forth as the exponent of the Pacific Coast's cherished prejudices, instead of representing the intelligent bulk of the nation, as it once did. That riddle may easily be guessed by any who think it worth studying. But it is pitiful to see a journal originally identified with the truest spirit of progress and liberty, sustaining a false theory with a pretence of logic at which a school-boy would laugh. "AH SIN, from Peking," says the *Tribune*, "looks very like AH SIN from Hongkong, and if he takes passage at the latter port, who is to prove that he was not born there, after Hongkong became a British possession?" . . . "The exclusion is not of subjects of China, but of 'Chinese laborers,' and PONG AH LUNG is a laborer, having 'all the peculiarities of the subjects of China,' Justice FIELD says, although he claims to be a British subject." We are not disposed to waste words over this affectation of reasoning, at which the writer himself must have blushed when he penned it. It is enough to say that, on the same fallacious plea, any laborer, from any part of the world, may be prevented from landing in the United States, if he appears to "have the peculiarities of the subjects of China." It may be true, as the *Tribune* farther remarks, that Great Britain "will not take offence" at this particular denial of British privilege; but it is a poor piece of business to rejoice over an exemption from international difficulties, when that exemption is attributable

solely to the trivial character of the transaction and the humble station of the man whose rights are violated. "England," we are assured, "will hardly carry her traditional sensitiveness upon the rights of British subjects so far as to insist that the Chinese she has involuntarily adopted in acquiring the island of Hongkong shall be allowed to set up laundries in San Francisco." Probably not. But that being the case, the United States Government will owe its immunity from reproach and complaint to the careless indifference of Great Britain, and not to the rectitude or righteousness of its own course. At the same time, it would be agreeable to know what the *Tribune* would say if England, by virtue, let us suppose, of a law excluding Frenchmen, should refuse ingress to a Louisiana citizen of French descent, "having all the peculiarities of the subjects of" France, whom the United States "had involuntarily adopted in acquiring" the territory of Louisiana. Of course, in quoting the word "involuntarily," we do not at all concede the propriety of its use; for the bare idea of "involuntary" action, in any connection with the deliberate annexation of a colony, is too preposterous to impose upon the slowest-witted reader. Nor, we may say, do we regard the attitude of a single New York newspaper, considered by itself, as entitled to the attention we have given this subject. But it is not yet certain that the main question will be allowed to rest undisturbed, and if it be brought into prominence, we may expect to find precisely these assumptions of the *Tribune*, and no others, urged by higher authorities in defence of Justice FIELD'S untenable propositions. It is with a view to the broader possibilities of the future that we examine the points at issue,—and not especially with reference to the details as they at present stand. Nevertheless, it is impossible to overlook entirely the anomalous features thus far developed. A judge of the Supreme Court of the United States commits himself to a decision which will not stand the most ordinary legal tests, and which is levelled against British law and the rights of British subjects, because he wishes to be President, and discovers an opportunity of gratifying the (so-called) Democratic element of the State of California. The *New York Tribune*, a leading Republican journal, which is pledged to oppose Justice FIELD politically under all circumstances, having been purchased not long ago by a California millionaire and magnate, now supports a judgment delivered in the interest of that section of the country. And neither the Government of

Great Britain, nor that of Hongkong, it is confidently assumed, will stir a step toward securing redress for an affront to both of them, because the actual wrong inflicted touches only a poor devil of a working man, who calls himself PONG AH LUNG.

OPENING OF THE ROKUMEI-KWAN.

On Wednesday evening a large party of Japanese and Foreigners assembled, by invitation of His Excellency the Minister for Foreign Affairs and Madame Inouye, to inaugurate the new Reception Hall near the Hibiya Parade Ground in Tokiyo. The building is a handsome structure, destined to serve the double object of a place for receiving distinguished foreign visitors and a Club. It accordingly comprises dining-rooms, reading-rooms, card-rooms, bed-rooms, and salons. The portion intended for receptions is limited to the front façade on the upper floor. It includes a central ball-room, of moderate size, side rooms and verandahs, with corridor for promenading. The site is excellently suited to the purpose of the building, being within five minutes drive of the Tokiyo-Yokohama railway terminus on one side, and on the other, about the same distance from the palace of H.I.H. Prince Arisugawa, the Foreign Office, the Austrian and Italian Legations, and the numerous residences of noblemen and Ministers at Urugasumi and Nagata-cho. Something, however, had to be sacrificed to convenience of site, as the soil of the Hibiya district is ill-suited to support large stone or brick structures. Thus for the foundations of the Rokumei-kwan, as the Reception Hall is called, it was found necessary to use deep filling and framing covered with concrete, and since to reduce all weights to a minimum was of paramount importance, the least limit of height consistent with the character of the edifice, and the least thickness of walls consistent with solidity, had to be adopted. The building is in a somewhat free style of classic character, with a central pediment, flanked upon both sides by a cast-iron colonnade, imparting to the façade a light, and when illuminated, as on Wednesday, a slightly fantastic character, suited to a place of amusement. The internal arrangements are excellent, and the originality and good taste of the whole structure reflect great credit on the architect. Japan, however, still requires a building specially adapted to the demands of large receptions. For such a purpose the Rokumei-kwan will doubtless be temporarily used, but some incongruity can scarcely fail to become apparent, after a time, in the double object it is at present intended to fulfil.

On Wednesday night the large garden in which the building stands was completely festooned with lanterns of various colours, and over the colonnade were the illuminated characters "Rokumei-kwan." The Imperial Princes, Ministers of State, and Foreign Representatives

(1) This name, which signifies "The hall of the star's voice," i.e., The hall of Summer, was suggested by His Excellency the First Minister of State.

were invited to a banquet at six o'clock. They were received by His Excellency and Madame Inouye, and at the conclusion of the repast the former spoke as follows:—

YOUR IMPERIAL HIGHNESSES, YOUR EXCELLENCIES, LADIES, AND GENTLEMEN:—It is only a quarter of a century since intercourse was first established between Japan and Western Countries, but during that short period, a feeling of friendship and good-will towards foreigners has gradually advanced, and at the present day a wish is everywhere expressed to render these sentiments more enduring by making our relations with the Occident more intimate. Distinguished travellers now approach our shores with the same assurance of a hearty welcome with which they visit less remote countries. Nevertheless, it was well known that the Capital of the Empire afforded no proper place where such travellers could be accommodated. To meet this requirement, the construction of this Hall was originally conceived. As the work progressed, however, the fact constantly forced itself upon our consideration that, while we were thus providing for the casual stranger within our gates, we were making no provision for those foreigners who dwell in our midst. This latter consideration has induced us to enlarge our original project, and the building has been carried to completion. It has been determined to make the Rokumei-kwan a place where Japanese and foreign gentlemen alike may meet socially, and form acquaintances and friendships which know no degree of latitude and longitude and which are not limited by national boundaries. If my words have failed to convey my meaning, the name we have given to this Hall will I trust, testify our motive. In calling it the Rokumei-kwan, we intended to illustrate, by borrowing a phrase from an old Chinese poem, that harmonious social intercourse of persons of all nationalities which we desire and expect to take place here. Rules and Regulations are being prepared, and we hope soon to be able to announce the opening of the institution to those who may wish to become Members. We trust that our undertaking may be crowned with success, but under any circumstances, our work will remain as an evidence of that desire to cultivate and perpetuate those relations of cordial goodwill and friendship which are everywhere recognized as the most important factors in the enlightened advancement of the world. In conclusion, I desire to express our sincere thanks to Mr. Conder, the architect of the building, for the energy and the practical knowledge he brought to bear upon the work, and which have so largely contributed to the successful completion of the enterprise.

To this speech the United States Minister, as Doyen of the Corps Diplomatique, replied briefly as follows:—

YOUR IMPERIAL HIGHNESSES, YOUR EXCELLENCIES, LADIES, AND GENTLEMEN:—Having heard with pleasure the address just made by His Imperial Majesty's Minister for Foreign Affairs, wherein the Minister was pleased to acquaint us that this beautiful structure, so spacious and so complete in its appointments, will be open alike to the Representatives of all nations and to the people of Japan, thereby furnishing facilities not hitherto enjoyed in this Capital for the cultivation of friendly intercourse between the people of Japan and those of foreign States; the Diplomatic Corps deem it fitting to the occasion to offer, as the expression of their united sentiment, health and prosperity to Their Majesties the Emperor and Empress of Japan, and health and prosperity to the people of Their Majesties' Empire.

Mr. Conder, architect to the Imperial Government, by whom the building was designed, then rose and said:—

YOUR IMPERIAL HIGHNESSES, YOUR EXCELLENCIES, LADIES, AND GENTLEMEN:—I should not venture to address you this evening were it not for the very kind way in which His Excellency the Minister for Foreign Affairs has mentioned my name as the architect of this building. There is a certain amount of satisfaction in assisting, be it in ever so humble a way, in the conversion of this large wooden Capital into a permanent city by the erection here and there of solid and enduring buildings within its precincts. Any one looking down from the eminences around Tokiyo upon the scene below cannot fail to be struck by the gradual transformation which is slowly but surely going on. Tokiyo must some day become a city of brick and stone; and the time is not far distant, let us hope, when no wooden huts will be built within its precincts.—when those fearful configurations will no longer illumine the midnight sky, spreading ruin and desolation in their path,—when the alarm of the fire-bell shall no

longer arouse the inhabitants from their slumber. I am fully aware of the many defects of this building. Erected on mud, a large portion of its fun-Is have been sunk in its foundations. An architect's work has often to be one of trimming and compromising. But although I look forward to the day when far statelier buildings will adorn this city, there yet remains to us some satisfaction in having been connected with the earlier efforts of workmen still young in new trades, and whilst there were still many difficulties to overcome, in the manufacture, transport, and procuring of new materials. I say *us*, because I must hand over a large portion of any credit due for our results, to two gentlemen, Mr. Sannomiya and Mr. Suyematsu, who have been connected with me as responsible officers throughout. I delight to have to mention so few; not because we can thereby take greater credit to ourselves, but because it gives me the opportunity of mentioning a matter which is sometimes overlooked. There is a Japanese adage—"Too many boatmen pull the boat on land," and this is particularly true of any technical piece of work conducted by responsible but untechnical inspectors. Nothing is more fatal to the successful accomplishment of any technical piece of work than an unlimited number of untechnical responsibilities;—a condition which changes what should be an executive body into a deliberative, legislative, and obstructive one. Our special thanks are due to His Excellency Mr. Inouye for the kind confidence and freedom which he has given us during the construction of this work and to which primarily I attribute any success attained; and especially I personally reiterate those thanks for his kind reliance in myself and his courtesy in inviting me to join in this august assembly this evening.

At half-past eight the general body of the guests began to arrive, and before long the assembly numbered more than a thousand, among whom were included all the principal residents of Tokiyo and Yokohama. Dancing was kept up to a late hour, and the entertainment was in all respects worthy of the purpose which the building is intended to serve,—a purpose which was explained in such earnest and feeling terms by His Excellency the Minister for Foreign Affairs.

CONNECTION OF ASTRONOMICAL WITH SEISMIC PHENOMENA.

The occurrence of two such terrible catastrophes as those in Ischia and Java within so short an interval has naturally inspired an unusually voluminous outbreak of earthquake literature, all more or less interesting to general readers, and especially so to dwellers in the Japanese Islands, which occupy a nearly central position in the chain of seismic activity. One of the most curious essays on this subject is from the pen of a French scientist, M. Delauney, who, a short time ago, addressed a communication to the Academy, claiming to have correctly predicted the earthquakes in Ischia and Java. M. Delauney's essay is published in the *Voltaire*, under the title of "*Les lois des tremblements de terre, et des autres phénomènes météorologiques.*" The writer commences by presenting to his readers a table wherein are shown, in four groups, the various years of maximum seismic activity between 1751 and 1850. The table is as follows:—

| | | | | | | |
|---------------|-------|-------|-------|-------|-------|-------------|
| FIRST GROUP. | | | | | | |
| 1759. | 1770. | 1783. | 1794. | 1806. | 1817. | 1829. 1841. |
| SECOND GROUP. | | | | | | |
| 1755. | 1756. | 1778. | 1789. | 1802. | — — | 1837. 1848. |
| THIRD GROUP. | | | | | | |
| | 1755. | | 1783. | | 1811. | 1841. |
| FOURTH GROUP. | | | | | | |
| | 1771. | | 1800. | | 1829. | |

It will be observed that the period for the two first groups is twelve years, approximately, while that for the two last, is about twenty-eight years.

Now these happen to be nearly the periods within which the planets Jupiter and Saturn perform their revolutions round the sun, and it occurred to M. Delauney that some connection might be found to exist between the two phenomena. He accordingly set himself to calculate the positions of these planets at the dates indicated in the above table, and the results of his calculations were thus:—

| | |
|--------------------------------------------------------------------------|------|
| Approximate longitude of Jupiter for the years of the First Group | 265° |
| Approximate longitude of Jupiter for the years of the Second Group | 135° |
| Approximate longitude of Saturn for the years of the Third Group | 265° |
| Approximate longitude of Saturn for the years of the Fourth Group | 135° |

The coincidences here apparent are certainly remarkable. In M. Delauney's opinion, they almost justify an assertion that our globe experiences a maximum of earthquake shocks when Jupiter and Saturn are at or near the points in their orbits represented by longitudes of 265° and 135°. There is also another fact to be noted with regard to the century under consideration. The years in which the greatest numbers of shocks occurred were—

1765, 1783, 1829, 1841.

Now these four years belong at the same time to both the classes defined above. For them, therefore, it would seem that the actions of Jupiter and Saturn were combined.

The discovery of these coincidences, or laws, if such they may be called, led M. Delauney to predict that May, 1877, and July, 1883, would be memorable months in the seismic story of the globe. His predictions were remarkably fulfilled. Proceeding to extend his theory, he observed, statistically, that August and November are the months of maximum seismic disturbance. Now in these months the longitudes of Venus and Mars are 265° and 135°, approximately. Hence he formulated the general conclusion that earthquakes are produced when the planets traverse the meteoric streams which our globe meets in August and November. He goes a step farther, too. Having regard to the fact that all phenomena of terrestrial and cosmical meteorology are connected, he declares that "all meteorological phenomena are due to passages of the planets through groups of cosmical atoms, especially those of August and November."

But how do the planets exercise these influences? M. Delauney's answer is interesting and ingenious. In the first place, he postulates that the sun and the planets, by their attractive force and their motions, surround themselves with all the gases which they find in space. These gases, which are incessantly renewed, are compressed, and exercise a certain pressure themselves on the atmosphere of the planet. But this pressure is not everywhere alike. Smallest near the poles and in high latitudes, it only assumes an appreciable value in the equatorial zone. Generally, indeed, it is along the equator that the gases thus encountered by the planets, flow. Observe now what happens when a planet traverses a cosmical group of atoms. At first the planet, passing into a relatively dense medium, loses a certain portion of its vital force. This

lost "work," is distributed, as we shall see just now, in two forms, calorific and dynamical. For, in consequence of the accumulation of cosmical matter in the equatorial zone, the flow in that zone is no longer sufficient, and the matter assumes a tendency to escape by the poles. This escape takes place with considerable violence. The cosmical molecules, arriving at the poles from different directions, collide, are condensed still further, and produce cyclones, magnetic deviations, and polar auroras. In short, the matter which continues to flow along the equator is simply condensed, but that which makes its way to the poles is not only condensed, but launched again into space with great velocity. The portion thus lost forms itself oftenest into a comet, especially in the case of a large planet, like Jupiter, animated by a rapid rotatory movement; and the comet, again, by its swift passage through space, exercises in its turn, a heating effect upon all the gases it meets. Thus the effect of a planet's passage through a collection of cosmical atoms is, first, a heating of a certain portion of the planetary space, and then another heating due to the action of the comet, the second development of caloric lasting longer and making itself felt over a larger area than the first. Now, with regard to the influence exercised by these phenomena on our globe. The earth encountering heated gases, that is to say, gases possessing an increased elastic force, its atmosphere will undergo a certain pressure. This abnormal pressure will be principally felt in the equatorial zone, and the atmosphere will develop a tendency of displacement from the equator towards the poles. If the calorific effect be considerable, the gases, instead of simply flowing along the equator, may escape by the poles, and phenomena may occur similar to those noted above with regard to a planet. Under any circumstances, the displacement of air from the equator towards the poles will have the effect of changing the conditions of equilibrium between the pressures exercised and experienced by the atmosphere. The crust of the globe will exhibit a tendency to change its form, to swell at the equator and in neighbouring latitudes, and the consequence will be that volcanic eruptions will take place in the equatorial zone. If now the elastic pressure of the gases in space falls again to its normal degree, the atmosphere will return from the poles to the equator, and the terrestrial crust, losing the swelling it has developed, may give way in certain places near the equator, the immediate result of which would be severe shocks of earthquake. Delauney extends his theory even to the sun, and accounts for the spots on the face of the luminary. "When the atmosphere is displaced," he says, "from the equator towards the poles, the barometric pressure at the surface must diminish in the equatorial zone, the consequence being that the liquid mass gives up a portion of the hydrogen it contains, and spots are produced."

If these theories be sound, the curious appearance presented by the sun at the time of the terrible volcanic disturbances in Java will be partially explained. But, on the other hand, seismic phenomena resulting from causes such as those described by Delauney, must be preceded or accompanied by barometrical evidence of a very marked character, and nothing of the sort has yet been recorded. At any rate, it is plain that the discussion of these phenomena is entering a very interesting stage, and we may expect that the difficulties of the subject will not prove entirely invincible by the ability and industry of modern scientists.

CODE OF CRIMINAL PROCEDURE.

BOOK I.—GENERAL REGULATIONS.

Art. 1.—Public action, which aims at the conviction of punishable offences, and the application of legal penalties, is conducted by the officials of the public administration (Ministère public).

Art. 2.—Private action, which aims at a reparation of injuries inflicted upon private persons by penal offences, or the restoration to the same of articles of which they have been illegally deprived, is in the hands of those who are deemed to have been injured, according to the regulations of civil law.

Art. 3.—Public action is independent of that of the injured party, and is not stayed by the abandonment by the same of his complaint or action, excepting in cases provided by the law.

Art. 4.—Private action, for any amount whatever, may be tried before the penal courts, in addition to the public action (accessoirement) excepting in cases provided by the law.—Private action may also be brought separately before the civil court.

Art. 5.—Public and private action must be conducted in a competent court, and according to the mode determined by the law in force.

Art. 6.—If both actions are simultaneously pending before the penal court, or before the penal and the civil court, the private action, on pain of cancellation of both judgements, cannot be first decided. Cancellation is legal when a civil condemnation is followed by a penal condemnation.

Art. 7.—The injured party, who first institutes an action before a civil court, can remove it from the same and bring it before a criminal court only when said court has already admitted a public action on the part of the State Prosecutor.

The injured party, who has instituted an action before a criminal court, can with the consent of the accused, desist from the same and institute proceedings before a civil court.

Art. 8.—Suspension of the action, declaration of innocence (l'absolution de l'inculpé), or the acquittal of the accused does not affect the claims of the injured party for reparation of damage, or for restitution to which he is entitled according to the regulations of civil law.

Art. 9.—Public action ceases:—

1. In virtue of the death of the accused.
2. In virtue of the cessation of the private action, or a compromise with the injured party, in all cases where according to the law, public action is made dependent upon private action.
3. In virtue of a final legal judicial decision (décision judiciaire devenue irrévocable).
4. In case of abolition (abolition de la peine) in virtue of a law passed subsequent to the commission of the offence.
5. In virtue of an amnesty.
6. In virtue of prescription.

Art. 10.—Private action ceases:—

1. In virtue of renunciation of the action or compromise with the injured party.
2. In virtue of a valid judicial decision.
3. By prescription.

Art. 11.—Public action suffers prescription:—

1. For contraventions in 6 months.
2. For delicts in 3 years.
3. For crimes in 10 years.

Art. 12.—Private action is prescribed in the same time as public action, even in cases in which the person who should institute proceedings is incapable of doing so, and although proceedings have been begun before a civil court.

(1) The regulations regarding prescription of execution of penalties are contained in the Penal Code Art. 38-62.

If, however, public action has resulted in a conviction, the private action suffers prescription only according to the ordinary regulations of civil law.

Art. 13.—Prescription begins with the day (inclusive) on which the offence was committed, and if continued several days, with the last day of the same.

Art. 14.—Prescription of public or private action against offenders, accomplices (even if unknown), and persons responsible according to civil law, may be interrupted by an act of prosecution on the part of the State prosecutor, by the injured person as party in a civil suit, or by any judicial proceedings, whether in preliminary examination or in the actual suit.

After the interruption a new prescription begins, which, however, can in no case exceed the double of the time indicated in Art. 11.

Art. 15.—The interruption is not valid, if the proceedings of the criminal prosecution, of the preliminary examinations, or of the actual suit, have been formally invalid; this does not include, however, the incompetence of the examining magistrate or of the court entertaining the action.

Art. 16.—In case of discontinuation of the suit, or of acquittal, the accused can demand damages against the prosecutor, the plaintiff, or the civil party, if these have been guilty of bad faith or gross negligence. The same holds good in case of a conviction, when plaintiff, complainant, or civil party, can be shown to have culpably and grossly exaggerated the offence.

If the civil party fail in an appeal against either preliminary examination or against a final sentence, he may, on application of the accused, be made to make special indemnification to the same for any injury incurred by every such appeal.

The application for indemnification by the accused may be made before the criminal court at any time before the passing of final sentence.

Art. 17.—The accused, even if acquitted, can demand indemnification from judge, state prosecutor, officers of court, or judicial police, only in cases where these persons have intentionally done him an injury or have in his case been guilty of some offence provided for in the penal code.

Art. 18-20 Regulate the terms for penal suits. The time fixed is generally peremptory.

Art. 21-25 Treat of delivery of judicial notifications that are obligatory on the Clerk of the Court or his agents.

The regulations are strict, sometimes on pain of invalidation.

Art. 26 Permits changes and additions in documents only under protection of strict formalities, the neglect of which entails invalidation.

Art. 27.—The Regulations of this Code of Criminal Procedure are applicable to offences committed before its promulgation.

Proceedings already begun in legal form are sustained.

Art. 28 Declares the regulations of this Code applicable also to special penal laws to be hereafter enacted.

Art. 29.—The provisions of this Code do not apply to offences punishable by military or maritime law.

Art. 30 Declares that the definition of relationship, given at length in the Penal Code Art. 114 and 115, is also applicable to the Criminal Procedure.

BOOK II.—ORGANIZATION AND COMPETENCE OF CRIMINAL COURTS.

CHAPTER I.—GENERAL REGULATIONS.

Art. 31.—The ordinary criminal procedure will be undertaken by the same courts and tribunals, that deal with civil justice.

Art. 32.—Seat and jurisdiction are fixed by Imperial decree.

Art. 33.—At every court and tribunal one or more officers of the public administration (State prosecutors) are appointed.

Art. 34.—The functions of the public prosecutor in reference to criminal procedure consist in:—

1. The investigation of punishable acts.
2. Making application to the courts for examination and trial, and the application of the law to offences.
3. The execution of orders and judgments of courts.
4. The defence of the interests of society before the courts.

Art. 35 Requires the uninterrupted attendance of an official of the department of public prosecutor at all sessions of Criminal courts.

Art. 38 Regulates the competence of courts according to the gravity of offences, as follows:—

1. Contraventions are dealt with in police courts.
2. Delicts before correctional tribunals.
3. Crimes are adjudged in Criminal courts.

The higher courts are competent to deal with lesser offences also, when graver ones are dealt with at the same time, even when there is no connection between them.

Art. 39 Gives the definition of connection of offences.

Art. 40-43.—Competence as affected by locality:

The judgment of offences committed, in case of doubt *forum praeveniens*. On the whole the principles of modern criminal procedure are followed.

Art. 44.—The same is true of all material connections. The competence of a court over the offender carries with it the competence to deal with all co-actors and accomplices.

Art. 45.—If an offence has been committed in a foreign country, the court of the district in which the offender has been arrested, or where he has been received, when delivered up by the foreign power, is competent to deal with the case.

Art. 46.—A special law regulates the competence of courts to deal with offences committed on board merchant ships.

Art. 47.—On pain of nullifying the decision, a magistrate who has assisted at the preliminary examination is prohibited from participation and judgment in the trial. Members of the higher Courts of Justice are also specially excluded from cases in which they have acted as examining magistrates. They are also excluded from cases of appeal where they have had to do with the decision of the lower court, also on pain of nullifying the proceedings. There are a few exceptions only, particularly in case of an appeal against a judgment for contumacy.

Art. 48.—Every judge before whom a case is brought is to decide as to his own competence.

CHAPTER II.—OF POLICE COURTS.

Art. 49-53.—Justices of the Peace; Competence; Contraventions.

Art. 51.—The functions of public prosecutor are to be performed by a competent police-officer who is under the jurisdiction of the public prosecutor of the higher (correctional) court.

CHAPTER III.—OF CORRECTIONAL TRIBUNALS.

Art. 54-62.—Competence: Judgment of delicts: Conducting of preliminary examinations of charges for delicts and crimes; decision regarding appeals from Police Courts.

The appointment of ordinary judges for correctional courts is made for one year by the president of the higher court. The appointment of examining magistrates is made for one year by the Minister of Justice. In case of ne-

cessity supplementary judges for both functions may be appointed; who shall attend both preliminary examinations and the trials, with a *voluntum consultativum*.

The functions of State prosecutor in correctional tribunals are undertaken by a government official of the higher court, or one of his substitutes.

The duties of the judicial police are performed by the public prosecutor, in conjunction with the Prefects of Tokio, and those of other districts. As assistant officials, in addition to the above and under their direction, there are "commissaries-general" (*Keishi*) and commissaries of police (*Keibu*), sub-prefects, justices of the peace, and district wardens. Their principal functions are in the preliminaries to an action.

CHAPTER IV.—OF COURTS OF APPEAL.

Art. 63-69.—Cases of appeal from police courts are decided by a bench of at least three judges in correctional courts. The functions of the public prosecution are performed by the State prosecutor or one of his substitutes.

All officials of the department of state prosecution, are under the control of the public prosecutor, within the bounds of his jurisdiction.

CHAPTER V.—OF CRIMINAL COURTS.

Art. 70-76.—These decide all criminal cases; they sit once every three months, and consist of a president and four colleagues. The functions of state prosecution are assumed by the public prosecutor or one of his substitutes.

CHAPTER VI.—OF THE COURT OF CASSATION.

Arts. 77-82.—In the Court of Cassation there is a criminal chamber, which decides in all cases:—

1. Of suits for writs of error.
2. Of appeals for re-hearing.
3. Of appeals an account of security or from suspicion of prejudice in the court.
4. Of questions regarding competency.

Its decisions must be made by a bench of at least five judges. The function of State prosecutor in the Court of Cassation are undertaken by an official of its own appointment or one of his substitutes.

CHAPTER VII.—OF THE HIGH COURT.

This is the competent court for all crimes detailed in Book II., Chapter 1 and 2 of the Penal Code [against the Emperor, and Imperial family, and against the security of the State]. It is also competent to deal with all criminal charges against members of the Imperial family and officials of the 1st, 2nd, and 3rd classes (*Chokuninkwan*) which involve a penalty of imprisonment on the guilty.

The High Court assembles on call of an Imperial decree, resulting from an application of the Minister of Justice, which shall also designate the matters to be adjudicated and the place of session. It consists of a President and six colleagues appointed annually by Imperial decree from members of the Senate and the Court of Cassation (also 2 supplementary judges appointed in the same way).

The functions of the examining justice in this Court of State are fulfilled by one or more members of the Criminal Chamber of the Court of Cassation, chosen for that purpose, the functions of State prosecutor are to be performed by the procureur-general of the Court of Cassation or one of his substitutes.

There is no appeal from the decision of the High Court, excepting in the following three cases:—

1. Appeal against judgment for contumacy.
2. Complaints regarding points of civil law (*requête civile*). See Art. 436).
3. Petition for rehearing (*Révision* Art. 339).

In these three cases, however, the High Court itself must decide. The process on the whole is similar to the ordinary process.

BOOK III.—OF INQUIRY INTO OFFENCES; OF THE PROSECUTION AND PRELIMINARY EXAMINATIONS OF THE SAME.

CHAPTER I.—OF INQUIRY INTO OFFENCES.

Art. 92.—The State prosecutor is required to investigate all intimations that are sent to him, regarding offences which it is his duty to prosecute, and also to follow up any traces of such acts as may come to his knowledge, so as to bring about the discovery of unknown offenders, &c.

SECTION I.—CHARGES AND DENUNCIATIONS.

Art. 93-99.—Any person aggrieved by a crime or delict may institute a charge for the same before the examining magistrate, the public prosecutor, or any official of the judicial police, of either the place where the deed was committed or where the accused resides. The complainant may appear as civil party.

Art. 96. Describes the official duty of the authorities and officials, in regard to the giving of information concerning offences which come to their knowledge.

Art. 99.—Allows the injured party, who has instituted penal proceedings, the right to withdraw the same at any time; the same right is accorded to the complainant; in this case, however, they are responsible for costs (Art. 16).

SECTION II.

Art. 100-106.—Treats of cases of discovery in the act, and is similar to the French law.

CHAPTER II.—PROSECUTION OF OFFENCES.

SECTION I.—FUNCTIONS OF THE STATE PROSECUTOR.

Art. 107-109.—The demand for the instituting of a preliminary examination is obligatory in case of a crime, optional in case of a delict, inadmissible in case of a contravention.

The right of complaint by the civil party (Section II. Art. 110-112) is similar to that laid down in the regulations of the French Code.

Chapter III.—(Art. 113-117) regulates the preliminary examination. Excepting in cases of crime or of a "délit flagrant," the examining magistrate cannot, on pain of nullifying proceedings, undertake a preliminary examination without a requisition from the public prosecutor or the civil party.

Section I.—Contains the regulations concerning warrants for summons and arrest. (Art. 118-142).

A warrant for production is allowable only:

1. When the accused has no fixed residence.
2. If the judge suspects him of an intention to flee from justice, or fears he may destroy the proofs of his guilt.
3. If he fears that the accused may carry into execution acts begun or threatened. (Art. 121.)

Connected with the warrant for production is a species of arrest (*mandat de dépôt*), which, however, is conditioned on a previous hearing of the accused, and in any case is allowable only when the judge is of the opinion that the delict will entail imprisonment or some other severer penalty on the accused. After ten days the warrant for detention (*dépôt*) becomes a *mandat d'arrêt*. This requires sufficient substantiation of the charge by means of a presentation of a summary of criminalizing facts, and the letter of the law bearing on the point. Excepting in cases of solitary confinement (*mis au secret*) the accused may, in the presence of an official, receive visits from their relatives, connections, friends or advocate, so long as household regulations are observed. The person confined thus can receive letters, books, and such messages only after they have been read by the examining magistrate.

In every examination prison, a copy of both Criminal Codes must be placed at the disposal of the prisoner (Art. 142).

At any stage of the preliminary examination, the examining judge may, if he considers it neces-

sary for the obtaining of truthful testimony, either on the requisition of the State prosecutor or of his own official right, order that the accused, whether detained or arrested, may be relegated to solitary confinement (*sera mis au secret*). This "*mis au secret*" means complete isolation from all intercourse with the outer world; the prisoner, without the permission of the examining judge, being unable to receive or send letters, documents, valuables, or any other articles whatever. Food and medical assistance are brought to him only by persons specially designated for that purpose. The "*mis au secret*" cannot be fixed for a longer term than ten successive days, but the order for a term of ten days can from time to time be repeated. Within these ten days there must be at least two hearings of the accused (Art. 145).

Section III. (Art. 146-148) treats of evidence in the preliminary examination, and begins with the principle. The law deduces from the facts given no presumption of guilt whatever.

The confessions of the accused, the results of investigations, the testimony of third parties, the opinions of experts, and evidence of every sort, are left to the free valuation of the judges. The examining judge has to collect suitable testimony for the purpose of finding out the truth regarding the contentions of the parties (*réquisitions* of State prosecutors, *demandes* of the civil party or the accused).

Before any other act of examination, unless there is danger of delay, the judge must give the accused a hearing. (Section IV., Art. 149-157.) The extorting of a confession by threats or false allegations is strictly forbidden. The accused may demand a copy of the report of his examination. Confrontations with other accused persons or witnesses in order to settle questions of identity or complicity, or to facilitate the ascertaining of the truth, are allowable.

Section V. treats of verifications and seizure of incriminating articles (Art. 158-169). In the first place the duty of the examining judge to procure facts favourable to the accused is particularly insisted upon. For this purpose the dwellings of other persons besides the accused may be subjected to a search, if a reasonable suspicion exists that they contain articles, the possession or the inspection of which would be of importance in the examination. The accused may be personally present at the search of his premises or may be represented by a special attorney. The same holds good for all sorts of investigations into circumstantial evidence. The examining judge has to decide as to the propriety of personal attendance only in case of arrest or detention. The civil party may claim the same right of personal attendance (Art. 163).

Whenever the examining judge considers it important for the establishment of the truth, he may demand from post-office officials, telegraph officials, and other furthering agencies, all telegrams, letters, and other despatches which have been sent either to or from the accused.

Section VI. deals with the hearing of witnesses (Art. 170-190). The examining magistrate issues the necessary summons for witnesses designated by the State prosecutor, the civil party, or the accused. If, however, plaintiff or defendant nominate too many witnesses, the examining magistrate may limit himself to the summoning of five (in correctional cases) or ten (in criminal cases) witnesses, who are first in order of nomination or who seem in his opinion to be the best informed, reserving the right to call a greater number if thought necessary for the establishment of the truth. He may also *ex officio* summon as witness any person other than those designated by the interested parties (Art. 170).—If the witness is a soldier or an officer in the land or sea forces,

and at the time absent with his corps, the summons is served on him through his military superior, who shall either give him the necessary permission to appear before the Criminal Court, or in case of absolute hindrance on account of necessary service, shall request the judge to grant necessary delay, giving his reasons for the request.

If a witness refuses (without excuse) to appear after having received a summons, the examining magistrate on the requisition of the State prosecutor has to inflict upon him the penalty of a fine of from 2 to 10 yen, from which neither appeal nor protest is allowed. The witness may be summoned repeatedly on pain of a penalty and under threat of having a warrant issued for his production. If the witness still disregards the summons without proper excuse, the fine is doubled and the warrant for production is to be issued.

It is worthy of remark that under general questions the question of the "religion" of the witness is not mooted (Art. 179). The witness swears to "tell the whole truth and nothing but the truth, without hate, fear, or favour." The following persons are not eligible as witness.

1. The civil party.
2. The relatives and connections of the civil party and the accused.
3. Their guardians or their wards.
4. Their servants or employes.

These persons can give information though they cannot act as legal witnesses.

The same holds good for the following persons (that is, they are ineligible as witnesses, but are heard for *renseignement*):—

1. Persons under 16 years of age.
2. Imbeciles.
3. Deaf mutes.
4. Such as have in consequence of a penal sentence forfeited their civil rights or had them suspended.
5. Such as are charged with crime or are brought before the police court for a delict which entails major imprisonment.
6. Persons who have been charged with the same deed and have undergone the criminal examination, but on account of lack of evidence, have escaped prosecution.

If the witness appears, but refuses, without legal excuse, to give testimony or to take the oath of a witness, on the requisition of the State prosecutor he is to be condemned to the penalty of a fine (4 to 40 yen) as laid down in Art. 180 of the Penal Code.

The following are exempt from the fine:—physicians, apothecaries, midwives, advocates, counsel, attorneys, notaries, or ministers of religion of any denomination who refuse to give answer respecting facts—but only respecting those—which they declare that they are bound to conceal as official secrets.—If a witness belongs to the Imperial family or to officials of the 1st, 2nd, or 3rd classes (Chokunin-Kuan) his testimony is taken at his residence.

Section VII. Of Experts. (Art. 191-200.) Experts are summoned when the examining magistrate considers their assistance necessary for the ascertaining of the truth. Art. 192 allows the compulsory summoning of experts, but only on pain of fine, not of warrant of production. The oath of experts promises fulfilment of duty "in all sincerity." If the expert appears, but refuses to take the oath or perform the *expertise* required of him, he incurs the fine laid down in Art. 179 of the Penal Code (from 4 to 40 yen).

Persons who cannot be heard as witnesses (Art. 181-182) cannot be summoned as experts. An exception occurs only in case of danger from delay, or the impossibility of immediately obtaining other experts. It this case however

the result of the *expertise* and opinion of the expert will be considered merely as information.

Section VIII gives the regulations concerning the preliminary examination of the so-called *délit flagrant*, (Art. 201-209) in which, following the example of the French law, far-reaching powers are entrusted to the State prosecutor. In these cases the examining magistrate can *ex officio*, i.e. without awaiting a requisition from the State prosecutor, proceed with the examination. In such cases, the public action is held to have been begun by the first declaration of the facts of the case; further procedure depends on the requisition of the State prosecutor. On the other hand if the State prosecutor, becomes aware of a *délit flagrant* before the examining magistrate, without awaiting the action of the same, he may repair to the place of the offence and undertake the various preliminary examinations, after which he shall immediately send a report of the examinations with his requisitions to the examining magistrate. Witnesses and experts are however heard by the State prosecutor without oath. Authority, similar to that of the State prosecutor in these cases, is also given the officials of the judicial police, who cannot however issue warrants of detention or arrest.

Examinations undertaken by the State prosecutor or the officials of the judicial police may be repeated by the examining magistrate. On the other hand the State prosecutor after having heard the accused, whether he has issued a warrant of detention against him or not, may summon him immediately before the bar of the Police Court, if he considers a preliminary examination unnecessary.

Section IX treats of Bail (Art. 210-219). During the course of the preliminary examination, the examining magistrate, after having heard the propositions of the State prosecutor, on the demand of the inculpated person under arrest, may set him at liberty under an engagement to present himself whenever summoned. If the accused is "incapable" (without civil rights), his release on bail may be requested by relatives, connections, or legal representatives. The provisional release is always conditioned on security, the amount of which is to be fixed by the examining magistrate. Security can be furnished by either the accused or a third party, either in cash or through legal representatives who bind themselves to pay. In case of refusal to appear the security may be confiscated in whole or in part. On the requisition of the State prosecutor, the magistrate pronounces sentence of forfeiture of security; on the requisition of the State prosecutor the magistrate may order the return of the forfeited security, if he discontinues the action, refers it to the Police Court, or pronounces a sentence for a delict entailing the penalty of a fine.

The magistrate may also entrust the accused to the care of his relatives and connections in case his release is not requested.

Section X. treats of the closure of the examination (Art. 220-234). If the magistrate judges himself to be incompetent, or the continuation of the examination to be useless, he sends the papers to the State prosecutor requesting his action in the matter, who must send in his requisitions within three days as well as return the papers. The State prosecutor may demand a supplementary examination. In any case the closure of the examination must depend on the judge's decision. If the judge finds that the offence lies beyond his competence, he declares his incompetence. The magistrate decrees the discontinuation of the proceedings, and the release of the accused:—1. If proofs of the offence are insufficient. 2. If the deed proceeded against does not constitute a delict. 3. If the time for prescription has been fulfilled.

4. If a legal sentence has already been pronounced for the same cause. 5. If an amnesty has been granted. 6. If there is cause for absolute exemption from penalty. If the offence be a contravention, the case will be transferred to the Police Court; if a delict, to the correctional police court; if a crime, the magistrate gives his decision to transfer the case to the Criminal Court, which decision carries with it the detention of the accused. If the case be referred to the Criminal Court or to the correctional police court for a delict involving imprisonment, and the accused cannot be found, the State prosecutor or the civil party may demand from the civil court provisional sequestration of his property until he is arrested.

Chapter IV. treats of Appeal in Preliminary Examinations (Art. 234-261). From beginning to end of the examination, the right of protest is accorded to both State prosecutor and the accused: 1. Against a decision of the judge rejecting an objection against his competency. 2. Against the issue of an illegal warrant of arrest, or the non-issue of a legal one. 3. Against the granting or illegal refusing of release on bail. 4. Against any other decision by which he exceeds his powers (*excès de pouvoir*).—In the last case only the civil party also has the right to appeal. In case of such appeal decision is given in the higher court by a bench of at least three judges.

The code contains special regulations as to legal objections against examining magistrates. Objections are valid in the following cases:— 1. Relationship or alliance between the judge or his wife on the one hand and the accused, the civil party, or their wives on the other. 2. Guardianship of the judge over the accused or the civil party. 3. If the judge or his wife has accepted gifts from the accused or his connections, or a proposition regarding such gifts, even when these gifts contain no evidence of being for the purpose of bribery (Art. 237). The objection must first be laid before the magistrate concerned, and will be brought before the Court only in case of refusal on his part. Every judge is bound, in case of the existence of any of the above causes for objection, to declare his incompetence. An objection against the State prosecutor by the parties to the suit is inadmissible.

The State prosecutor has always the right to appeal against a decision of an examining magistrate closing an examination, the Civil party has this right only in case of excess of magisterial powers, and the accused, in this latter case or an account of incompetence of either the judge or the court entertaining the action, if the judge decides that the case must be laid before the Criminal Court or the correctional Police Court. The higher court, acting as a Council-Chamber, must decide such cases of appeal, and the validity of their decision may be called in question by any of the parties concerned. An accused person, who has been released from a prosecution by means of a legal decision of the examining magistrate, cannot be prosecuted again for the same offence even from a new legal stand-point, unless new, and previously unknown, evidence be forthcoming.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Chamber of Commerce, Tsukiji, Tōkiyō, on Wednesday, November 14th, the Vice-President for Tōkiyō in the Chair.

The minutes of the last Yokohama Meeting, having been published in both the daily and weekly editions of the *Japan Mail*, were taken as read.

The election was announced, as Members of Council, of Mr. Naibu Kanda, instead of Mr.

Hattori, who had declined to serve, and of Mr. H. Gribble, instead of the late Dr. Geerts.

It was also announced that Dr. C. G. Knott and Mr. James Green had been elected members of the Society.

The Rev. W. DENING then read his paper on "Modern Translation into Sinico-Japanese."

The Paper commenced with a short account of the various treatises presented to the Society in past years, in which special notice was taken of the fact that writers on literary subjects had chosen the ancient rather than the modern world as a field of investigation. The causes that led to this were then touched on; and the writer proceeded to show that there was a special interest attached to the study of modern Sinico-Japanese; in that the books that were written in it contained the ideas and theories that were to govern a future generation. It was pointed out that the standard works of the day were almost exclusively translations or compilations; these translations were producing great changes in the language of the country, as well as instructing the people in other ways.

The author of the paper then proceeded to state his views on translation in general, defining what he conceived to be the true ideal to be aimed at. Whilst of opinion that there were occasions in which literal translation might be necessary, he maintained that the power, beauty, and expression of our best works, could not be fully reproduced unless a free translation was resorted to. Dr. Legge's translations of the Chinese classics were referred to as defective in this respect, though they were most excellent in every other. The delegates' version of the Chinese New Testament was spoken of as the best translation that had been produced in this part of the world. Quotations from it were given, special attention being drawn to Ephes. IV., 15-16, and Heb. IV., 12, as typical passages that showed the conciseness and elegance of the style of the whole book.

The author of the Paper maintained that there was no thought too refined or too deep to be expressed in Chinese, as he said would be shown by the examples, which formed a part of the Paper. It was pointed out, however, that some of our best poetical works were, owing to their historical allusions, linguistic peculiarities, and highly figurative nature, quite untranslatable. The works which most easily yield themselves to translation were of a scientific, historical, or philosophical nature.

The necessary qualifications for carrying on the higher class translation were specified. The practice of employing teachers who know English and are able to translate better than their employers was strongly deprecated. The Paper contained twenty-seven examples of translation, with criticisms and explanatory remarks of various kinds.

The CHAIRMAN, in thanking the author for his Paper, took occasion to express his concurrence in most of the views Mr. Dening had advocated, and he drew attention to the superiority of Sinico-Japanese over pure Japanese as a vehicle of thought and expression.

Various remarks having been made and opinions expressed by the Rev. E. R. Miller, the Rev. G. W. Knox, Dr. Divers, and the Rev. A. D. Gring, and the author of the Paper having briefly replied;

The CHAIRMAN, in conclusion, wished to draw the attention of all persons interested in this question to a simple fact which is sometimes in danger of being forgotten. That fact was that the decision concerning the style of language to be used in Japan rests with the Japanese, not with foreigners, and that the decision of the Japanese has made itself heard with no unflattering sound. In their translations of European books on every subject, Sinico-Japanese is the language used, and it is also, with the modifications necessary to colloquial speech, that used by all persons of education in discussing any grave subject. Neither is it that the Japanese have, as it were, wilfully and without a fair trial of various styles, thus chosen one and rejected the others. In the last century there was an attempt made by a brilliant band of scholars to resuscitate the pure native tongue. This attempt, though it has left some ornamental literature whose charms of style within certain narrow limits delight the student of language, failed utterly as a practical movement. Were it not, therefore, presumption, as well as waste of time, for outsiders to espouse a cause which even the native talent of

a Mabuchi and a Motoori failed to make successful? Should we not, at any rate for the present, learn Japanese as it is, and use for our translations that style which all Japanese workers in every branch have simultaneously adopted? In questions of diction, at least, every nation must be allowed to be its own best judge.

The Meeting was then adjourned.

CORRESPONDENCE.

[Our readers must distinctly understand that we are in no sense responsible for the sentiments or opinion of our Correspondents, for the accuracy of their assertions, or for the deductions they may choose to draw therefrom.]

ON BEHALF OF SERGEANT JAMES.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Having read of the difficulties and dangers which beset the few foreign members of the Yokohama Police Force, in the discharge of their labors; and feeling that, in cases where they are subjected to unusual peril, they are entitled to more direct manifestations of sympathy than they are accustomed to receive, I beg to suggest that a substantial evidence of appreciation would not be misapplied at a time when any one of them should suffer a serious injury. I believe that the courage and devotion to duty of these officers are universally admitted. It is not likely that those qualities would be impaired by a more effective general recognition than is commonly awarded them. The hardships of Sergeant James afford an opportunity for bringing the subject forward in a practical way. If not contrary to the rules of his service, I trust it may be found possible to collect for his acceptance an amount of money which, though it cannot heal his wounds, will perhaps help to deaden their smart. I send herewith a sum which I ask you to include with that which I hope will be contributed for this reasonable purpose. And if any other foreign attaché of the police force should similarly come to grief hereafter, I shall always be ready and glad to offer a like amount for his benefit.

I am, yours very truly,

H.

Tokio, November 22nd, 1883.

IMPROVEMENT OF THE POLITICAL SITUATION.

(Translated from the *Fiyu Shimbun*.)

The essential elements that constitute an oligarchical government; the elements which are indispensable to keep the bone and blood of an oligarchy together, are three in number, to wit, fear, secrecy, and severance (the origin of faith and allegiance). These three qualities proceed from the same source. Fear produces secrecy and *visa versa*. Fear induces reverence, and in a word they are the cause and effect of one another and work in harmony; when secrecy is employed things assume larger proportions than they really are. In the same ratio does fear induce reverence. This state of affairs can only exist in uncivilized communities. It is evident, therefore, that the oligarchical form of government is only suitable for uncivilized people. What caused this fear, secrecy, and reverence? The reply is that when this world was wrapped in a state of ignorance, men lacked the ability to investigate the natural phenomena by which they were surrounded and were constantly subjected to external influences which they could not explain. The sight of the ocean for instance over-awed them, and they had no courage to try and navigate it. The solemn grandeur of the mountains deterred men from exploiting them. Earthquakes, lightning, and anything else that was visible or audible, created consternation in their minds. They have stood appalled at the sudden opening of ominous clouds and the violence of the waves. All these they have attributed to supernatural agencies. In short, ignorance produces fear and reverence. In these times battle and pillage were rife, and men were glad to have a day's rest from the strife. The man who excelled in physical and intellectual

power commanded the respect of all, and as an inevitable sequence they become subject to him.

This is the foundation of our present form of government. Under these circumstances, those in authority avail themselves of the reverence of the people and thereby contrive to forward their own selfish designs. Those who resist them are either punished or killed. The people, therefore, to propitiate them make presents of rare articles, and similar observances are traceable to the homage exacted by the strong from the weak and from the common herd to the chief of a tribe. Amongst barbarous tribes, division of labour being unknown, the chief supplied them with clothes and provisions and held intercourse with his subjects on intimate terms. At that time they had not given him the name of "supreme being." According to the *Nippon Shoki*, Susano-o-naru Mikoto, on his way to Idzumo, met an old woman carrying a little girl who was weeping. The Mikoto asked her who she was, and she replied, "I am Kumotsu-Kami." The same authority records an instance in which a fisherman being interrogated by Jimmu Tenno whilst on the sea, replied that he was Kunitsu-Kami. It is apparent, therefore, that in remote ages ordinary people adopted the title of *Kami*, and that it was not used as a designation of supreme beings only. As time advanced, the division of labour became more expressed and the relations between the ruler and the people became more unequal. Now the chief does not converse intimately with his subjects. In the old times there was no record kept of the births and deaths of chiefs, they were only handed down verbally; hence the superstition arose that the chief was descended from a supreme being. This superstition induced unmerciful rulers to oppress the weak and inspire them with fear. It is recorded that barbarians, fearing wild beasts, and snakes deified them to avert their anger. Buckle, in one of his essays, says:—"The gods of the barbarians are not the deities of good, but of evil." This is true. That men regard an enlightened ruler as a god, and pay reverence to him, is but an association of ideas. It is only possible to command fear and reverence after persecuting your fellow creatures. The man who persecutes commands reverence. The oligarchical system was established through the influence of external objects brought to bear on the human mind. Buckle again says:—"In Asia, the vast size of the mountains, rivers, and geographical phenomena, inspired the human mind with awe, increased the imaginative powers, and made men ascribe all things with which human power could not cope, to the work of spirits. Thus the advance of civilization was checked and things remained in a dormant condition. On the other hand, the geographical features of European countries not being so pronounced as in Asia, the sense of fear did not arise. Hence the development of intellect and the present civilization of European countries." The fact that Asiatics as a body are submissive and docile and do not know what freedom is, is attributable to the pernicious effects of external influences. In Japan we do not find the vast oceans or lofty mountains that one sees in Europe, yet the people are content with oligarchical oppression. The cause of this is to be found in Buddhism and Confucianism. They have fostered false ideas and prevented the development of the human intellect. The description of a hell, the doctrines of filial piety, allegiance, and retaliation for offences committed, have largely contributed toward the ignorance of the people. This is greatly to be regretted. Buddhism was introduced into Japan and superseded Shintoism. While the former spoke of future punishment and promised pardon for all who believed in its doctrines, the latter, superficial as it was, spoke only of present calamities and confined itself to forms and ceremonies. The new religion was at the time more attractive to the populace, who embraced it eagerly. Confucianism came in at the same time as Buddhism and became very popular. The former encouraged submission to superiors and the latter a spirit of quiescence. They both advanced the interests of the oligarchical institution. In ancient as well as modern times, rulers have oppressed the people in the name of religion. These two religions Buddhism and Confucianism created a great number of royalists. The same may be said of Spain and Italy, where Christianity, having attained to great power, influenced a large

number of royalists. Till quite recently there was no steam or telegraphic communication, or postal service, in this country, so the oligarchy was able to maintain its power. Now it cannot any longer continue to fight against the progress of society. Since foreign intercourse was inaugurated in the era of Kayei, all the latest European and American inventions have been introduced. Amongst these, we may mention steamships, railways, telegraphs, the postal service, the press, military organization, law, sciences, and arts. So far as external appearances are concerned, our civilization is complete. Secrecy is no longer a power. We have lectures, and the tide of liberalism runs everywhere. The oligarchy is about to be destroyed. European history bears testimony to the possibility of such an event. The French revolution served as a warning to the supporters of oligarchy, and at present among the nations of Europe only the Russians and Turks have this form of government. It is evident that an oligarchical form of government is against the dictates of common sense, so long as it promotes only the selfish designs of those interested in it. A famous French writer said that "an oligarchical Government stops progress, disturbs the peace of the nation, and is unjust. People are not bound to obey its laws or orders." He further argues "that as it is maintained by physical force, its people must likewise use force to protect their rights, their freedom, etc. Thus this form of government is condemned, and all political institutions under it are objects of national hatred." Our beloved Sovereign, in his graciousness, has promised to establish a national assembly in the 23rd year of Meiji (1890). His Ministers, in accordance with his wishes, are trying to abolish the oligarchical form of government, as the promotion of steam and electric communication, and the establishment of schools in the rural districts show. It now only remains for the Japanese people to assist them in the consummation of their object, viz., the abolition of the oligarchical government.

THE LOSS OF THE "KIWORO MARU."

MARINE COURT OF INQUIRY.

A Marine Court of Inquiry was held yesterday, before G. Ramsay, Esq. (President) Lieutenant James, R.N., and A. F. Macnab, Esq., into the circumstances of the loss of the Mitsu Bishi Mail steamer *Kiworo Maru*, Captain Withers, ordinarily plying between Yokohama and Yokkaichi.

After reading Section X. of the regulations for officers serving on board vessels of foreign construction in Japanese employ, and the terms of the agreement embodied in the form of a letter applying for engagement from the Company, the President read the following letter from Captain Withers, which was acknowledged by that gentleman, reporting the loss of the *Kiworo*, and addressed to the Directors of the Mitsu Bishi Steamship Company. The certificates of the master and the first officer were deposited in Court. The extra-first officer and chief and second engineers stated that they had lost their certificates at the wreck.

Kajiga Hana, October 16th, 1883.

To the Directors of the Mitsu Bishi Mail Steamship Company, Head Office, Tokio.

DEAR SIRS.—An opportunity now offers me to report the sad fate of your vessel *Kiworo Maru* so lately under my command. I will commence with giving the position of ship at 4 a.m., on the 13th instant, she then being in lat. 33° 39' N. and long. 136° 27' E., heading by magnetic compass W.S.W. Up to this time we had a fresh gale from the Eastward, with passing rain squalls and high Easterly sea, ship running with top-sail and fore-trysail. Midnight the reading of barometer was 30.11 and at 4 a.m. 29.88, and in consequence of its falling and weather looking threatening to the Southward, took in the top-sail and fore-trysail and hauled ship's head out half a point. At about 4.30 a.m. a sudden burst of wind from the S.S.W. struck the ship with terrific force throwing her over on her broadside into the trough of the sea, and although the helm was put hard down and engine worked to the utmost speed the ship lay powerless at the mercy of the storm drifting to leeward unmanageable at an almost inconceivable speed. At daybreak saw land and breakers, and at 6.30 ship struck on a sand-bank on outer bar of Otomashi-gawa. At this time the ship was heading direct

for the land, put on all possible speed to engine and with the help of sea which was breaking clean over the ship, got into the entrance of the river all the time ship gliding and being forced over the bottom: let go both anchors and stopped engine, shortly after 7 a.m. ship commenced to drift out towards the breakers (already gone through) put engines at highest possible speed until the sea breaking on board put the fires out. We then drifted broadside on the beach with head to the Westward ship falling over on her port side and bilging. Got lines on shore and landed everybody except two Japanese passengers (missing). We have engaged coolies, and with the crew have saved some cargo and wreckage, ship fast breaking up with continued bad weather.

The weather is now fine and if it continues will be able to save, I hope, more cargo.

(Signed) GEO. WITHERS (late Commander steamship *Kiworo Maru*).

(Signed) O. OLSEN (late Chief-officer steamship *Kiworo Maru*).

(Signed) YOSUKE KAYA (Superintendent Chief-officer steamship *Kiworo Maru*).

(Signed) YOZABURO KITANO (2nd Officer steamship *Kiworo Maru*).

Captain George Withers, after being cautioned to speak the truth, was first examined. He said:—My certificate is numbered 114 from the Japanese Government, given on account of my holding a master's certificate from the English Board of Trade. I recognize as a correct copy the document (above given) of my letter to the Directors of the Mitsu Bishi Mail Steamship Company reporting the loss of the *Kiworo*. The Chart, before me, has been on board about six months. The log-book, before me, is the ship's. The fair log was written up by the mate on shore the day after the loss of the vessel. It is comparatively clean because it was kept in the driest place that we could find in the ship. My room and the mate's were the driest part of the vessel. The deviation table was entered in the log from the date that was commenced. The vessel has not been swung in my time to ascertain the deviation. At every available opportunity I have checked my ship's position by taking the bearings of Fujiyama. At my suggestion, the mate frequently took observations for azimuths and amplitudes. I do not think they were entered in the log. I got the true bearings of Fujiyama from the charts. The deviation table as given are by Captain Francke, whom I relieved, and whose observations I found correct. I never used a night order book on the coast. The officers were Messrs. Olsen, chief officer, Kaya, supernumerary chief officer, Kitano Tozaburo, second officer, and the engineers. Mr. Olsen has been with me about a year; Mr. Kaya and the second officer about six and eight months each. I left Yokohama at 6 a.m. on the 12th. There was a light wind and the weather was cloudy. We passed Rock Island at 1.46 p.m. with a strong N.E. wind and drizzling rain. We then steered West by the bridge compass, not magnetic. The corrected course would have been about W. by S. We had three compasses on board, but our bridge-compass we considered the standard. I steered west until I arrived off Onisaki, bearing N.W. magnetic, at 4.46 p.m. on the 12th of October. I then altered that course to W. by S., still by the bridge-compass—error about ten degrees. So the magnetic course would have been about a degree short of W.S.W. The chief mate was on watch at the time, and I ordered him to take a bearing, which he did. This was about 4 a.m. [Witness described the state of the weather at this time and continued.] She was in the trough of the sea for about two hours working to her utmost speed. I put the helm well up, and kept it so for about a quarter of an hour. The topsail yard was traced hard. Finding the ship would not fall off, I put the helm down. This had no effect as far as I could discern. The ship was going full speed ahead, and the compasses were vibrating terribly. I had no chance of club-hauling, as the position was so dangerous. I do not think it would have been possible to box-haul the ship. We cannot control the elements. I could not have attempted to put tarpaulins or anything else in the fore-rigging. The sea was too heavy for anyone to execute orders. I was knocked about, and so were all the men on deck. I kept the engines going full speed because I thought it the best thing to do. A heavy sea was bursting on us from the eastward. The

ship was trending about west. The compasses were useless. I cannot state the pressure of steam carried. The average pressure was about twenty-two. The speed was not reduced during the passage up to the time of the vessel striking. I made no allowance for the deflection for the Kiro Shiwo. An easterly wind, in my experience, decreases the velocity of the Japanese gulf stream. I have never noticed that stream setting in a directly opposite direction to its easterly course. Between the 13th and 14th of October I did not estimate that I had any current. At Yokohama I took in about forty tons of general cargo—no iron. The vessel was stranded by God's elements, rush of waters. I think the ship was taken charge of by a tidal wave—washed in and washed out. I cannot account for the disaster in any other way. About seven o'clock we were thrown into the Otonashi river. I let go the starboard anchor, having to cut away the lashings and then let go the port anchor, having stopped the engines. I ordered the engineer to go full-speed ahead. I don't know what pressure of steam we had. No lives were lost. Daylight was about six o'clock or 6.15. The breakers when first seen were from one to two miles off. I saw the land and broken water simultaneously. About half an hour then elapsed before the ship struck. The vessel was going full speed all the time, but never headed towards the land. She fell off when she got into broken water. I suppose she struck ashore because she was down three feet by the stern. About a quarter of an hour after we got into the river the vessel drifted toward the bar. She was then heading about north-west. I went full speed ahead, and had what was left of the fore-trysail and fore-staysail set in order to endeavor to "keep her there." In spite of our going full speed ahead she parted the starboard anchor. Letting go the port anchor I got clear of a rock where all would have been lost. Thence the vessel drifted and stranded, like a plank from a water-mill, a mile below the rock on the beach. From 4 a.m. she drifted at a dreadful speed, about five knots an hour, perhaps on a North-west course. It is beyond my power to say exactly. The engines were powerless. Supposing no accident had happened I should have given the vessel nine miles speed and made a northerly course. I estimate the drift, at least, at four miles an hour, dead to leeward. (During a long examination nothing further could be elicited from the witness than that his ship was thrown ashore by an extraordinary convulsion). During an ordinary gale the ship would have drifted eight miles in the two hours. Looking at the new dead reckoning position on the chart at 6 a.m., I cannot account for the vessel being so close into the land. I noticed everything. I do not think it possible that the patent log could have been in error as much as one mile an hour. I have never known it so. I have no record of the last time I got the deviation; but I am positive the compasses are correct. My allowance for the set of the sea was of no account because of the current. After passing Omaisaki, I laid down for a few minutes; but was frequently on deck, up till a quarter to four, when I took entire charge of the ship. The barometer was then 29.88.

Canute Olsen, late Chief-officer of the *Kworio Maru*, holding a first-mate's certificate, No. 61, said:—I kept the watch from 4 to 8, morning and afternoon. The weather on the 12th of October was squally, with a strong Easterly wind. The speed by patent log was 9.2/4 miles. The log was fixed three feet inside the port quarter. This log was not checked by the hand-log on this voyage. I kept the ship's log (produced). It was submitted to the master at intervals of three or four days. It was written up at the place of the wreck, three or four days afterward. The deviation table was written when the book was commenced. Observations were taken by me whenever the weather was clear, and recorded in a small book kept by myself, that is now in Yokohama. My observations agreed with the deviation table. At 4.46 p.m. on the 12th Omaisaki was bearing N.W., about 10 or 12 miles, by my judgment. We shaped a W. by S. course by bridge compass—error 10 degrees W. We went magnetic W.S.W. westerly. The captain set the course. I steadiest the ship. The point made for was South of Ooshima. Leaving Yokohama the trim was three feet by the stern—forward 10.6, aft

13.6. I was not looking for Toyama Light. The captain's night orders to me were to look after the ship, and report dangers. The course was not altered during my watch. I think I was the first to see the land, before it was reported to n.e. This was at daybreak, and I only saw the top of the land. The wind was S.S.W., hurricane force, drizzling rain. I could see about a mile. The breakers were first seen about 6 o'clock, the ship heading for the land at no speed whatever. The engines were not stopped: they were going full speed. The ship had no head-way. The helm was twice shifted to bring the ship to the wind. The sea was the same as the wind—southward and westerly, confused—the westerly highest. The means employed to bring the ship round were helm down and engines full speed; but the ship would not come up. The foresail could not be set, as the ship was under water forward. I went aloft to cut the topsail away and heard the captain say he would try to wear the ship. If the helm had been put hard awether and the fore-topsail braced hard back, the engines going full speed, the vessel would not have come round; nor would she with engines going full speed astern, tarpaulins in the rigging and men forward. My only suggestion to the captain when the vessel was going ashore was to cut the lashings of the anchors. The engines had not been reversed at all, to my knowledge. Anchors were ready to let go before we drifted over the bar. They were not cock-billed. We had to cock-bill and let go at the same time. There was too much sea to let go the anchors as we were drifting to the shore. We had nine deck hands, and four quarter-masters. The average speed of the *Kworio* was 8 1/2 miles per hour. I do not think the ship was underlogged on her passage. I saw the chart at 4 a.m., and think the position marked at that time was correct. From 4.30 to 6 a.m. the ship must have drifted dead to leeward about six or seven miles. I cannot account for the ship being so close into the land at 6 a.m., except by some unknown cause. I did not think a typhoon was nearing us. I did not look at the barometer at 4 a.m. The second mate told me its height. It had fallen 0.34 since I left the deck before. I supposed the fall meant easterly wind and rain—more for rain.

Kaya Kosuke, supernumerary first officer, said:—I hold a first officer's certificate, dated in August this year. I have been on board the *Kworio* for about three months, and kept the watch from 8 to 12. At midnight on the 12th it was cloudy, blowing hard from the east, and the sea was high. I relieved the chief officer who gave me the course, and orders about the sails, and to call the Captain if the weather changed. Course by standard compass on the bridge was W. by S.: Error ten degrees westerly: magnetic course W.S.W. I kept the course as ordered, and the vessel was steered the course at a speed of about ten knots by patent log. Topsail and fore-trysail were set. I took trysail in at half-past eight. The master was then in his room. He came on deck during my watch. I was relieved by the second officer. The weather was the same at midnight. I came on deck again just before daylight because the ship was labouring heavily. I saw land soon after, about daylight, at a distance of, perhaps, three or four miles. The morning was very dark. Soon I saw breakers. The ship was rolling heavily side on to the sea. It was not possible to set the fore-staysail. About twenty minutes elapsed from the time I saw the breakers till the ship struck. The engines were going full speed the whole time. The *Kworio* entered the Otonasi-gawa at seven o'clock, or thereabouts. Two anchors were down. The port cable was all paid out and parted. The starboard was nearly all paid out. The out-rush of water from the river was very strong: it carried away the cable. We steamed against it but could not stem it. It carried us out over the bar.

To Captain Withers—I remember your coming up in the middle watch, and asking if I could see Mitoya. I said I was looking for it, and went aloft. You were on deck then. I saw nothing. The entries of the barometer reading are made by the second mate for that watch. The weather was clear and not so bad as it had been before.

At noon the court adjourned till 1.15 p.m. On resuming Mr. Kitano Tozaburo was called. He said—I was second mate of the *Kworio Maru* at the time of the wreck. I hold a second mate's

temporary certificate, which I have held for about two years. I have been about six months on board the *Kworio*. I kept the watches from 12 to 4. On the 12th the weather was dark, a hard wind blowing. Trysail and fore-top-sail were set. (Witness here corroborated the evidence of the preceding witnesses as to course and sail set.) I know that the error of the compass was 10 degrees West. We steered S.W. by W. to the end of my watch. My orders were to call the captain if there was any change in the wind. I looked frequently at the bridge-compass to see the ship had kept her course. At 4 the weather was dark and rainy. I could see two or three *cho*. I do not know what time I came on deck after being relieved. The chief officer called me. When I got on deck they were taking in the trysail. I saw land about four or four and a half miles distant on the starboard bow, but saw no breakers. I do not know the time when I noticed that the ship was drifting on shore. I cannot estimate the rush of the river: it was great. The speed at the time, from the log, was ten knots per hour. I did not look at the barometer. I have never taken an azimuth or amplitude on board the *Kworio*.

To Captain Withers—The entry in the log of barometer reading is in my handwriting, 29.88 at 4 p.m. I recorded the reading at every hour.

Yamada Jinjiro—I have a certificate, No. 13, as First Engineer under rule three of the Regulations. I have been in the *Kworio* since September 1882. There are three engineers on board. The chief's watch is from 4 to 8, 2nd 8 to 12, 3rd 12 to 4. On the 12th the pressure of steam was 20 lbs., revolutions 73 or 74. I estimate the speed of the ship on the twelfth, with the wind, at about ten knots. The weather was windy and the sea rough. At 4 on the 13th the wind had changed, but was strong. From 4.40 to 6 the speed was about ten knots. I was not on deck. After the change of wind the vessel was rolling very much. The speed was not reduced since we left Yokohama—not even when the bad weather commenced. At half-past six or a little before seven the speed was reduced. That was at the mouth of the river—where exactly I cannot say as I was below. A little after seven the engines were moved again, and kept going for twenty or thirty minutes—pressure 21 lbs., and going full speed. The engines were stopped by order telegraphed from the deck. The ship was then aground. I left the engine-room shortly before eight. The engine-room clock had stopped. The ship bumped exceedingly. The engines had begun to race at half-past one the previous day. I relieved the pressure from time to time. The pitch of the propeller is about 12. In ordinary weather the revolutions to make 9 knots are 75 or 76 per minute.

At this point the Court decided to call no further evidence, but addressed a few questions to Captain Withers.

Q. When you were drifting so helplessly toward the shore why did you not stop the engine?—A. A few points of wind would have taken her off the shore. Stopping the engines would have made her less controllable.

Q. At full speed ahead what headway, not leeward, did the ship make?—A. None, if any at all.

Q. Had the engines any effect upon the ship?—A. No, until she got within the outer line of breakers, when I did my utmost to bring the ship within the lagoon at the entrance to the river where I let go my anchor.

Q. During the time you were standing by the ship, did you make any observation as to the rise and fall of the river?—A. In still water there is a rise and fall of about six feet. That I ascertained while bathing.

Q. How do you account for the ship being carried in and out?—A. By an influx and reflux of water: some mysterious freak of nature that I cannot understand.

Q. Why did you not let go both anchors when the ship was being driven towards the shore?—A. Because to do so would have cut the ship down to the water's edge and imperilled the life of everyone on board.

Captain Withers, continuing his statement, said that he had been supplied with a copy of the regulations. There might be something therein ordering that the ship's speed should be logged every two hours. He kept a private memorandum-book, in addition to his supervision of the ship's log.

The Court reserved judgment, stating that it would inform Captain Withers and his officers in due time before it was delivered.

SATURDAY, December 1st, 1883.

The Court assembled this morning at 11 a.m. for the purpose of delivering the following decision, which was read by Captain Ramsay, the President.

The *Kworio Maru* was a composite screw steamer of 811 gross, and 617 net tons, built at Glasgow in 1868, by Messrs. C. Connell & Co., her length being 191.3 ft., breadth 29.1 ft., depth 15.2 ft. She was of 100 nominal horse power, owned by the Mitsu Bishi Mail Steamship Company of Tokyo, and commanded by Mr. Geo. Withers, who held a Master's Certificate of Competency, of the First Grade, No. 114.

The vessel sailed from Yokohama at 6 a.m. on the 12th of October last, bound to Kobe. She passed inside Mikotomo, and at 4.46 p.m. Omaye-saki bore N.W. distance 10 to 12 miles, wind being East, a fresh breeze with drizzling rain; speed of ship being 9.6 knots per hour.

From Omaye-saki a W.S.W. Magnetic course was shaped by Bridge Compass to pass 4 miles South of Ooshima: this course, and speed of 9.6, were maintained till 4.30 a.m. on the 13th, the vessel carrying all possible sail.

Between midnight and 4 a.m. the barometer fell from 30.11 to 29.81, with strong East and E.S.E. winds, when all sail was taken in, the weather being dirty, and having a most threatening appearance to the Southward.

At 4.30 a.m. the ship had run 110 miles on a W.S.W. magnetic course, according to the log, from the time Omaye-saki bore N.W. distant 10 to 12 miles, when suddenly the wind shifted to the S.S.W. in a hard squall, and continued to blow with hurricane force, and by the evidence, rendered the vessel unmanageable; and the ship was blown bodily to leeward though the engines were going full speed ahead. The evidence states she had no headway, but was drifting at a rate of 3 to 4 miles an hour. Endeavours were made to get the vessel round on the starboard tack, by keeping the helm hard alee, and by cutting the remnants of the fore-topsail away. Finding then she would not come near the wind, the helm was put hard aweather, in the hope of wearing her, but without success.

About daylight land was sighted right ahead, distant about 1½ miles. Shortly after, breakers were seen, the ship apparently drifting helplessly towards them, with the engines going full speed ahead. About 6.30 a.m. the vessel struck on a sandbank, or the outer bar of a river, over which she was carried by the force of the sea and speed of the engines into the Otonashi Gawa; there both anchors were let go, engines stopped, cable of port bower veered to bare end, and starboard bower veered to 30 fathoms; but within a few minutes, a heavy freshet parted the port cable. Notwithstanding the engines were going full speed ahead, she dragged her starboard anchor, which was at once shipped, to avoid a rock, towards which the ship was driving; and the vessel was carried out to seaward again, and finally wrecked on the coast, without loss of life.

At 6 a.m., when the ship was discovered to be so close into the land, she should have been by the master's dead reckoning about 15 miles ahead of and 4 miles to the Northward of his assumed position. This discrepancy may arise from two reasons. Firstly:—a current set the vessel to the W.N.W. Secondly:—Underlogging—in both cases at a rate of one knot per hour. The speed recorded is that shown by the registering log, but the First officer and Chief engineer, considered her speed at 10 knots per hour. It is possible that the following high sea would account for the additional knot per hour, and this addition would not be registered by the log, nor perceivable by the eye.

If the error of the ship's position is attributable to the first reason, the Master cannot be held responsible.

If the error of the ship's position is due to the 2nd reason, the Master is to blame, as he, by his long experience, should have made an allowance for the set of the sea.

We are of opinion that it was a combination of the two reasons as given above, which placed the

ship so close to the land at daylight on the 13th of October, viz:—1st, The Kuro Siwodeflected to the northward; 2nd, Underlogging.

After sighting the land and breakers so close aboard at daylight on the 13th of October, the time for action was limited, yet we are of opinion that the Master might have tried other measures, for keeping his vessel off the shore. (1) By going full speed astern, helm a-starboard, with some head sail set, or men in the fore rigging. (2) By cutting away his foremast, and using it for a drag to bring her head to wind. (3) By letting go both anchors when he found she was drifting so helplessly towards the shore. (4) By at least stopping the engines, which were kept moving full speed ahead, in a vain attempt to get the vessel head to wind.

The vessel, once inside the Bar, every effort was made to keep her there, but the heavy rush of water to seaward, rendered it impossible.

JUDGMENT.

We are of opinion that the master is to blame for not endeavouring to keep the vessel off the shore by either of the means enumerated above.

But taking into consideration that at daylight the weather was so exceptionally bad, and the time for taking active measures for the safety of the ship from being wrecked was extremely short, we are of opinion that the exigencies of the case will be met by suspending the Master's certificate, No. 114, for a period of three months from the date of judgment.

GEO. RAMSAY, President.

THOS. H. JAMES, Assessor.

A. F. MACNAB, Assessor.

I hereby approve of this decision, and direct that it be carried out accordingly.

SAIGO TSUKUMICHI,

Minister of the Agricultural and Commercial Department.

Marine Office, Tokio, December 1st, 1883.

The certificates of the other officers were returned to them, and the Court rose.

CHRIST-CHURCH.

A meeting, as advertised, was held yesterday afternoon, in the Chamber of Commerce Rooms, to consider the advisability of maintaining a Church and Clergyman here, of the Established Church of England. There were present Mr. Russell Robertson (Chairman), Messrs. Tom Thomas, Murray, Whittall, Durant, Kirkwood, Griffin, James, Wilson, Walter, Fraser, Cope, Wilkin, Dallas, E. B. Watson, A. J. Watson, and others.

Mr. RUSSELL ROBERTSON, having been voted to the chair, explained the object of the meeting, which was to consider whether the seat-holders and those interested in Christ Church were prepared to maintain that establishment for another year. There was a debt of \$600 on the establishment.

Mr. KIRKWOOD alluded to the clergyman's salary, which would have to be provided for. He understood that the present incumbent's engagement expired in February, and that he was willing to remain for three months beyond that time.

The CHAIRMAN said that the Chaplain had consented to remain in Yokohama for three months from February next if his parishioners desired it.

Mr. BREARLEY suggested that the seat-holders should give a guarantee on their pew-rents for the debt of the Church and the Chaplain's salary. He deprecated the closure of the Church.

Mr. FRASER concurred with Mr. Brearley, but spoke of the burden falling constantly upon a limited number of the community.

After some general remarks had passed, the CHAIRMAN said that the treasurer, Mr. Whittall, was leaving the country, and it was only just that he should be reimbursed the \$600 that he had advanced. The question was, where was the money to come from?

Mr. GRIFFIN asked whether the income of the Church met the expenditure. The reply being in the negative; he remarked that the \$175 which had to be provided monthly for the chaplain's salary stared us in the face.

Mr. WHITTALL said that that pittance was little

enough, and that no competent clergyman could be procured for a less stipend.

Mr. F. EASTLAKE alluded to the numerous subscriptions that had of late been had in Yokohama, mentioning them in detail, and wondered that, in such circumstances, there should be any difficulty in defraying a debt of \$600 owing by the members of Christ Church. \$20,000 had been subscribed for the Theatre.

Several suggestions were made as to the best means of raising funds, Mr. Kirkwood remarking upon the difference of Churches, and that the Church of England could not appeal to the general public. Mr. Cope proposed concerts, and quoted the precedents of former years. The discussion became very desultory, and divers suggestions were made—Mr. Eastlake proposing a list to be handed round, and Mr. Cope a reduction in pew-rents. Mr. E. B. Watson suggested that an appeal be made to the junior members of the community, as the burden had heretofore fallen on a few shoulders, that were not always, in the present state of affairs, well able to bear it. Mr. Whittall said that some time ago the junior members had subscribed handsomely. He did not seem to be in favor of a new appeal to their generosity, and his feeling was apparently shared by the majority of the meeting.

Mr. THOMAS emphatically and at some length held that it was a disgrace that the Church should be embarrassed for a debt of \$600, a feeling that was heartily endorsed by the other members; but, as the Chairman remarked, nothing practical was suggested. In plain terms no one seemed to be willing or able to subscribe the money required to guarantee it; and there seemed, at this stage, a likelihood that the meeting would rise without coming to any decision at all—a negative result which Mr. Wilkin, for one, warmly deprecated.

The CHAIRMAN explained that the present indebtedness of \$600 was in face of \$900 collected only a few months ago. He called the attention of the gentlemen present to the actual seriousness of the financial situation. The monthly expenditure for salaries, repairs, interest, and sundries is \$170, which is too great a tax in present circumstances, although in other small far Eastern foreign communities, such as Kobe and Shanghai and so on, the Church establishments were maintained without apparent difficulty. To Mr. Thomas he explained that the mortgage on the church was \$1,500.

After further desultory discussion, a motion was formulated by Mr. THOMAS, and seconded by Mr. BREARLEY. It is to the effect:—

That a guarantee fund be started to pay off the present Church Debt of \$600.

This motion was lost.

Mr. F. EASTLAKE suggested a series of entertainments, Mr. Cope organ recitals, and then a long and varied discussion ensued.

Mr. FRASER then proposed, and Mr. GRIFFIN seconded,

That a guarantee fund be begun in this room to see matters through to the end of the year.

The committee would thus, said Mr. Fraser, be able to bring in a budget in January next, shewing the prospects for 1884; and further action could then be taken. Messrs. Thomas, Brearley, Wilson, Griffin, Wilkin, Owston, Kirkwood, Melhush, Whittall, Mollison, and Fraser expressed their willingness to put down their names to start a list of guarantors. Messrs. Eastlake, Thomas, and Fraser were understood to promise to help the Church Committee in canvassing seat-holders and others for additional support.

The meeting then adjourned.

NOTIFICATION NO. 33 OF THE COUNCIL OF STATE.

To Departments, Boards, Senates, Cities, and Prefectures:—

It is hereby notified that *gendarmerie* will be established in Osaka.

(N.B.—A company of the metropolitan *gendarmerie* will be despatched.)

SANJO SANEYOSHI,
Prime Minister.

November 30th, 1883.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, November 22nd.

FRANCE AND CHINA.

The Chinese Government has sent a vigorous note to the Powers, reasserting the suzerainty of Annam, and throwing the responsibility upon France in case of war being declared.

London, November 26th.

It is currently reported here that negotiations are now proceeding between the English and French Governments with a view to British mediation on the Franco-China question.

THE CHINA SQUADRON.

Orders have been given to reinforce the British Squadron on the China Station.

London, November 27th.

FRANCE AND CHINA.

The Committee of the French Chambers have approved the vote of credit for Tonquin.

The Minister of War has stated that 6,000 troops were ready to leave for Tonquin at any moment.

NOTES FROM JAPANESE PAPERS.

Horse races will take place at the Mita Gardens to-day. The Mikado will honor the sports with his presence.

The *Fuso* and *Kongo* are cruising in the vicinity of Imari Bay.

The trial of Messrs. Kono and Aigawa, who are charged with libelling Mr. Mishima, Prefect of Fukushima, on the occasion of the trial at the Supreme Criminal Court, was opened on the 29th ultimo. The presiding judge is Mr. Ito, and the prosecutor Mr. Kikuchi. The evidence of the prosecution depends upon the offensive expressions alleged to have been uttered by the defendants during their late trial. The examination proceeded but for a short time, when the defendant's counsel made a motion asking for an adjournment till next day on several technical grounds. The motion was granted and the trial recommences to-day.—*Fiyu Shimbun*.

The construction of the Nakasendo railway will be commenced in January next and is expected to be completed in the 21st year of Meiji (1888).—*Choya Shimbun*.

It is reported that a Korean capitalist, by name Li Ken Yei, who went to the interior of Korea accompanied by a Japanese mining expert, was attacked by a band of highwaymen and robbed. The miner was beaten nearly to death, but, fortunately, he recovered owing to good medical treatment, but mining operations had to be postponed. The mine lies in Keishu, and covers, according to Mr. Li, a considerable area. It is said to be a rich metallic deposit consisting of three beds. It was already dug to the depth of 30 *jo* and the deeper it is excavated the better appears to be the quality of the metal. It is expected that when worked with European machinery the out-turn will be increased.

At 8 p.m. on the 25th ultimo a train was overturned on the Kobe-Osaka line when approaching the Sumiyoshi station. No one was injured.—*Fiji Shimpô*.

According to the latest census returns, there are 499 families of *Kwasoku* or *ex-Daimyo*. Of these, 412 live in Tokijo, 61 in Kiyoto, and 26 in different provinces.—*Nichi Nichi Shimbu*.

LATEST SHIPPING.

FREIGHTS.

There is no new feature to be reported in the Freight Market, everything remains dull as stated last. The following steamers are circulated for New York, with early despatch, via China ports:—Steamships *Mosser*, *Venice*, *Benarty*, and *Benledi*.

ARRIVALS.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Kumamoto Maru*, from Hongkong via Kobe:—Messrs. Richardson, Pierre, Voleke, Kosuge, Hamano, Yasugi, Satake, Yamamoto, and Chimoto in cabin; and 63 Japanese in steerage.

Per British steamer *Oceanic*, from Hongkong:—Mrs. W. H. Marsh, Miss Thornton, and Lieut. Richard Rush, U.S.N., in cabin; and 2 Chinese in steerage. For San Francisco:—Rev. S. M. and Mrs. Merrill, Captain E. Thebaud, Messrs. Krohn, and Tong Foh in cabin; and 370 Chinese in steerage.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—98 Japanese.

Per Japanese steamer *Niigata Maru*, from Hakodate:—Mr. and Mrs. Murakami, Messrs. H. Gosch, Nakajima, Uchi, Mogami, Chiba, Nagao, Watori, and Sakata in cabin; and 231 Japanese in steerage.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—Dr. Dodd, Messrs. H. H. Hunt, A. C. Read, and J. Wilson in cabin; and 9 Chinese and 30 Japanese in steerage.

Per Japanese steamer *Hiogo Maru*, from Kobe:—68 Japanese.

Per American steamer *City of Tokio*, from San Francisco:—H. E. Sanya, Mr. and Mrs. Russell Robertson, Rev. F. R. and Mrs. Graves, Mrs. W. N. Lovatt and child, Miss E. F. Swinney, Miss M. A. Whitman, Messrs. S. N. Nickerson, Eustace A. Smith, Gustave Reddell, A. R. Vogel, G. A. K. Honey, W. Turnbull, Jun., D. B. Fearing, and J. Morimura in cabin; and 10 Europeans in steerage. For Hongkong:—Mrs. E. Laurence, Miss A. Fabar, Messrs. H. N. Palmer, and C. de Pemmyrac in cabin; and 1,220 Chinese in steerage.

Per Japanese steamer *Kowyeki Maru*, from Yokkaichi:—2 Japanese.

Per Japanese steamer *Seikai Maru*, from Handa:—11 Japanese.

Per French steamer *Tanisai*, from Hongkong:—Mr. Miesse in cabin.

Per Japanese steamer *Hiroshima Maru*, from Shanghai and ports:—H. E. Inouye, Mr. and Mrs. Lowe, Mr. and Mrs. Matsudaira, Messrs. Drummond, Okamoto, Namura, Yoshizawa, Fujita, K. Inouye, Katayama, Kawasaki, Kojima, Shimone, and Ichijo in cabin; and 5 seamen, 2 Chinese, and 175 Japanese in steerage.

DEPARTED.

Per British steamer *Oceanic*, for San Francisco:—Rev. S. M. and Mrs. Merrill, Captain E. Thebaud, and Ting Toh in cabin; and 6 Europeans, and 366 Chinese in steerage. For New York:—Lieut. Commander Hitchcock, U.S.N., Mrs. Hitchcock and daughter, Messrs. H. Kerr, H. J. Hunt, and S. Uragawa in cabin. For London:—Captain E. Jones, Messrs. Montague Lévy, and C. G. Sinclair in cabin. For Liverpool:—Mr. G. A. Campbell in cabin. For Paris:—Messrs. A. Andreossi and B. Imbert in cabin. For Bremen:—Mr. W. Krohn in cabin.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Governor Watanabe, General T. B. Van Buren, Rev. F. R. and Mrs. Green, Mr. and Mrs. Nakai, Mrs. Otaike and child, Mr. and Mrs. Shioto, Mr. and Mrs. Nishioka, Mrs. Lovatt and child, Mrs. Schreiber, Miss E. F. Swinney, Miss A. MacKenzie, Miss MacKenzie, Rev. H. Stout, Rev. S. H. Cobb, Captain Byrne, Messrs. G. W. Penney, Nakamura, O. Kumbara, Hatake, Fukukawa, Mori, Kinashi, Takagi, Ito, Hatake, and Yokoyama in cabin.

Per American steamer *City of Tokio*, for Hongkong:—Mrs. E. Laurence, Miss A. Fabar, Messrs. H. N. Palmer, C. de Pemmyrac in cabin; and 1,220 Chinese in steerage.

CARGOES.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—Through cargo, 1,578 packages; Local cargo, 2,365 packages; Cattle, 30 head.

Per British steamer *Oceanic*, for San Francisco:—

| Nailrod, small size - | 2.35 to 3.15 |

KEROSENE.

Sales during the past week have amounted to 22,000 cases, and deliveries to 16,000 cases Oil. The Market is a shade firmer for Devoo and Comet, but Stella brand is only saleable at the low rates. The *Clarissa B. Carter* has taken her cargo down to Hongkong, but the *Heracles* has arrived, and will probably discharge her 47,000 cases here.

| | PER CASE. |
|----------|-----------|
| Devoo - | \$1.68 |
| Comet - | 1.65 |
| Stella - | 1.48 |

SUGAR.

With a limited enquiry, transactions are necessarily on a small scale, holders firmly demanding the following rates:—

| | PER PICUL. |
|-----------------|----------------|
| White, No. 1 - | \$8.00 to 8.35 |
| White, No. 2 - | 6.75 to 7.00 |
| White, No. 3 - | 6.10 to 6.50 |
| White, No. 4 - | 5.80 to 6.00 |
| White, No. 5 - | 4.60 to 4.75 |
| Brown Formosa - | 4.25 to 4.30 |

EXPORTS.

RAW SILK.

Our last was issued 24th instant, since which date business has continued on much the same basis as then reported, and Settlements for the six days reach 700 piculs. As was expected, the *Oceanic* took a good quantity, her cargo of 855 bales bringing the total Export up to 18,546 bales, against 13,412 bales to date last season. Direct shipments to New York by the *Oceanic* were 313 bales, making the Export to the United States total 6,192 bales, against 4,333 bales at same time last year. No sooner had the American mail gone than buying—especially of Filatures—again set in with renewed vigour, and Stocks are still further reduced. The total Stock of all kinds in Yokohama is estimated to be 4,200 piculs. Prices on the whole are without much quotable change,

the tendency for most descriptions being rather firmer.

Hanks.—Purchases have been light, holders trying to establish a slight advance, which, buyers having pretty well supplied their present wants, refuse to pay. With *kinsatsu* tending downwards and a Stock of nearly 2,300 piculs, it will be difficult to force prices up unless the tone of telegraphic advices should improve. Among the reported Settlements we note Shinshu, fair to good, \$450; Uyeda, \$450; Yechigo, \$440; Maibash, \$425; and Hachioji, \$415.

Filatures.—The bulk of the trade has been done in these kinds and Re-reels. Prices are without any quotable change, but may be considered fairly easy at the figures given below. Stocks, of good Silks especially, are reduced, and anything above a fair No. 1 in 14/16 deniers commands its price. The current demand has again run upon No. 2 kinds. Among the transactions are chronicled a small lot of Oshu filature Nihonmatsu at \$625; Tenriusha, \$595; ordinary No. 1 Shinshu sorts, \$580; seconds, \$560; Koshu, \$550.

Re-reels.—A fair amount of business has been done in these, and several parcels are reported to have gone forward on native account by last American steamer. Five Girl chop has been taken at about \$567½ for a large parcel. Medium Shinshu at \$550 have, however, been most in demand. Bushu, \$530; Kawaichi, \$525.

Kakeda.—Rather more doing in these on basis of "Sano Musume" \$595, \$565, and \$525, for firsts, seconds, and thirds respectively. "Niwateri" have been done at \$520; Common, \$500; Inferior, \$480.

Oshu.—After the large purchases reported last week there has been a lull in this Market. One parcel of Sendai has changed hands at \$465, and another of better quality brought \$485. A few Hamatsuki at \$420 make up the balance.

QUOTATIONS.

| | |
|-----------------------------------|--------------|
| Hanks—No. 1 - | \$480 to 490 |
| Hanks—No. 2 (Shinshu) - | 475 to 480 |

| Kakedas—Extra - | 595 |
| Kakedas—No. 1 - | 565 to 575 |
| Kakedas—No. 2 - | 530 to 540 |
| Kakedas—No. 3 - | 500 to 510 |
| Oshu Sendai—No. 2½ - | 460 to 470 |
| Hamatsuki—No. 1, 2 - | 455 to 465 |
| Hamatsuki—No. 3, 4 - | 400 to 420 |
| Sodai—No. 2½ - | 400 to 410 |

Export Tables Raw Silk to 30th Nov. 1883:—

| | SEASON 1882-83. | 1883-83. | 1881-82. |
|--------------------|-----------------|----------|----------|
| | BILES. | BILES. | BILES. |
| France and Italy - | 10,749 | 7,016 | 3,349 |
| America - | 6,192 | 4,333 | 2,347 |
| England - | 1,605 | 2,063 | 1,793 |
| Total - | 18,546 | 13,412 | 7,494 |

WASTE SILK.

After the large transactions noted in our last, business has much fallen off, buyers apparently are busy inspecting and sorting their previous purchases. Arrivals are but moderate and Stocks are creeping up a little; still the assortment is not very extensive, more than half the total Stock on offer consisting of Medium to Low Kibiso, including Neri. Prices, except for the last-mentioned kinds, are no lower; indeed some special requirements in high-class Wastes are hard to fill at our top quotations.

Pierced Cocoons.—Nothing done in these; there is a Stock of about 150 piculs, Common, in the Market and further quantities are reported to exist up country. Some of these are said to be of better quality, but until they appear but little can be said of them.

Noshi-ito.—About 100 piculs have found buyers, all being of Joshu province and ranging from \$78 to \$83. In addition to this there has been a small

purchase of Koshu filature at \$125. Stocks of *Noshi* generally are reduced to 300 piculs, and good qualities are scarce.

Kibiso.—Filature kinds are in request but are scarce; with larger arrivals and rather lower prices, business would ensue. We notice purchases in Shinshu filature at \$115. Koshu and Yechiu \$110 to \$105. In Hanks Kibiso there has not been much doing. A parcel of Shinshu, Common at \$40, also some Oshu Sendai at \$86 to \$80, have found purchasers. Nothing done in Neri.

Mawatta.—No transactions this week. Stock is estimated at 260 piculs with prices unchanged.

QUOTATIONS.

| | |
|----------------------------------|-------------|
| Pierced Cocoons—Medium to Fair - | \$90 to 100 |
| Noshi-ito—Filature, Best - | 150 |
| Noshi-ito—Filature, Good - | 130 |
| Noshi-ito—Filature, Medium - | 110 |
| Noshi-ito—Oshu, Good to Best - | 140 to 145 |
| Noshi-ito—Shinshu, Best - | 110 |
| Noshi-ito—Shinshu, Good - | 100 |
| Noshi-ito—Shinshu, Medium - | 90 |
| Noshi-ito—Joshu, Best - | 100 |
| Noshi-ito—Joshu, Good - | 85 |
| Noshi-ito—Joshu, Ordinary - | 75 |
| Kibiso—Filature, Best selected - | 115 to 120 |
| Kibiso—Filature, Seconds - | 110 to 105 |
| Kibiso—Oshu, Good - | 95 |
| Kibiso—Shinshu, Best - | 75 |
| Kibiso—Shinshu, Seconds - | 50 up |
| Kibiso—Joshu, Fair to Common - | 50 to 30 |
| Kibiso—Hachioji, Medium to Low - | 20 to 15 |
| Kibiso—Neri, Good to Common - | 20 to 12½ |
| Mawatta—Good to Best - | 175 to 185 |

Exchange.—In spite of arrivals of specie, news of higher rates ruling in China has tended to harden quotations here; and the tendency is against shippers. Credits are firm at:—London 4 m/s, 3/9½; New York 30 d/s, 91½; 60 d/s, 92; Paris 6 m/s, fcs. 4.82. *Kinsatsu* fluctuate a little according to the business passing in Exports and may be quoted 112 to 113 per \$100.

TEA.

The animation which characterised our Tea Market when last reviewed, ceased on that date. Since then only a small business of 710 piculs, principally of Medium and Good Medium sorts, have to be reported at the undemoted quotations. Receipts during the week aggregate but 1,070 piculs, making a total of 139,612 piculs since the opening of the season, against 156,287 piculs in 1882. The cargo from this port of the O. & O. steamship *Oceanic* despatched on the 27th ultimo, comprising 246,549 lbs.:—For New York, 855 lbs.; for Chicago, 21,973 lbs.; for California, 109,379 lbs.; and for Canada, 114,342 lbs. The steamship *Canton* which sailed on the 21st, also took 279,048 lbs., viz.:—For New York, 123,308 lbs.; and for Canada, 155,740 lbs. At the close the Market is quiet and nothing doing.

QUOTATIONS.

| | |

| On San Francisco—Bank Bills on demand - | 90½ |
| On San Francisco—Private 30 days' sight - | 91½ |

KINSATSU QUOTATIONS.

The following table shows the rate of the day, and the fluctuation during the past week:—

| | |
|----------------------------|------|
| Monday, November 26th - | 111 |
| Tuesday, November 27th - | 112 |
| Wednesday, November 28th - | 112½ |
| Thursday, November 29th - | 112½ |
| Friday, November 30th - | 111½ |
| Saturday, December 1st - | 110½ |

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.
May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co.,
Corbet Court, London, E.C.

May 1st, 1883.

IMPORTANT NOTICE.

SMALL CAPITALISTS, wishing to establish a business, should see if there is an opening for a Mineral Water Manufactory in their District. All information and recipes for the purpose of making Lemonade, Soda Water, &c., is given, previous knowledge is not necessary. The demand for these drinks is so much on the increase in all parts of the world, that the outlay for the machinery in all cases leads to a profitable and safe business. Catalogue forwarded free, on application to

BARNET & FOSTER, Engineers,
23c, Forston Street, London, N.

May 1st, 1883.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 8TH, 1883.

DEATH.

At No. 51, on December 2nd, Captain EDWARD PIERCE, late of the schooner *Pringle*.

On Advent Sunday morning at the Parsonage, BRENDA, infant daughter of the Rev. E. Champneys Irvine.

WEEKLY NOTES.

REUTER, true to his well established character, has not failed to supply us with an apparently important piece of news in the form of a veritable enigma. He loves to puzzle the public, and is not without opportunities to indulge the propensity. On the night of the 6th instant he sent us a message to the effect that "France, Russia, and the United States had agreed to co-operate, and that the English and German Governments would either remain neutral or act as protectors of China." Nothing could will be more perplexing. For though it is possible to conceive the contingency of Russia throwing in her lot with France against China, the entry of the United States into such a coalition seems scarcely credible. If, on the other hand, we attach to "co-operation" the only reasonable

interpretation, namely consensus with a view to a conference and the discovery of an amicable exit for France and China from their difficulties, then that England and Germany should stand aloof appears inexplicable. There is, however, another way of reading the telegram, though it is a way that refuses to adapt itself wholly to the terms of the message. In the event of war between France and China—an event which we do not yet regard as imminent, but which is certainly too possible to render preparation unnecessary—the position of the foreign residents in the Middle Kingdom, will become exceedingly precarious. Through the open ports not only will China be able to procure supplies of arms and ammunition, but so long as these ports are unmolested, her foreign trade will continue with little interruption, and the revenue she derives from it will still be available. To blockade these important commercial emporia would be to wound her in a very vital part, and France might be expected to make the attempt at an early stage of military operations. But its consequences could scarcely fail to involve complications of a most serious nature, and, further, to expose the foreign residents to dangers against which all ought to make common cause. It is the plain duty of the great Powers to be prepared for this contingency, and to determine among themselves, beforehand, to what lengths they will carry concerted measures for the protection of their nationals, that is to say, of neutrals in China. Such a question bristles with difficulties that might refuse to be adjusted at the moment of action unless the method of adjustment were determined in advance. We are inclined, then, to think that European Governments have perceived the wisdom of providing against this contingency, and that Reuter's Message of Thursday alludes to diplomatic preliminaries probably now in progress. The only trouble about this reading of the telegram is the grouping of the Powers. For the United States ought certainly to be on the side of Germany and England. Russia might, and probably would, object to the policy of guaranteeing the protection of neutrals resident in an Eastern Empire at war with a Western State. But America's policy ought to be of a different nature, and we are of opinion that what Reuter meant to tell us is something to the following effect:—France and Russia have agreed that the former's action, in the event of a war with China, shall be quite unfettered, but the Governments of Germany, the United States and England are in favour of jointly guaranteeing

the protection of neutrals resident in China." For the present, however, all this must remain a matter of conjecture.

H.B.M.'s SUPREME COURT for China and Japan has confirmed, in every point, the finding of H.B.M.'s Court for Japan in the case of Hiroshima v. Blakeway. Our readers will remember that Blakeway, acting as agent for Schnell, sold the wreck of the M.M. steamship *Nii* without knowing that it had already been given by Schnell to Hiroshima. The latter subsequently brought suit against the buyer, a Japanese, in the Japanese Courts; but, since the deed of sale bore the Consular stamp and was in all respects valid as a document, the Courts declined to set it aside. Hiroshima's only recourse was, therefore, against Blakeway. She cited him before the British Court and obtained a judgment for 1,000 yen. Great sympathy was felt for Blakeway, inasmuch as he had evidently acted *bona fide* in Schnell's interests, and had, moreover, made every reasonable effort, subsequently, to repair his inadvertent error. After the judgment, a sum of 500 yen was tendered by way of compromise, and this being refused, it was determined to appeal the case to Shanghai. On what equitable grounds this action was taken we have never been able to discover. The main point involved was, whether the plaintiff's failure in the Japanese Courts against a Japanese barred her action in an English Court against an Englishman. The Japanese defendant had purchased from the Englishman, with all due observance of legal form, and in all good faith, a certain chattel, the property of Hiroshima. The whole fault lay with the seller, and as it was not within the competence of the Japanese Courts to adjudicate upon that fault: the alternatives were, either that the purchaser should forfeit his lawful acquisition and the price he had given for it, which would have been manifestly unfair; or that Hiroshima's property should be alienated without her assent, which would have been a novel principle; or that the alienator should be obliged by his own laws to make restitution, which is not an uncommon variety of justice. Except to determine the amount of Hiroshima's just claim, one is puzzled to understand what Blakeway can have expected to gain by allowing the matter to be taken into the British Court at all. But that, after a decision had been given in that Court, the further delay and expense of an appeal should have been incurred because the plaintiff refused to accept half the sum awarded to her, is an issue

which will not redound much to the credit of British justice in Japanese eyes. We should like to know by how much the net proceeds of the sale of the steamship *Niil* will eventually help to swell the bulk of Hiroshima's worldly wealth.

ONE of our Yokohama vernacular contemporaries publishes a statement to the effect that, in negotiating a treaty of commerce with Korea, Sir Harry Parkes insists upon the free introduction of opium into the country. Not many persons will be found to believe this. Sir Harry Parkes has never been credited with any very strong anti-opium sentiments. He is understood to think, like some other distinguished Englishmen, that China's objection to the importation of the foreign drug does not deserve serious consideration until she proves her sincerity by taking some steps to stop the growth of the poppy in her own territories. But, between this and an attempt to insist upon including opium in the list of legal imports into a country where its use is as yet unknown, there is a vast difference. We cannot suppose for a moment that Sir Harry has adopted such a policy. What does seem possible, however, is that he may have suggested the justice and expediency of imposing the same restrictions on the import of the Chinese, as of the foreign, drug. It would plainly be both useless and unfair to exclude opium imported by English traders while admitting that imported by Chinese, and so far as we know there is no provision against the latter in Korea. We should be glad to know the *Mainichi Shimbun's* authority for the action it attributes to Her Majesty's Minister. Sir Harry Parkes is not the exponent of a very liberal policy; but, among the many arbitrary acts that have been laid to his charge, there is none which furnishes a precedent for the course now attributed to him.

THE *New York Herald* contains the following:—

Mr. Von Möllendorff, vice-president of the Korean Foreign Office, in a letter dated at Seoul, July 14, proposes an international exhibition in the Korean capital. The letter has been communicated to the Department of State at Washington and copies have been forwarded to the Chamber of Commerce in this city. Mr. Von Möllendorff says:—

"With a view of developing the commercial and industrial resources of the Kingdom of Corea, and in order to facilitate trade, it is proposed to establish at Seoul (the capital) a museum in which, among other things, will be exposed samples and models of articles of foreign export, such as machinery, mining, and agricultural implements, geological instruments, and the varied material of every description likely to prove of interest and benefit to a population of 12,000,000 souls emerging from a most primitive state.

"These articles will be catalogued in English and Chinese, and have attached the names of contributing or manufacturing firms. The merchants and manufacturers of the United States of America are invited to contribute to this museum. All articles should be addressed to the care of H. Suethlage, Esq., Shanghai, China, and all communications, catalogues, and price lists, should be sent direct to me at Seoul. The Korean government should have the privilege of purchasing these articles at the prices named on the invoices. It is hoped by this system to develop a trade to mutual advantage; and as any orders which may be the outgrowth of it can be sent by us direct to manufacturers, the aid of middlemen will not be needed, and American firms having no representative in the East will be largely benefited thereby."

To ordinary readers Mr. Von Möllendorff's proposal does not sound very like an "International

Exhibition," though a store in Korea containing American goods would certainly be an "exhibition" and might possibly be called "international." We confess that, if we are asked to record our impression of this scheme without reserve, we should feel obliged to describe it as a device for establishing a very large agency in the hands of gentlemen who shall be nameless. The "interest and benefit" of the "twelve million souls emerging from a most primitive state" are excellent aims, and the privilege promised to the Korean Government—the privilege of buying the exhibits at invoiced prices—is most valuable, but on the whole the "interest and benefit" do not appear to be all on one side, and the privilege of selling the exhibits is not without good points.

ONE of the inconveniences entailed by the spasmodic nature of telegraphic intelligence is that we are kept in a state of perpetual excitement and uncertainty. By the wires there are conveyed to us facts of special salience only, and when the ordinary means of communication subsequently bring us the less remarkable details, we are apt to confuse the proper sequence of events and to imagine that things are actually happening in the order their recorders temporarily give them. This is notably the case with regard to Tonquinese news. A fortnight ago the telegraph told us that China had issued a manifesto announcing her resolve to regard any French advance upon Bac-ninh as a declaration of war. This sounded serious enough, but by no means hopeless. It did not follow that the French forces would attack Bac-ninh. Quite the contrary, indeed. For though they might be strong enough to garrison a dozen places in Tonquin, and at the same time carry on a series of skirmishes with a band of so-called pirates, they were certainly not strong enough to engage in an open struggle with the armies China could easily march to the banks of the Red River. Thus, the stout attitude taken by the Cabinet at Peking seemed rather favorable than unfavorable to the prospects of peace, since there had always been grave danger in the propinquity of the Chinese and French forces while the former were sympathizing with, and secretly helping, the enemies of the latter, and the latter under no acknowledged restraint with regard to the former; whereas the French would now have excellent reason, as well, perhaps, as positive orders, to avoid any collision until the arrival of large reinforcements guaranteed them against losing all the positions they had so hardly won. In fact, after China's manifesto, the only wise course for Admiral Courbet's little army to pursue would be to hold their own, and do nothing calculated to invite risks they could not possibly hope to control. But while the public was thus arguing, and gradually overcoming the uneasiness caused by the telegraphic intelligence, there followed mail news that preparations for the attack of Bac-ninh were in active progress. Immediately, people inferred that China's ultimatum had been disregarded, and that Admiral Courbet was

about to proceed with the occupation of the disputed territory, whatever complications might ensue. But it is to be observed that these supposed designs of advancing against the Chinese positions were not subsequent, but prior, to the issue of China's manifesto. We are not yet in possession of any definite intelligence as to the effect produced upon France's counsels by that manifesto. Its date was November the 20th; and on December the 1st, the Committee of the Chamber of Deputies issued their report on the Tonquin affair, recommending an amicable settlement with China. So far, then, from considering the prospects darker than they were, and despite the despondent utterances of several of our Chinese contemporaries, we are disposed to see much hope in the position. We believe that French good sense only waited to reassert itself until Chinese policy assumed a really unequivocal shape. There is now so little substantial difference between the claims of the two Powers, that except from sheer love of fighting they have no cause to engage in a war involving not alone heavy sacrifices for both, but also complications whose extent it is difficult to gauge. That France should continue to prepare reinforcements means nothing. In any case she must send out more men, unless China definitely undertakes the responsibility of pacifying the country. The Black Flags seem to be as active as they ever were. Twice—the 12th and 17th of November—they attacked Hai-duong. On the first occasion, the French garrison was not strong enough to leave the citadel. The Black Flags, therefore, had it all their own way. They pillaged and burned the town to their hearts' content. On the second occasion, they assaulted the citadel itself, and though they were ultimately repulsed owing to the fortunate arrival of a gunboat, the garrison lost 28 out of its total of 150 men. Hai-duong lies on the Taibigne River, which, it will be remembered, forms a part of the limits China proposes for French occupation, and which at the same time constitutes the water-way between Haiphong and Hanoi. Obviously, therefore, the footing obtained by the French troops in the upper portion of the Red River delta is of a very precarious nature, and they are much too wise to imperil it still further by prematurely engaging in an open struggle with the Chinese forces.

A NOT less important feature than even China's resolute manifesto, is the publication of the decree said to have been secretly issued in the name of the Emperor of the Middle Kingdom appointing the Chief of the Black Flags, Liu Jung-fu, to be Commander-in-Chief in Tonquin, and instructing the Governor of Yunnan to coöperate with him. That some step of this nature was taken long ago by China, we never had any doubt. It was easy to see that on the successful resistance of the Black Flags depended her best chance of persuading France to be content with smaller results than those originally contemplated. To keep the foreign invaders at bay without openly crossing

swords with them, until they should consent to negotiate on a reasonable basis, was a wise and legitimate policy from China's point of view. She could not afford to neglect such aids as the Black Flags, and in secretly assisting them, she acted as any Western Power would have acted in her place. We speak entirely apart from her title to interfere at all in Tonquin. That is another question altogether. But, so soon as it appears that the leader of the Black Flags, himself a Chinaman, holds a commission from the Government at Peking, that Government becomes directly responsible for his conduct *vis-à-vis* the French. In short, if the decree referred to above was really issued, it transforms the Black Flags from fugitive rebels into loyal Chinese subjects fighting on China's behalf and with China's authority. But was the decree ever issued in the form reported, or, if issued, does not its secret nature enable China to evade its consequences, should she be so minded? The limits of diplomatic subterfuge are wide. Unless we are much mistaken it will prove a very difficult task to saddle China with any responsibility that can be avoided by equivocation or point-blank denial. It is one thing for a foreign newspaper to publish what purports to be a decree issued by the ruler of the Middle Kingdom; another, and a very different, thing for a foreign Government to obtain conclusive proof of that decree's genuineness. If France wishes to push matters to extremities, she may renew her charges against the Peking Cabinet on the strength of this new rumour, or fact, whichever it be, but the chief significance of the thing in our eyes is that it furnishes additional evidence of China's resolve to maintain her position. There is no mistaking that resolve now; and, since France's persistence in mistaking it has been the chief obstacle to an amicable settlement, good may after all result from this rare indiscretion on the part of the Chinese officials.

NOTES.

THERE is some distinction in belonging to an island whose suzerainty is disputed by two empires, but the privilege is not without perils also. A correspondent of the *North China Daily News*, writing from Ningpo, says that the local authorities have in custody ten Riukiuan who were picked up at sea by a Chinese junk four months ago. The Riukiuan originally belonged to a partly of fifteen, but five of their number had been drowned, or killed by want and exposure, and the survivors were rescued after drifting about for 18 days in a water-logged boat. They were landed at Changhai, where they have been kept in custody since July, the Cheshien of Ningpo maintaining that they are Chinese, not Japanese, subjects. The contention is wanting in relevancy. To whichever empire the shipwrecked men owe allegiance, it is certain that their homes are in the Riukiu Islands, where, as the unfortunate cast-aways tearfully explain, they all have wives and families anxiously awaiting their return. What the Chinese hope to effect by detaining them at

Ningpo we are at a loss to conceive, unless there is a distinct desire to reopen the old trouble. Japan, presumably, will require the men's release, and if China replies by alleging her right to deal with them after the arbitrary methods practiced towards her own subjects, there is no telling where the complication may end. It is to be hoped, however, that the statesmen of the Middle Kingdom are too prudent to adopt such a clumsy and unwarrantable method of reasserting a half-forgotten claim.

THE letter and telegram published below afford an interesting evidence of the community of sympathy that is constantly growing up between Japan and the Western world. A calamity even more terrible than that which has evoked this munificent expression of fellow-feeling, is still fresh in the memory of the present generation, and may perhaps have had some share in inspiring Prince Arisugawa's initiative. But however this may be, such an act of mercy is most pleasant to record. It will help to remind the people of Italy, and through them Europeans generally, that in seeking admission to the comity of nations, Japan is not more anxious to reap the benefits of equality than she is willing to discharge the duties of fellowship.

FOREIGN OFFICE, TOKIO,
Nov. 26, 1883.

MY DEAR MR. LANCIARREZ.—The deep sympathy entertained by His Majesty the Emperor and the Government of Japan for the sufferers at Ischia, induced His Imperial Highness Prince Arisugawa to undertake the pleasant duty of giving expression to the feeling by the collection of a fund in aid of those who were rendered destitute by the terrible calamity.

The subscription list has been closed, and as it was believed that any aid which might be tendered should be made available without delay, in order to give it the full measure of benefit, Mr. Asano has, I am happy to state, been instructed by telegraph, as per enclosure, to pay at once the sum of 10,000 francs, that being the amount contributed by the Imperial Family and Japanese officers.

I am, Dear Sir,
Your obedient Servant,

(Signed) INOUE KAORU.

ASANO, Japanese Minister, Rome.

Pay out of funds in hand to Minister for Foreign Affairs the sum of 10,000 francs, as contribution from the Imperial Family and Japanese Officers, under the initiative movement taken by H.I.H. Prince Arisugawa in aid of the sufferers at Ischia, for whom deep sympathy is felt. Particulars and remittance by mail.

(Signed) INOUE.

A LARGE audience assembled in Union Church on Friday, 30th ultimo, on the occasion of a public temperance meeting, held under the auspices of the Alpha and Neptune Lodges of Good Templars. Captain J. S. Skerrett, of the U. S. flagship *Richmond*, took the chair, and called the meeting to order at a few minutes past 8 o'clock. After prayer by the Rev. W. C. Davisson, the Chairman stated that the meeting had been called for the purpose of considering what could be done to restrain the sale of intoxicating liquors in Yokohama. He spoke of the recognized evils flowing from the present unrestricted sale of all manner of poisonous stuff, and expressed his hearty sympathy with any movement which tended to lessen such evils. He then introduced the Rev. Mr. Correll, of Tokyo, who occupied some forty minutes in discussing the general question of total absti-

nence, the history of the temperance movement, and the special merits of the Independent Order of Good Templars. Several songs and a reading were followed by the closing speech of the evening, delivered by Chaplain Crawford, of the *Richmond*. His speech had the merit of being short. He discussed the responsibility of communities for the evils existing in their midst, and appealed to those present to forward the cause of temperance and good order by personal example and effort, and the employment of all possible means for the suppression of the traffic in poisons, carried on in that section of the city popularly known as "Blood Town." A vote of thanks was extended to the Trustees of Union Church for the use of the building, and the meeting closed with an ode and benediction. The evening's entertainment was certainly enjoyable; but, judged from the stand-point of the object announced in the advertisement, it was not a success. It was expected that some organization would be attempted, but no movement in that direction was made, and no suggestions offered as to the means by which the desired reforms might be brought about. It is a disgrace to our community that no restriction whatever should be placed upon the sale of liquors by irresponsible parties, and we wish that something could be done to prevent the daily scenes of violence and disorder in our streets, which bear such sorrowful testimony to the freedom with which bad rum is dispensed to any one who has the money to buy it.

WE have long ceased to conjecture the sources whence some of the vernacular journals derive their information. That they should err in their attempts to follow the course of foreign events, is not wonderful; but the airy fancies they suffer themselves seriously to record concerning matters which the most trifling exercise of care and intelligence would enable them to verify, imply a scanty sense of the importance they attach to journalistic responsibilities. "Rumour is a pipe blown by surmises, jealousies, conjectures," but chiefly, we fear by jealousies in the case of those Opposition sheets which would fain persuade their readers that a sudden predilection for public works is in danger of undoing all the good accomplished by the careful economy of the past two years. Recently one of these writers told us, in the columns of the *Hochi Shimbun*, that it was in official contemplation to raise an internal loan of twenty-five million *yen* for the purpose of building railways. The rate of interest in Japan at present is so high that such a measure seems as ill-advised as it would certainly prove inconvenient in its consequences. But in considering the action of Japanese financiers, allowance must be made for a factor lying somewhat beyond the domain of ordinary political economy. We mean their almost romantic repugnance to a foreign loan. There is a feeling abroad that the treatment this country receives at the hands of Western nations is not of a nature to warrant it in contracting any new liabilities towards them. From time to

time, of recent years, the foreign public has been stirred to a mood of careless protest, and occasionally of unsympathetic ridicule, by Japanese complaints that Japan is not regarded as an independent State. Yet it is beyond all question that she has not yet accomplished a measure of independence sufficient to satisfy the aspirations of a high-spirited people. Some of the most important privileges of independence are still denied to her, and their denial prevents the removal of barriers which belong to the days when her idea of independence was isolation. The whole nation, or at any rate the whole body of the upper classes, is animated by a desire to recover these privileges, and connected with that desire is a somewhat impractical reluctance to figure before the world in any dependent rôle, even though solid pecuniary advantage be in immediate prospect. Recognising, as every moderately careful observer must recognise, the existence of this mood, we do not find it impossible to believe that the apparent necessity of building railways and providing other facilities of transport might, at any moment, invest the idea of an internal loan with fictitious attractions. But there is a wide interval between any project of this nature, and the scheme attributed three days ago to the Minister of Finance, namely, the re-issue of twenty-five millions of *Kinsatsu*. By steadily reducing the bulk of the paper in circulation and refraining from all speculative attempts to temporarily remedy the results of inflation, the Government has at last reduced depreciation to a manageable condition. Nobody believes, we doubt whether even the *Hochi Shimbun* itself believes, that the smallest idea is entertained of sacrificing these results to a gain problematical under any circumstances, and wholly out of proportion to the evils its pursuit by such means would entail. The country has suffered quite enough by currency fluctuations. It has lost not ten or twenty millions but ten or twenty times as much, through the want of a stable medium of exchange, and it has not even yet begun to emerge from the commercial depression which has accompanied every nation's return to sound money. Were the Government again to invite the disasters of inflation for the sake of building a few miles of railway, it would amply deserve the discredit which the Radical organs unjustly seek to fix upon it by anticipation.

It would appear that the use of tobacco is by no means growing less. An anti-tobacco society recently formed at Paris, has published a pamphlet showing that during the first half of the present year the quantity of the leaf sold throughout France exceeded the quantity sold during the corresponding period of 1882 by nearly a million pounds, and that the additional cost to the French people was four and a half millions of francs. The enormous sums expended by Western peoples upon alcohol and tobacco deserve greater attention than they generally receive. Few persons know, or hearing would be disposed to believe, that during the past twelve years the inhabitants of the United Kingdom

have spent one hundred and thirty-four millions sterling annually upon liquor, and that the money thus squandered is increasing in a much more rapid ratio than the population. In connection with this subject we cannot do better than reproduce an interesting letter which appeared recently in the columns of the *Manchester Guardian*:-

Taking the three years ending 1852 and comparing them with the three years ending 1882, I find our trade to our principal colonies has developed as follows:-

| | Three years ending 1852. | Three years ending 1882. |
|------------------------|--------------------------|--------------------------|
| India..... | £ 20,748,117 | £ 88,754,448 |
| Australia..... | £ 9,431,814 | £ 28,308,806 |
| Canada..... | £ 10,114,132 | £ 25,819,453 |
| Cape of Good Hope..... | £ 2,612,876 | £ 21,198,314 |
| Total..... | £ 43,107,339 | £ 174,061,021 |

From the above figures it will be seen that during the last three years the aggregate trade of our four principal colonies was more than four times as much as thirty years ago.

The following table gives the value of our aggregate exports to all parts of the world, including our colonies, neutral markets, and other countries. I give the figures for each year:-

| | 1850..... | 1851..... | 1852..... | 1880..... | 1881..... | 1882..... |
|------------|---------------|---------------|---------------|---------------|---------------|---------------|
| | £ 271,367,885 | £ 274,448,722 | £ 278,176,854 | £ 323,060,446 | £ 334,022,878 | £ 341,497,162 |
| Total..... | £ 271,367,885 | £ 274,448,722 | £ 278,176,854 | £ 323,060,446 | £ 334,022,878 | £ 341,497,162 |

The above table shows that the total of our foreign trade is more than three times as great as thirty years ago, and that if we deduct the figures relating to our colonies it will still leave our trade with other countries nearly three times as great as thirty years ago. During the last few months, and indeed for a year or two, trade has been depressed. Is this due to a falling off in our foreign trade? What are the facts? Our total exports for the three years ending 1879 amounted to £ 583,773,737, whilst for the three years ending 1882 they reached £ 603,550,286, being an increase for the three years of £ 115,271,549, or 19·7 per cent.

This brings us to the question which most immediately concerns Manchester—the cotton trade. The Board of Trade returns show that our total exports of cotton goods for the three years ending 1852 were 4,425,601,644 yards, whilst for the three years ending 1882 the amount reached 13,621,307,000 yards, or above three times as much as thirty years ago. But what about recent years? Has not the cotton trade lately declined? The following table, giving our exports of cotton goods for the three years ending 1882 as compared with the three years ending 1879, will show the facts:-

| | 1879..... | 1880..... | 1881..... | 1882..... |
|------------|----------------|----------------|---------------|---------------|
| Yards..... | 3,537,808,850 | 3,618,661,300 | 3,724,448,800 | 4,494,445,000 |
| Total..... | 11,881,134,950 | 12,821,309,000 | | |

Exhibiting an increase of 21 per cent. in our cotton trade during the last three years, and being one-fifth more exports than were ever sent abroad during any three years in the history of the cotton trade. If we take the eight months ending August of the present year, I find we exported 3,042,902,600 yards of cotton cloth, as against 2,861,179,000 for the same eight months in 1882.

Taking the aggregate of the trade of the world, both imports and exports, with its population of 1,400,000,000, I find that in 1880 (the last returns published) it reached in value to £ 2,935,767,000; and of this amount the share which our little island, with its population of 35,000,000, got was £ 634,239,000, or above one-fifth of the whole, and yet our people are in distress and poverty for want of trade.

Here let me refer to one or two facts relating to our poverty. In 1852, with a foreign trade of £ 78,000,000, we paid in actual relief of the poor in England and Wales £ 4,807,685; whilst in 1882, with wages from 30 to 80 per cent. higher and a foreign trade of £ 241,000,000, we paid £ 8,232,472, being an increase of 68 per cent. in money paid for actual relief, whilst our population had only increased 43 per cent. From the 42d report of the Registrar-General (see page 27) I find that of the total deaths in the year 1879, one out of every fifteen occurred in a union workhouse; and in the city of London, the wealthiest city in the world and the capital of this Christian country, one person out of every nine who died, died in the workhouse. I could multiply these facts to a great extent, but your space will not allow. As Dr. Pankhurst says, "There is a mass of misery in this country," and every Christian man and patriot ought to hang down his head in grief and shame. The question is, whence comes it, and what is the remedy for it? We have an enormous foreign trade, wages are comparatively high, food is cheap, and money, the machinery by which trade is carried on, is plentiful and cheap. We have thus all the conditions for good trade, and yet it is depressed; and we are burdened with a pauperism and misery that is distressing to contemplate. Under such circumstances our distress and poverty can only arise from our dissipation and from the waste of our resources. During the twelve years ending 1852 our drink bill averaged £ 72,000,000 yearly, whereas during the last twelve years it has averaged £ 134,000,000, or, with an increase of 43 per cent. in our population, we have had an increase of 88 per cent. in our drinking. In the Anti-Corn Law agitation Mr. Bright and others used to picture the happy condition of our homes when the prosperity which would follow Free Trade should dawn upon us; the people were very much inclined to bid good-bye to poverty

and the workhouse, and yet, whilst in 1852 we had 106,000 paupers in workhouses in England and Wales, in 1882 we had 190,000, or 70 per cent. more, and yet our trade has been developed and our wealth augmented to a degree unparalleled in the world's history. But, surrounded as the people have been by the temptations of the liquor shop, the money which should have blessed them and stimulated our home trade has been spent in intemperance, and so has cursed and impoverished and often ruined them; and what with our enormous expenditure upon drink, with the burdens of crime, pauperism, vagrancy, lunacy, disease, and the other resulting evils added thereto, the purchasing fund which should have enriched our home trade has been impoverished. With £ 134,000,000, or £ 4 per head, spent in drink, and about £ 14,000,000, or 1s. per head, spent in cotton goods, how could it be otherwise? And yet Dr. Pankhurst, bewailing our pauperism, seeing 30,000 people in distress in the district where he is speaking, travels to India, to our other colonies, and to the neutral markets of the world for his remedy. He is concerned to get our goods upon the back of the Hindoos, but why not also clothe the poor children in St. Michael's Ward? Why go moaning and pining about more foreign trade when we have such an enormous proportion of the world's trade now, and when we do so little for ourselves at home? Let the causes at home that destroy our trade, that desolate our homes, that impoverish and reduce our people to misery and death to ruin, be dealt with, and then there will neither be 30,000 nor 300 persons in distress either in St. Michael's Ward or any other ward in Manchester. And when the people of Manchester, whose votes he is seeking, ask him to support such a change in the law as will give them the right to protect themselves from this dire evil, Dr. Pankhurst says:—"No; you shall not have the right of self-protection; you must bear the burdens, suffer the evils, pay the taxes, and endure all the misery and woe that the traffic may entail upon you; but I reject your claim to self-protection. You can give your votes to me (Dr. Pankhurst), and I, who am the champion of 'Government for the people and by the people,' will get the law altered so as to send down to Manchester a judge—a lawyer like myself—and you the 400,000 citizens of Manchester, must go cap in hand and state your grievances to this great man, and no doubt he will take them into his serious consideration." Such is the proposal offered to Manchester by a man who needs no suffrages on the plea that he is a Liberal.

One word more. The people of Manchester have been represented by a Conservative, Mr. Birley, who sought to conserve what was good and get rid of what was evil; when he always voted with Sir Wilfrid Lawson. What Mr. Houldsworth's Conservatism is I have not been able to discover, only that it is different to Mr. Birley's. But I would submit that no man is worthy of the suffrages of the people of Manchester who denies them the right to protect themselves from that which the present Prime Minister declared "entails upon the country greater evils than the combined evils of war, pestilence, and famine."

I am, &c.,
WILLIAM HORLE,
Claremont, Bury, September 27, 1883.

It has never been practically demonstrated that to bid a man lay down his arms is a successful method of persuading him to keep the peace. That the Emperor of Germany and the great Chancellor entertain any such wild scheme with regard to Europe, we cannot persuade ourselves to believe. Every patriotic statesman must bitterly regret the retrograde tendency civilization has developed during the past thirteen years. Since Prussia began her wonderful career of victory, Europe has been obliged to keep some three millions of men constantly under arms, and to spend annually over a thousand million dollars on their maintenance. Philosophers cry out bitterly against such a terrible waste of energy and capital, but their voices awaken no practical echo anywhere. It seems to be universally confessed that national existence depends upon military strength, and that international morality would be a dead letter were not its precepts supported by force. It is not in the nature of such a mental aberration to produce immediately apparent effects. Men that live beyond their means, so far from betraying any symptoms of embarrassment, convey to the general public the impression of ease and affluence. Nevertheless indications of their unsound condition are never wholly wanting. Such an indication in Europe's case is the tide of emigration which of late years has steadily drained the vital force of the great military nations,

and rendered them daily less competent to endure their self-imposed burthens. Few countries in the Old World are sufficiently wealthy to maintain an immense army and at the same time to ameliorate the lot of their agricultural classes. Germany by attempting the dual task has lost a vast number of her bread-winners, and Italy is beginning to suffer seriously from the same cause. It is but poor consolation to these countries to know that in the world of humanity and physics alike there is no such thing as waste; to see that what Europe loses America gains, and that the United States, untrammelled by the load which older nations carry, and receiving, yearly, enormous increments of vitality at Europe's expense, must soon surpass any hitherto conceived programme of prosperity and civilization. This prospect, comfortable to philosophers, cannot have many charms for a statesman of Prince Bismarck's absorbing patriotism, and we can well conceive that the dream of his old age is to leave his country permanently great by freeing it from burthens not less potent to impede its growth in the future than they were necessary to initiate that growth in the past. But he will never seek to attain this end by pursuing the chimera of universal disarmament. Whatever were the strength of a league issuing such a mandate, its announcement must inevitably be the signal for an universal war. Except the exhaustion of a series of battles there is no process that can persuade the nations to divest themselves of armour whose very weight betrays the depth of the distrust that induced them to don it. The venerable Emperor of Germany and his wonderful coadjutor are too wise, too patriotic and above all too humane to entertain such a scheme. There is, however, another and a sounder method of achieving the desired result. The permanence of European peace may be secured by environing it with a force against which no nation can hope to struggle and live. An union of strong States such as that which Germany is gradually gathering about her, might be powerful enough to impose its veto upon every attempt to disturb the peace of Europe, and at the same time sufficiently representative of the general interest to accept the rôle of arbiter in all international quarrels. To have been the contrivers of such an union would entitle the Emperor and Prince Bismarck to a far higher place in the history of civilization than the eminence to which their great achievements have already raised them. Germany can add nothing to her laurels as a conqueror, but her successes have fitted her for the performance of such a rôle as seldom falls within the compass of a nation's ability. We have too much faith in her destiny to suspect her greatest statesman of a scheme so evil and impracticable as that attributed to Prince Bismarck by the prophets of the London press.

Among the claims for injuries to British trade that will have to be settled when the French have concluded their operations in Madagascar, is one from a Mauritius merchant who has sent to Lord Granville an estimate of damage done

to his sugar plantation near Tamatave by the attack of the French on that place. He estimates the damage to this year's and the two succeeding crops at £60,000, and, if his mill has been destroyed, £40,000 additional. Shippers of goods to Madagascar by the *Tamar Castle* are also forwarding to the Foreign Office claims for damages on account of their goods not being allowed to be landed. Further claims by British subjects at other points, such as at Temoarifo and Majunga, will also be forwarded so soon as their extent can be ascertained.

THE Théâtre de la Renaissance of Paris is very attentive to the dramatic critics. The manager has provided for their use a special and luxuriously furnished writing-room, where, before or after the performances or in the intervals between the acts, these gentlemen can at their ease indite their criticisms. A lackey, gorgeously arrayed, is likewise in attendance, ready at any moment to drive to the editorial offices with the copy, the theatre paying his travelling expenses. In this otherwise admirable arrangement there is, however, one slight drawback. The lackey, we understand, has strict orders to open every envelope, examine the contents, and "accidentally" mislay every unfavourable critique.—*Whitehall Review*.

As will be seen, by the telegram published in another column, Vice-Admiral Sir William Montagu Dowell, K.C.B., at present senior officer in Command of the Channel Squadron, has been appointed to succeed Vice-Admiral George Ommanney Willes, C.B., in the command of Her Majesty's Squadron in China waters. Sir William Montagu Dowell became Vice-Admiral in January, 1880.

In various rice-growing countries attention has frequently been drawn to inexplicable distinctions between different sorts of rice. Mr. Colquhoun found that the rice on the Tali side of the Bakal lake can only be kept one year, whilst that on the eastern side can be kept free from decay for many years.

THE remarks made by the *Tokyo Trade Journal* (*Bukka Shimpō*) with regard to the export of wheat, show that public attention in Japan is turning to a subject of very great importance. Independent of the fact noted by the *Bukka Shimpō*—that the introduction of kerosene, by diminishing the demand for vegetable oil, has rendered available for the cultivation of grain considerable tracts hitherto devoted to the culture of rape—we have also to remember that extensive districts of arable land lie wholly waste because they are unfit for rice planting, or too inaccessible to invite labour in any form. Since the Restoration the area of the Japanese rice-fields has been increased in a ratio larger than the increase of population, but the process of reclamation cannot fail to be temporarily checked, like all other industries, by the recent rapid appreciation of *Kinsatsu*. Capital invested in wet fields, under existing circumstances, returns a disproportionately small percentage, and this pro-

spect will be one of the last to improve, because the consumption of rice, and therefore, to some extent, its market value, depend upon the general prosperity of the country. It is tolerably certain that the crop this season is considerably in excess of the national requirements, and that the disposition of the agricultural classes in the immediate future will be to contract rather than extend their operations. Seldom does it happen that an exceptionally fine rice harvest is accompanied by an ample yield of other cereals, but such is the case this year, so that Japan finds herself in the predicament of possessing more food than she wants. This would be a matter of sincere congratulation were foreign markets ready to receive her surplus stocks, but unfortunately the varieties of grain she can offer to Western nations are in very limited demand there, and the principal effect of her bountiful harvest will be to depreciate the value of its products. It is at such a time as this that farmers can be most readily taught to comprehend the advantages of not confining their operations to grain for home consumption. There can be no doubt that, like America and Russia, Japan could derive large profits by exporting wheat, and that millions of acres of land now lying idle might be thus converted into a source of constant wealth. It may be that there is little hope in this direction until greatly increased transport facilities are provided in the interior, but the subject deserves more consideration than it has hitherto received. One of the necessities imposed upon Japan by her altered conditions of existence, is that she should adapt herself to the requirements of her foreign trade. At present her efforts may be said to be confined to tea and silk, while her agricultural classes, who represent the great bulk of the nation, remain always dependent upon the home markets. Here, too, we may mention another question which will soon demand attention. Yielding to the representations of the farmers, the Government has notified its willingness to receive a portion of the taxes in kind, at a rate ten per cent. less than the market price, after deducting expenses of inspection and some other unavoidable charges. The proposal does not appear very favorable at first sight, but it has to be remembered that in many cases the sale of rice is quite impossible except at a ruinous sacrifice. In places where the local demand is small and facilities for transport do not exist, the farmer, confronted by the necessity of paying a certain sum in taxes within a certain time, often finds himself absolutely without resource. The banks will have nothing to do with rice as security, and money lenders, when not equally reluctant, demand prohibitive rates of interest. It may very well happen, therefore, that the Minister of Finance will ere long find himself possessed of inconveniently large stores of the staple. True the Notification referred to above reserves to the authorities a discretionary power as to quantity, but it is obvious that to afford any sensible relief the measure must have a more or less extensive operation. What then, in that event, will the Government do with the

rice? Direct export to Europe, when conducted under official auspices, is a hazardous speculation, and recent experiences are not of a nature to recommend export through foreign agents on Government account. Yet, in expert hands and with economical management, there is certainly a profit to be realized on such transactions. It seems to us that the wisest course to pursue under the circumstances is a very simple one, namely, publicly to invite tenders from Japanese and foreigners alike. The Minister of Finance need not bind himself to accept any tender, and he could choose his own place for delivering the rice. With regard to the latter point, however, it is difficult to discover valid reasons why the grain should not be delivered at any port in Japan. The prospects of profitable export might be seriously impaired by imposing conditions in this respect. By adopting this plan of inviting tenders the Government would, in all probability, obtain better terms than it could procure directly in the European markets; it would avoid the risks and delays inseparable from the methods hitherto employed; its returns would be immediate, and for the most part, if not altogether in specie; and finally, it would not incur the suspicions invariably excited by official trading. We do not pretend to think that the gain would be all on the Government's side. On the contrary, one of the considerations in favour of the measure is that it might afford an outlet for local foreign energies now paralyzed by lack of opportunity. But we do not suspect the present Government of a desire to exclude foreigners from legitimate competition, especially when to indulge such a propensity would be plainly opposed to the pecuniary interests of the State.

M. ROCHEFORT, the libeller of the King of Italy, is a veritable firebrand. His general occupation is to stir up dust and his particular aim seems to be another trial of strength between France and Germany. The retirement of General Thibaudin from the Ministry of War has furnished a theme upon which this refined journalist discants in his most polished style. His article in the *Intransigeant*, under the picturesque heading "Ferry, the Uhlán," contains things worthy to be quoted:—"It were useless to observe that the man of straw by whom General Thibaudin is to be replaced, will strip our frontiers, at the orders of his chief, in order to scatter our troops in the swamps of Tonquin. He will not haggle over reinforcements or give himself much concern whether or no he has the authorization of the Chamber to send over there an army of fifty thousand soldiers. The blood of our people and the resources of our finance were guarded by Thibaudin only. Now that he is gone, the dance of the dollars is about to commence." Supplementing a statement that the President of the Council is an accomplice of Germany, this passage is worthy of the great hand that penned it. M. Rochefort, however, is not the loudest of the *siffleurs*. He is surpassed by M. Laisant, who writes thus in the *République Radicale*:—"General Thibaudin

has just resigned. *They* have beaten him. Who are the 'they'? M. Ferry and his band; that is to say, William (of Prussia): that is to say Alphonse (of Prussia and Spain): that is to say everyone that hates the Republic; everything that hates France. This shameless Ferry, when he called on General Thibaudin to ask him to resign, was so far lost to all consciousness of politeness and modesty as to say, 'these late complications would not have occurred had you followed our policy.' 'So far as policy is concerned,' bruesquely retorted the honest soldier, 'I know but one line; it is the straight line, and at the same time the patriotic line.' The Minister of War goes out of office as he went in, head erect, a loyal Republican who has done his duty. Let us hope for our country's sake that his retirement will not be long." Another Parisian journal, the *Lanterne*, under the caption of "The Ministry of National Humiliation," says:—"The Ferry Ministry humiliated itself before Germany, after the article in the *North German Gazette*, by disavowing the French press. The Ferry Ministry humiliated itself before England in the matters of the Missionary Shaw and the Suez Canal. The Ferry Ministry humiliated itself before King Alphonse, Colonel of Uhlans, by making M. Grévy receive him at the railway. The Ferry Ministry humiliated itself before Spain by expelling General Thibaudin from the Cabinet. The Ferry Ministry is the Ministry of national humiliation." Even harder things than these are written of the Prime Minister, but Paris seems to trouble itself very little about the outcry. The Radicals have a bad cause, and as is generally the case with men labouring under that disadvantage, in default of argument they are driven to invective. Even Yokohama journalists could scarcely teach them anything of this trade.

JUTE culture has been attempted in Mississippi and has met with success so far as concerns the growth of the plant, but to make it profitable it is necessary to have some cheap way of separating the pulp from the bark. A bonus has been offered for the invention of a machine to be used for that purpose, and several machines will be tested on the 27th of November, under the auspices of the Cotton Planters' Association. Vicksburg and New Orleans papers report several preliminary tests of decorticators, as these machines are called, and it is thought that when the formal test is made, it will show that the jute problem has been solved. California, which has two jute manufactories, is even more interested than Mississippi in this matter. There is now a prospect that before long thousands of acres of our tule lands will be turned into jute fields.—*Alla*.

A FEW months ago, rumour said that the Eastern mails would no longer be despatched by the Brindisi route, but by Marseilles, as of old. The news was subsequently denied, then confirmed, and ultimately the cholera put an end to the possibility. We read now in the *Sémaphore*, of Marseilles, a journal which ought to be well

informed, that the original route by France would have been already resumed if the French postal administration had shown a little more desire to co-operate with the English. It may be concluded from this that the change in question was actually contemplated and only prevented by a hitch on the French side. In effect, the advantage, in point of time, possessed by the Brindisi route, is no longer of serious importance, since all business sufficiently urgent to be affected by a delay of two or three days is transacted by telegraph. What we have really to desire is that the American route should become more accessible. For homeward-bound letters it achieves a saving of a clear fortnight, and for the outward-bound mails it would be equally advantageous were the connections more trustworthy. That a little trouble is not taken to make them so, betrays a decided want of enterprise somewhere.

THE awards by the Committee of the late Fisheries Exhibition have been made and published in a supplement to the *Gazette*. A bronze medal has been awarded to Japan for a Collection of Cured Fish, &c., also for an Exhibit of Smoked Salmon; and diplomas to the Japanese Government for Specimens of Medicinal Oil, and to the Chinese Commission for Collective Exhibit in Natural History Section, and to Mr. Teh Ah Kew for specimens of Freehand Drawings.

THE last volume of the "Proceedings of the Institution of Civil Engineers" contains a paper by Mr. B. F. Wright on the subject of the Yanagase tunnel. This tunnel is situated on the Tsuruga-Nagahama railway. It pierces a hill 800 feet high from formation level; has a length of 67 chains, and a gradient throughout of 1 in 40. It was commenced in June, 1880. "The material," says Mr. Wright, "at first was soft decomposed granite, gravel and detached boulders, through which progress was made at the rate of 3 or 4 lineal feet per day for about 100 yards; nearly all the remainder of the stuff to be excavated consisted of hard Trappean rock, with veins of water and clay. The ventilation became defective, and the air vitiated to such an extent that miners' lamps would not burn, and the only means of boring the hard rock for dynamite charges was by hammer and chisel. An ordinary fan worked by a water-wheel, the wind being conducted to the headings by tin pipes, was tried, but found not to give sufficient ventilation. The work in the headings was therefore suspended in August, 1882, until a new air-compressor, driven by a turbine designed for the purpose, was completed. The original designs for both turbine and compressor were made by Mr. E. G. Holtham, late Principal Engineer of the Southern section of the Imperial Government Railways of Japan. The details and working drawings were got out in the drawing-office of the locomotive department under the supervision of the author (Mr. Wright); and the whole of the work, patterns, castings, and forgings, were made and fitted in the Kobe locomotive-works

by native workmen under the supervision of a European foreman and the author. No European artisan was engaged on any part of the work." The writer then proceeds to give some details of the turbine and compressor, and concludes by saying:—"It is not the author's intention to claim anything original or novel in the designs of the turbine or compressor; but to record the fact that the whole work has been made and erected by, and is now in entire charge of, men who eleven years ago had not seen a railway or machinery used for making one. The line was surveyed by Japanese engineers, and all the works were under their superintendence; and with the exception of the tunnel, the railway has been completed." We often hear the question asked, "What is the outcome of all the scientific training which the rising generation of Japanese has received, at so much expense, of recent years? The answer is to be found in facts such as those recorded by Mr. Wright, to which we may now add the evidence of the Tokiyo-Kumagai line built from first to last by Japanese without any foreign assistance whatsoever.

THERE is at present in the press a work entitled "*Frankreichs Kriegsbereitschaft*" (France's readiness for war), written by a Prussian officer of high rank who was present during the recent manoeuvres of the French army. The European public seems to attach much importance to the conclusions of the author as an expert, and the newspapers refer to them with evident interest. Epitomized, the writer's opinions amount to this:—That so far as the active army of France is concerned, her forces exceed those of Germany by a hundred thousand men and 582 field-pieces, but that, as a set off, the superiority in point of cavalry is largely with Germany. Again, while the French reserve numbers only 96,000 men, that of Germany numbers 246,000, with 444 field-pieces and 63 squadrons of cavalry. We may remark here that this question of cavalry has more than a mere arithmetical significance. Only to accurate students of Germany's recent wars is it known has much of her success was due to the splendid organization of her cavalry and its perfect performance of outpost and vidette duties. Without these aids an army is like an insect which has lost its feelers. Incidents that ought to be within certain control pass into the chapter of accidents: The writer of the above pamphlet, after making these numerical comparisons, proceeds to claim another "incontestable advantage" for the German army, namely, that the incessant changes of the Minister of War in France have prevented her troops from attaining that degree of unity and cohesion which is among the highest qualities of the German army. Whether this very interesting branch of his subject is fully discussed by the author, the *Gazette de Cologne*, whose reference to the *Frankreichs Kriegsbereitschaft* is before us, does not say. But there can be no doubt that the achievements of the German troops in 1870 and 1871 were due, in a great measure, to these very qualities of unity and cohesion, and to the fric-

tionless interactions of her whole military system: More than ten years have passed since these stirring events occurred, yet the world has not yet decided to whom the credit chiefly belongs, so perfect was the co-operation of all, and so insensible the intervals that separated the various orders of responsibility. The German army never seemed to depend upon individual inspiration for the means to counteract each new move of its opponents. Like a machine perfectly adapted to fulfil all its functions, little apparent exercise of skill was required for its control. It has been said that all Prince Bismarck's astuteness and General Von Boon's skill in organizing, disciplining, and mobilizing his battalions, would have been fruitless had not Germany possessed in Von Moltke, a strategist capable of using this vast mechanism effectively. But whatever portion of the praise may belong to these great men severally, it is to the completely harmonious working of their talents that the German Empire owes its fame, if not its very existence. It has been said that the wheels of destiny revolve on unnoticed pivots. The American war might have ended differently if Charles Dana, now editor of the *New York Sun*, had not persuaded President Lincoln to frank Grant's requisitions, and the story of the Franco-German war might have had another sequel had not France's strength been crippled and paralyzed by causes comparatively insignificant. It is not possible that those causes have survived such a lesson, but it is very possible that their counterpart may exist in the kaleidoscopic mutability of French ministries under the Republic.

WE extract the following from the *Geographical Society's Proceedings* about the late Admiral Sir Richard Collinson's career. Admiral Collinson was the first practical surveyer of the waters of the China coast:—

Admiral Sir Richard Collinson was the third son of the Rev. John Collinson, rector of Gateshead, and afterwards of Boldon, both in the county of Durham; and was born in the year 1811. When he was twelve years old he was put into the Royal Navy, by a sudden and unexpected, but as it turned out a happy, accident; for he was a born sailor, and had, as a school-boy, shown the pluck and determination which is the characteristic of that profession. Early in his naval career he took to the scientific line, beginning as a midshipman in 1828, with Captain Forster in the *Chanticleer*, on a voyage of scientific surveying round the coast of South America, in the course of which a careful examination was made of the levels of the Isthmus of Panama. In 1834 he was with Captain H. Austin, in the *Medea*, one of the first war-ships in which steam was employed. Next, as a lieutenant, he was appointed one of the surveying officers of the *Sulphur*, under Captain Beechey, again on the coast of Central America.

By this time he had established a name in the Hydrographic Office of the Admiralty, whose then able superintendent, Captain Beaufort, was from that time till his death, a sincere admirer and firm friend of Richard Collinson. Captain Beaufort's good opinion of him led to his being selected, on the outbreak of the first Chinese War in 1841, to act as surveying officer to the fleet. This duty, which was a somewhat novel one, was, in the hands of Lieutenant Collinson, raised into an important branch of the war enterprise; he had a small vessel given him, the *Bentinch*, and in consort with his old shipmate and great friend, Captain Henry Kellett, who happened to arrive in China at that time from a surveying expedition on the American coast, these two acted as the pilots to the fleet in the harbours and rivers into which the expedition had necessarily to penetrate. The course of the war compelled the fleet to enter more than one large river, and

among these was notably the great river of China, the Yang-tze-kiang, now no doubt well known to all the seafaring world, but then an *aqua incognita* absolutely; and not only were its waters unknown to them, but they were in ignorance of the preparations of defence made by the Chinese. In advancing up this river Captain Kellett and Lieutenant Collinson had to keep ahead of the fleet in the harbours and rivers buoying out the channel day by day; by their help the war-ships successfully reached nearly 300 miles from the mouth. Operations like these required a ready scientific skill, as well as coolness and courage, and involved an amount of personal labour requiring great activity, endurance, and zeal. In them Lieutenant Collinson showed such capability in the more warlike as well as in the scientific branches of his profession, that Admiral Parker, the naval commander of the expedition, took him greatly into his confidence, and intrusted him with various important duties, and valued his opinion greatly. The result on the whole was that Lieutenant Collinson came out of the war a post-captain and a C.B.

On the conclusion of the Chinese War there arose a desire to have the coast of China surveyed to enable merchant ships to take advantage of the openings gained by the war into the various new ports in that country. The duty was handed over to Captain Collinson in the *Plover* (as the *Bentinch* was renamed), and with him was associated his friend, Lieutenant Bate, in a small schooner called the *Young Hebe*. These two little vessels for three years worked along the Chinese coast, from Chusan to Hongkong, including the Island of Formosa, and produced the charts which are still the guides for the extensive sea traffic now frequenting those seas.

THE sovereign of Oman, usually called the Imam of Muscat, is besieged in his capital by an insurrectionary force under command of his brother, and a British man-of-war is kindly helping the sovereign by shelling the camp of the besiegers. England's interest in seeing that the shores of the Persian Gulf remain in the hands of her friends is so actively displayed that it is a natural inference that she regards the control of the route to India through the Euphrates Valley as of the first importance. A railroad will soon connect Bagdad with a port on the Mediterranean, and England will then not be solely dependent on the Suez Canal for a highway. So long as the great valley of the Euphrates and the Tigris—the seat of some of the greatest empires of antiquity—remains in possession of the Turks, England is satisfied; but if the Russians attempt to execute their threat of taking possession, the English will feel the necessity of being beforehand with them. Much has been said about the importance to England of the possession of Egypt, but Egypt lies less directly on the road to India and is less important than Mesopotamia.—*Alta*.

IN existing conditions between Europe and Asiatic powers a memorandum addressed so long ago as January, 1869, by Lord Clarendon to Sir Rutherford Alcock may be found to possess some points which are not only instructive but interesting. The ultra-Occidentally-inspired English Press of the East has taken occasion, not infrequently, to gird at every diplomatic, military, and naval official of foreign powers that will not assume advantage of any petty row to display the might of Western, and especially British, influence in these latitudes. It is never supposed that an admiral who knows not his duty would not retain his command; or that a ripe diplomatist is acting on dictates of experience and knowledge, supplemented by frequent instructions from home and explana-

tions that the telegraph may render almost instantaneous. China and Japan were not quite so near to England when the Foreign Minister in London sent to his representative in China these instructions:—

I have to instruct you to explain to Her Majesty's Consuls that the special purposes for which her Majesty's ships-of-war are stationed in the ports of China, and employed on the coast, are to protect the floating commerce of British subjects against piratical attacks in Chinese waters, to support Her Majesty's Consuls in maintaining order and discipline among the crews of British vessels in the respective ports, and, in cases of great emergency, to protect the lives and properties of British subjects if placed in peril by wanton attacks directed against them, on the part of local authorities or by an uncontrolled popular movement. As regards this last point, Her Majesty's Consuls must constantly bear in mind that the interference of naval force, either in their representation or on the part of naval officers acting on their own estimation of facts before them, will alone receive the subsequent approval of Her Majesty's Government, when it is clearly shown that without such interference the lives and properties of British subjects would, in all probability, have been sacrificed; and even in such a case Her Majesty's Government will expect to learn that the alternative of receiving them on board ship, and so extricating them from threatened danger, was not available. Beyond this, the circumstances of the case must be of a very peculiar nature which would be held by Her Majesty's Government to justify a recourse to force. Her Majesty's Government cannot leave with Her Majesty's Consuls or naval officers to determine for themselves what redress or reparation for wrong done to British subjects is due, or by what means it should be enforced. They cannot allow them to determine whether coercion is to be applied by blockade, by reprisals, by landing armed parties, or by acts of even a more hostile character. All such proceedings bear, more or less, the character of acts of war, and Her Majesty's Government cannot delegate to Her Majesty's servants in foreign countries, the power of involving their own country in war. My despatches, to which I have referred, will have enabled you to point out in unmistakable terms to Her Majesty's Consuls, the course they are to pursue when an emergency calling for immediate action, as the sole means of protecting British life and property, has passed away. They must appeal to Her Majesty's Minister at Peking to obtain redress through the action of the Central Government; and he, on his part, if he fails to obtain it, will submit the case for the judgment of Her Majesty's Government, with whom alone it rests to decide as to the course to be thereupon pursued. I shall furnish the Board of Admiralty with a copy of this despatch, in order that they may send corresponding instructions to the Admiral in the Chinese Seas. I have only to add that all Her Majesty's agents in China have been instructed to act in the spirit and with the objects which I have thus explained to you, generally caution British subjects to pay due respect, not only to the laws of the Empire, but, as far as may be, to the usages and feelings of the Chinese people.

No appropriation made by the last Legislature (says the *Alla*) was more judicious than that for the establishment of a silk filature and the encouragement of the silk interests of the State in a general way. This is an industry for which the climate of California gives promise of success, and yet it is not one of the industries that take root and grow spontaneously. So long as twelve or fifteen years ago private persons, filled with enthusiasm, went into the silk experiment, but discouraged by their non-success, soon abandoned it. It is something that needs combined action and the stimulus of official encouragement. Forty years ago there was a silk-growing excitement in the Eastern States, and mulberry trees were planted and worms introduced from Maine to Georgia. The experiment went just as far as former experiments have gone in California—to the production of a few cocoons—and there it stopped. Probably the time had not then arrived for the successful introduction of the silk industry into the United

States. But since then the domestic manufactures of silk have grown to such importance that the value of the raw silk imported annually is more than twelve million dollars, and what is more important, American ingenuity has devised machinery for reeling silk which gives a living chance of reducing the hand-labor required to an extent that makes competition with the Oriental countries not impossible. The success of the silk industry of California means a vast addition to the wealth and productive capacity of the State.

THE *Straits Times* assumes that the conference of delegates from all the Australian Colonies (including Fiji) that was to assemble in Sydney, New South Wales, on the last day of November was to consider several questions of inter-colonial interest, chiefly, the annexation of New Guinea, Federation, Postal Matters, and the Reduction of Cable Rates to Europe. Mr. W. Grigor Taylor, the General Manager of the Eastern Extension Telegraph Co. at Singapore, left that port for Sydney on the 12th of November to represent his Company in any transactions on the last-named subject.

CONSTANT complaints are made, with or without reason, of pocket-picking occurring at the Shimbashi Railway Station. The *Mainichi Shimbun* reports the case of one passenger having been recently robbed at the terminus of a pocket-book containing forty-eight yen.

THE English Journal *Land*, doubtless having in mind recent investments by some of its countrymen, remarks: "All the indications at present, however, point to America as the future land of enormous estates; and such as yet is the cheapness of land in the States that a million acres there is a hundred thousand here." If the people of the United States are true to themselves they will disappoint this prophecy, by taking such measures as will prevent the rise of great landed estates. The easiest way of doing so would be by legislative regulation of the descent of that species of property. If it is attempted to arbitrarily prohibit the acquisition by one person of more than a certain number of acres of land, such a law will generally be evaded; but if it is enacted that estates above a certain size shall be divided among the heirs upon the death of the owner, such a law will be enforced, because every heir who would be benefited by the operation of the law would lend his assistance to secure its enforcement.—*Alla*.

We are requested to publish the following letter has been addressed by His Italian Majesty's Chargé d'Affaires in Tokiyo to the Italian Consul in Yokohama:—

SIR,—I have received the note which you did me the honor to address me, under date the 19th instant, forwarding the accounts of the theatrical representation given in Yokohama on the 12th of this month for the benefit of the sufferers by the catastrophe in Ischia, as well as a cheque for francs 2,214.94 (\$471.18), being the net proceeds of the representation. This amount represents the sums realized by the sale of tickets, and two generous donations, one of \$50 made by the Russian Minister, M. Dawydoff, the other of \$30 made by

Mr. Nakamura, formerly Japanese Chargé d'Affaires at Rome. I have lost no time in forwarding the cheque by the English mail to His Excellency the Minister of Foreign Affairs in Rome.

It would give me the greatest satisfaction to tender my thanks personally to all those who contributed to the success of the representation so as to render it worthy of its philanthropic purpose, but the task is beyond my power and I am compelled unwillingly to abandon it.

I must, however, refer specially to those with whom the idea of the representation and its initiative originated, as well as to the ladies and gentlemen who took parts in the piece and in the vocal concert. In the case of the ladies above all, it is to me a matter of much regret that etiquette and their well known modesty forbade me to mention their names. They are, however, well known in Yokohama and may always be found among the promoters of every charitable work.

At the same time, in order not to be ungrateful, I must make an exception in the case of certain persons whose names I desire to mention. I count upon their indulgence to pardon me. They are, first, Mr. Hegt, who was kind enough to lend the theatre for a comparatively trifling sum; second, the Messrs. Vinatti, who on this occasion, as indeed upon all occasions, did not spare their time and their talent in the preparation of the decorations; third, Mr. Kiel, who without a moment's hesitation placed at the disposition of the organizers of the representation the assistance of the amateur orchestra which he so ably directs; and finally Mr. Moss who supplied the stage furniture gratis, Mr. Farsari who undertook the sale of the tickets without remuneration, and Mr. Culty whose professional services were given on the same terms.

To all those who directly or indirectly assisted at the representation I tender here my most sincere thanks in the name of the sufferers in Ischia, in the name of the Government which I have the honor to represent, in the name of my nationals in Japan, and in my own name. In so doing I simply perform my duty, for I am persuaded that those who assisted at the representation find in the consciousness of having performed a generous act and relieved suffering, a recompense superior to any species of thanks.

And now, Mr. Consul, you who live in Yokohama and know the ways of the place, I beg and authorize you to publish, in whatever manner you deem proper, this expression of my thanks and of my gratitude.

With assurances, &c.,

The Italian Chargé d'Affaires.

(Signed)

E. MARTIN LANCIELE.

THE steamer *Fu-yew* which arrived in Shanghai from Hongkong on the 16th instant imported into the latter port a quantity of arms and ammunition to the order of the Chinese Government.

MR. U. CRISPINI, a gentleman whose name is well known in other regions of the Far East than this in connection with the concerts that he has given, has arrived in Yokohama, where he proposes presenting a series of musical entertainments. Further particulars will be announced in due course.

THE *China Mail* has been asked to state that the British Consul at Amoy helped, in a most marked way, the chief officer of the steamer *Selembria* in extinguishing the fire on board that vessel on the 5th of November. The overhauling of the steamer shows what a narrow escape she had.

THE Rajah of Jeypore travels in a kind of State that Solomon would hardly have assumed. We read in an Indian Exchange that this native prince "accompanied by three hundred *sannah* ladies, starts for Allahabad." To vary proceedings, he will return to Jeypore before the great Dewali festival, . . . "and again start for Allahabad with another batch of three hundred ladies from his *sannah*."

THE comet discovered on September the 2nd by Professor Brooks, in the State of New York, continues to approach the earth. Its brilliancy is now just double what it was when it was first perceived three months ago, and will continue to increase until in January we shall be able to discern the celestial visitor with the naked eye. At present it is only telescopically visible. Astronomers are at present occupied in the examination of another phenomenon also. There have appeared in the surface of the moon long, deep fissures, running parallel to the crater of Archimedes and in the direction of a chain of mountains designated "the Appenines" in lunar charts. As yet no theory has been propounded with regard to the nature of these fissures, but probably the great majority of European telescopes were directed towards them on the 11th of October, a night when the conditions for observing the phenomenon were expected to be specially favourable. Some further sensation was recently created in the scientific world by an announcement that there had again been detected on the surface of Jupiter a red spot, supposed to be a volcano, which appeared some time ago but disappeared last year. Professor Ricco, of Palermo, has, however, announced, as the result of a long series of observations, that the red spot no longer exists. It has been replaced by a white one recognised as having occupied the same position formerly.

THE *Petit Marseillais*, speaking on the authority of a letter addressed by a friend in Russia to a prominent member of the Russian Colony in the Phœnicia of Southern France, gives the following information:—The Ataman, General commanding the Cossacks of the Don, has received from the Russian Government a secret order which he has forwarded to the second "group," composed of twenty *polks* (Cossack regiments). The order involves placing these regiments immediately on a war footing, in view of a speedy mobilization and taking the field. The officers themselves are ignorant of the direction in which they will have to march; but people of all ranks are absolutely persuaded that a serious war is imminent; for they doubt not that a counterpart secret order has been forwarded to all the other "groups." The eventuality is all the more grave that this "group" of twenty Cossack *polks* is only the vanguard of one hundred or one hundred and fifty similar regiments already mobilized.

Last Saturday's issue of the *Maru Maru Chibun* has a small cartoon in derision of the recent disturbance at the Meiji Kwaido, where a number of students took occasion to make practical exhibition of their preference for modern Western materialism to the tenets of Christianity as expounded at the meeting by foreign and Japanese adherents of the Christian faith. Such a black curtain as one often sees shading the entrance to Japanese stores is in the left back-ground, with a wooden sign-board at the side inscribed with characters whose interpretation is, "Words pawned here!" On the

drapery a human face is caricatured with goggle eyes squinting, shapeless nostrils, and a mouth that might have been lent for the occasion by a gaping hippopotamus. The wrinkles in the forehead (at the top of the *noren* or curtain) convey, of course, a double meaning, to wit, the Japanese name of the screen itself, and the opposition so loudly evinced to the Western doctrine in the cries of No! No! which assailed the lecturers. In the right foreground are two figures probably intended to convey to an imaginative mind the idea of two foreign missionaries in attitudes inspired by terror at the grim countenance glaring at and menacing them. One of the figures has tripped and fallen to his knees, whence he is endeavoring to rise, having abandoned a tome labelled "Holy Bible." His "stove-pipe" hat is falling to the floor, and what may be supposed to be his coat is branded with a big cross. His companion retains his feet and hat; but is fleeing in fright, and yet unable to avert his gaze from the menacing apparition. The legend is to the effect:—"Wonderful that such *bakemono* ('monsters' or 'evolution') should exist in broad daylight. We are sorry to see it; but there is no help for it." And then the absconding Christian missionaries finish their adjuration with "Amen!"

WE hear that a sailing match has been made between two vessels belonging to this port, and that the race will probably come off about the beginning of the New Year. The vessels are Mr. Collyer's *Breeze*, and Mr. Hodnett's *Zephyr*, and the course is to be from Yokohama anchorage round the Island of Osima and back, a distance of about 115 miles. The *Zephyr* is having a new mainsail made for the occasion, and the *Breeze* has been altered to a fore-and-aft schooner, and given that the vessels are properly sailed the race should be an interesting one.

A TOKYO contemporary is in receipt of the following communication from Korea:—One, O-yung-jung, a Korean inspecting officer, who yearly visits the Northern districts of the Kingdom to inquire into the condition of provincial administration, has returned from a recent tour; and has memorialised his Government on the question of the frontier line between Korea and Russia, to the following effect:—"Tu-man-gang, and the region north of it for a distance of 700 *ri*, were originally absorbed by our Kingdom. It was then a desolate and cold region, apparently unadapted for cultivation. Forty years since, Russia was encroaching upon it. Last year, the Chinese Government opened negotiations with the Russian authorities at Vladivostok to recover the country overrun. But the Russians did not keep their promise to give it up, and they still continue to occupy it. It is now high time that steps should be taken to recover it. The only alternative left open to Korea, is either to address herself direct to Russia or through China. If the proper steps are not taken now, the Russian high-handed manner of dealing will be unchecked. There is no saying but that

Russia may seize the whole of the Korean district." The Korean Government is said to have received the memorial, but to have also determined to postpone consideration of the question till a more favorable time shall occur.

THE Mitsu Bishi mail steamship *Hiogo Maru*, Captain R. N. Walker, which arrived here yesterday from Hakodate, brought on sixteen castaway Chinese. These men were the crew of a junk which got into bad weather when making a voyage from Vladivostok to Olga Bay, and after suffering many hardships, during which one of their numbers succumbed, were ultimately picked up by a coasting steamer near Akita Bay and taken on to Hakodate. The passengers that were in the junk, 22 in number, were transferred at Hakodate to the German steamer *Ingo*, which vessel is under charter to the Mitsu Bishi Company, and taken back to Vladivostok.

THE *Owari Maru*, a new steamer for the Union Steam Navigation Company of Japan, has been built by Messrs. Henry Murray and Co., of Dumbarton. Her dimensions are as follows:—Length, 215 feet; breadth, 31 feet; and depth, 22 feet 6 inches. Her engines, which are of 120-horse power nominal, are constructed by Messrs. James Howden and Co.; the high and low pressure cylinders are respectively 27 inches and 54 inches, and the stroke is 36 inches. On her trial trip a speed of twelve knots per hour was obtained.

THE American ship *Loretta Fish*, which arrived on Tuesday from New York, brought the largest cargo ever delivered here by an American vessel, viz., 69,000 cases kerosene oil and 100 tons of general cargo. She came by way of Australia and experienced moderate weather till ten days ago off this coast, where adverse gales with unsettled weather were met and continued to port.

THE P. & O. steamship *Khiva* reports a delay of two hours at the entrance to Shimonoseki Straits through a snowstorm, and a detention at Kobe for three hours from a similar cause.

THE American ship *Hercules* sailed for Kobe last Tuesday evening with the whole of her original cargo of kerosene from New York.

THE steamship *Gordon Castle*, from Hongkong, reports having experienced strong north-east monsoon and very unsettled weather throughout the passage.

THE Mitsu Bishi Mail steamship *Genkai Maru*, Captain G. W. Conner, will be despatched from this for Shanghai, *via* ports, on Saturday, the 15th instant, instead of on the usual day.

THE Occidental and Oriental steamship *Arabic*, for this port, left San Francisco on the 1st December.

THE Russian brig *Sophie* is loading wheat for Amoy, having been chartered by Chinese.

THE SEIZURE OF THE "OTOME."

ON the 28th of October the Russian authorities at Wladivostock released the crew of the British schooner *Otome*, which vessel, as our readers will doubtless remember, was seized off Behring Island at the end of August. With regard to the circumstances alleged in justification of the seizure itself, we have already expressed an opinion which the subsequent course of events has not modified. The *Otome* was violating Russian laws in Russian territory when the steamer *Alexander* fell in with her, and her liability to the penalty prescribed by those laws scarcely admits of question. According to the written admission of the master himself, her crew killed a number of seals on Behring Island and were only prevented from carrying off the skins by the interference of armed natives. The contention that no seal-skins were found on board, with the exception of three obtained at sea, is, therefore, scarcely admissible. Even supposing that it were possible, by inspecting a parcel of skins, to distinguish between the various places where they were procured, the fact would remain that the *Otome* was confessedly engaged in sealing operations in Russian waters. When a man is caught in a pheasant preserve with a gun over his shoulder, and when the keepers of the preserve declare that they interrupted him in the act of slaughtering pheasants, it is difficult to see how he can escape being punished as a poacher merely because he has failed to carry off any game. Another plea advanced on behalf of the schooner was that the regulations under which she was seized had not been posted at the British Consulate in Yokohama, whence the *Otome* sailed. Were the question of publicity alone involved here, the argument might have some significance; for though the regulations were posted at the Russian Consulate and advertised in an English local journal, a British ship, after all, looks chiefly, if not entirely, to the British authorities for information of this nature. That no steps were taken by the Russian Consul at Yokohama to warn his English colleague of the risks to which British shipmasters are exposed in Russian waters, was at least inconsistent with the traditional courtesy of Russian officials. But, for the rest, it were plainly extravagant to require that Russian laws, applying only to Russian territory or to trespassers on it, should not be enforced against Englishmen until a preliminary notice has been conveyed through English officials. It is the duty of a man visiting a

foreign country to respect its laws and to furnish himself with such information as will enable him to respect them. If he fails to adopt this necessary precaution, he must accept the consequences.

So far, therefore, as the seizure of the schooner and her confiscation are concerned, we cannot see that her owners have anyone to blame but themselves. Their people were engaged in an illegal adventure, and unfortunately for themselves they were not sufficiently adroit to escape detection. The *Otome*, indeed, seems to have been singularly unfortunate as well as singularly confiding. Her voyage to Petropaulovsky, in obedience to the instructions of the master of the *Alexander*, was a curiously naïve proceeding, just as her subsequent encounter with the *Wladivostock*, by which steamer she was taken in tow, was a remarkably unlucky accident. According to the accounts which first reached us, the steamship *Wladivostock* went out expressly to look for the *Otome*, but it now appears that such was not the case. The former vessel was on her way to another port when she fell in with the *Otome*, and took effective measures to secure the schooner's visit to *Wladivostock*.

After this, the most liberal interpretation of the local authorities' legal competence could not have warranted more than the confiscation of the *Otome*. That was the utmost penalty prescribed by the regulations, as it was also, obviously, the utmost penalty which could properly be inflicted under the circumstances. But the authorities seem to have been quite unprepared for the conjuncture. The Admiral and the Governor alike declined to deal with the case, and nothing remained but reference to the Governor-General at Irkutsk. Pending that official's reply, the master and crew of the schooner were placed in close confinement and guarded by Cossacks. With what object they were thus detained it is difficult to conjecture, nor was any explanation whatsoever offered by their jailers. After seven weeks' imprisonment a strong protest was lodged by the master, but it does not appear to have evoked any answer. Meanwhile, the prisoners suffered considerable hardships. The sum of money allowed for their maintenance scarcely sufficed to purchase the commonest food, and was, moreover, seriously reduced in its passage through the hands of their Cossack guards. Against the latter's dishonesty the crew finally made such forcible resistance that the Cossacks were induced to mend their manners. But a much more serious trouble than temporary discomfort and rough

fare would have been detention at Wladivostock throughout the long winter, and it seemed more than probable that this would happen, as the middle of October brought no apparent prospect of release. In the interim, however, the British authorities had not been idle. Her Majesty's Chargé d'Affaires in Tokiyo had telegraphed to London particulars of the crew's unnecessary imprisonment, and Lord GRANVILLE seems to have lost no time in communicating with St. Petersburg. On the 28th of October, the prisoners were summoned before the local authorities, when there was read to them a document in Russian purporting to be a telegram from the Governor-General at Irkutsk. Its import was that the schooner *Otome*, having been captured hunting in Russian waters, with a large quantity of furs on board, and hunting in those waters being prohibited—a notification to that effect having been published in Japan—the vessel, cargo, and hunting appliances should be confiscated, while the master and crew should have their personal effects restored to them and be set free. Protests offered against this decision were met with a reply that the officials at Wladivostock were simply acting under instructions and could not enter into any discussion. The guard of Cossacks seems to have been then withdrawn, and the crew of the *Otome* found themselves in Eastern Siberia, deprived of their vessel without any form of trial and possessing no means of leaving the country. Their application for food, shelter, and assistance to reach Japan was not entertained, and at first it seemed as though they would have fared better in confinement. Ultimately, however, the Japanese portion of the crew obtained relief and a passage to Yokohama from the commercial agent of their country at Wladivostock, while the Europeans, by selling their effects, got together a sufficient sum to reach Nagasaki.

The action of the Russian authorities subsequent to the capture of the *Otome* is open to a charge of grave injustice. Some semblance of warrant might be found for the imprisonment of the crew had they been ultimately brought to trial. But it is difficult to imagine that any intention of this nature ever existed. No civilized system of administration prescribes the preliminary imprisonment of defendants in a suit whose issue involves nothing more than the confiscation of certain chattels. The owners of the *Otome* might have been trusted to watch their own interests, and not to allow the case against them to go by default. Apart, too, from this vexatious detention

of British and Japanese subjects, the confiscation of the schooner by a mere mandate of the Governor-General was a needlessly arbitrary proceeding. However remote the possibility of defending her action appeared, some opportunity to make the attempt ought certainly to have been provided. The reputation of Russian justice will not gain by the story of these proceedings.

THE NEW PATENT LAW.

One of the most important legislative results of the past session of Parliament is the "Patents, Designs, and Trade Marks Act," which, as will be seen from its title, deals in a single statute with three kindred subjects. At the present juncture these matters are especially worthy of attention in Japan, since the absence from the Japanese statute-book of satisfactory laws relating to them has long been a grievance both with foreigners and Japanese; and while the former have, by individual applications and through the formal representations of their Ministers, brought the question prominently before the notice of the responsible officials of the Government, the latter have, it is understood, commenced steps to supplement the acknowledged defect. It may be hoped that, in preparing drafts on these subjects, the labours of Experts, Commissioners, and Legislators during the past thirty years in England, this last result of accumulated experience, may be utilized as they deserve.

Important as the Act of last session will no doubt prove to be, it does not profess to achieve any radical change of system; though, as we shall have occasion to point out later on, it contains one provision admittedly of prime importance—and, as we believe, invoking a radically new principle—we refer to the provision for Compulsory Licences—which at the least effects a profound theoretical modification of the conditions on which Patent rights have hitherto been held. But the fundamental principle of Patent Law, the encouragement of invention by affording State protection to the inventor, remains unshaken. The question of Patents or No-patents, that is Rewards or No-rewards, which used to form the battle-ground of Commissions, is no longer regarded as an open one: the No-patents school is said to be dead and buried, and any discussion of its views to be academic only and not one for practical legislators—in England at any rate.

The Act before us, which is not only an amending but a consolidating statute, deals, as we have seen, with the three allied subjects of Patents for Inventions, Designs, and Trade Marks. Recent legislation, recognizing their affinity, had already grouped these three subjects together so far as to place the working of the Acts on the two latter under the superintendence of Commissioners of Patents. The Acts relating to each of these branches are now consolidated, and all three brought into the compass of a single statute; and a single

office is created in name as well as in fact. The branch of the subject placed at the head of this article is as much as we can deal with at present.

In moving the second reading of the Bill in the House of Commons in April, the President of the Board of Trade said that "the Bill proceeded upon the assumption that an inventor was a person to be encouraged and not repressed." This sentence gives the key-note of the measure. The cry of reformers in this field of economic legislation has ever been for the "simplification" of the Patent Laws: and the history of the past thirty years has been a record of efforts towards simplification in procedure, and cheapness—the older laws having hedged about the grant of letters patent with such a multiplicity of forms and set up such a barrier of prohibitory fees, as effectually, if not intentionally, to "repress" rather than to "encourage" the inventor. The Act of 1852 inaugurated a great reform: that of 1883 carries it further without diverging widely from the same lines of policy. Mr. CHAMBERLAIN, in the speech above referred to, stated the objects of reform—granted the good of Patent Laws at all—to be four-fold:—(1) Adequate protection to the inventor without undue monopoly: (2) A scale of costs low enough to bring the advantages of the law within reach of all: (3) That the protection afforded to the inventor should be real and effectual: and (4) that litigation, where necessary, should be cheap and efficient. Let us see how the law as it now stands seeks to attain these objects. The first head is fundamental and implicitly contains all the rest, which are indeed but necessary corollaries. To afford adequate protection to the inventor without undue monopoly is the one great aim of all Patent Laws. To strike that balance, effect that compromise between protecting the interests of the inventor for the sake of encouraging invention and safe-guarding the public against exclusion from the enjoyment of useful inventions by an undue monopoly in the inventor—these are the problems that always have and always must beset the question, and which have appeared to many so irresolvable as to lead them to suggest cutting the knot by abolishing Patent Laws altogether. That expedient not being at present, as we have said, practically open, the method of reform has been confined to trimming the balance: and the present Act proceeds for the most part on this principle. It leaves the much-vexed question of the term where it found it, at fourteen years: fifteen is the period in most countries, we believe; so that something like this time seems to be fixed by a consensus of experience as the appropriate term within which an inventor should be able to reap the reward of his industry or genius. But the position of the inventor in this respect is improved, firstly by the omission of any clause curtailing the term to the period still unexpired of any foreign patent for the same invention of earlier date, as under the former Act: and secondly by the conditions on which extension of the term may be obtained—a more rational and elastic rule being laid down for the guidance of

the Committee of Council in deciding upon applications for extension, in place of the uniform considerations to which alone that tribunal, having once for all laid down a rule for its own judicial guidance, had, as a matter of precedent, habitually had regard.

The other provisions of the Act, which aim directly and solely at the encouragement and protection of the inventor, appear for the most part well calculated to promote their object. Procedure is most materially simplified by the abolition of numbers of forms and stages hitherto requisite in obtaining a Patent. The number of personal applications at the office for instance is reduced from seven to two. A clause in the Act prohibiting the unauthorized assumption of the Royal Arms, which before explanation caused some comment, appears to be aimed, like many others, at the Patent Agents. It is said that, by the display of the Royal Arms, the sharks of this profession decoy the unwary, who are thus led to believe that they are doing business with a Government official, all the time that they are in reality running up a bill of costs in a Patent Agent's back-room. We can speak from personal observation of the colourable titles, in every sense calculated to mislead, such as "Office for Inventions" and the like, on the doors of Patent Agents' offices in the same street as the real Patent Office.

The modifications of the fees do not at first sight appear so important as they really are, inasmuch as the total amount of reduction is only twenty-one pounds, from £175 to £154, an almost insignificant sum compared with the drop from £300 to £175 effected by the Act of 1852. But it is in the reduction of the amount of the initial payments and postponement of the dates at which the instalments become payable that the true value of the concession lies. An inventor can now obtain protection for the first four years of his patent for the sum of four pounds. The first years are obviously the critical ones: a heavy initial fee is prohibitory to the poor inventor, or to one the practical ability of whose invention on a paying scale is more than usually doubtful. On the other hand, the heavy subsequent payments are not deterrent; for in the interval the inventor will have had time to decide whether it is worth his while to incur the further expense or to let his patent drop. It is not the useful, but the useless, inventions that are weeded out by the system of instalments. Under the previous scale it was calculated that the second payment killed two-thirds of the patents taken out, and the third, nineteen per cent. of the remainder, leaving only eleven per cent. of the original total surviving for the full term. It is objected, and we think rightly, that the fees are still too high. Mr. ANDERSON, who had a Bill of his own on the subject before the House, pointed out that the United States Government grants a Patent for seventeen years for the equivalent of seven pounds sterling. The Treasury however could not see its way to any greater reduction at the present time. The fees have always been regarded as a legitimate source of re-

venue. Nevertheless, we trust the time may come when the example of America may be followed, at any rate, more closely than at present.

Towards the cheapness and efficiency of litigation the Act perhaps does not go a great way. The provisions for the appointment of specially qualified assessors to assist the Courts are regarded by different persons, whose experience should enable them to judge, and on different grounds, as not likely to prove more valuable in the future than such powers as were already possessed by the Courts for the same end have proved in the past. This branch of the subject is necessarily technical and scarcely of a nature to be dealt with here. It may be remarked, however, in passing, that, among many objections specified, the provisions as to opposition to Patents are singled out as "most objectionable," and as likely to press heavily on the poorer classes of inventors, in the Report of the Patent Laws Committee of the British Association presented to that body at its annual gathering in September. It should be mentioned that, of the two other Bills which disputed the attention of Parliament with that introduced by the Government, one embodied the views of the Society of Arts: and we believe we are correct in stating that the advocates of this rival scheme made their opinion felt on the Committee referred to. Any comparison, however, of the merits of the different bills would lead us beyond the scope of our present purpose, which is to afford our readers some idea of the law as it is, and not as it might have been.

Among other amendments now introduced into the law in favour of the inventor, that one which provides that a Patent shall bind the Crown deserves especial notice. As the law stood, the Crown, being the granter of Patents, was not bound by them—an arrangement obviously of serious detriment to the interests of the Patentee. The Commission which sat in 1865 reported in favour of use by the Crown without licenses, but conditionally upon the payment of adequate remuneration. Subsequent opinion has gone beyond this, and the new Act declares (section 27) that "a Patent shall have to all intents the like effect against Her Majesty the Queen, her heirs and successors, as it has against a subject." But in the interest of the public service there is a proviso empowering officers of the Government or their agents, at any time after the application for a Patent has been made, to use the invention for the services of the Crown, on terms to be agreed upon before or after the use, or, in default of agreement, on terms to be settled by the Treasury after hearing all parties interested. The latter part of this proviso retaining the decision in the hands of the Treasury has naturally been the subject of much criticism. There is, further, provision for the voluntary assignment to the Secretary of State for War of the benefit of any invention or patent relating to instruments or munitions of war; and elaborate measures are provided for keeping such inventions secret.

On the other side of the question—on the side of securing the interests of the public by refusing the inventor an undue monopoly—two principal provisions of the law as it now stands declared or amended may be mentioned. In the famous Statute of JAMES the FIRST, known as the "Statute of Monopolies" there are expressly excepted, from the general abolition of unlawful monopolies thereby effected, Letters Patent and Grants of Privileges for Fourteen Years for the sole making or working "of any manner of new manufactures within this Realm to the true and first inventor and inventors of such manufactures, which others at the time of making such Letters Patent and Grant shall not use." This section, which is not only the constitutional authority for Patents, but is adopted both in the Act of 1852 and in the present Act, as affording the legal definition of Inventions, has always been judicially interpreted as including the introduction into the realm of anything not previously known within it, though the introducer be not the true and first "inventor" in the ordinary sense of that term. But it has always been open to an alien to obtain a Patent, and the right is expressly declared by the present Act: and the law in recent times, having regard to the facilities of modern communication, has not favoured the introducer of other men's inventions. The House of Commons Committee that sat in 1871 and 1872 recommended that letters patent should not be valid for an invention that had been in use in a foreign country, unless a patent for the same should have been granted in such country, and unless such letters patent should have been granted in this country to the original inventor, his assignee, or authorized agent." The Act does not embody this recommendation. But the holding of a patent by others than actual inventors is made less likely—a provision as much in the interests of the public as of inventors—by the facilities for obtaining revocation of a patent by any person who alleges that he, or any person through whom he claims, was the true inventor, and allowing private persons as well as the Attorney-General, the official representative of the public, to petition for the revocation of a patent upon the allegation that they have publicly manufactured, used, or sold within the realm anything claimed by the patentee as his invention. As to the grant of Patents for anything not properly the subject of a Patent, the Statute of Monopolies itself affords sufficient protection by its prohibition of the grant of monopoly-privileges detrimental to the public interest; and Letters Patent for Inventions have always contained a proviso (continued in the form given by the schedule to the present Act) for revocation by the Crown itself, if, amongst other things, the grant be made to appear at any time during the term of it "contrary to law, or prejudicial or inconvenient to our subjects in general."

But the greatest advance, as it appears to us, made by the new Act is in the provision it contains for the compulsory granting of licenses. Hitherto a Patentee might refuse to others the grant of a licence to work his

invention, and, though unable to supply the public demand, keep the working of it in his own hands exclusively; or not work it at all. In the first case he was prejudicially exercising an undue monopoly: in the second, by holding what has come to be known as a "Dog-in-the-manger Patent," he is preventing the use of what is *ex hypothesi* an improvement. The motives for this latter line of conduct are not apparent on the surface, but that it serves an end of trade competition is shown by the fact of its being sometimes pursued. The real danger of it, however, lies in a special direction. Allowing, as our law does, a foreigner to take out a patent in England, it is evident that, by refusing licenses to work it there, it lies in his power, when the improvement introduced is sufficiently great, to kill the industry concerned in England and monopolize the business in his own country. This has actually happened, notably in the case of the manufacture of artificial colours connected with coal products, the whole of which has gone to Germany: and if the inventor of the hot-blast-furnace, also a German, had in like manner refused licenses, almost the whole of our iron industry might have been destroyed! In the face of dangers so stupendous it is surprising that the law should have been allowed to remain as it was so long. Yet the Commission of 1865 reported against Compulsory Licenses, and there was considerable conflict of opinion among the witnesses before the Select Committee of the House of Commons which reported in 1872. Most witnesses, however, even those opposed to the system generally, admitted its necessity in the case of foreigners and for certain exceptional processes—such as BESSEMER'S; and the Committee reported in favour of the system. The chief difficulty seems to have been felt in regard to settling the amount of the royalties to be paid by the licencees to the patentee when the grant of the licence is not a matter of contract between them. Under the Act this is left to be settled by the Board of Trade. We may as well transcribe the section in full. It is the twenty-second section of the Act, and runs as follows:—

If on the petition of any person interested it is proved to the Board of Trade that by reason of the default of a patentee to grant licences on reasonable terms—

- (a) The patent is not being worked in the United Kingdom; or,
- (b) The reasonable requirements of the public with respect to the invention cannot be supplied; or,
- (c) Any person is prevented from working or using to the best advantage an invention of which he is possessed;

The Board may order the patentee to grant licences on such terms as to the amount of royalties, security for payment, or otherwise, as the Board, having regard to the nature of the invention and the circumstances of the case, may deem just, and any such order may be enforced by mandamus.

With the principle of this provision we entirely agree. Our readers may purchase remember an article which appeared in our columns about twelve months ago in which a somewhat novel suggestion was put forward in regard to legislation on the subject of Patents for Inventions. Briefly,

the proposition there made was the adoption of a system of Royalties pure and simple: that the inventor should be rewarded, not by a monopoly, which he might or might not allow others to share with him and always upon his own terms, but by the right to Royalties, fixed by a tribunal appointed by the State, for the use of his invention by all who obtained State-licences for the purpose. The principle now recognized by our law is the one underlying that proposition; and the plan of granting a patent that no longer confers a monopoly, but a monopoly *minus* the obligation to share it with others, is a distinct approximation to the scheme suggested in these columns, and marks a very long step towards the final disappearance from our Patent Laws of all trace of the monopoly system out of which they arose. Starting, as Japan does, with a *tabula rasa* on this point, it will be a pity if her legislators think it necessary to enmesh themselves in the toils wrought for us and others by historical accident, from which our own laws are just struggling to shake themselves free.

HIGHER EDUCATION IN JAPAN.

During the first seven years of its existence the students at the Imperial Engineering College in Tokiyo were under the care of a numerous and highly qualified staff of foreign professors. In two respects the institution was exceptionally fortunate. Its welfare was specially watched over by a Japanese Minister of earnest character and considerable influence, and its principal happened to be a gentleman who to great administrative ability added a fixity of purpose that over-rode difficulties and made light of opposition. These advantages, combined with a happy choice of professors and instructors, were naturally attended with success. The students attained a truly admirable standard of efficiency; the discipline of the College left nothing to be desired, and the laboratories, museums, halls, and class-rooms became one of the sights of the capital. The foreign public, notably the British section, had reason to be proud of such an institution; the Japanese could point to it complacently as an evidence of the value they set by Western science, and its staff had the satisfaction of seeing grow up under their care material that could not fail to do them credit. When, therefore, a sudden and sweeping reduction of the foreign professorial body was announced in 1880, the news was received with regret. No one, indeed, had any reason to expect that the place would be exempted from the general action of Japanese policy. To dispense with foreign aids so soon as they could be replaced by competent Japanese substitutes, was always a recognised object of the Government. But there is an intelligible reluctance on the part of the public to see these experiments applied to an institution so successful that any change seems suggestive of retrogression, and this was eminently the case with the Kōbu Daigaku. There were doubts, too, more than

doubts, whether the vacancies could be adequately filled. For though the contingency had been foreseen, and though steps had been taken to provide against it, these steps necessarily required time for their completion, and the time was not yet ripe. Graduates of the College, who had gone abroad to finish their studies, and who on their return would be available as instructors, were still absent, and without them the difficulty appeared insuperable. Into the exact methods employed to overcome it, we need not enter here. Enough has been said to show that a special interest attaches to the history of the College during the past three years, and to explain our reason for referring to it at present.

The Calendar for the current year is now before us. It is a tolerably bulky volume of nearly two hundred pages, though as compared with its predecessors, its dimensions are sensibly diminished. We may remark, too, *en passant*, that its fashion of compilation is considerably improved—a more systematic arrangement of the body of General Regulations; the addition of a *coup d'œil* time-table; the reduction of the syllabus of subjects to literary unity; a more complete nomenclature, and greater perspicuity in the methods of recording the marks obtained by the students, being among the most conspicuous changes. Turning to the list of officers, we find that the staff of Professors and instructors numbers twenty-eight, of whom six only are European. The principle adopted has evidently been to retain foreign assistance, as far as practicable, in the technical subjects, and to entrust the instruction in the general course to Japanese. The consequences of this division will be intelligible when we say that during the first two years of residence at the College the training of the students is carried on entirely by the Japanese staff, except in the subjects of the English language and chemistry. This means that to Japanese professors is delegated the duty of teaching the principles of geometrical drawing and its application to engineering and architectural drawing; mathematics, including the higher branches of algebra and trigonometry as well as the elements of analytical geometry and conic sections; and the elements of natural philosophy. A general supervision in this course is exercised by the European staff, but the actual instruction is given entirely by the Japanese. At the conclusion of the general course a final examination is held, by the results of which is determined the students' general fitness to enter on the work of the technical course. The standard of proficiency is high, the minimum passing marks being forty per cent. of those obtained by the best student over all the five subjects of the course, and twenty-five per cent. of his marks in any one subject. This method of taking the marks of the best student as the unit of comparison is open to objection. For while it preserves a desirable relation between the achievements of the students in each year, and thus eliminates a certain class of possible accidents, it also introduces an exceedingly variable factor, namely, the

ability of a particular individual. It may happen, and has actually happened at English public examinations, that the record of some one year is marked by an altogether exceptional display of talent on the part of a candidate, between whom and his competitors an immense interval is found to exist. To take such a candidate's attainments as a general test would be obviously unjust. Turning to the results of the last examination held at the Engineering College for second-year students, we find that the first man obtained 425.2 marks out of a possible 500, so that the minimum for passing became 182, or more than 36 per cent.—a higher standard than is generally required of students in the West. It is only fair to say, however, that up to the present the working of this system does not appear to have been attended by any inconvenience. Having passed successfully into his third year, the student spends the next two years of his curriculum attending one of the technical courses. Subject to the exigencies of the public service, he is at liberty to select his subject from among the following, viz., Civil Engineering, Mechanical Engineering, Naval Architecture, Telegraphy, Architecture, Applied Chemistry, Mining and Metallurgy. In each of these branches he receives a portion of his training from the foreign staff, but the general instruction is given by the Japanese. Of the results achieved we are enabled to form a tolerable estimate from the examination papers. Here are a few selections taken at random from those set by the Japanese staff.

Second year students were required to answer such questions as the following:—

Find the intersection of a cone and cylinder, as given, and construct their developments. Show the calculations necessary for the developments.

Find the shadow cast upon the two planes of projection by a cone as in given position.

Draw the square prism with hexagonal cap upon it, as shown. Find the shadow of the cap upon the prism, and also the shadow of the cap and prism upon the planes of projection.

If a plane mirror be equally inclined to each of the three co-ordinate planes, and l, m, n be the direction-cosines of a ray incident on it, show that those of the reflected ray will be $\frac{1}{2}(2m+2n-l)$, $\frac{1}{2}(2n+2l-m)$, and $\frac{1}{2}(2l+2m-n)$.

Find the equation of a plane in the form

$$lx + my + nz = p$$

where p is the perpendicular from the origin upon the plane, and l, m, n its direction-cosines.

Enunciate and prove the triangle of forces.

Describe the Morse system of electric telegraph.

Compare the advantages and disadvantages of different kinds of telescopes. For what purpose is each specially fitted?

Prove that the path of a projectile (in a vacuum) is a parabola. Find its focus and latus rectum.

State clearly the principle of the Conservation of Energy. By applying the principle, find the mechanical advantage of the single movable pulley with strings not parallel, and that of the bent lever.

Give a table of the compounds of phosphorus, arsenic, and antimony with oxygen; with chlorine; and with hydrogen and oxygen.

What are the chief components of the best Bohemian glass; of common window glass; and of flint glass?

Of the questions proposed to fourth year students by the Japanese examiners the following will serve as examples:—

Write a short report for the improvement of the

street between Shinbashi and Nihonbashi, illustrating your designs by sketches.

What improvements would you recommend to be made on the works for the water supply of Tokiyo?

Under what circumstances is "weir and lock navigation" used in rivers? Describe the precautions that are necessary in the location and construction of a weir for such a purpose.

Make sketches of the turning tools generally used for pattern making and show the way in which such tools are employed. Give sketches of a centering square, backstay, and boring collar.

Prove that the velocity of efflux from a small orifice in the bottom of a large reservoir is $\sqrt{2gh}$, and thence find the formula for the theoretical discharge from a rectangular orifice in the side of a reservoir.

Compare the advantages and disadvantages of turbines and ordinary vertical water-wheels.

Describe different methods of arranging the casts in an elliptical stern.

Show how the stability of a ship may be calculated for a given angle of inclination.

It will be at once evident from these questions that the professorial part taken by the Japanese staff is very important, and from what we have been able to learn, their efficiency and zeal are beyond question. Fifteen of that staff are graduates of the College, so that in the ten years of its existence, the institution may be said to have educated its own instructors. This result, highly satisfactory from a general point of view, is also attended by a special advantage. Not only are the young professors familiar with the ways of the place and its appliances, but they also know, and are known by, their foreign colleagues, a circumstance which cannot fail to prevent friction and to discourage superficial or dishonest methods. Altogether it will be safe to conclude that the College has suffered little, if anything, by the changes effected in 1880. Ample time has now elapsed to exhibit their full effect, yet the standard of proficiency attained by the students continues to progress in a ratio not less rapid than was the case under the original regime.

This progress is an exceedingly interesting feature of Japanese education. The limited space at our disposal here does not permit a detailed comparison of past and present results, but those who desire to pursue the subject more carefully, will find that, judged by the tests successfully endured, a steadily increasing degree of proficiency is plainly discernible. To take an example. A few years ago the mathematical examination papers of the second year students in the Engineering College did not embrace problems demanding a wider range of reading than TODHUNTER'S manuals for beginners. The same papers now contain questions in the higher branches of algebra, analytical trigonometry, co-ordinate geometry of three dimensions and the calculus. An assimilation of knowledge even at the rate indicated in the former case was comparable with any general results achieved in the West, but there really appears to be no visible limit to the Japanese student's industry and versatility. He seems to study with an object very different from the mere desire of accomplishing a set task. What that object is, may easily be discovered, in part at least, by those who have observed the feverish earnestness this nation displays to recover the ground lost

during its centuries of isolation. Such a purpose is seldom associated with the unconcern of boyhood, and the association being so strange, we need not be surprised that its results are equally out of the common.

It would be wrong to dismiss this part of the subject without a word on the often-discussed topic—physical exercise. A glance at the syllabus of the Engineering College shows that there is required of the students a monotony of daily toil only possible to men with whom the love of work has become a passion. EMERSON says that the first requisite in a gentleman is to be a good animal, and the high-pressure life of these latter years is beginning to demonstrate how much subtle wisdom is embodied in that light phrase. "Nature," as HERBERT SPENCER observed a year ago, in his speech in New York, "quietly suppresses those who disrespectfully treat one of her highest products, the 'vile body,' and leaves the world to be peopled by those who are not so foolish." We have often thought that the example of the country she chiefly respects and admires, exercises more or less influence on Japan in this respect, and that added to her own anxiety to be quickly wise, there is something of the wonderful intemperance in work which we are accustomed to regard as an American characteristic. However this may be, there can be no doubt that the tendency of the Japanese student to-day is to transform the means into the end, to forget—we quote again HERBERT SPENCER'S words—that "it is as irrational to pursue industry to the exclusion of the complete living it subserves, as it is for the miser to accumulate money and make no use of it." We observe that among the rules of the Engineering College there now stands one specially directed against this excess of mental application, namely:—"Any student who has failed to put in two-thirds of his attendances at the Recreation Ground, and to take due part in the exercises and games, is disqualified from receiving a prize in any of the classes in the College." But when we see that one of the most promising students the institution ever possessed is lying in Aoyama Cemetery, killed by brain fever; that another, of equally brilliant parts, has lost the use of his right hand, and that many others betray symptoms of that premature collapse which stress of work inevitably entails, we feel that something more is needed than any advice the foreign staff may offer or any rules they may enact.

CODE OF CRIMINAL PROCEDURE.

BOOK IV.

Book IV. contains the regulations for the Adjudication of Offences (*Du jugement des infractions*). Chapter I. presents a number of general principles applicable to the treatment of all kinds of offences (Art. 262-320). First of all publicity is insisted upon on pain of nullifying proceedings. Exceptions are made only in cases where public order demands secrecy, or publicity would offend modesty or good morals. The accused must appear un-

fettered; he has the right to secure the help of an advocate, whom he may choose from among the lawyers recognized by the Court, or with permission of the Court he may select any other person. If the accused does not appear at the time set for trial, in case the offence be a delict involving imprisonment or severer penalties, the trial may be proceeded with in his absence, only when it is certain that the summons to appear or at least the decision ordering the closure of the preliminary examination, has been put into his hand. The accused if absent, cannot avail himself of the assistance of an advocate.

The President has police control of the sessions, he must take all measures necessary for the maintenance of order. Expressions of applause or disapprobation are punished by immediate expulsion from the audience room; delicts committed during a session are punished *incontinenti* or in the next following session: crimes, however, are remanded to the examining magistrate to deal with according to the regular procedure.

The Court can pass sentence only on those offences with which the accused has been charged. At the same time it can deal with offences connected with the principal charge which first come to light by means of the trial, and may even order a supplementary examination for this purpose.

Protest against the judge in the trial is allowable on the same grounds as in the case of the examining magistrate. Moreover objection against the judge is valid, if he has acted as examining magistrate, or has had to do with the preceding action or decision in another Court. The protest against a judge is admissible at any time before the final decision.—All evidence pro and con admissible in the examination is admissible also at the trial (Art. 283). On the demand of either party the president can order the reading of the reports of the examination relating to the facts of the case, or other cogate documents. All the declarations of the same are accorded the same degree of credibility as the statements of witnesses for and against. The officials of the judicial police, who have taken the minutes, can, either by the parties or *ex officio*, be summoned to act as witnesses; the examining magistrate, only *ex officio* or with permission of the Court, and then only to explain the meaning of minutes taken by himself.—The witnesses heard in the examination can be summoned again, if this cannot be done, or the witness fail to appear, whenever it seems necessary for the explanation of contradictions, the declarations made in the examination may be produced and read in the trial.

Witnesses and accused can be examined only by the president. Colleagues and State prosecutor may ask questions with the permission of the president. The civil party and the accused can demand through the president the asking of such questions as they deem necessary for elucidation.

A witness who has been summoned and without excuse fails to appear, on the requisition of the State prosecutor, may at once in the same session be sentenced to the penalty of a fine of from 50 *sen* to 1 *yen* 95 *sen* in simple police cases, or 2 to 10 *yen* in case of a delict or crime, against which there is no appeal. If he does not appear after receiving a second summons, the fine is doubled, and a warrant for production may be issued against the recalcitrant witness.

After the hearing of evidence has been completed, first the State prosecutor, then the civil party, and finally the accused or his advocate has the right to plead. No one is allowed to interrupt the speaker while pleading his case.

If the State prosecutor abstains from carrying through the public action, the Court is nevertheless obliged to come to some decision in the case.—The persons responsible in civil law can intervene at any state of a case, even during the hearing of an appeal, and on requisition of the civil party may be called into Court.

In case of a condemnatory sentence the reasons for the same must be given both in respect to the facts of the case and the points of law, and the proofs brought forward must be given; the same holds good in case of a sentence staying proceedings.—Sentence of acquittal must state that the charge is not proven, stating the material and legal reasons therefor. The Court passes sentence at the same time on the civil phase of the suit if it deems the matter sufficiently elucidated.

Chapter II. gives the special regulations for the adjudication of contraventions (Art. 321-346). The Police Court entertains an action either when the State prosecutor summons a culprit, or an examining magistrate remands an accused person, or when a higher court sends down a case. The accused may appear by proxy through an attorney, in which case his statement will be allowed only when reduced to writing by himself. If the accused fail to appear, on the requisition of the State prosecutor or the civil party, sentence for contumacy will be passed, against which an appeal may be made within three days. If the offence seems to involve correctional or criminal penalties, the Court must declare its incompetence. An appeal against the decision of a Police Court is admissible before a correctional Police Court, and will be proceeded with according to the forms of a correctional action. All the parties have the right to sue for writ of error against a decision of the correctional Police Court in cases of appeal.

Chapter III.—Of the adjudication of delicts. (Art. 347-371). The Correctional Police Court entertains an action:—

1. When on the requisition of the State prosecutor the accused is directly summoned by the clerk.
2. When a case is remanded to the same, whether by the examining magistrate, the Council-chamber of the Correctional tribunal, or the decision of a higher Court. If the delict in question involves a penalty of only a fine, the accused may be represented by an attorney. The same right of acting through representatives is accorded the civil party and the parties responsible in civil law.

As to the course of the trial itself, there is no appreciable deviation from the modern procedure of the continent (Europe). This is particularly the case with the taking of evidence and the order of pleadings of the parties, where the regulations of the French *Code d'instruction criminelle* are almost exactly followed. In the same way also large discretionary powers are given the court (not the president) "for the establishment of the truth."—The verdict of the correctional tribunal (also similar to the regulations referring to the same matter in the French *Code d'instruction criminelle*) may be contested by an appeal before the court of appeals. In case of appeal, suit for writ of error is admissible.

The adjudication of crimes is attended with somewhat stricter formalities (Chap. IV. Art. 372-409.)

The indictment must contain a full and careful presentation of the facts of the case and all the legal points involved. In other respects it follows closely the decision for remanding the

case, and can neither introduce other facts nor accuse other persons than those indicated therein.

Disconnected felonies may be presented in special indictments and separately adjudicated. An advocate will be officially provided for the accused if he has failed to choose one for himself. His presence during the trial is compulsory on pain of invalidating the proceedings. Unconditional freedom of intercourse is allowed between the accused and his advocate from the time of the legal reference of the case (Art. 382). The list of witnesses called by the prosecution must be shown the defendant, and those of the defendant to the State prosecutor. If these announcements are not made within the time legally fixed therefor, the witnesses can be heard only as "persons giving information."—The opening of the session is public but in the absence of the accused. The regular trial begins with a thorough hearing of the accused. In case of contradiction between his statements in court and his previous declarations, the accused is simply asked to explain. After the hearing of all the witnesses, the accused has perfect freedom of reply in explanation. After the conclusion of the taking of evidence the pleadings of the parties follow in regular order (State Prosecutor, Civil Party, accused or his advocate, the persons responsible in civil law).

If new crimes or delicts come to light in the course of the trial, which have no connection with the offences contained in the indictment, and the State prosecutor demand prosecution therefor, the Court is to order one of the members of the Tribunal of the First Instance to proceed with the examination, and then in another audience of the same or following session to adjudicate both offences (the original and the additional).—Suit for writ of error is open to all parties against the verdict of a Criminal Court. A verdict is given in the absence of the defendant only after a thorough examination of all witnesses pro and con, and all forms of erroneous procedure have been guarded against. Suit for writ of error is allowed only to the State prosecutor (excepting in civil matters); the accused has the right to protest (opposition) against a verdict of guilty—and this until the penalty is prescribed—if this is admitted a new trial is proceeded with according to the ordinary formalities of adjudication.

Book V. deals with the Jurisdiction of the Court of Cassation, and Chapter I. of the same treats of suits for writs of error (Art. 410-438). Chapter II. treats of the revision of penal procedure (Du pouvoir en revision, Art. 439-447), and Chapter III. of contests regarding competence (Des reglements de juges, Art. 449-450). Chapter IV. of reference for reasons of public security or on account of "suspicion légitime" (Art. 451-458).

In the chapter on writs for error the following points are worthy of notice:—Suit for writ of error is admissible against the decisions of examining magistrates and the verdicts of adjudicating courts in the following eleven cases:—

1. If a protest has been rejected in opposition to regulations laid down in the law.
2. If the court has been irregularly constituted.
3. If the judges, who have adjudicated the principal action, or to whom the case has been remanded, were incompetent, or if, on the contrary, competent judges have declared themselves incompetent.
4. If the forms prescribed by the law on pain of nullification have not been observed, or if the prescribed rules in

the interest of the defence have not been followed, even when the law does not threaten nullification, provided only that the accused has protested against the illegality.

5. If public action has been wrongly declared admissible or inadmissible.
6. If the State prosecutor has failed to make requisitions where required by the law.
7. If, during the trial, the judge has failed to decide regarding a requisition of one of the parties, or has ruled on points not raised, with the exception of those cases where the law allows the judge *ex officio* to give a decision.
8. If the trial has not taken place in public, when the hearing with closed doors has not been duly ordered, and the decision has not been made public.
9. If no grounds of fact and of law are given for the sentence of the court, or if these grounds contain a contradiction.
10. If there has been an error in the application of the law.
11. If the court has exceeded its powers (*excès de pouvoir* Art. 410).

Acquittal or abandonment of the prosecution can never be contested by suits for writs of error, on account of non-observance of prescribed regulations in favour of the defence, or on account of incompetence arising from considerations of the place of the deed.

The civil party, the accused, the persons responsible in civil law can sue for writ of error against a decision regarding a point in civil law in the preliminary or principal hearing, if one of the cases mentioned in Art. 410 occurs. The defendant (in suit for writ of error) can also, in any stage of the proceedings up to the final decision of the Court of Cassation, lodge a counter-appeal. The same right is accorded the State prosecutor in the Court of Cassation.

Appellant and defendant may employ advocates. In criminal cases the condemned, who has not chosen an advocate will be officially provided with one. The president of the Court of Cassation appoints a reporter, the action begins with the reading of the report of the same, whereupon the parties to the appeal are heard pro and con.

If the Court of Cassation finds the appeal valid, the whole judgment is nullified, and as a rule the case is remanded to another Court. If, however, judgment is nullified on account of improper application of the law, or erroneous application of the law relating to the validity of public action, the Court of Cassation itself passes judgment without reference to another Court. If the informalities, whether in the examination or in the adjudication, have had no effect upon the action, the Court of Cassation simply nullifies the same without remanding the case. If the verdict against which appeal is lodged is founded upon a number of offences, and the appeal is merely directed against the procedure or the sentence referring to parts of the charge, it is optional with the Court of Cassation to nullify a part only of the contested verdicts.

The Court to which a case is remanded is bound to maintain the legal ruling of the Court of Cassation which led to the decision of reference. A new appeal is admissible against the verdict of the second adjudication.

The State prosecutor of the Court of Cassation can at any stage of a case, either *ex officio* or on the requisition of the Minister of Justice, lodge an appeal for writ of error for the preservation of the law, this, however, is limited to verdicts and decisions in which acts are punished upon which the law does not inflict a penalty, or are punished

with a heavier penalty than the law demands. This suit for reversal, admissible even in case of a legally final verdict, operates practically in favour of the condemned.

Chapter II. treats of revision (Art. 439-447) for which appeals are admissible only in favour of the accused against final verdicts (criminal or correctional). The admissibility of re-hearing goes beyond the well-known cases of the *Code d'instruction criminelle* and the French law of 29 June, 1867.

1. If any one has been condemned for homicide, and sufficient evidence be subsequently found that the person is still alive whose supposed death led to the condemnation.
2. If two or more persons have been condemned for the same offence by different verdicts, without complicity of the same.
3. If subsequently an *alibi* can be proved in favour of the condemned.
4. If it can be proved that the verdict resulted from perjury, bribery, or any other punishable act whatever of any third party.
5. Or if the verdict was effected by a falsified document (Art. 439).

The requisition for re-hearing in favour of the accused can be made by the State prosecutor or the condemned; after his death by his relatives. The re-hearing can be demanded at any time, even after the infliction of the penalty.

Chapter III. treats of appeals regarding competence which are entertained by the Court of Cassation (Art. 448-450). Five judges of the Court of Cassation acting as Council give the final decision and designate the competent court. The grounds for reference of a case to another jurisdiction (Chapter V. Art. 451-458) may be found in the number or peculiarity of the accused, the excitement of local passion, or other "circumstances graves," so soon as the suspicion seems well founded that disturbance or perversion of justice is likely to arise. The Court of Cassation decides as Council Chamber without necessarily hearing the parties. The suspicion of partiality in the judges may also give rise to reference to another court of the same rank.

The last Book of the Code (VI.) treats of the execution of sentences, rehabilitation, and pardon.—The permission of the Minister of Justice must be obtained before a sentence of death can be executed, all other legal verdicts must be executed immediately after the final decision. Doubts as to the meaning of the verdict and the execution of the same when raised by the condemned must be decided by the Court which passed the sentence in dispute.—Art. 467 and 468 contains essentially a reproduction of forms of procedure of the French *Code d'instruction criminelle* (Chapter VI. Art. 518-520) for the treatment of condemned persons who have escaped and have been re-captured. The same is true of the procedure for rehabilitation. (Art. 470-476, *Code d'instruction*. Art. 619-634.) Petitions for pardon may be presented to the Minister of Justice by the State prosecutor or the principal of a penal institution. The Minister of Justice presents a report with his own opinion to the Emperor. The Minister of Justice can also initiate a petition for pardon. Petition for pardon suspends the execution of no penalty but that of death.

REPORT OF THE COMMISSIONER OF THE IMPERIAL MINT.

The official report of the Osaka Mint for the fiscal year ending on the 30th of June last has been published. It consists of communications addressed by Mr. Endo, the commissioner, to the Minister of Finance. The report is the ninth issued by the Commissioner; the thirteenth report of the Imperial Mint. In the tables we observe several items of interest. Altogether 21,699.13 Troy ounces of gold were imported into the Mint during the year. Among these were, in Troy ounces, 23.99, English gold; 1.05, American; and 0.53 Japanese worn coins. Twenty thousand and a half ounces nearly of gold of standard fineness (900) was accepted for coinage, only 584 of which came from the Government, private Japanese contributing all the remainder. Of silver 3,214,097 million were imported, principally in bars from San Francisco (1,565,650 oz.) Old *ichi-bu gin* figures to the amount of 30 oz.; Japanese worn coins to that of 833 oz. American silver coins, 93; English, 66; Mexican dollars, 893. Next to the San Francisco bars are, in point of bigness of value, the following bullion, given in their order as tabulated, and in Troy ounces:—Silver bullion of unknown fineness, 243,888.24; silver bullion of known fineness, 532,593.09; refined silver bullion of known fineness, 457,483.92; shoes of sycee, 412,555.51. The amount of silver of standard fineness (900) accepted for coinage was, also in Troy ounces:—Imperial Government, 1,020,475.26; Japanese, 836,588.42; Foreigners, 1,624,315.01; Total, 3,481,378.69.

Of copper bullion imported into the Mint during the year there was in aivoirdupois pounds:—Japanese tile copper, 1,665,932.00; Refined copper ingots from old bronze guns, 63,709.00; Sei-dokai-sha refined copper ingots, 94,186.00; Total, 1,822,827.00.

A comparative table shows that seventeen thousand Troy ounces, less than last year, of gold was received; the decrease of silver was 132,519 oz.; the increase of copper, 356,349 lbs. aivoirdupois. 85,914 five-yen gold pieces were struck or about half the number minted last year. Silver yen were struck to the number and value of 4,479,844—or 1,184,856 more than last year. More than a million's worth of copper tokens were struck—a considerable increase on last year. Of one rin-coins, so handy to the populace, nearly 131 millions have been struck. The total value of the mintage this year was yen 6,078,351, against yen 5,229,181 last year, representing an increase of yen 849,170.

The values of the coinage issued from the Mint since its inauguration are, gold yen, 54,704,927; silver yen, 45,011,821; copper yen, 9,184,496; or a grand total approaching closely to one hundred and nine million dollars.

Some alterations have been made in the method of receiving bullion and the quality that may be received, for coinage, as was notified in this paper some months ago. We read also that, during the year under review, 112 ingots of refined gold, value yen 1,158,484 were made for the Imperial Government. Mr. Endo says, further, that his Department has been more busily engaged than during any previous year, the manufacture and repairs of various instruments, &c., for the Mint requirements having greatly increased. But the experience of former years and improved practice have enabled them to be made skilfully and quickly, without the necessity of increasing the number of workmen. The following instruments have been made or repaired by request:—Repair of 9 surveying instru-

ments for the Railway Department; manufacture of 2 scale pans for the Kioto Company; and of 5 stencil plates for the Treasury Department. The foreign officials employed are, still, Mr. Gowland, F.C.S., Chemist, Assayer, &c., and Mr. MacLagan, M.I.M.E., Engineer.

The total receipts and expenditure of the Mint for the financial year and those from its commencement up to the end of last financial year are as follows:—Receipts.—For the financial year, yen 874,148.261; from the commencement of the Mint up to the end of last financial year, yen 9,978,375.323; total, yen 10,852,523.584. Expenditure. For this financial year, yen 411,541.480; from the commencement of the Mint up to the end of last financial year, yen 5,187,237.033; total, yen 5,598,778.513.

The process of refining silver bullion which contains only a small portion of gold is thus described. The metal is first granulated, and then dissolved in sulphuric acid. The solution of sulphate of silver thus made is ladled out or decanted as much as possible, leaving the residue—mixture of sulphate of silver and sulphate of copper with much gold—behind. The residue is remelted and granulated, forming what is termed re-granulated metal. When silver bullion containing little gold is so dissolved the residue of gold is in the finest powder mixed with the other precipitates and cannot be collected. Should, however, it be again melted, granulated, and dissolved in sulphuric acid, the gold consists of larger grains and can be easily collected.

The amount of bullion refined this year, compared with that of last, shows an increase of 25,976.57 oz. of pure gold, and 201,436.94 oz. of pure silver; in both cases the increase is owing to much of the bullion imported last year having been refined during this. By the substitution of iron for copper refining pots the average fineness of refined silver has reached the high figure of 997 per mil.

During the year the amount of sulphuric acid manufactured has decreased half that of last year, chiefly owing to the fact that trade generally has been depressed throughout the country, and the trades in which sulphuric acid is used have also felt the depression. Sulphuric acid has also been sold by the Osaka Sulphuric Acid Company at very low rates, and there has been a diminished demand from abroad. Of the whole consumption within the Mint, the Refinery has been supplied with 92,500 lbs. sulphuric acid, which shows the increase of 6,292 lbs. over that of last year. The consumption of brown sulphuric acid has been 159,690 lbs. more than that of last year, as it was used in the Soda Works. The consumption of chamber sulphuric acid has also increased by 32,958 lbs., having been used in making sulphate of iron. Of the acid sold at home the largest amounts were taken by Tokiyo and Osaka. This, however, may not have been all consumed in these two localities only; as the acid which was bought in these localities may have been sold for use elsewhere. As the China market for acid has continued very inactive the amount of the acid exported has considerably decreased, as shown.

At the end of Mr. Endo's report we read of a curious phenomenon. In melting the bullion from Sado Mine, an unusual occurrence was observed. About two minutes after it was first melted, a large quantity of gas escaped, scattering about particles of both gold and silver, which adhered to the outside of the furnace and crucible. The difficulty was overcome by melting subsequent importations of the metal under charcoal.

The appendix contains the report of the Mint Surveyor and the usual notes of the assays—the Japanese coinage holding its own for purity with the mintage of all the civilized countries of the world.

TRANSLATIONS FROM NATIVE JOURNALS.

THE TRADERS' AND MANUFACTURERS' ASSOCIATION.

(Translated from the *Nichi Nichi Shimbun*.)

The above association was definitely established on the 20th ult. on which occasion the opening ceremony took place. As already mentioned in these columns, Mr. Yoshikawa Akimasa, Governor of Tokiyo, called a meeting of the principals and managers of the various tradal and manufacturing guilds in the City, and explained to them the necessity of establishing an association of traders and manufacturers in the capital. All the firms represented at the above meeting eagerly responded to the call to carry out the proposal. Each association is to be represented by one officer. The site of the Association offices is in the late Chamber of Commerce. On the occasion of the inaugural meeting, official circles were well represented in the persons of H.E. Matsukata, General Saigo, Mr. Kabayama, Governor Yoshikawa, and other officials of high position. The election of officers was at once proceeded with and the question of expenditure was then discussed. Following close upon the preliminary business, a formal meeting was opened which was taken part in by General Saigo, the Minister for Agriculture and Commerce, and Governor Yoshikawa, and others, and our readers are already acquainted with the nature of the proceedings which have been published in these columns.

We have before had occasion to point out the pressing necessity for establishing a Traders' and Manufacturers' Association in Tokiyo, and it was the knowledge of this want, no doubt, that evoked the enthusiastic speeches of the Governor. It is hardly necessary to enter upon the details of the discussion again. The guilds recognized the importance of this subject, and spared no effort to organize the Sho-ko-kwai. In a word, every merchant and manufacturer participated, and thereby invested the body with important functions. It only remains for us to congratulate its members upon the election of right men as officers in right places. Mr. Shibusawa Yeichi has been appointed President, and Mr. Masuda Ko, Vice-President; and the Directors consist of Masuda Kotoku, Komuro Shimpu, and Umeura Seiichi. The ability and integrity of these gentlemen stand in high estimation with the mercantile community. The first mentioned two gentlemen both occupied the Chair of the late Chamber of Commerce for considerable periods. Messrs. Masuda Kotoku and Komuro Shimpu have also filled the office of director and carried out their duties to the satisfaction of everyone. Mr. Umemura held the onerous post of secretary, and discharged his duties in such a satisfactory manner as to elicit the highest encomiums. Thus, equipped with able officers, than whom none better can be found, the Sho-ko-kwai will not fail to promote the interests of traders and manufacturers, and its success will ultimately be intimately connected with the prosperity or decline of the commerce and manufactures of this country. The gravest responsibility rests upon the association and demands great exertions on the part of all its members. The representative body of merchants in Tokiyo that preceded the present one, was the Chamber of Commerce. In the beginning, this institu-

tion furthered the interests of the mercantile community to some extent, and soon after it was established had a similar effect in all the provinces. Owing, however, to several reasons, upon which it is not necessary now to enter, the public began to look upon the Chamber invidiously, and the members found themselves compelled to retire. This fact the Governor impressed upon those present at the inauguration of the Sho-ko-kwai. Mr. Shibusawa, noticing the reference in replying, said that he was not prepared to assure the promoters of the certain success of the association, as he thought that, while undertakings that were supported by those who were not directly concerned in them were liable to collapse, speaking generally, in this instance their supporters will be directly interested in the movement, consequently they will not be likely to enter upon it in a half-hearted way, or give it up without a sustained effort. He quoted the failure of the late Chamber of Commerce in support of his assertion. The causes which contributed towards the collapse of that institution were numerous, and may be said to admit of manifold interpretations. In fact, the Tokiyo Chamber of Commerce was by many regarded as a private association established by a few influential citizens, and that its members subscribed towards its maintenance simply on account of the friendship existing between themselves and the promoters. As a matter of fact, they derived no benefit whatever from remaining members of the Chamber either in the form of business or in social intercourse, and were obliged to spend time in discussion of matters which did not concern them in the slightest degree. In time they felt the strain upon their purse-strings, and, what was worse still, were often compelled involuntarily to divulge their tradal operations, which became inseparable from the investigation of some commercial matters. These are some of the causes which led to the close of the Tokiyo Chamber of Commerce, and by its example it becomes evident that organizations supported by persons not directly concerned in them are more or less liable to collapse. The Governor has fully pointed out this fact, but as the Sho-ko-kwai is organized on a thoroughly different system to the late Chamber of Commerce, and as its patrons and supporters are men of enlightened views consistent with the order of things existing in this the era of *Meiji*, the new institution ought to flourish. It is therefore to be sincerely hoped that the members will guard against the failure which it is possible may overtake them should they spare earnest effort in connection with it, and it must be borne in mind that indirect interest is the promotor of direct interest.

THE EXPORT OF WHEAT.

(Translated from the *Bukka Shimpō*.)

The public is well aware that Japan's export of wheat to China has of late years largely increased in response to the demand. Last year the export of wheat and barley together was estimated at 3,961,755 *kin*, valued at *yen* 54,576. This year wheat alone was exported between January and September to the quantity of 2,437,120 *kin* and value of *yen* 355,008. The exact quantity exported during the months of October and November last, cannot as yet be ascertained owing to the absence of the Customs returns. Yet, according to the *Official Gazette* the direct shipment by Japanese is reported as having reached the value of *yen* 10,966. Therefore, the export during the said months

must have been large. That these exports are augmenting gradually, is a fact which must be looked upon with satisfaction. Whether the increase is temporary or permanent, we regret that we cannot as yet say. According to intimations from Hongkong and Shanghai, the wheat crops in the southern parts of China were severely damaged by the heavy rains of last year and fell considerably short of the average. In consequence, the demand in Hongkong and Amoy, where wheat is consumed to a large extent, had to be supplied from the North and Japan. This being the case, the alarming falling off in the export of sea-weed and other marine products, is made up by the augmentation in the export of wheat—a fact which may be considered satisfactory in view of the decline in other branches of trade. Of late, the farmers have been compelled to abandon the cultivation of rape in consequence of the introduction of kerosene, which has superseded the use of vegetable-oil. This, taken together with the fall in the value of silver, rice, and other commodities, has had the effect of encouraging the cultivation of wheat, which has commanded a high price throughout the year. The average price of it used to be 3 *to* 1 *sho* per 1 *yan*, while it is now quoted at 2 *to* 1 *sho*. The crops in the provinces of Owari and Mikawa show an increase of 20 per cent. This cannot, however, be sold until after next year. Supposing, then, the demand in China has ceased owing to the late abundant crops there, the farmers will experience inconvenience, as probably the market will be overstocked and prices will fall. The only means to save them from great disappointment is to export the surplus to England where, according to recent advices, the best wheat fetches 42s. per quarter: medium 40s. and common 38s. After freight, commission, and other charges have been deducted from the above, there will be left a profit of at least \$3. Should such transactions be effected they would be a great boon to the farmers. Meanwhile, we will try to furnish agriculturalists with all information likely to conduce to their benefit.

THE RELATIONS BETWEEN JAPAN AND CHINA.

(Translated from the *Mainichi Shimbun*.)

The Chinese Empire is one of the countries that has the closest relations with us, both commercially and politically. India was overrun by England and Holland two or three centuries ago, but Japan did not suffer in the slightest degree. Australia shared the same fate with India in the 17th century, yet Japan escaped from any serious consequences. This was simply on account of the distance that separated us from those countries. Had, however, China then succumbed to the fate of India or Australia, Japan would not have been exempted from the calamity, although navigation was not in its present state of advancement two or three centuries ago. Geographically, China is not far from Japan, and there exists but a slight difference in the manners and popular sentiments of Japanese and Chinese. Whatever we like, they admire, and thus our marine products are yearly exported to China to a large extent. According to the latest statistical reports, China ranks next to America and England in the foreign commerce of this country. The exports to, and imports from, China amount to more than ten million *yen* per annum, and there is every sign of the commerce growing larger and larger yearly, while there is no

token of any decline. It is evident, therefore, that Japan and China are most closely connected both commercially and politically.

Considering the course of events since the Restoration, we find that matters have frequently been of such a nature as not only to risk the severance of our Chinese relations, but sometimes even to assume a threatening aspect. Look upon the Formosa, Riukiu, and Korean affairs, and especially the Soul outrage. The latest trouble is the opium affair at Nagasaki. These all tend to foster ill-feeling between the two countries. Misunderstandings mostly arise from mutual ignorance. China's grievances are often baseless; and even admitting that she was justified in her action respecting the Formosa and Riukiu affairs, there is no reason why she should continue to be peevish, since we had a claim that was stronger and more reasonable than hers.

The Meiji Government, to its great credit, has broken up the isolation of Korea. Although when we enter upon a detailed discussion of its policy toward the peninsular kingdom, we might find some points upon which we cannot all agree, yet it is plain that our Government has laboured only to promote the welfare of Korea. Should her officers develop any skill in diplomacy, they will not fail to recognize that Japan was the tutor and not the enemy of Korea. We might well feel proud of this in the face of every country in the world. But unfortunately for a good understanding between China and Japan, the events that have occurred are mostly of such a nature as to be displeasing to the Chinese Government. Ever since Japanese commenced trading in Korea, Chinese trade with that country has declined. Korea habitually opposes China's demands under the pretext of acting under Japanese inspiration. Finally, the trade regulations recently enacted between Japan and Korea have displeased the Celestial officials. As we have previously indicated, Chinese authorities, by discarding the request of Korea, mean this:—"It is no wonder that Japan treats your country (Korea) with an air of haughtiness, and busies herself about the independence or otherwise of your nation, for, absurd as it is, your country regards the Middle Kingdom inimically, and fears Japan, but not China." This clearly shows that Korea in her dealings with China has put forth the name of Japan. China, therefore, is jealous. It is reported that, when the British and German Ministers informed Li Hung-chung of their intention to ratify the treaty with Korea independent of China's assistance, the Viceroy appeared displeased. England and Germany are about to model their treaties on that between Japan and Korea. General Foote is reported to have given an expressive opinion on the validity and advantage of the Korean-Japan Treaty. Thus, it appears that Japan has unintentionally evoked the suspicion and ill-feeling of China. We have contributed toward abolishing China's suzerainty over Korea, and the former does not like to see Korea an independent country because Korea's independence must benefit the intercourse between her and Japan. Hence the ill-feeling on the part of China.

With regard to the opium affair, we have tried to glean every particular, but having no access to the investigation now proceeding, we are obliged to accept what has leaked out. Our Government insists that the Japanese police were justified in entering the houses of Chinese residents and arresting inmates while opium smoking, an offence which is treated here differently to all others. There have been previous instances of opium-smokers being arrested by the Japanese police. It

is unreasonable that the Chinese should raise an objection on the present occasion, while they have remained silent previously. Their Consul accuses the Government of violation of the treaty. Although we cannot vouch for the accuracy of this particular report, it is plain that the Chinese Government is dissatisfied with our treatment of its subjects. During the last twelve years—the period that has elapsed since free intercourse was inaugurated between China and Japan—four unpleasant events, we repeat, have occurred; and the Chinese Government has abandoned itself to causeless suspicion and an insolent demeanour. It is with great regret that we note a strain upon the relations between China and Japan.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN Esq., Judge.—Tuesday, 4th December, 1883.

J. E. CARTER v. J. J. GRAY AND J. J. GRAY
v. J. E. CARTER.

Mr. Carter claimed the sum of \$400.00 for services alleged to have been rendered during the construction of the schooner *Penelope*; and Mr. Gray, entered a counter claim for loss sustained through Mr. Carter's negligence.

Mr. Carter stated that, in October last year, Mr. Gray, being desirous to go into the otter-hunting business, made a proposition to him, that if he would join with him he would supply the money and build a schooner like the one Mr. Cook had built the year before, and after several days' talking with Mr. Cook it was agreed to build a vessel for \$6,000, Mr. Gray telling him that he (Carter) had no money and wanted to make some, and Gray had money and wanted to make more. This was the second time that Gray had asked him to go into the business, the first time being when the yacht *Breeze* was sold, which he refused to have anything to do with, as he was making money by his pilotage business. He drew up a contract for the construction of the vessel and submitted it to Gray and Cook. With some slight alterations, putting in his name as supervisor of the work, the contract was agreed to and left with Mr. Cook to get clean copies made. The contract was to have been signed on the 1st November, but was not signed at that time owing to some difficulty with the Hongkong and Shanghai Bank. Mr. Cook commenced the vessel and from that time plaintiff was constantly in attendance. The contract was signed about the 9th November. He was in attendance till the 30th November at which time the keel was laid, stern post in position, and the frame work partly up. An opportunity offered for him to pilot a vessel to Hakodate, to which Mr. Gray gave his consent, and instructed him to enquire into the business in the north while he was there. On his return Mr. Gray did not complain that his absence had caused any inconvenience. He returned on the 1st January, and found the vessel but slightly advanced. Gray expressed his opinion that Mr. Cook was giving more attention to this vessel than he had ever done before. After his return from Hakodate he was constantly in attendance at the yard, and procured money from a friend to enable Mr. Gray to pay the second instalment. He was in company with Mr. Gray till the vessel was finished and passed by Captain MacDonald. His name was put on the papers as master when the registry was applied for at H.B.M. Consulate. About the middle of April he got the vessel under weigh by the aid of coolies paid by him and sailed

the vessel from opposite the boat-house to the English hatoba so as to be ready to take in stores. By this time Mr. Gray allowed himself to be led away by the chief hunter, and treated him (Carter) with the utmost contempt, telling him that he was nervous, because he remonstrated against carrying an American and a Russian ensign on board a British vessel, and he (Gray) either could not or would not explain their use. On the 7th April, Mr. Gray asked him if he would give up charge of the vessel till she was ready for sea; this he consented to, and on the 18th April Mr. Gray informed him that he had engaged another master for the *Penelope*.

To Mr. Gray—Carter said he was engaged in piloting which was profitable. He, Carter, had no license. He did not apply for any employment while the ship was being built, except by Mr. Gray's advice, when he saw Mr. Whittall about that gentleman's steamer. Witness did not know when he applied. The conversation between himself and Mr. Gray took place in the coal yard. Could not say whether it was before or after he went to Hakodate.

Carter said he had applied for the command of the yacht *Marchesa* by Mr. Gray's advice. He had never been otter or seal hunting. There was nothing for him to learn about fitting out a vessel for this business: it only required the experience of a master. He (Carter) had been employed in the Mitsu Bishi Company, whose service he left to take charge of another vessel with the consent of the Agent in Kobe. The Mitsu Bishi Company had not paid him. He had given notice to the Agent in Kobe that he was going to leave the service. Gray gave his consent to his (Carter's) going to Hakodate, being glad that he (Carter) should make a few dollars. On his return from Hakodate he reported that the weather had been so severe he did not go ashore. He received \$125 for going to Hakodate. He was away on three occasions during the construction of the *Penelope*. He took three ships down the Bay as pilot, for which services he received \$80 in all. He was away one day in each ship. He generally left at night and returned by boat to Uraga and thence to Yokokama, the return journey taking about four hours. Witness was two days on the *Paul Revere*: on the others only a few hours. He was not absent on any other occasion, and had nothing to do with the *Helena*. He went on a picnic in her to Shinagawa, with Mr. Gray's permission, and was away from 3 o'clock one afternoon and the whole of the next day. She touched off the Forts. When he (Carter) left the *Penelope* the contractor had finished with her. He did not know whether she had been turned over. It was in April that he left the *Penelope*. The last payment was made on 28th March, 1883. When witness left he did not leave anybody in charge. The vessel was in a perfectly safe position. He had never assumed command of her. On the 9th April he was ordered to go on board but refused, as Gray would not give him any money. The register of the schooner was applied for in the beginning of April. Witness had not spoken about an advance previous to this, as it was the usual thing to have an advance. After the vessel was ready for sea he wrote to Mr. Gray (letter and answer produced) on 7th April. Mr. White did not offer him \$300 to enable him to go away. He was doing a good business up to the time of the commencement of the building of the schooner. After his return from Hakodate, Gray asked him not to do any more piloting but to stick by the schooner, which he did. When he took any ships down the Bay he was only absent for a few

hours. He got ashore from the *Paul Revere* in a fishing boat and landed at Uraga. There is no agreement in force that he should have a fourth share of the schooner, he having given up his share. He (Carter) had never asked Gray's permission to give up his share (agreement handed in). Had never made any inquiries as to what the catch had been. He would only have been too glad to have gone in the schooner; but it was impossible for him to leave Yokohama without money, which Mr. Gray refused to advance. When money was offered to Mr. Gray to make the advance, Gray said he would not "have Carter on board at any price."

John Carroll, shipbuilder, stated that he signed the contract to build the *Penelope* (contract handed in) Mr. Cook being only the manager of the yard. He did not know who drafted the contract. The contract states that Mr. Carter was to supervise the building. Mr. Carter was present when all the payments were made, but had nothing to do with the building of the vessel. Witness remembered a letter being written to Mr. Gray stating that there would be some delay in delivering the vessel, as Carter required several additions to be made. Mr. Gray did not refer witness to Carter; on all occasions witness referred Mr. Gray to Mr. Cook who was building the ship. He did not know how many times Carter had been in the yard: Carter was present at the launch, and also when the ship's bottom was painted at Benten. He had never threatened to turn Carter out of the yard for being too officious.

To His Honour—A foreman's pay would be about \$5.00 a day, and the foreman would not attend to any other duties.

To Mr. Gray—Witness said that Mr. Cook superintended the building of the vessel. He was in the yard at work every day during her construction. Witness did the iron work, after taking his measurements from Mr. Cook. Witness never received any instructions from Carter, and did not remember seeing Carter every day, but thought he should have seen him had he been in the yard.

To Mr. Carter—You were there to watch Mr. Gray's interests, not mine.

At noon the Court adjourned until 2 p.m.

On the resuming at 2 p.m.,

Captain W. MacDonald, Lloyd's Surveyor, stated that he had surveyed the schooner *Penelope* after her launch. He had informed Mr. Carter of the proper form in which to make an application for the register. He thought Carter was present when he surveyed the ship. Witness found the vessel a few tons larger than the *Ada*. He looked upon Carter as in charge of the schooner, but knew nothing of the arrangements between Gray and Carter.

To Mr. Gray—He had measured one other vessel in Mr. Cook's yard. He was only there once to measure the *Penelope*; but took final measurements after she was floated.

J. J. Gray said that on the 9th of November last year he contracted with Mr. Cook to build a boat for him to engage in the otter hunting business in the north, with the approbation of Mr. Carter, who undertook to superintend the construction, fitting-out, and provisioning of the schooner and to take charge of her as master. Witness was then engaged in the coal business of Gray & Co. as managing partner. Carter left Yokohama about the end of November without witness's consent, and did not return until January this year. In the meantime witness had sold his business, knowing that some one must look after the schooner, and

that the vessel had to leave at a certain time of the year, and knowing also that Mr. Carter's business as a pilot might take him away when he was required to look after the schooner. It was for this reason, Carter's absence, that witness had sold his business, whereby he had sustained a loss.

To the Court—He had heard that Mr. Carter was going north, but did not speak to him on the subject as Carter had not informed him of any such intention. It was on account of Carter leaving that he sold the business. Through friendship for Carter he did not at first object to his absence, thinking he might not be away for more than a fortnight. He was away a month.

Mr. Gray continued—Several conversations had taken place between him and Carter about the vessel leaving early. At last, seeing that Carter was interesting himself more about other vessels than the *Penelope*, he asked him to go on board and look after the stores, etc., for the schooner (letter put in). Carter not complying with this request, witness had to engage another Captain, which caused a delay of thirteen days in the vessel's departure, and caused him damage, because his vessel, arriving late on the hunting-ground, others got otters where she failed. One craft got six otters, valued at about \$1,000. Her name was the *Stella*. Witness had boarded her and saw the skins.

To Mr. Carter—I have been head steward on a vessel. I know that you (Carter) had others to provide for besides yourself. I did not offer you money to buy things for the ship, but told you to buy them and charge them to me. When you asked me to buy two water tanks from the *Raffael*, I did not say "there was plenty of time." I desired you to buy a sextant and chronometer from Mr. Collyer for \$50.00, but you said they were not to be purchased at the price. When I asked you to spend all your spare time with the head-hunter you did not refuse. You attended only one auction with me; looking for stuff for the schooner, and had been with me to shipchandler's stores to explain what was wanted; you gave me a list of ship chandlery things which were required but it was almost useless. Together we made out the list of things to be ordered from England. I did not send the ship down the bay and follow it at night to evade your summons. Mr. Green went as a passenger on the trip. He paid for his passage but not in money. I did not sell the coal business to raise money for the schooner. I applied at H.B.M. Consulate after she was built to know whether I could sign as master; not during her construction. I was the owner and thought that, as the vessel was under 100 tons, I could sign as master and get a second master, knowing that this has often been done before, and that unqualified persons had sailed out of this port as masters in vessels under 100 tons. I did not apply, but merely asked the question. This was in April when I thought Mr. Carter was throwing me over. It was by my desire that Mr. Carter's name was inserted in the builder's contract. I did not know what a master's duties were, but thought the master should have checked the stores. I advanced \$50 to the master who went with me. He came from an American ship, but held an English master's certificate, and was examined by Captain MacDonald. I have not been in the business long enough to know certainly, but have heard that, as a rule, the masters of such vessels as the *Penelope* do not have an advance. Captain Miner is the present captain of the *Penelope*, since Captain Pierce's death. The ship was finished about contract time. I had several times complained to Mr.

Carter about his negligence, and had even asked him to hand over the ship to me as he was delaying her departure.

F. E. White deposed that during the construction of the *Penelope* he often visited the yard, and had seen Mr. Carter there, and knew about the contract. He found out that Mr. Carter was not going as master after the vessel was launched. He heard of it from both parties. On one occasion he made an offer to Mr. Gray to give Mr. Carter monetary assistance to enable him to leave Yokohama. Witness went on board the *Penelope* and asked Mr. Gray's permission for Carter to go to Shinagawa, to which Mr. Gray consented. During Mr. Carter's absence at Hakodate witness did not hear Mr. Gray complain. He understood that Carter had Gray's consent to go.

To Mr. Gray, F. E. White said—I have no fixed hours of duty at the Consulate, and have plenty of time to go round to Mr. Cook's yard after 4 o'clock. I think that the workmen are employed till 5 o'clock in winter and 6 o'clock in the summer. I often saw Mr. Carter round there, and think I have seen the contract for the vessel. It was Mr. Carter who showed me the contract, and asked my advice about it. I offered Mr. Gray money to give to Carter so as to enable him to go in the schooner. I did this as a mutual friend. The *Helena* sailed for the north about the 14th or 15th April, about a week before the *Penelope*. I asked Mr. Gray's consent for Mr. Carter to go to Shinagawa. This was on board the *Penelope*. There was no money in the question. Carter simply went as a friend. The *Helena* was going to Tokiyo to dock. At that time she had just been bought. She had been north one season before. When the contract was signed Mr. Gray was managing a coal business, which was a satisfactory and remunerative one. Mr. Gray and I were partners in the business.

H. Cook said he recognized the contract to build the *Penelope*. He superintended the building and rigging of her. He had no assistance, and did not want any. Mr. Carter did not give him any assistance, and gave him no instructions so that she might pass Lloyd's. Witness would have objected to receiving instructions from Carter. Carter came there from time to time, and walked in and out of the yard. After the ship was in the Bay he asked Mr. Carter to come on board one Sunday, but Carter said it was blowing too hard. Mr. Carter had then not been on board for some time so as she was nearly fitted witness had asked him to come and look at her. After notice had been sent that she was finished, Mr. Carter made out a list of things to be done to her but these he refused to do, as they ought to have been mentioned before when the men were still at work on her. It was Mr. Gray who sent me the list. Mr. Carter did not assist me in the construction of the vessel. I have built most of the other schooners here, and never had any assistance from the owners. My vessels have always passed Captain MacDonald. The owner arranges with Captain MacDonald.

To Mr. Carter—The contract was drafted by Mr. Carter and altered by me. It is exactly the same as the *Ada*'s. I put the skylight on myself, and had some words about it at Benten. I fitted up the cabin as I always do. I sent the draft of the sails to Hongkong, as was understood before the contract for the boat was made, this was at Mr. Carter's suggestion. Mr. Carter did not see the draft before the sails were made. I superintended the building of a boat for the P.M. S. Company and bought all the wood. My salary was \$150 a month,

The Japanese did not give me any commission. I did not put in all my time to superintend the building. In summer the men work from 6 a.m. to 6 p.m.; in winter from 6.45 a.m. to 5 p.m. I and Mr. Carter have not been on very good terms for some time. I do not know whether Mr. Carter was on board when I bent the sails.

To Mr. Gray—Mr. Carter seldom came on board. I prefer a hardwood (*keyaki*) keel made in two pieces to an Oregon soft wood keel in one piece. The boat with the hard-wood keel would class the higher.

S. Cocker said he was second hunter on the *Penelope*, and was engaged in February or March. He went on board nearly every day, when the vessel was in the Bay. He only saw Mr. Carter once, when he said something about the sails. Witness was anxious to get away, knowing that the first vessels up there had the best chance for others. Has been in the business for two years. Thought Mr. Gray tried to push on and get away; but there were others who did not seem to hurry. Did not think Mr. Carter assisted at all to get her away. Witness was on a twelfth lay. When they got north the *Stella* had got six others. If they had got away earlier, no doubt they would have got some.

To Mr. Carter—Witness had an advance of \$150. He was anxious to get away. The vessels that left later did not do so well as the *Penelope*. He did not remember whether it was when the sails were bent or when the flooring was put down that Mr. Carter came on board. It was not by witness's advice that Mr. Gray did not take Mr. Carter. He did not know by whose advice it was.

J. S. Teller said in July or August last Mr. Carter distinctly told him that he should hold to his fourth share. This was before she returned. He also said that if she made a catch he should make a very good thing of it. Mr. Blackstone was also present. The conversation was held in the Spring Valley Brewery.

A deposition made by Mr. E. Miner before his departure was then read. It was corroborative of the statements of Mr. Gray and his witnesses.

Mr. Gray said he would leave the matter in His Honour's hands. He thought he had proved that he had been put to great inconvenience and expense. It was a venture he had undertaken with Captain Carter and through the failure of that person to fulfil his contract, he (Gray) had had to go north himself and act as third on board.

Mr. Carter said that he had done his best in Mr. Gray's interest and had been most anxious to go; but Mr. Gray would not provide him with funds. He had lost \$422.00 during the building of the schooner by having to give up his business.

Judgment reserved.

IN H.B.M.'S SUPREME COURT FOR CHINA, AND JAPAN.

Before Sir R. T. RENNIE, Chief Justice, and R. A. MOWAT, Esq., Assistant Judge.

HIROSE SIMA V. GEORGE BLAKEWAY.

APPEAL CASE.—JUDGMENT.

The main point involved in this appeal is whether the defendant can successfully plead in bar to the present action, brought for the wrongful sale by him of the plaintiff's property, a judgment delivered in the Japanese Courts in a suit brought by the plaintiff against the person to whom the defendant had sold the property in question. We concur with the learned Judge of the Court below in holding that he

cannot do so, and that no estoppel arises in such a case, on the simple ground that the defendant was neither a party nor privy to the proceedings in the Japanese Courts. Another point made for the appellant is that as the act in question was not shown to be a tort according to the law of Japan (in the waters of which country the property was), it cannot be treated as a tort in an English Court. Again we agree with the learned Judge in holding that, in the absence of any evidence to the contrary, it was to be presumed that the unauthorised sale of another's property is a tort according to the law of Japan. On the question of fact, which is the only remaining matter urged by the appellant, we see no reason to differ from the finding of the Court below. The appeal will therefore be dismissed with costs.—*N. C. Daily News.*

THE PRIEST AND THE DUCK.

AN ANNAMITE LEGEND.

Adapted from the French of "Viator," in *La France* :—

Generally speaking, the Annamites are votaries of the religion of Buddha, which in that country is called "Phat;" but they do not practise it scrupulously; and it can only be said of them that they are Buddhists in name. The religion of the multitude consists in worship of the dead and the adoration of protecting genii. The eminently distinguishing point of this people is a gross superstition. In Annam is to be found a number of people who, side by side with the ordinary divinities, worship tigers, crocodiles, and other animals which strike terror into the vulgar mind. On the other hand, there are many who make divinities of the beings from whom they hope to receive benefits. The Annamites, who have borrowed from the Chinese their laws and literature, have also taken from that people its religion and its superstitious rites. The Annamite Pantheon is inhabited by Chinese deities, some of a superior, others of an inferior, grade, and to categorize them would require a complete volume.

But outside these "official" gods, each individual may choose private ones which become the titular protectors of the house and the family. These domestic deities, answering to the *penates* and *lares* of the Romans, are not invariably the objects of the adoration of their entertainers; if, for example they do not always comply with imperious requests. Then the worshipper behaves as the pagan, in La Fontaine's fable, behaved toward his wooden idol.

The ruler of Annam has, like ordinary householders, his *penates*, whom he can promote by one degree when they have fulfilled his wishes, or knock to pieces when they are recalcitrant or deaf to his prayers. Nevertheless it sometimes happens, as Mr. Chaigneaux, the author of the *Souvenirs of Huc* says, that, "when the punishment has been inflicted, the punisher begins to feel uneasy; and the fear of the god's vengeance quickly succeeds to anger. The idol is reinstated on its altar, with many requests for pardon; and peace is made with it, if meanwhile one does not intend to risk everything and to choose another divinity which will attend better to its business."

As regards the literati, mandarins, and others of high standing, they follow the doctrine of Confucius, the apostle of wisdom, who prescribes the cult of the Supreme Being, and veneration of parents as well as of ancestors; but, as in his precepts,

which are rather moral than religious, the followers of the Confucian sect do not disdain to have recourse to the prayers of the "bonzes," or Buddhist priests, in order that the latter should intercede, in their behalf, with the divinity, and procure for them admission into the halls of the blessed, these bonzes profess that man has many souls. One of these, say they, on leaving the body departs to Hades. Another transmigrates into another mortal frame where it undergoes a period of penance. If we may believe them, the priests of Buddha have power to withdraw from hell the soul of one of the damned and place it in a more favorable domicile; but it must not be disguised that this change is difficult, the road to Paradise being dangerous to approach, lined by fearful precipices and haunted by atrocious monsters. Free-thinkers do not believe, as one may well comprehend, all these yarns. They make game of the power that the Bonzes attribute to themselves, especially when these whose priests, flesh is so frail, venture to expound the precepts of their religion.

So far so well: the Buddhist creed prescribes abstinence, and interdicts the use of meat by the priests. They must eat salt-fish with rice and fermented vegetables. Yet, some of the Buddhist priests, finding that this régime is too "thin," are faithless to their "Phat" divinity; and it is one of their infractions of the general rule that has originated the following story :—

A certain countryman had a duck for which he had conceived a romantic affection. This kind of affection is by no means uncommon. Did not "Cham," our amusing and much lamented caricaturist, possess a duck, which he was very fond of? The author of a biography of Cham, just now in course of publication in the *Figaro*, relates that the son of the Count of Noah when he had just commenced his career, fell in love with a duck which was about to be killed and spitted for his degustation. The caricaturist arrived in time to save the quacker from the cook's claws. If we can believe Perichon, one is always bound to any animal that one has preserved from sudden death. This was the case with Cham, who was then, as it happens, moving from a lower to an upper story. He made his duck follow him as a dog would: talked to it like a friend, and, being unable to give the palmed pond to swim in, left it his basin for bathing and native purposes. Unhappily good things do not last; and the time came when Cham lost his duck for ever.

This digression brings us by a devious route to the story of the Annamite Priest and his duck. An Annamite peasant lost his duck, possibly not in the way that "Cham," the noted French caricaturist, did, but quite as effectually. The Annam duck was fat and plump; and for these virtues it had been ogled and ardently coveted by a bonze, who lived in the house adjoining that of the peasant proprietor. But how could the priest obtain possession of the desirable fowl? The ecclesiastic, after deeply cogitating, one fine afternoon stole like a thief into the premises of his neighbor; and there prostrated himself before the barnyard brute which was taking a quiet afternoon's siesta, as ducks do, cosily balanced on one leg. Just imagine the astonishment of the duck when it woke! It had never been so honored before. Many animals, as we have said, are deified in Annam; but they are generally savage beasts—tigers, crocodiles, and so forth—creatures, in fact, from which man has something to fear. Ducks had never previously been so highly beatified! And then, for a person so venerable, so high-placed, as a bonze, to offer such homage to a duck! It was certainly the first time that such a thing had happened in Annam. The honest truth is that the duck was somewhat distrustful of so exemplary an act of adoration. It believed that some snare was laid for the inveiglement of its youth and inexperience, and therefore it scuttled away as quickly as its short legs and heavy obesity would allow.

The owner of the bird had observed this remarkable scene from afar. Approaching the worshipper he asked :—

"How is it, oh! honorable representative of Buddha, that you prostrate yourself before that unclean fowl?"

"Hush!" replied the friar, mysteriously, "a hu-

man soul has passed into the body of that bird, and the soul, list you!" is that of my father! You, with your mundane eyes, did not perceive it; but I, with vision more acute, knew it at once. Hence, man! my veneration for that waddling biped; from which, be assured, on the word of a Bonze, that nothing in the world shall tear me!"

Much touched by this address, the clown, despite the love that he had for his bird, agreed to dispose of it to the Buddhist priest, who carried the duck away in spite of its resistance and complaints.

A few days later chance took the clown to the Monastery. Crossing the court-yard, he trod on a heap of plumage, in which he imagined he recognized the feathery spoils of his favorite. His curiosity being aroused by this supposed discovery, he marched straight to the cell of the priest, whom he found devouring the last leg of the duck, with every appearance of gastronomic appreciation. Although His Reverence was put a little out of countenance by the unlooked for apparition of the defunct and devoured animal's former owner, he quickly recovered his equanimity, and spoke thus:—

"Just as you see me, I am achieving a painful duty. Dear and estimable neighbour, you may not believe, but truth is truth! From the body of that duck, which you were kind enough to give me, and into which my father took the trouble to enter, (strange fancy of his, eh?), I have expelled the soul. Truly it had too unworthy a tenement! By dint of praying I succeeded; but what was I to do with the remaining shell? Throw it to the beasts and birds of prey? That would have been a horrid profanation! My evident duty was to cause all the carcase to disappear, but without any offence to an adored memory. Well, I had to take the whole charge upon myself," (here the worthy priest heaved a stomachic sigh), "and, as you may see, I am just finishing my lugubrious task!"

Who was put to shame? The clown, certainly! who swore, rather too late like the crow in the fable, that he would not be caught again!

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, NOVEMBER 30TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongh, Tokijo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
— represents velocity of wind.
— represents percentage of humidity.
The barometer is reduced to the freezing point and to the level of the sea.
* Rain in Inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 23.0 miles per hour on Thursday at 5 p.m.
The highest reading of the barometer for the week was 30.25 inches on Friday at 11 p.m., and the lowest was 29.806 inches on Monday at 2 p.m.
The highest temperature for the week was 57.9 on Monday, and the lowest was 35.3 on Thursday. The maximum and minimum for the corresponding week of last year were 65.0 and 31.0 respectively.
The total amount of rain for the week was .981 inches, against .000 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00, 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30 p.m.

Those marked with (†) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (‡) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, sen 70.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 1st.

FRANCE AND CHINA.

The Committee of the Chamber of Deputies have issued their report on the Tonquin Affair, and recommend an amicable settlement with China. Meanwhile, however, the necessary preparations with regard to reinforcements are to be continued.

London, December 5th.

THE FRANCO-CHINA QUESTION.

It is announced that France, Russia, and the United States have agreed to co-operate, and that the English and German Governments will either remain neutral or act as protectors of China.

[REUTER'S TELEGRAMS.]

London, 21st November.

THE NEW ADMIRAL FOR THE CHINA STATION.

Admiral Dowell succeeds Admiral Willes as Commander-in-Chief of the British Squadron in China and Japan.

THE WAR IN THE SOUDAN.

The hill tribes have attacked near Squakim an Egyptian reinforcement for the army in the Soudan; 486 were killed.

London, November 24th.

Hicks Pasha's army in the Soudan has been destroyed.

Of the whole number of Hicks Pasha's army of 10,500 men, only one escaped.

The order for the evacuation of Egypt has been countermanded, pending the development of events.

London, November 28th.

FRANCE AND MADAGASCAR.

Negotiations are at a standstill between the Government at Tamatave and the French, the latter insisting upon their previous demands.

Taganoura Maru, Japanese steamer, 454, Matsumoto, 6th December, Yokkaichi, General.—Mitsu Bishi M. S.S. Co.

Gembu Maru, Japanese steamer, 748, F. J. Brown, 7th December, Hakodate, General.—Kiyodo Unyu Kwaisha.

Kamtschatka, Russian steamer, 748, Ingman, 7th December, Kobe, General.—Mitsu Bishi M. S.S. Co.

Tanais, French steamer, 1,750, Vaquier, 8th December, Hongkong, Mails and General.—Messageries Maritimes Co.

Toyoshima Maru, Japanese steamer, 579, Thomas, 8th December, Oginohama, General.—Mitsu Bishi M. S.S. Co.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Messrs. Stoddart, Kodado, and 9 Japanese in cabin; and 133 Japanese in steerage.

Per Japanese steamer *Niigata Maru*, from Kobe: Messrs. Shida, T. W. Hellyer, Bensaburo, Hachirobey, Shinzana, Kime, and Usui in cabin; and 76 Japanese in steerage.

Per Japanese steamer *Ise Maru*, from Kobe:—Governor Morioka and 46 Japanese.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Mr. and Mrs. Bissett, Mr. and Mrs. A. R. P. Collaço and infant, Captain Davison, Messrs. A. J. Lines, Goward, Greppi, J. Falk, R. Trevelick, D. J. Falk, J. F. Twombly, Hasegawa, Mori, Kobayashi, Takagi, Tamaye, Mizuno, Suzuki, Matsumoto, and Mifune in cabin; and Mrs. Collaço's amah, J. Bruno, J. L. Thompson, Mr. Goward's servant, 1 Chinese, and 194 Japanese in steerage.

Per Japanese steamer *Higo Maru*, from Hakodate via Oginohama:—Rev. C. B. Poate, Messrs. Hamilton, Bland, and 15 Japanese in cabin; and 173 Japanese and 16 ship-wrecked Chinese in steerage.

Per British steamer *Khiva*, from Hongkong via Nagasaki and Kobe:—Mrs. Wheeler, 2 children, and amah, Mr. C. Vercoe and servant, Messrs. C. P'Anson, Williams, and Wong Lung Choon in cabin; and 1 European and 16 Japanese in steerage.

DEPARTED.

Per British steamer *Zambesi*, for Hongkong via Kobe and Nagasaki:—Mr. and Mrs. Lowder, Mrs. Hubbard, Miss C. A. Benneson, Miss A. M. White, Dr. Van der Heyde and servant, Lieutenant Bayly, R.N., Staff-surgeon Ellis, R.N., Messrs. T. F. Harrison, R.N., J. B. McIntyre, Drummond, A. S. Bush, W. Hewatson, and Wong Yoke Shin and servant in cabin; and 2 Europeans, 11 Chinese and 19 Japanese in steerage.

Per Japanese steamer *Hiroshima Maru*, for Shanghai and ports:—Bishop Williams, Rev. N. H. and Demorest, Mr. and Mrs. Hara, Mrs. O'Neil and son, Messrs. F. Hellyer, J. A. Thompson, F. A. Singleton, F. W. Playfair, Gotsugi, Date, Okamoto, S. Kawasaki, U. Kawasaki, Kanowo, Yamagata, Kimura, Morimura, Okura, Date, Wakai, and Shibata in cabin.

Per French steamer *Tanais*, for Hongkong:—Messrs. Richard Rush and H. Okudaira in cabin.

CARGOES.

Per British steamer *Zambesi*, for Hongkong via Kobe and Nagasaki:—Silk for France, 1,209 bales; for London, 35 bales; for Italy, 28 bales; Total, 1,272 bales.

Per Japanese steamer *Ise Maru*, from Kobe:—Treasure, \$28,000.

Per Japanese steamer *Genkai Maru*, from Shanghai and ports:—Treasure, \$176,000.00; yss 102,520.31.

Per British steamer *Khiva*, from Hongkong via Nagasaki and Kobe:—Twist, 1,078 bales; Yarn, 306 bales; Sugar, 507 bags; Cattle, 40 head; Sundries, 818 packages.

Per French steamer *Tanais*, for Hongkong:—Silk, for France, 694 bales; for England, 200 bales; for Switzerland, 4 bales; Total, 898 bales.

REPORTS.

The Japanese steamer *Takasago Maru*, Captain C. Young, reports having left Hakodate on the 28th November, at 6 a.m. and arrived at Oginohama on the 29th, at 6.15 a.m.; left that port on the 30th, at 6.16 a.m. and arrived at Yokohama on the 1st December, at 9 a.m.; and experienced northerly wind and fine weather throughout the passage.

The Japanese steamer *Shinagawa Maru*, Captain Kilgour, reports having experienced thick rainy weather with fresh N.E. wind throughout.

The Japanese steamer *Niigata Maru*, Captain John C. Hubbard, reports leaving Kobe on the 1st December, at 5 p.m. with fresh northerly wind and dark threatening swell to Hinoimasaki; thence to port moderate N.W. winds and fine. Arrived at Yokohama on the 3rd inst., at 6 a.m.

The Japanese steamer *Ise Maru*, Captain J. J. Efford, reports leaving Kobe on the 3rd December, at 4.30 p.m. with strong W.N. gale and high sea throughout the passage. Arrived at Yokohama on the 5th December, at 3 a.m.

The Japanese steamer *Toyoshima Maru*, Captain Thomas, reports leaving Hachinohe on the 4th December, at 7.30 a.m. with strong winds from W. to W.S.W. and clear weather throughout the passage. On the 5th December at 5.45 p.m. passed a steamer off Inuboye bound northward. On the 6th, at 10.10 a.m., passed a man-of-war steering southward.

The British steamer *Benlarig*, Captain John H. Clark, from Hongkong, reports having experienced fresh N.E. monsoon with unsettled weather till nearing coast of Japan where strong N.W. and W.N.W. winds set in which continued to port; after all she made the passage under seven days from Hongkong, which is good for this season of the year.

The Japanese steamer *Higo Maru*, Captain R. N. Walker, reports leaving Hakodate on the 4th December, at 8 a.m. with strong N.W. winds with snow squalls to Oginohama where arrived on the 5th, at 8 a.m. and left on the 6th, at 6 p.m.; thence to port N. and N.W. winds with clear weather.

The British steamer *Khiva*, Captain P. Harris, reports leaving Hongkong on the 29th November, at noon with fresh N.E. monsoon to Ocksen; thick rainy weather off Turnabout, thence to Nagasaki moderate to strong gale with high seas. Delayed two hours at the entrance of Simonoeki Straits by snow squalls, strong westerly winds and snow in the Suwo Nada, and fine weather for the rest of the way to Kobe. Delayed three hours at Kobe by falling snow; down the Kii Channel fresh N.W. winds and fine, thence to Yokohama fresh and moderate winds from the westward and very fine weather. On the 6th December, at 2.30 p.m. passed steamship *Zambesi* in the Iyo Nada.

LATEST COMMERCIAL.

IMPORTS.

During the past few days some little demand has arisen for Imports, and though buyers offer but low prices, there is some indication of an improvement on the utter stagnation which has been ruling.

KEROSENE.

Salce have amounted to 41,000 cases and deliveries to 16,000 cases. The Market is now firm at quotations with a tendency to higher rates. The *Hercules* has been sent on to Kobe with her original cargo, but the *Loretta Fish* has arrived with 69,000 cases and is still in harbour.

| | | |

| Brown Formosa | - | 4.25 to 4.30 |

EXPORTS.

RAW SILK.

Our last was issued on the 30th November, since when business in this staple has somewhat fallen off: Settlements for the week under review being estimated at 600 piculs, including about 180 piculs taken by a prominent Japanese shipper, presumably for Export direct. The *Zambesi* (which vessel did not finally get away till the afternoon of the 2nd instant) took the large quantity of 1,272 bales, nearly all for France. The Export to the Continent of Europe now shows an excess of nearly 5,000 bales over that to same date last year, the exact figures reading 11,986, against 7,053 as per table at foot.

These last few days, on the strength of telegrams reporting a slight rise in European Markets, holders have made a determined attempt to raise prices. Buyers, however, are wary, and but little business results on the new basis. We advance some quotations a little, but most of them must be considered more or less nominal, especially for Hank sorts. Stocks are slightly increased (say

4,300 piculs). Rejections have been fairly plentiful, and arrivals come in rather more freely than they did a week ago.

Hanks.—There has really been very little done in this class, rejections nearly equalling Settlements. The increased pretensions of sellers have apparently stopped business for the time being. The Stock of Hank sorts is now 2,400 piculs, and the news from Europe does not apparently warrant buyers in paying the advance asked. Among the reported Settlements we notice a small lot Best Shinshu, \$500; Good Shinshu, \$170; Annaka, \$460; Tomiyoka, \$485; Hachioji, \$120. These prices show a nominal advance of about \$10: probably in some cases the final weighing would be made at something under the recorded figures.

Filatures.—Business in these has been fairly brisk. Holders have tried for an advance and helped by the purchase on Japanese account, as noted above, have succeeded in making things decidedly firmer. Best qualities both in fine and coarse thread are scarce. Quotations especially for anything above Medium must be advanced \$5 to \$10. A small parcel "Rokosha," all firsts, is held for \$620. Good No. 1, fine size, have been done at \$605. In coarse descriptions we notice Oshu, \$585; Shinshu, \$580; Hida, \$570; Mino, \$540.

Re-reels.—Not much passing in these. A parcel of Five Girl (Maibash) has been taken into godown at \$570 and Bushu sorts at \$550. Some low Shinshu also at \$530 to \$520.

Kakada.—Rather more enquiry for these at about former prices. Again the better kinds are neglected, nothing being registered over \$540. The bulk of the transactions have taken place in sorts costing between \$520 and \$500.

Oshu.—These have been quiet, some little doing but without any advance in rates. One good parcel Sendai brought \$495, and common Hamatsuki has been done at \$420 to \$380, according to quality. Nagahama \$360.

QUOTATIONS.

| Hanks—No. 2½ (Shinshu) - | - | 460 to 470 |
| Hanks—No. 2½ (Joshu) - | - | 450 to 460 |
| Hanks—No. 3 - | - | 430 to 440 |
| Hanks—No. 3½ - | - | 410 to 430 |
| Filatures—Extra - | - | 615 to 625 |
| Filatures—No. 1, 10/13 deniers - | - | 595 to 605 |
| Filatures—No. 1, 14/16 deniers - | - | 590 to 600 |
| Filatures—No. 1, 14/17 deniers - | - | 575 to 585 |
| Filatures—No. 2, 10/15 deniers - | - | 570 to 580 |
| Filatures—No. 2, 14/18 deniers - | - | 565 to 575 |
| Filatures—No. 3, 14/20 deniers - | - | 540 to 550 |
| Re-reels—No. 1, 14/16 deniers - | - | 575 to 585 |
| Re-reels—No. 1, 14/17 deniers - | - | 560 to 570 |
| Re-reels—No. 2, 14/18 deniers - | - | 540 to 550 |
| Re-reels—No. 3, 14/20 deniers - | - | 530 to 530 |
| Kakadas—Extra - | - | 595 to 575 |
| Kakadas—No. 1 - | - | 530 to 540 |
| Kakadas—No. 2 - | - | 500 to 510 |
| Kakadas—No. 3 - | - | 460 to 470 |
| Oshu Sendai—No. 2½ - | - | 455 to 465 |
| Hamatsuki—No. 1, 2 - | - | 400 to 420 |
| Sodai—No. 2½ - | - | 400 to 410 |

P.S.—At closing, the Market for *Filatures* and *Re-reels* is very strong, holders having quite an exaggerated notion of what is due to them. All classes are for the moment held at an advance of about \$10 on the above quotations. It remains to be seen if buyers will be justified in paying the high prices now demanded. In other sorts no change.

Export Tables Raw Silk to 7th Dec. 1883:—

| | SEMI-MO 1883-84. | 1882-83. | 1881-82. |

| America | 6,192 | 4,783 | 2,347 |
| England | 1,640 | 2,318 | 1,798 |
| Total | 19,818 | 14,154 | 7,499 |

WASTE SILK.

During the period under review there has not been a large business done. Buyers try hard for lower prices, but sellers resist as sturdily as they can, especially on good to best descriptions. Stock of all kinds is only 1,500 piculs, chiefly low undesirable sorts, and purchases in these grades might be made on easier terms. Recent purchases are being freely shipped by each mail steamer, and this clearance should open the way for fresh business; at the moment there seems but little demand except for some classes of which the available Stock is very scanty.

Pierced Cocoons.—No transactions reported in these with the exception of a small parcel Good Medium at \$90. The Stock in Yokohama remains nearly stationary at or about 150 piculs, but further arrivals from the country are said to be close at hand.

Noshi-ito.—Although Stocks have slightly increased, still holders are very firm, and for anything above "Ordinary" can as a rule obtain what they ask. The business noted last week in *Joshu* still goes on at rather higher prices. In *Filatures* some small arrivals have been taken up on basis of quotations given below. Shinshu and Hachioji, good to best, have been taken in small quantities at \$105. A fair-sized parcel, Common *Joshu*, has found a buyer at \$50.

Kibiso.—*Filature* sorts are still wanted at a little under quotations, but good reliable quality is hard to find. Several small parcels have found buyers at from \$115 to \$105. In Ordinary *Kibiso* there has been something done, sorts between \$50 and \$20 being most enquired for. In *Neri* a small purchase Medium to Fair at \$15.

Mawatta.—Nothing done. Stock is now 270 piculs; but with no offer to test the Market.

QUOTATIONS.

| | | |
|-------------------------------------------|---|-------------|
| Pierced Cocoons—Medium to Fair - | - | \$90 to 100 |
| Noshi-ito— <i>Filature</i> , Best - | - | 150 |
| Noshi-ito— <i>Filature</i> , Good - | - | 130 |

| Mawatta—Good to Best - | - | 175 to 185 |

Exchange.—The firmness reported in China, coupled with news from home that silver was a shade better, has kept rates fairly steady here; especially for London paper. On the other hand "francs" and "U.S. Gold" have been done a little under last week's quotations. Current rates may be called:—London 4 m/s, 3/9½; New York 30 d/s, 91; 60 d/s, 91½; Paris 6 m/s, fcs. 4.81. *Kinsatsu* have been fairly steady at about 112 to 113 per \$100.

TEA.

With the exception of two days in the past week when the Settlements of each day only reached 20 piculs, transactions during that interval show indifference on the part of buyers. The total Settlements since our last Market Report are 850 piculs, consisting of the following grades:—Good Common 85, Medium 150, Good Medium 170, Fine 285, and Finest 130 piculs. Prices have remained steady as previously reported. The British steamers *Venice* and *Gordon Castle* sailed for New York via usual ports on the 5th instant, the former took about 2,300 packages and the latter 175 packages Tea. Weights will be given in our next issue.

QUOTATIONS.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakar that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,

celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia.

ONLY GOLD MEDAL—PARIS, 1878, TWO SILVER MEDALS AND "FIRST ORDER OF MERIT," MELBOURNE, 1881.

ATKINSON'S CHOICE PERFUMES FOR THE HANDKERCHIEF.

White Rose, Frangipanne, Ylang-ylang, Stephanotis, Opopanax, Jockey Club, Ess Bouquet, Trevel, Magnolia, Jasmijn, Wood Violet, Gold Medal Bouquet, and all other odours, of the finest quality only.

ATKINSON'S GOLD MEDAL EAU DE COLOGNE

is strongly recommended, being more lasting and fragrant than the German kinds.

ATKINSON'S OLD BROWN WINDSOR SOAP,

celebrated for so many years, continues to be made as heretofore. It is strongly Perfumed, and will be found very durable in use.

ATKINSON'S WHITE ROSE TOILET VINEGAR,

a new and indispensable Toilet accompaniment, and most refreshing Perfume for the Handkerchief.

ATKINSON'S WHITE ROSE TOOTH PASTE,

and other Specialties and general articles of Perfumery may be obtained of all dealers throughout the World, and of the manufacturers.

J. & E. ATKINSON,
24, OLD BOND STREET, LONDON, W.

PRICE LIST FREE ON APPLICATION.

CAUTION.—Beware. J. & E. ATKINSON manufacture their articles of one and the best quality only. Purchasers are cautioned to avoid counterfeits by observing that each article is labelled with the firm's Trade Mark, a "White Rose" on a "Golden Lyre."

ESTABLISHED 1799.

YOKOHAMA: SATURDAY, DECEMBER 15TH, 1883.

DEATH.

At Yokohama, on December 8th, 1883, EDWARD CHARLES KIRBY, aged 48.

At the German Hospital, on the 9th inst., CHARLES WILLIAM STONE, a Native of New York, U.S.A., in his 49th year. New York papers please copy.

WEEKLY NOTES.

THE volume which was presented to the French Chambers by the Ministry of Foreign Affairs at the end of October was not a Yellow Book, as the telegrams said, but an official *résumé* of the operations in Tonquin and Annam, and of the negotiations between the Cabinets at Peking and Paris. The document opens thus:—"During the separation of the Chambers public attention has not ceased to follow, with an ever increasing interest, the successive incidents of our action in Cochín-China. Some prejudices even have been aroused in consequence of the contradictory information of which our relations with China have been made the object in the press. We have felt ourselves called upon to satisfy the legitimate curiosity of the country by publishing, without delay, all the news officially

transmitted to us with regard to the movements of our expeditionary corps. With regard to the pending negotiations, we have tried to find among the diplomatic communications the elements of a publication which would enable the public to follow their development. But at Paris, as in China, the exchange of views took place most frequently at interviews of which no minutes were kept; while, on the other hand, the despatches and telegrams referring to them, are, for the most part, of such a nature that extracts only could be given. It has therefore been found necessary to abandon the project of publishing a Yellow Book, since it would only have given an incomplete, and consequently inexact, idea of the *pourparlers*. In order to supply this deficiency as much as possible, and to furnish you with explanations which you are in a position to require, we have decided to place before you the detailed course of the events which have occurred in Annam, and of the communications exchanged between the representatives of France and China." This preamble is followed by a history of the military operations, among which the taking of Hué and the treaty signed there are mentioned. Of the treaty itself only a brief analysis is given, with the following observation:—"The text reached Paris only a few days ago. The clauses it contains are numerous, and have concern with subjects of a very diverse nature. The Government has examined them with care in order to determine whether it will be proper to submit the treaty to Parliament in its present form, or whether it will not be useful to obtain certain modifications beforehand." Then follows a brief account of the negotiations carried on by M. Tricou at Shanghai, which, after various interchanges, were resumed at Paris.

On the 18th of August the Marquis Tseng demanded:—"First: That France undertake nothing against the political position of the Kingdom of Annam or annex any of that State's territory with the exception of the six Southern provinces which she annexed or occupied in 1862 and 1867. Second: That the ties of vassalage which unite Annam to China remain as they formerly were. Third: That the territory and the towns actually occupied by the French forces in Tonquin be evacuated, and that certain towns, to be subsequently fixed by agreement, be opened to foreign commerce, with Consulates established there on conditions similar to those which regulate the foreign commerce in the ports of China. Fourth: That the Red

River be opened to foreign commerce as far as Thouang Ho-Kwan, situated on the left bank, opposite the town of Sontai, and that that town be considered, provisionally, as the extreme point to which foreign vessels may penetrate, and as a place of exchange for the products of the province of Yunnan and the localities on the banks of the river below it. Fifth: That China undertake to employ the influence conferred by her position to facilitate the commerce of the Red River and to avoid the necessity of using force against the Black Flags. Sixth: That every new convention between France and Annam be made the subject of an understanding with China."

In a memorandum dated September 15th, M. Challemel-Lacour formulated the following propositions:—"First: That the French Government undertake not to occupy any point or take any action within the region bounded on the north by the Chinese frontier and on the south by a line to be hereafter determined, setting out from a point on the coast between the 21st and 22nd degrees of latitude and ending at the Red River above Laokai. That the Chinese Government, on its side, undertake not to occupy any point or take any action within the same region. That the administration continue to be exercised within that zone by Annamite functionaries, and that no fortresses be erected there. If armed bands come there to seek an asylum, or if they cause there disorders incompatible with the security of the neighbouring territories, the French and Chinese Governments, either conjointly or separately, shall be entitled to send thither a military force, after having agreed mutually on the object and the extent of its operations. This force to be withdrawn so soon as it shall have obtained the object for which it is sent. Second: That the town of Man-hoa, on the Red River in the province of Yunnan, be opened to foreign commerce, on the same conditions as the other towns or ports in the Chinese Empire where foreign commerce is already permitted."

On the 16th of October, the Marquis Tseng informed M. Challemel-Lacour that his Government did not consider the French proposals compatible with either the interests of China or her suzerain rights over Annam, and indicated, as a new basis of negotiations:—"Failing an arrangement which will preserve the political *statu quo* of the Kingdom of Annam, as it existed before 1873, and the entire indepen-

dence of the King of Annam *vis-à-vis* every foreign power, the Emperor of China, his suzerain, alone excepted, any arrangement which will not leave to the Imperial Government the entire and exclusive right of action on the Red River can only appear inadmissible. Of the two solutions here suggested, China would prefer the former; for, being entirely free from aggressive intentions, she would regret to find herself compelled to encroach upon the territory of her vassal after having respected it for two centuries. Reduced to the impossibility of avoiding an occupation which would safeguard its rights and interests, the Imperial Cabinet would be ready, but only in that event, to discuss the proposition of the French Government concerning the establishment of a neutral zone, but a neutral zone between Kouang-Bing-Kouan, the southern frontier of Tonquin, and the 20th degree of latitude. It would be equally disposed to make propositions which would meet the requirements of commerce by opening the Red River to the flags of all nations that have treaties with China. So far as places of commerce develop, negotiations can be entered into with the Imperial Government with the object of coming to an understanding about points farther up the river. But that Government cannot, for the present, agree to open either the town of Man-hoa, or even that of Laokai, to foreign commerce."

The Minister of Foreign Affairs concludes his *exposé* by the following remarks on the pretensions of China and the *ensemble* of the situation:—"This time no uncertainty is possible. It is the abandonment of our treaties and the evacuation of Tonquin that China demands of us, reserving to herself the right of occupying all the north of Annam. At this price she might, perhaps, be disposed to shut her eyes upon our establishment in the southern provinces. Such is the state of affairs. The indications contained in the first part of this *exposé* establish the fact that, during the past five months, our expeditionary corps in Tonquin has been engaged in dealing with the exigencies of the situation. The difficulties with which it has found itself concerned, and the resistance it has encountered, have been, it is true, more serious than the information procurable at the outset could have led us to anticipate. But with the means of action which our troops will soon find at their disposition, we make no doubt that they will promptly terminate the work they have so valiantly commenced. As for the diplomatic negotiations, you will now be able to judge the direction they have taken. From the first day we have let it be clearly understood that though it was not possible for us to treat with China about Annamite affairs, we were nevertheless disposed to enter into negotiations upon every point which has relation to the neighbourhood of the two countries, to study even an arrange-

ment of frontier which would furnish all necessary guarantees. Our disposition in these respects has not changed. It does not appear that the same can be said of the Court at Peking, judging by the successive propositions which its representatives have put forth. None the less we continue disposed to pursue with China *pourparlers* in the most amicable spirit, hoping that the events accomplished will lead to a juster estimate of the situation, above all when she shall have become assured that the moderate but firm policy of the Government of the Republic, has not ceased to have the approbation of the Chambers, and consequently of the country."

It will be seen from the above that before the end of October China had virtually abandoned her pretensions as suzerain of Annam, and signified her willingness to a compromise which should include the leaving of a neutral zone between her frontiers and the provinces occupied by France. Thus the only questions to be decided were the limits of that zone—about which there was a considerable divergence of opinion—and the extent of the privileges to be secured to foreign trade. With regard to the latter, the French went beyond anything that could ever have been contemplated in previous negotiations or treaties with Annam: M. Challemeil-Lacour demanded that the Red River should be opened not only up to the Chinese frontier, but as far as Man-hoa, a town situated some twenty miles within that frontier. And this while he was informing the Chambers that his object had always been "to study an arrangement of frontier which would furnish all necessary guarantees."

The circumstances of the French forces in Tonquin were now somewhat embarrassing. To advance against Sontai, and proceed with the main object of the campaign—viz., the opening of the Red River—would have been to expose their line of communications to a flank attack from the direction of Bac-ninh. Indeed, from a military point of view, nothing could have been more unfavourable than the position. The general direction of the Red River is nearly at right angles to the two roads leading from the delta to the province of Canton, so that to advance by the river would be to pass along the Chinese front, and leave every point of a rapidly lengthening line of communications open to direct attack. True this inconvenience was in a measure lessened by the imperfect nature of the communications in northern Tonquin. The road from Hanoi to Bac-ninh is an embankment a few feet wide, worn away in many places by floods, and nowhere able, it is said, to support the weight of field artillery. Such a route practically prohibits any vigorous advance whether by French or Chinese troops. Thus, as we explained in a previous issue, the French commander, not yet prepared to attack Bac-ninh, and not daring to expose his flank to an attack from it, adopted the expedient of constructing a *tête-du-pont* at the point where the

road from that place crosses the Red River at Hanoi. This operation, described by the *Saigon Independent* as a preliminary to marching against Bac-ninh, really signified exactly the opposite intention. It meant that Admiral Courbet, before pushing on against Sontai, desired to set up a shield between himself and Bac-ninh.

Bac-ninh itself, of which we have lately heard so much, is by no means a place of remarkable strength. It is a quadrilateral fort with bastions of the Vauban type, and though armed with Krupp guns, its capability of resisting attack is destroyed by the vicinity of some low eminences, from a quarter to half a mile distant, which offer an easy position for artillery and completely command the citadel. As for the town, it is a place of no importance, consisting only of five or six hundred thatched houses arranged round the fosse of the fortress. It would appear, however, that for many years Bac-ninh has been garrisoned by the Canton militia, whose business has been to guard the district against the Black and Yellow Flags. Whether this occupation, undertaken originally at the entreaty of the King of Annam, is regarded by China as equivalent to possession, it is certain that from the time French aggressive designs upon Tonquin became evident, imperial troops were gradually moved down to Bac-ninh until at the beginning of November, it was believed to possess a garrison of twenty thousand men, well armed, and led, if rumour may be credited, by Germans. Everything, indeed, seemed to indicate resolve on China's part to make a determined stand at this point. On the other hand, the policy of the French Government was to carry on the occupation of Tonquin with the utmost vigour, so as to bring China into a more amenable frame of mind. With this view, on the 3rd of November,—the day after a special discussion of the Cabinet Council—orders were forwarded to Admiral Courbet to "push operations on in order to make the Chinese Government show what course it meant to pursue." Admiral Courbet responded by undertaking a reconnaissance in force in the direction of Bac-ninh. The nature of the defences and of the roads seem, however, to have convinced him that a successful attack was not within the compass of the means at his disposal. He postponed further operations, assigning, as a reason for delay, the necessity of waiting until the rice crop was gathered, and the roads, still sodden from the inundations, had become sufficiently firm for the passage of artillery. It was announced, however, that the attack would be undertaken by a column of 3,000 men during the first week in December. This news was dated November the 7th, and on the 10th of that month the Peking Government issued, as we know, a manifesto to all the Powers, declaring, in so many words, that a French advance against Bac-ninh would be considered a declaration of war. The Ministry at Paris had now attained its desired object. China had shown her hand unmistakably. Fresh

negotiations were accordingly commenced at Paris, but on the 11th instant the situation seems to have been still so difficult that we find Mr. Ferry announcing the impossibility of further postponing operations against Bac-ninh. "A definite basis of agreement was still wanting," whatever that many mean. On the same day the Chamber of Deputies passed a vote of confidence in the Ministry—a vote which sounds more warlike than anything we have heard yet. It is plain that the *denouement* is not far distant, though to those who have followed the course of the negotiations, the issues seem to be too narrow to involve an appeal to the sword.

THE Marquis Tseng says he "regards M. Tricou as a sort of political Jesuit, who thinks that almost anything he may say or do in the interest of his country is right." The reason of this outburst of Celestial indignation is remarkable. In the House of Deputies on October 30th, M. Ferry read a telegraphic despatch from M. Tricou announcing that Li Hung-chang had disavowed the policy pursued by the Marquis Tseng upon the Tonquin question and that the Chinese Government desired him, M. Tricou, to remain in China. The sensation produced by this announcement was considerable. The London journals refused at once to credit M. Tricou's despatch, and pointed out that the Viceroy of Chili had no authority to make any such statement. But in Paris everyone was elated, and, in the words of a telegram, "statesmen of all parties and newspapers of all shades were convinced that Li Hung-chang had apologized." The Marquis Tseng laughed at the notion. "M. Tricou knew," he said, "that the French Cabinet wanted such a telegram, and so he sent it. It was altogether impossible that Li Hung-chang should have made such remarks as those which M. Tricou attributed to him." And the Marquis was right. Three days afterwards, the T'sung-li Yamèn telegraphed to Paris "expressing the utmost astonishment of the Chinese Government at the statement contained in the despatch of M. Tricou to Prime Minister Ferry that Li Hung-chang did not agree with the course pursued by the Marquis Tseng in the Tonquin matter." The despatch continued:—"Both the Government of China and Li Hung-chang deny having expressed the slightest desire that M. Tricou should remain in China as the French agent, and testify their unqualified approval of the manner in which Marquis Tseng has carried out his instructions from his government on the Tonquin question." It is further stated that an important despatch to the same effect was forwarded subsequently from Peking, and that among other things the Chinese Government "expressed its surprise that the French Cabinet received M. Tricou's telegram without question as to the correctness of its statements, and used it publicly in the Chamber of Deputies." A French representative in China being thus directly accused of resorting to dishonest devices, M. Ferry allowed himself

to be betrayed into the somewhat undignified course of resorting to a palpable *tu-quoque*. He declared that the only weapons of Chinese statesmen are "brag and falsehood."

On Thursday evening General and Madame Oyama entertained a large party of Japanese and foreign guests at the Rokumei-kwan. The building was brilliantly illuminated by electricity, which added not a little to the success of the evening. The occasion of the party was to celebrate the recent marriage of the host and hostess, but additional interest was imparted to the event by the approaching departure of General Oyama, who proceeds to Europe on official business. It is rumoured that the portfolio of War will be taken by General Saigo during General Oyama's absence.

CONSIDERABLE changes have taken place in the Cabinet, some of them significant of retirement from executive positions. This is notably the case with His Excellency General Yamada, who exchanges the important office of Minister of Home Affairs for the virtual seclusion of the Department of Justice. His Excellency Inouye, accompanied by Madame Inouye and Madame Katsu Inouye, has left Tokijo with the intention of remaining absent for about six weeks, during which time the duties of Minister of Foreign Affairs will be undertaken by His Excellency Ito. General Kabayama, who hitherto held the office of Inspector General of Police, has been promoted to the position of Vice-Minister of the Navy.

NOTES.

It is sometimes useful, though seldom pleasant, to hear what our neighbours have to say about us. Since England began to execute her scheme of creating in Egypt all the mechanism of a civilized administration, and herself occupying the country until the creation is accomplished, the last shred of popularity she possessed abroad has been rent away. Nobody has a good word for her. Even Italy is converted from an ally into a traducer, and Germany begins to find the *ex cathedra* lectures of the London press too outspoken to be agreeable. The bitterness of jealousy, if not of absolute dislike, betrayed in the utterances of continental nations against our countrymen was remarkably exemplified at the time of the cholera epidemic in Egypt. Even the prattle of giddy children is more rational than the wild accusations then preferred by the European press against the conduct of British officials in Cairo and Alexandria. Had the English Government's programme of Egyptian usurpation included a deliberate scheme for devastating the Continent by a deadly pestilence, harder terms could scarcely have been applied to our sanitary methods and their so called arbitrary infractions. This outcry was not allayed by the evident nonchalance of its objects. Thackeray has well said that the most exasperating phase of our insular character is a tacit assumption of superiority. An important evidence of that assumption is

indifference to abuse and ridicule. Our self-content is not a whit damped whatever showers of reprobation be poured upon our heads. We invariably refer the deluge to the same source—jealousy. Yet it is not easy to be quite so complacent when accusations of gross and systematic dishonesty are preferred against our Customs officers: when we are assured that fraudulent discrimination in favor of British importers is carried to such an extreme at the principal Custom-houses in Egypt as virtually to incapacitate merchants of other nationalities. Charges of this nature, though constantly formulated of late by the French and Italian press, remain quite unnoticed in England. Nobody seems to think them worth notice, still less of refutation. Perhaps it is in consequence of this indifference that the critics pass from abuse to sarcasm. For certainly the tone of their latest aspersion is decidedly sneering. The English appraisers, we are told, are singularly subtle persons; thoroughly versed in the art of levying toll on the vanity of importers. By way of illustration, a story is related of two traders, one British, the other French, who desired to pass through the Customs two precisely similar machines. On such articles an *ad valorem* duty is levied. The appraisers, proceeding to examine the English machine, found it a genuine specimen of Brummagem workmanship, and cried out against the penny-wise-pound-foolish policy of importing such unfavorable specimens of British mechanism. Coming to the French machine, however, they were equally loud in their applause, and pronounced it a really worthy example of honest, durable work. Finally, the latter was required to pay duty on ten thousand francs, the former on six thousand only, though of the two the English manufacture would command the higher price in the market. "Against such favoritism," says the Parisian journal from which we take this story, "what can the French merchant do? After all his import has been appraised at its real value. He has not a word to say. And so it is with all foreign goods. They are prohibited from competing with English by one species of discrimination or another." The notion of Englishmen abusing their own manufactures with the object of saving an impost of a few francs, is scarcely worthy of French intelligence, but it will doubtless serve its turn as well as any other of the wild accusations preferred against "*les Anglais en Egypte*."

SINCE Oscar Wilde's visit to America, a tour in the United States seems to have become one of the most attractive prospects that present themselves to distinguished Englishmen. Herbert Spencer went there at the close of last year, and as he happened to be suffering at the time from nervous prostration, he was full of sympathy for "the number of faces which told in strong lines of the burdens that had to be borne," and for "the large proportion of gray-haired men." Chief Justice Coleridge appears to be taking things much easier. His after-dinner speeches are not ornamented with sociological, biological,

or physiological reflections; and, among his afternoon amusements he includes strolling into a court in session, taking a seat on the bench and enjoying a quiet nap. The "apostle of culture," Mr. Mathew Arnold, is also "on hand," as the New York journals quaintly observe, and already the reporters are beginning to extract wonderful opinions from him, as for example, that Edwin Arnold's poem, "The Light of Asia," is unintelligible, and that he, Matthew, "wonders at its being so much read in America." A Brooklyn newspaper, commenting on this, recalls a story told of Lord Beaconsfield, who, having received from "his affectionate and grateful friend, Victoria" a beautiful copy of George Eliot's "Romola," laid the volume aside and used to say despairingly of it, "There is the book, but I can't read it. I have tried to do so, but I can't." These tales, however, will scarcely persuade the public to accredit such men as Matthew Arnold and Benjamin Disraeli with that puniest of moral propensities which "hates the excellence it cannot reach." It is expected that the United States will next be called on to welcome Algernon Swinburne, and a right hearty welcome they will doubtless afford the master of musical speech. Indeed, all the welcomes given to Englishmen in America are worthy of the givers. Henry Irving's case is no exception. The thanks he gave his audience at the Star Theatre on the night of October 29th, his first appearance in America, were very earnest:—

LADIES AND GENTLEMEN:—I am told you sometimes extend to an actor the privilege of tendering his acknowledgments of favors shown him. I wish it were in my power to thank you as I desire; but, beggar as I am, I am too poor in speech. The greatness of your welcome I believe to be typical of the greatness of your nation. Wherever I be, I shall always remember the reception you have given me this 29th of October. I thank you on behalf of my comrades, and I hope you will receive with like enthusiasm Miss Ellen Terry, who appears to-morrow evening. And so I trust we shall go on—

Our loves increasing as the days do grow.

Judging from the newspaper accounts of Irving's debut in America, the people of the United States were determined from the outset to applaud him. The great actor's declared intention is to present on the American stage, one by one, the characters in which he won his London reputation. He began with "The Bells" at the latter place, and he accordingly began with the same piece in New York. "His entrance as *Matthias*," we are told, "un-announced except by the quickening of the music, was electrical in its effects. The English actor stood before the audience, draped in fur, sprinkled with snow, with flushed face and flowing hair, a stalwart figure, unlike the ideas formed of him by many, but picturesque, dignified, and imposing. A salutation, cordial beyond any accorded a stranger on an American stage, proclaimed the general feeling. A storm of applause swept the house." This tribute to the reputation he brought with him was soon succeeded by no less hearty approbation of the great qualities he displayed; and at the end of the piece the verdict was that, though the man's mannerisms jarred upon his audience, and though his methods puzzled them, the power of his performance was beyond question. Un-

wittingly he has been the means of still further spoiling Mr. Oscar Wilde's prospects of posturing successfully a second time before the American public, for some clever observer—a lady of course—has discovered that Oscar's "tricks" have not even the merit of originality, but are accurate reproductions of Irving's ways. One of the leading London journals expressed a hope that American critics would give England an impartial judgment and a scientific analysis of the great actor's abilities. The wish was natural enough, for one can easily understand that the people of London feel towards Irving much as a man feels towards his own son, who has grown up under his eyes and on whose qualities he is no longer quite competent to pass a verdict. But those who know anything of American journalism could be sure beforehand that the English-reading public would learn more about Irving during the first fortnight of his performances in New York, than the London press had discovered during the previous ten years. That this is so the following extract from the correspondence columns of the *Brooklyn Herald* will show:—

Henry Irving is one of the most charming men I ever met. He has a delightful run of small talk which is amusing, but never becomes silly. He is a polished man of the world, and has made more friends in New York than any visitor we ever had from the British Isles. When he meets a man he shakes hands with him with a firm and hearty grip, and looks him straight in the eye, and he has none of the affected drawl or broad accent of the usual run of British visitors. Irving's picture has been pasted on soap boxes, paper boxes, card cases, and other novelties that have been imported from London during the last year, and his photographs have been displayed all over town so that his features are now as well known as those of Oscar Wilde. He is not a handsome man. It is a toss up between him and that ten thousand dollar beauty of the wild, wild West, Holman, except that the candidate for President has a mouth like a meat-cleaver, while Irving's mouth and teeth are the most attractive features of his face. Every afternoon the tragedian walks up and down Fifth Avenue, followed by a small brindle pup, and usually accompanied by a friend. People stare at him as though he were a being from another planet, and a great many bow instinctively to him. He has more invitations than he can possibly accept, and has not eaten at his hotel but once since his arrival. Breakfasts, luncheons, teas, and dinners are offered him all over town. He has some good American coach, evidently, for he accepts only the hospitalities of the very best people.

I supposed, and the mistake was natural enough in view of the many invitations Irving had received, that he was devoting all his time to enjoyment, and I should probably have continued in this impression had I not accidentally run against Mr. Bram Stoker yesterday on my way down town. Mr. Bram Stoker is the business manager of Mr. Irving's tour. He is a tall Englishman, with a red beard and pleasing manners. I asked him whom Irving was breakfasting with on that particular morning. And he smiled and said:—

"He is not going to breakfast till eleven o'clock, when he goes to Justice Shea's."

"Oh, then he isn't up yet."

"Well," said Mr. Stoker, with a smile, "come with me for a moment and see."

So we went through the lobby of the theatre, pushed the swinging doors open, and discovered on the stage at least sixty of Mr. Irving's actors and actresses in street attire and in full rehearsal for a scene in "Charles I.," which is to be produced on Tuesday night. They had already gone through one rehearsal of "The Bells" when I arrived. I have seen many drill masters on the stage, but I never saw a better one than Mr. Irving. He is as strict a disciplinarian as if he handled an army, instead of a troupe of actors, and his suggestions are followed out as though they were royal commands. The perfection of details in his performances is noticeable. Miss Terry was there on that morning, dressed in a long Newmarket coat which fitted her with an elasticity that was delightful. She was in a very happy mood and went frisking around, when not reciting her lines, like a child at play. She thumped the scenery with her knuckles, beat a tattoo upon the prompter's

table or tapped her toes against the tin of the footlights as she awaited her cue. The company has played both "The Bells" and "Charles I." hundreds and hundreds of times in London, but they rehearse them as if they were to be played for the first time on Monday night. One cannot wonder so much at Mr. Irving's success after seeing him at work.

Our news from China by the French mail does not indicate any change in the Franco-Chinese position. In Shanghai an impression seems to be growing that war is by no means inevitable. Bac-ninh has not been attacked, and public opinion seems to incline to the idea that even though it be attacked, the results will not be so terrible as China's manifesto led us to suppose. We cannot entirely endorse this forecast. Bac-ninh is garrisoned by a Chinese force, and should the French assault it, a state of war will actually exist between the two countries. Diplomacy has already shown itself so impotent to deal with existing difficulties that the addition of such a complication would probably paralyse it altogether. But we do not believe that Bac-ninh will be attacked, for the present at all events. There is such a thing as common prudence, and the French commanders, whatever confidence they may have in the bravery of their troops, will not expose a mere handful of men to an encounter with the vastly superior forces of China. So far as the Cabinet at Paris is concerned, its attitude does not appear to have been altered either by the receipt of China's manifesto or by the news of her secret decree to the Chief of the Black Flags. Either there is a set conviction of the Middle Kingdom's determination not to fight, or the path to a peaceful adjustment has become plainly discernible. The former hypothesis is scarcely tenable, and for our own part, we have little doubt that the latter is correct. Were it otherwise—were any prospect of War with China really imminent—we should long ago have received very different accounts of the preparations on foot in France and of the measures contemplated by the Minister of War. It cannot be denied that there are many serious and uncertain elements in the present aspect of affairs, but we see nothing to disturb the hopeful predictions which we have ventured, up to the present, to express.

Mr. ZAPP, who has officiated during his brief sojourn in Korea as Envoy Extraordinary and Plenipotentiary for H.I.G.M. at the Court of Seoul, has, we are informed, accommodated treaties that are mutually satisfactory to both contracting parties. The conventions were signed on the 26th of November, the same day as the British treaty, subscribed by Sir Harry Parkes, was signed. The treaties now arranged are much more favorable to foreign commerce than those drafted last year. The German and British Envoys left Korea for their respective posts almost simultaneously, and were received by the King of Korea before their departure from his capital.

The advantages of smokeless furnaces are too much insisted upon by modern hygienic scientists

to need additional emphasis. The difficulty of obtaining them remains to be solved; and any effort in that direction is a public benefit. We now read that the Medart Patent Pulley Company, St. Louis, have in operation at their new works a novel and economical smokeless furnace. It is self-feeding, and especially adapted to the use of fine or slack coal. The construction of the furnace is described in the *Age of Steel*. It has on either side a bunker or magazine into which the slack or broken coal is introduced. The bottoms of the bunkers are sharply inclined to correspond with the inclination of the grate bars of the furnace, and, by the working of outside machinery, form in connection with such bars, every now and then, two continuous and inclined planes, down which the coal moves from either bunker by force of gravity towards the centre of the furnace. To prevent the crowding of coal on the fire, the bottom of each bunker is provided with an inverted box, called a "stoker-box," which moves up at regular intervals to the side of the bunker next to the fire, cutting off the movement of the coal towards the grate bars of the furnace. This box is moved by machinery attached to the front end of the furnace, and, when drawn back forms, in connection with the inclined bottom of the bunker and the grate bars of the furnace, the plane down which the coal moves to the centre of the furnace. The furnace is arched over to prevent the flames and intense heat from coming in direct contact with the boiler. The air is admitted in front of the furnace, the supply being regulated by a damper, which passes up through a flue in the brick wall, then over the arch, and there takes up the heat from the brickwork, passes down through little openings, and gives to the fresh fuel on the coking plate its supply of air. It is hot enough itself to ignite any gases evolved; consequently immediate combustion takes place, and no smoke is made. By the time the coal reaches the grate, the bituminous part is consumed, and what remains is coke. This gets its needed supply of air through the grates. A very small engine is attached to the side of the furnace; and to this is attached a bar running across the front of the furnace. This bar is connected by links to arms which move the stoking apparatus and shake the grate bars. The clinker breaker at the centre or bottom part of the furnace is worked by a wrench from the outside. The company working the furnace estimate their economy in the value of fuel consumed at from 90 dols. to 150 dols. per month according to the quality of coal used.

THE month of November has the reputation of being the one in which the greatest number of suicides are committed, and according to statistics drawn up in various European countries, this seems to be really the case. As a reason for this, we believe, is generally given that fogs and other unfavourable weather have such great an influence in depressing a man's mind. We do not know whether this finds application in Shanghai, but we hear that two natives committed suicide and the third was just prevented in time

from making up the trio. Perhaps they had in their minds that to-day is the last of November, and so they thought to make use of the last chance. The first case of suicide committed to-day was that of a young Chinaman, who took his life by strangulation. He selected a rather peculiar place to bid farewell to this world, as his body was found hanging in one of the public W.C.'s at Sinza. The second case was that of a young Cantonese woman, living two doors from the Sailor's Rest, Hongkew. Our reporter visited the place about 11 a.m. The body was then lying on a Chinese opium couch; the deceased seemed to be of rather well-to-do circumstances, to judge by her dress and jewellery she had about her. Right over her head, fastened to one of the beams of the ceiling, was still hanging a short piece of a thin Chinese rope, by the aid of which she committed strangulation. As usually on such occasions, a great number of Chinese crowded the room; they said that the suicide was committed at about 9 a.m., and that there was no attempt made to revive her by calling the assistance of a doctor. Yet they have not forgotten to commence a large "joss pidgin." We hear that the act was committed whilst the woman was under the influence of a large dose of opium. The third case, which we had an opportunity of witnessing, was that of a most wretched-looking specimen of humanity. We noticed him climb the rail of the Garden Bridge, and after holding on for a moment to the electric wire post on the top of the bridge, he made, with a loud yell, a dive into the Creek. It was then nearly high tide. A native boat was near the scene, and as soon as the unfortunate man came to the surface, they got hold of him with their boat-hooks and pulled him half dead into their boat. They landed him at the steps of the Garden Bridge, where two native constables were waiting to convey him to the Police station.—*Shanghai Mercury*.

THE sketch of the Fisheries of Japan, by Mr. Okoshi, which we noticed in a recent issue as having been produced by that gentleman for publication in the series of special papers issued, with the *imprimatur* of the Commissioners, in connection with the International Fisheries Exhibition in London, was read by the author (a correspondent informs us) before a Meeting in the Conference-room at the Exhibition on the 23rd October. The Meeting was perhaps better attended than could have been anticipated on a day when the subject was so remote from having any practical application for the majority of those likely to attend the conferences, a series of which were held under the same auspices: and those present evidently, our correspondent says, followed the paper with lively interest and satisfaction. Apart from the merits of the paper itself, the circumstances made the occasion not a little remarkable. Mr. Sonoda, the Consul in London and Commissioner for Japan at the Exhibition, was appointed by his colleagues on the Commission to preside at the Meeting, and was supported on the platform by some of the other Commissioners and two or

three English gentlemen connected with Japan. The Japanese Minister and Madame Mori were unfortunately unable to be present; nor were there more than three or four persons, one a lady, of Japanese nationality in the room. But this made the peculiarity of the case perhaps all the more striking. Here was a Japanese gentleman at an English—or should we say International?—official gathering presided over by a Japanese chairman, reading a paper written by himself in the English language, before an English audience, in the English metropolis! It is no wonder that a scene so unique suggested matter for reflection to those present who knew—as who does not, in outline, at least?—what Japan was twenty years ago or less. One of the subsequent speakers, who caused some merriment by his manner of at once announcing himself as an Irishman—a fact which his auditors would have had no difficulty in divining ere long for themselves—turned the occasion to account, in following up the train of thought just alluded to, to compare the height of civilization manifested in Japan by the attention bestowed upon the sea-fisheries with the low economic development of his own "on-happy country" attested by the lamentable neglect there of nature's most abundant 'harvest of the sea,' lost for want of the gathering. Readers of our notice of Mr. Okoshi's paper will be interested to hear that his recommendation to infuse a little of Japanese culinary art into English fish-cookery was very warmly applauded by his audience. Mr. Sonoda, who not only acquitted himself honorably of his duties as president, but spoke at some considerable length with combined fluency and deliberation as if he had been accustomed to address English audiences in their own language all his life, deprecated the humble show made by his country at South Kensington, and excused his countrymen on the very legitimate ground of the more pressing calls of the National Fisheries exhibition held at the same time in Tokio. Our correspondent adds that the complimentary observations of the gentlemen who moved and seconded votes of thanks to the reader of the paper and the Chairman, were really as well-deserved as they were evidently sincerely made and cordially responded to by the Meeting.

REFERRING to "the famous signal," Mr. J. William Thompson writes, in reference to a statement relative to the late Admiral Pasco having "acted as Signal Lieutenant at Trafalgar," "will you allow me to say that, if the implication is that it was he who had to do with the well-known 'Every Man to do his Duty' signal, the paragraph is not quite correct? What actually happened before the action was this. The Admiral gave the order to telegraph to the whole fleet—'Nelson expects every man to do his duty.' This order was given, not to the Signaling Lieutenant of the *Victory* (who had been disabled, I believe), but to my grandfather, the late George Lewis Browne, who was then serving on board the flagship. My father has more than once heard him relate the inci-

dent which then occurred—the young Lieutenant's suggestion, half-hint, half request, that 'England' should be substituted, as that word was in the signal code-book, and could be run up at once; whereas 'Nelson' would require six sets of flags, displayed one after the other, and Nelson's prompt and hearty reply, 'Right, Browne; that's better! This officer was paid off, as were so many others, in consequence of the war being virtually ended as far as naval operations were concerned, by the victory of Trafalgar; and it was whilst he was practising as a barrister on the Western Circuit that he got his promotion as Commander. Long afterwards he was given post-rank. I have once or twice seen a curiously garbled version of this little bit of history, in which Nelson is made to have carefully adapted his words on this occasion to the requirements of writers of popular songs.'

THE *Hiege News* of the 10th instant contains an interesting article, in which the details of the visit of Sir Harry Parkes and Mr. Zappe to Sôul are recorded at some length. Treaties, which are described as very much more favorable than that of Commodore Shufeldt, were concluded on behalf of Great Britain and Germany, after negotiations lasting about a month, and the two Envoys were subsequently received in audience by the King, who is said to have treated them with affability. A banquet in European style brought together all the foreign diplomatists in Sôul on the 27th of November, and on the following day Sir Harry Parkes set out for China. According to the *Hiege News*, the tariff attached to the treaties fixes the duty on unmanufactured metals, cotton yarn, and other raw goods at 5 per cent, *ad valorem*; that on textile fabrics, as shirtings, piece-goods, &c., at 7½ per cent; while a few articles of luxury will pay 20 per cent. Tonnage dues are to be levied at the rate of 30 cents per ton, and the proceeds will be applied to harbour improvement and the erection of lighthouses. It is further stated that the privilege of travelling by passport in the interior for purposes of pleasure or business is conceded; that the foreign settlements are to be governed by municipal councils of the residents, and that land for building purposes may be acquired by foreigners within a circle of 3 miles radius round the settlements. If these conditions have really been obtained, the negotiators deserve to be congratulated from a selfish point of view. But how will it fare with Korea? Is she, whose people, little more than twelve months ago, were in open revolt against the pro-foreign party, and of whom it is said, even now, that but for the presence of Chinese troops the disturbances of 1882 would break out anew—is she to be responsible for the safety of foreigners travelling in the interior, and to pay heavy indemnities whenever they are insulted or ill-used? And what provision is to be made for the good order of these foreigners themselves? We do not know that even Germans and Englishmen can be trusted entirely beyond the reach of control, and we are very sure that neither the German

nor the English Government have a right to obtain for their subjects privileges which render them virtually independent of all laws. It is, however, premature to discuss these points yet. Neither Sir Harry Parkes nor Mr. Zappe is likely to have ignored the experiences furnished by the working of one-sided and imperfect treaties elsewhere. We prefer to expect that the treaties they have negotiated will not contain any of the crude provisions attributed to them by report.

If the vernacular press is correctly informed, the students of the Tokijo University who were recently rusticated, or expelled, are to be allowed to rejoin their classes. It is pleasant to find that the authorities have been able to see their way to this course. So far as the original infraction of the penalty is concerned, there was not much room for choice. A grave act of insubordination, amounting almost to a mutiny, had been perpetrated, and as the resolute attitude of the students rendered it impossible to discover the ringleaders, nothing remained but to punish the whole number. The alternative was to admit that discipline became paralysed so soon as a sufficiently numerous body of the students combined to defy it. But whether the grievance which lay at the root of the trouble was real or imaginary, there was something very admirable in the way the lads held together after the *Incuse*. Nothing could shake their determination to stand by one another, and after long and varied investigations, all hope of breaking up the combination had to be abandoned. Of course there is nothing to be said in extenuation of the original violence. Such methods are fatal to the validity of any cause. But the subsequent firmness of the students not only implied a settled conviction of the justice of their grievance, but also betrayed a quality of spirit with which one is constrained to sympathise. We are glad, therefore, that a way has been found to re-admit them to the University without any unwise sacrifice of discipline.

EVEN Sir John Pope Hennessy's most hostile critics must give him the credit of being consistent. So uniform is his policy that its nature can be predicted in any particular case with the greatest confidence. There is a story told of a Dutch seaman who, being employed to heave the lead, and finding his knowledge of English insufficient to interpret the marks grammatically, contented himself with crying out in a nautical monotone:—"You'd better keep away from 'e-e-re! You'd better keep away from 'e-e-re!" until at last the ship ran ashore, whereupon the Dutchman shouted triumphantly:—"Didn't I tole you so-o-o! Didn't I tole you so-o-o!" Sir John's critics remind us of this worthy but imperfectly educated mariner. They do not attempt any thorough analysis of his policy or essay to show whether it is radically bad or good. All they say is "keep it away. We'll have none of it;" and then, seeing it repeated elsewhere, they point with exultation to their own perspicuity, just as though the very

possibility of forecasting a man's conduct was sufficient to prove him a malefactor. In Hongkong Sir John's aim was to remove, as far as possible, the municipal and political disabilities under which the Chinese residents labour. The latter are British subjects, and it is a fundamental principle of British civilization that men who pay taxes ought to have a voice in their disposal. It is true that in attempting to rate the respective claims of the Chinese and English residents, many special circumstances have to be taken into consideration, but no one can deny that the equalization of those claims ought to be the final object of a just administration. It was Sir John Pope Hennessy's object, but unfortunately he seems to have pursued it with so little tact and so much precipitancy that his action tended rather to widen than to bridge the interval. In Mauritius also he finds a class of persons situated somewhat similarly to the Chinese in Hongkong, namely the Creoles, or Mauritians proper. The attitude of their new Governor is interpreted by this class as indicating a desire to "give Mauritius to the Mauritians," or, in other words, to give the Creoles political liberty and representative institutions. The prospect is welcomed by the Mauritius *Argus* in a strain of somewhat romantic eloquence, interspersed with protestations of fidelity and attachment to the *British Crown*, and containing, amongst other things, the following statements:—

The administration of Sir John Pope Hennessy, whatever may be its ultimate end, or whatever events may distinguish it later on, has offered in its first few months an unusual spectacle. If one recalls the prejudice entertained against Sir John by a large proportion of the public before his arrival, he cannot but feel astonished at the reversal of feeling which the present time displays. Sir John Pope Hennessy gains each day in popularity, and it may be said that already he has gained more confidence and esteem than most previous Governors possessed. Curious as this is, is it inexplicable? No. The prejudice which at first existed in Mauritius against our Governor was produced by allegations more or less false, by slanders, by reflections more or less malevolent on his character and his political tendencies, all of which were designedly scattered broadcast by those whom his policy had displeased in other places. The private letters of those who pretended to know, and articles in some of the journals of the colonies where he had been, represented him as of a despotic and irascible spirit, a man of revolutionary tendencies whose administration had everywhere resulted in disorder, and as taking particular pleasure in exciting political passions. He was even represented as possessing but little delicacy, and being in the habit of making assertions void of foundation in order to cover and justify his policy. A Hongkong journal went so far, we remember, as to bring against the late Governor of that Colony accusations of a very grave nature indeed. All this was reproduced, printed, and published in Mauritius. Hence the preconceived opinions of Mauritians with regard to their future Governor.

Sir John Pope Hennessy, if he read the Mauritius papers during the few months preceding his arrival, could not fail to see that his advent was awaited with something of defiance and apprehension. Perhaps he has had no explanation of how this came about. We will supply him with it to-day. This feeling was the work of those whom, here as elsewhere, he has held at a distance and whose insolence and oppression he has curbed. These persons endeavoured to prejudice the public against him and to create in advance a feeling hostile to the new administration.

The Creoles may, or may not, be fitted for the full application of the principle of equal rights. That is a question we have not the means of answering. But it is at all events plain that the reputation their present Governor brought with him did not help to smoothen his political path, and that his former opponents have no intention

of suffering him to leave his misfortunes behind him. The journal which, in Hongkong, showed itself his most inveterate enemy, now responds to the challenge of the *Argus* by renewing against him the charge of everywhere "exciting class or race prejudices." At first sight there is some difficulty in reconciling this charge with a programme which, if it aims at anything at all, aims at the removal of class and race distinctions. Yet the *Hongkong Daily Press* appeals strongly to our reason when it says that disaffection and hatred can be the only results of creating political aspirations which it is impossible to gratify. That seems to describe pretty accurately what Sir John did in Hongkong, and it may prove to be an accurate description of the task he has set about in Mauritius. But these wholesale prejudgments are not consistent with the common definition of fair play. Might it not be as well to wait and see whether Sir John's administration in his present government is really going to prove so mischievous? Our own candid opinion, as judges at a distance, is that a little writing like that of the *Hongkong Daily Press* is more potent to bring about the evils it predicts than several years of Sir John's policy.

THE home papers contain many comments on the New Rules of Procedure now in observance in the English Courts. The *Morning Post* remarks that the reforms are somewhat sweeping and drastic. To begin with, all existing rules on procedure, forming, as they did, an enormous mass of almost irreconcilable orders made from time to time to meet existing necessities, are swept away for ever. In their place a code is established which aims at completeness and uniformity. To say that it is perfect would be to make too bold a statement; to say that it is in all points clear and to be understood of the people would be flatly untrue; but we may fairly hope that the care and pains bestowed upon the production of this laborious undertaking, by so many learned minds, will not be thrown away, and that a substantial improvement will be found to have been effected. The framers of these orders have striven to ensure cheap law, speed, certainty, and the impossibility of abuse. How far they have succeeded experience alone can decide. That the reforms introduced will be viewed with favour on all hands is too much to expect; certain classes will lose heavily. The Bar will lose by the transfer of much Chancery work from Court into Chambers, and by the alterations in the practice of pleading. But, however much they may lose at first, we feel sure that the Bar will take a view of the situation worthy of so old and honourable a profession, and will recognise the fact that cheap law makes plenty of litigation, and that what is best for the nation is in the end best for the legal profession. The rules do not perhaps so seriously affect the interests of the solicitors as they do those of the Bar; we mean the interests of the representative class of respectable practitioners. To many of the lower class of attorneys who look on a client as a man

to be bled and not helped in his difficulties, the new reforms will deal a terrible, and, let us hope, a deadly blow. These are men who have too long disgraced an otherwise honourable and useful profession, and for their losses no one can have a moment's sympathy. On the whole, we are inclined to believe that when sufficient time has elapsed to enable the new rules to be thoroughly tested, they will be found to have contributed greatly to facilitate the administration of justice by the simplification of the complicated processes by which alone that desirable end has hitherto been attainable.

As years go by the number of so-called "aids to Japanese" multiply. A short time ago we had occasion to notice one which at least possessed the advantage of being amusing, and the merit of exhibiting its errors too palpably to mislead. Another is now before us; a very unpretentious little volume of seventeen tiny pages containing several spasmodic sentences and a few scanty vocabularies. It might have been an excellent affair in its way but for two misfortunes; the first, that it was compiled, apparently by, a gentleman from the province of Hizen; and the second, that it was printed by a Chinaman. The consequences of the former mishap are visible in every page. Thus *yo-bukuro* is written *Ziy-bukuro*; *asuko* becomes *asoko*, and, generally, all the *j* sounds are converted in *z*. The Chinese compositor, however, has left his traces still more indelibly on the work. Whether his fount of type was short of *i's*, or whether it possessed a superfluity of *u's* with a dieresis, he never fails to substitute *ä* for *ii*, the result being that we find *ima taihen isogashä* for *ima taihen isogashii*, and *nanno yoka häle miro*, for *nanno yoka häle miro*. Of course these errors will not prove seriously embarrassing to persons familiar with Japanese, but as the book does not appear to be compiled for finished linguists, it is not improved by such typographical eccentricities. The Chinese printer also displays some mental confusion as to the separation of words and syllables. We apprehend that among the foreign merchants, for whose assistance the volume is specially compiled, there may be found some to whom, even with the aid of a dictionary, such words, or agglomerations of words, as *nochini-kite*, *urade-aro*, *otakuye*, *otodokemshimashö*, and so forth, will present a hazy appearance. Still the book may be found not entirely useless. It is short enough to be corrected from cover to cover in about sixty minutes, and this is no small recommendation. We ought to add, too, that the author practically and openly prepares us to find his work defective, for at the very earliest opportunity he hastens to give us an example of his own and his printer's inaccuracy by writing the title of the volume "The Merchants Interpreter."

MR. THOMAS TYLOR, in an interesting article in *Time*, on earthquakes and their causes, devotes a few lines to an account of the seismic shocks which have occurred in the British islands. Some persons, he says, may possibly be inclined to

think that Great Britain has been altogether exempt from earthquakes. But such an opinion would certainly be mistaken. A writer in the *Quarterly Review* (January, 1869) gives 151 as having taken place from the tenth to the eighteenth centuries inclusive. In the twelfth and thirteenth centuries, if the accounts which have reached us are to be trusted, some remarkable earthquakes occurred. In 1158 the Thames is said to have been laid dry, so as to be passed on foot. And twenty-one years later, ground belonging to the Bishop of Durham, near Darlington, was elevated like a hill at nine in the morning, and so continued till sunset, when it sank, leaving a deep cavity. On other occasions buildings were damaged, and landslips more or less extensive are said to have occurred. On the 6th of April, 1580, at six in the evening, "London and all England were thrown into consternation. The great bell at Westminster sounded the alarm, and was followed by others; the students of the Temple started up from table, and rushed into the street, knives in hand; a part of the Temple Church fell, and stones dropped from St. Paul's. Two stones fell in Christ's Church, and crushed two persons—one to an immediate, the other to a lingering death; in rushing out of the church many persons were lamed, and there was a 'shower of chimneys' in the street." Fears were entertained of a repetition of the shock; and it was at this time that two wags are said to have amused themselves in the early morning, by waking the sleepy Londoners, announcing the hour, "Half-past four, and a dreadful earthquake." On February 8th, 1750, there was an earthquake in London, followed by one still more violent a month later. Moreover, a certain dragoon prophesied that, on the 4th of the following month, London and Westminster would be destroyed by an earthquake between twelve and one o'clock at night. On the night predicted of course no earthquake occurred, but affrighted multitudes filled the open places; and it was on this occasion that Mr. Whitefield preached at midnight in Hyde Park. Slight earth-tremors are still of frequent occurrence at the town of Comrie, in the centre of Perthshire.

In this context we observe that Mr. H. Cecil, of Bregner, Bournemouth, writes to *Nature* under date October-22:—"I perceived here on the morning of the 10th inst, just before the light was sufficient to show the hands of a watch, two distinct tremors of earthquake. A whatnot by my bedside trembled throughout, and a watch on its stand vibrated with a strong and regular pulsation. Nothing was passing at the time, and a heavy steam-roller has passed one morning since without affecting the whatnot or the watch."

THE mortal remains of Mr. E. C. Kirby were interred in the Bluff Cemetery yesterday morning. It is not too much to say that all the foreign residents who could possibly attend the funeral were present at Christ Church at the hour prescribed for the ceremony. The beautiful and impressive ritual of the Church of England was

read by the Reverend E. C. Irvine; and as the coffin was borne out of the church the "Dead March in Saul" was played. At the gate of the Churchyard a large procession formed, and followed the hearse which conveyed the body to its last resting-place, a tranquil dormitory, which Mr. Kirby first saw when it had perhaps but three or four occupants, but where he now finds a place among a thousand of his contemporaries. Our deceased fellow-citizen's enterprising and honorable career in Japan was too well-known during the twenty years of his residence to need from us other than the briefest comment. Honest, energetic, and laborious, he pushed his way ahead from small beginnings, not discouraged by obstacles, or flushed by success, or daunted by misfortune. Till within a few moments of his lamented death he was in full possession of all his faculties. No loss to the commercial and industrial foreign community of Japan is to be more regretted than that sustained by his premature demise.

THE attention of the Italian Government appears to have been strongly attracted by the constantly increasing tide of emigration which is shown to be setting Westward from the peninsula. The public had pretty well made up its mind as to the source whence the impetus of this movement was derived, but the Government deemed it wise to call upon the various prefects for an explanation, and, as might have been anticipated, these officials have replied that the general cause of the exodus is the difficulty of procuring a subsistence, and the particular cause, a low rate of wages. This analysis suggests a curious reflection—namely, that in the West of Europe, where everything resembling national seclusion ought to have disappeared long ago, and where the means of intercommunication are so perfect, there are two countries, France and Italy, separated by a chain of mountains only, in one of which the number of arms is too great for the work they have to do, while in the other, the work is too much for the number of arms. In France, the demand for labourers is so great that salaries have reached an unprecedented level, and the returns on capital being disproportionately small, enterprise languishes. In Italy, men are deserting their country and seeking beyond the sea the bread which an overstocked labour market refuses them, at home. Commenting upon this state of affairs, an Italian journal pertinently remarks that when two bodies of water, separated by a dyke, are at different levels, it is only necessary to remove the dyke and the two surfaces become one. The natural barrier between France and Italy can never be entirely removed, but railways and roads have long ago overcome the obstructions it offered to intercourse. The artificial barrier is the real trouble. So long as the present Customs regulations exist, the two countries are prevented from ministering to each others needs. Work is the germ of capital, and did the Italian workmen enjoy free access to France, they would create there a fixed capital incomparably greater than the floating capital they might carry away.

This practical illustration of the benefits of free trade is interesting, but after all similar illustrations are to be seen everywhere by those that take the trouble to look for them.

WHEN the news of the reception given to the King of Spain by some Parisian roughs reached America, the *Texas Siftings* came out with a characteristically irreverent cartoon. The picture contained three figures: one a statwart old man dressed in a species of nondescript uniform and holding out a fragment of coloured cloth on the end of a stick; the second, a very inane looking person seated in a swing and wearing a large crown; the third an enraged billy-goat, which with one irate eye fixed upon the old man's piece of cloth, was bucking the swing and its occupant sky high. Underneath this choice specimen of art was the following subscription:—*'Little Alfonso'*—"Hurrah for me! Just see how high I can swing myself when I try." The unintentional suggestion conveyed by this cartoon was, perhaps, the funniest part of the whole, for certainly nothing could be more absurd than to suppose that Prince Bismarck could have foreseen the results of the compliment paid to King Alfonso at Berlin. The world gives Prince Bismarck the credit of being a remarkably sagacious person, but it also gives the French the credit of being an eminently courteous people. Nothing more unlikely could have been predicted than that a Parisian crowd would deliberately insult the guest of their country. It is very certain that Prince Bismarck never anticipated such a conjuncture, and it is equally certain that had he anticipated it, he would have spared no pains to prevent it. Seldom, indeed, has a chapter of accidents so simple in themselves been attended by a sequel so strange. For it now turns out, if we may believe the *Gazette de Cologne*, that when the citizens of Paris hooted and shook their fists at a monarch who was supposed to have allied himself with their sometime foes, they had in reality no better cause to be angry than the King of Spain's innocent preference for yellow as compared with white. In Germany it is the custom to pay all royal visitors the compliment of making them honorary colonels of a cavalry regiment. When the compliment came to be paid to King Alfonso—a piece of etiquette in which Prince Bismarck does not appear to have been concerned either directly or indirectly—there were two regiments of Uhlans to choose from, and the uniforms of both were presented for the King's inspection. One had white facings; the other yellow. Alfonso preferred the latter, and it chanced to be that of a regiment stationed at the moment in Strasbourg. Had he chosen the white facings, Paris would have welcomed him gladly, and the Emperor William and Prince Bismarck would not have been guilty of a conspiracy to embroil France with her last natural ally in Europe. *Eheu! quam brevibus pereunt ingentia causis.*

A GENTLEMAN who travelled from Saigon to Ceylon in the M.M. steamer *Djemnah*, by which

General Bouet was a passenger, has written to the *Paris Dépêche* to say that, on the voyage, he had frequent occasions of conversing with the General, and that although the latter maintained an attitude of extreme reserve with regard to Tonquinese affairs, he was sufficiently communicative: to let it be known that the trouble between himself and Doctor Harmand was not a question of authority but of opinion. The General wished to take Sontai by assault, the Commissioner thought he could obtain the same results without bloodshed. Under these circumstances it was natural that the former should desire to be relieved of his command and sent to France to explain the situation to the Cabinet. This is credible, but it fails to account for the extraordinary system which virtually entrusts the conduct of a campaign to a civil official. Commissioner Harmand himself is now about to quit Tonquin, if, indeed, he has not already set out for France, so that one of the chief obstacles to French unanimity of action in Cochin-China will be removed.

AT the meeting of the Academy of Sciences in Paris on October the 1st, M. Faye read an interesting paper on the subject of slow movements of the soil. The author referred at some length to the researches of M. Arturo Issei, of Genoa, and displayed a hypsometric chart of the surface of the globe intended to illustrate the various conclusions of that scientist. He then went on to say that all the evidence hitherto collected goes to demonstrate the truth of his previously announced theory with regard to the law which governs the oscillations of the liquid mass in the centre of the globe and explains the seemingly bizarre irregularities of its surface. The chart showed large depressions in the regions occupied by the oceans—depressions which become daily more marked, while, on the other hand, the upheavals of the continents takes place with corresponding continuity. According to M. Faye, geologists do not sufficiently consider geodesic facts. The testimony of the latter shows that in the beginning, that is to say, when our globe was a burning mass in a state of semi-consistency, its figure represented, mathematically, an ellipsoid of revolution, and its ponderosity, in consequence of the flattening of the poles, was manifested with an intensity increasing regularly towards the equator. Since then, the surface of the earth has been sensibly modified. To assert that its depressions and elevations are insensible, is inaccurate. Depressions of 16 kilometres and elevations of corresponding dimensions, represent differences of level of thirty-two kilometres, and these are capable of altering the primitive mathematical figure. Nevertheless, geodesy bears witness that the earth has not ceased to have the figure of an ellipsoid of revolution, and that the distribution of the ponderosity has remained absolutely unchanged. To explain this M. Faye thinks there is only one admissible hypothesis. The portion of the surface of the earth which comes in contact with the depth of the ocean undergoes a cooling more intense than that to which the surface of the

continents is exposed. This cooling is caused by the icy currents from the poles. It is known that, if the temperature of the layers in contact with the air is sometimes from 15° to 20° , that of the lower layers falls and is constantly maintained somewhere in the neighbourhood of 0° . Thus while at a depth of 4,000 metres the submarine terrestrial crust has a very low temperature, the continental crust, at a corresponding depth, has a temperature of 150° , approximately. The consequence of this submarine cooling is a relatively rapid augmentation of the globe's solid crust. But in thickening, the crust contracts and becomes denser. This contraction exercises a pressure on the adjacent pasty or liquid mass, causing it to reflow towards the continental regions and produce there a constant upheaval. In fine, there is brought about a sort of see-saw movement, which tends constantly to deepen the ocean and to elevate the continents. In presence of these great phenomena, volcanoes appear as accidents of little importance. They are doubtless due to the infiltration of sea water, by capillary channels, into the burning or pasty matters of the interior. Upon contact with these matters the water accomplishes a veritable metamorphosis of the rocks in fusion: the silicates thus formed acquire powerfully explosive properties, and are capable of dislocating, and even of bursting, the solid crust unless they find an issue already open. Volcanoes, according to this theory, ought to be found near the edges of the continents, or in the sea, on the circumference of the shallows which correspond to submerged continents. M. Issel's chart, constructed from data purely geographical, confirms this theory in a striking manner.

A CANTON correspondent of the *China Mail* writes:—A laughable incident of the Canton Regatta was the closest struggle of all—that between Frenchmen from the *Lutin*, French man-of-war, and a crew from the Chinese gun vessel *Chen-to*. The *Juniata's* cutter (American) came in first; and although willing enough to take a licking from the generous hosts of the day, Frenchmen one and all would have died sooner than be beaten by the *Chen-to's* Chinamen. Eventually *la grande nation* came in winners by several lengths, but they had a very tough struggle for it. Speaking of the Canton Regatta, the way in which some of the *Juniata's* officers denied themselves all pleasures of the day to dispense hot punch and other refreshments at an improvised bar down below (the punch itself and the salad both exquisite, as only some initiated favoured few know how to compound them), will be long held in remembrance by all who partook of the hospitality so freely extended to all comers by the officers and crew of the U. S. steamer *Juniata* at the Canton Regatta of 1883.

THE Dean of Bangor, speaking at a meeting held to further the establishment of courses of instruction in practical cookery in the elementary schools, said that if we had his own way there would be much less tea-drinking among people

of all classes. Oatmeal and milk produced strong, hearty, good-natured men and women, whereas excessive tea-drinking created a generation of nervous, discontented people, who were for ever complaining of the existing order of the universe, scolding their neighbours, and sighing after the impossible. Good cooking would, he firmly believed, enable them to take far higher and more correct views of existence. In fact, he suspected that over much tea-drinking, by destroying the calmness of the nerves, was acting as a dangerous revolutionary force among us. Tea-drinking renewed three or four times a day made men and women feel weak, and the result was that the tea-kettle went before the gin bottle, and the physical and nervous weakness that had its origin in the bad cookery of an ignorant wife ended in ruin, intemperance, and disease.

THE *Hioo News* says that the farewell ball given by the foreign community of Kobe last evening to Mr. and Mrs. Aston, was certainly the most successful public entertainment which has taken place in Kobe during the whole period the port has been opened to foreigners. It must be very pleasing to Mr. Aston to receive such unequivocal evidence of the appreciation felt here for the manner in which he has discharged the duties of H.M.'s Consulate for more than three years past. Without desiring in anyway to depreciate the capacity of the present incumbent, we cannot help thinking that it must necessarily be some time before he can entirely fill the place which Mr. Aston's removal will leave void. There are so many questions constantly arising, more especially with the Japanese local authorities, that require personal knowledge of individuals and the exercise of special tact to arrange satisfactorily, that Mr. Aston's success while in Kobe must be regarded as altogether exceptional. Exaggeration is not at all unusual on these occasions, but it is no exaggeration to say that Mr. Aston bears with him the best and heartiest wishes of every member of the foreign community residing in this portion of Japan.

SOME interesting archaeological discoveries have just been made at Canterbury. In the course of the repair of the old city wall and buttresses still in existence beside the Dane John, a piece of Roman tessellated pavement was found imbedded in the structure. It is formed of small stone cubes, the tesserae, all white, being inlaid in a layer of fine salmon-coloured mortar, similar to the remains of a Roman villa recently found at Wingham and at the ancient church of St. Martin. Excavations within a short distance of the old city moat have resulted in from twenty to twenty-five skeletons being unearthed, together with Roman urns of fine red ware, a fragment of a highly-decorated bowl, bearing a raised image of a Roman soldier, with a shield on his left arm, coins, rings, bracelets, some curious flint implements, and rounded sling stones.

NATIVE race and religious distinctions are hard to eradicate in India, where, indeed, England

only keeps sway by the terror of her might. The *Indian Mirror* relates that, in the case of a late affray at Delhi, on the Eed, between Hindus and Mahomedans, in connection with the attempt of the latter to sacrifice cows in the city, the Magistrate has sentenced six Hindus to be imprisoned for one year each, and one Hindu for six months; two Mahomedans for one year each, and one for six months. The case of the ringleader, a Moulvi, was still pending at the time of the departure of the latest Indian mail.

THE British steamer *Iolani*, Captain Wallace, has been lost on the island of Tablas, which is situated in latitude $12\frac{1}{2}^{\circ}$ N., east of the island of Mindoro. The steamer is reported to be a total wreck. The *Iolani* was a new vessel of 981 tons. She arrived at Shanghai from Glasgow on the 30th of August, left Shanghai for Hongkong on the 3rd October, and thence for Iloilo on the 13th October. Her non-arrival at Manila from Iloilo, to complete her cargo, had caused some alarm, as she was supposed to be in the track of the typhoon which visited the south of Luzon on the 28th-29th October last.

A HINDU widow, writing to the *Kaiser-i-Hind*, of Bombay, says that it appears from statistics that there are twenty-one millions of widows in India, who are debarred by custom from entering into matrimonial bonds after the demise of their first husbands. If one widow out of a hundred were to give birth to a child every year, the total number of such children, which are generally not allowed to see the light of day, would amount to about two hundred thousand and upwards. The correspondent urges the paper to represent the grievance of these millions of widows to Her Majesty the Queen-Empress, with a view to bringing about such a social change in their community as to improve their status and thereby enable them to break the adamant shackles which keep them hard and fast to the cruel custom.

THE following changes have taken place in the Cabinet:—His Excellency Yamada, from the Home Office, to be Minister of Justice; His Excellency Oki, hitherto Minister of Justice, to be Minister of Education; His Excellency Yamagata, hitherto President of the Council of State, to be Minister of Home Affairs; and His Excellency Fukuoka, from the Department of Education, to be President of the Council of State.

THE *Monocacy* returned to Shanghai from Nagasaki on the 24th November after many months' absence. She will stay there during the winter, and is to be thoroughly overhauled in the meantime.

ACCORDING to the *Saigon Independant* of the 17th ultimo the French Government have informed M. Harmand that it is impossible he should leave for France at present.

DISTRUST AND PREJUDICE.

IT has always been considered a very remarkable literary feat that ADDISON, during quite a lengthy period, produced six articles a week for the pages of the *Spectator*. Few men are equally gifted, and we cannot be surprised that promiscuous attempts to follow the great essayist's example lead often to very lamentable results. One of these results is now before us in the columns of a Colonial contemporary. The subject is the action taken by the Japanese authorities in connection with the recent affray between the police and certain Chinese residents of Nagasaki, and the line of argument pursued is directly inspired by comments that have appeared from time to time in the local press of Yokohama. We err, indeed, in calling it a line of argument. It bears no resemblance to any effort of reason, and reminds us most of LOCKE'S celebrated dictum:—"To be rational is so glorious a thing, that two-legged creatures generally content themselves with the title." Take, for example, the following assertion:—"It is true that the Japanese Government proposes to appoint European and American judges to administer its codes; but this would be merely to perpetuate the imagined grievance in a different form. To formally confess herself incompetent to administer her own laws, and to bind herself to the employment of foreigners for that purpose, would be more humiliating to Japan than the present plan of simply granting extraterritoriality." It cannot be supposed that the writer of this took the trouble to consider why Japan offers to employ foreign judges. An utter neglect of reflection is the least fault that can be laid to his charge. For the proposal that in all cases where foreigners are concerned a majority of the judges on the bench shall be foreign, carries with it no admission whatsoever of Japanese judicial incompetence. It is simply a concession to foreign prejudice and mistrust. The constant contention of the advocates of extraterritoriality is that the impartiality of Japanese judges could not be trusted where the decision lay between foreign and Japanese interests. This objection the Government of Japan meets by offering to leave such decisions virtually in the hands of foreigners. They see clearly, as every thinking man must see, that it is not really a question of competence or integrity, but of race prejudice. Twenty years hence, however unimpeachable the records of this country's courts might be, the same difficulty would probably exist. There would still be the

same unworthy reluctance to admit that the sense of justice or fair-play can be a governing influence among Orientals. That conviction is wholly beyond the reach of logic or the testimony of negative experience. Therefore the Government offer to meet it boldly by a concession in itself almost conclusive of good faith.

For certainly the appointment of foreigners to the highest judicial positions in the land is not a measure which can be supposed to possess many attractions for Japan. Apart from the question of expense, a Government likes to keep these posts for its own nationals, and we have no reason to suppose that the Japanese are more cosmopolitan than other peoples in such matters. On the contrary, the general impression conveyed by their policy is that they desire nothing with greater earnestness than to be self-sufficing, and to dispense with extraneous aid altogether. When, therefore, they offer to place upon their bench twenty or twenty-five Western judges, simply in order that foreign law-breakers may have the privilege of being tried by men of their own race, they show an impartiality and freedom from prejudice which their critics would do well to imitate. The advocates of extraterritoriality, so far from appreciating this liberality, twist it into a confession of incompetence. They might as well assert that when a landlord builds a house after a certain plan to suit a tenant's caprice, his inability to construct it in any other fashion is established. Such a prostitution of reason to prejudice betrays a set reluctance to be trustful; a determination not to be convinced by everything. Men argue as though the Japanese Government, in seeking to recover jurisdiction over foreigners, were contriving some subtle scheme for their despoliation or expulsion. The very pursuit of such an object is called impractical and romantic, while in reality it deserves sympathy and approbation. To the opposition it encounters these uncomplimentary terms may be applied with much greater justice. For there is no reasonable proportion between the consequences of the change and the denunciations levelled against it. Judging by the latter, one would imagine the proposed partial abolition of extraterritoriality to be a measure calculated to affect the whole course of our daily existence, whereas in truth it could only concern the lawless and peace-disturbing fraction of the community—a very small fraction, let us hope. How many of us have ever been arraigned, or are ever likely to be arraigned, before a criminal tribunal? Certainly not one in a

thousand of the educated men who come here to accomplish the commercial purpose of the treaties. For the sake, then, of a handful of roughs, let them be liberty-men, loafers, publicans, or panders, the extension of this country's foreign intercourse is to be impeded, the prospects of foreign trade circumscribed, and the development of Japan's resources prevented. It is impossible to conceive anything more illogical or impractical. Japanese statesmen would fail to discharge the most elementary functions of Government did they consent to expose the whole empire to the inconveniences and anomalies of that heterogeneous medley of jurisdictions, which, even within the narrow limits of the open ports, have been proved so confusing and inefficient. In discussing this question, three important facts are persistently ignored. The first is that to which we have just alluded, namely, that the proposed change, so far as criminal jurisdiction is concerned, would only affect an exceedingly small section of the community; the second, that in civil cases half the jurisdiction is already in Japanese hands; and the third, that the foreign residents would still continue to enjoy the protection of their own Ministers and Consuls. The same machinery could always be set in motion to offer remonstrance or seek redress. Surely no very grievous wrongs need be apprehended under these circumstances, unless indeed foreign and native officials are objects of equal distrust. But in truth the question receives no dispassionate consideration. The place of reason and logic is usurped by sentiment and race prejudice. Many of the advocates of extraterritoriality cannot put into intelligible form the apprehensions they feel at the prospect of its partial abolition. Enough that they have a vague horror of everything Japanese, and a hazy notion that privileges must never be surrendered whatever inconveniences they entail. Their mood deserves some respect, as standing in a sort of distant relationship to the "Britons-never-will-be-slaves" phrensy; but it offers a grotesque contrast to the charges of distrust and race prejudice which they themselves so loudly prefer against the Japanese.

The ruling passion, be it what it will,
The ruling passion conquers Reason still.

The ruling passion here seems to be hot anger against the Japanese Government and a determination to lay to its charge all the misfortunes and disappointments of every-day life in Japan. To eyes blinded by that feeling Japanese official action invariably looks faulty. Thus it happens that journalists who know nothing whatsoever about the considerations which

induced the authorities to hold the investigations at Nagasaki with closed doors, do not hesitate to denounce the Court as "a species of modern Star-chamber" and to speak of "the apparent absence of any of the ordinary machinery of the law which is in force in other countries." Such writing betrays a wonderful recklessness of facts. The Japanese Government, having regard to the international excitement which rash and unwarrantable newspaper comment had excited, deemed it expedient to conduct the trial of the Nagasaki police in private. Such a course is within the discretion of every Government, and the expressions it has evoked from local writers are both impertinent and unjust. They do not prove that Japanese criminal procedure is defective or that the general administration of the law is below a civilized level, but simply that there are English journalists in China and Japan whose idea of honesty is to denounce everything they do not understand, and of fair-play to declare a man a murderer while he is awaiting trial. Extraterritoriality must be in a sadly decrepit condition when such logicians as these are its only props and stays.

NEUTRALS IN CHINA.

THE voluntary nature of international law is its principal defect. Different nations take different views of it and the same nation takes different views of it at different times.¹ What is chiefly wanted to make it efficient is an authoritative exponent of its principles. It is for this reason that many distinguished jurists urge the advisability of an international congress to prepare a code which shall receive universal recognition. Pending the compilation of such a code, the tendency of nations, when confronted by any important question touching their rights, is to take the law into their own hands. There is a possibility that the eventualities of the near future may bring home to us the inconveniences of this uncertainty. Should the Tonquin embargo result in war between France and China, the rights of neutrals settled in the

latter country or trading with it will be open to various interpretations, and unless the Governments of the Great Powers agree, beforehand, upon some concerted line of policy, complications of most serious import may ensue. We do not presume that this danger is unforeseen. Indeed, if the telegram received a few days ago is to be read as we suppose, Germany, the United States and Great Britain have already initiated a programme that will go far to allay the growing uneasiness.

In the meantime, however, it is worth while to consider the nature of the problems that present themselves. Generally, it may be said that the tendency of civilization is to respect neutral interests. In other words, neutral power has increased, of late years, more than war power, and the drift of international morality is constantly towards such alterations of the code of war as will favour neutral commerce. But before examining the rights of neutrals in the special contingency that concerns us here, we must first determine who are neutrals. Upon this point the latest dictum of international law is that the nationality of individuals in war depends, not on their origin or their naturalization, but upon their domicile. Anyone domiciled of free choice in a neutral country is a neutral, and anyone domiciled in an enemy's country is an enemy. Thus, too, a person having a house of commerce in the enemy's territory, although actually resident in a neutral country, may be treated as an enemy so far forth as that part of his business is concerned. Under this definition it is plain that all foreigners settled in China would become, *de jure*, enemies of France, in the event of a war between the latter and the Middle Kingdom. But there presents itself here an important modification; namely, that the foreign settlements are not Chinese territory in the strict sense of the word. They are places specially designated by treaty for commercial purposes, and those living within their limits are exempted, in many respects, from the exercise of Chinese sovereignty. Having regard to these facts and to the nature of the interests at stake, it can scarcely be doubted that the Great Powers would claim for the settlements of their nationals, and for the persons residing in those settlements, a neutral character.

Here we may observe, *en passant*, that this character would not necessarily attach to Frenchmen inhabiting such settlements. The doctrine of the English Courts, adopted by the American, and interpreted by WHEATON, is that a person having a house of commerce in a neutral country and

domiciled among the enemy, is not held to be a neutral. But as the principle obviously underlying this distinction is partiality towards the interests of captors, and as its admission might involve grave infractions of the desired neutrality, the Great Powers would probably refuse to recognise it, and China would be better advised than to insist.²

What rights, then, would attach to this neutral character? Briefly, the neutrals could insist that their settlements should be inviolate and untouched by the operations of war, and that the privileges they enjoy there should be uninvaded. This would, of course, carry with it exemption from blockade. It has always been recognised that blockade is illegal if it affects the passage or the stream of vessels destined for neutral soil. On the other hand, such exemption would certainly be inconsistent with the rule of impartiality which governs the practice of strict neutrality. China would be benefited at France's expense. To take an example. For the conduct of a campaign in Tonquin, Canton would be China's base of supplies, and nothing could cripple her operations more than its blockade. Yet blockade, if permitted, would destroy the foreign commerce of Canton, since the egress and ingress of neutral vessels would necessarily be prevented. Nay, more, blockade would imperil the safety of the foreign settlements, for access would equally be denied to the force necessary for their protection, or to the supplies required by that force if admitted. On the whole, while admitting that to interdict the blockade of ports where foreign settlements exist would be, in some degree, an infraction of France's belligerent rights, it is not less evident that blockade, if permitted, would completely violate the rights of the neutral residents.

Many curious and difficult problems present themselves with regard to the neutralization of the open ports, as for example, the admission of vessels of war of the belligerents; the rights of asylum, and so forth. But, where precedents to determine the main question are wanting, it would plainly be presumptuous to discuss these side issues. However the dispute between France and China may eventuate, it will not be wholly unproductive of good if it extracts from Germany, America, and England an authoritative definition of the rights of neutrals residing in Oriental countries.

And here a question naturally arises as to Japan's probable attitude towards this

(1) The relations of the United States and Great Britain have furnished some of the most remarkable examples of this variable principle. Thus, in 1862, some of the crew of the *Emily St. Pierre*, which had been captured by Federal ships, got possession of the vessel and carried her to Liverpool. The U.S. Government claimed her on the plea that the rescue was fraudulent and an act of violence towards a lawful cruiser. But the English Authorities rebutted the claim on the very same ground put forward by the American Government in reply to a similar demand made by Great Britain sixty-two years previously. The case of the *Trent* was still more remarkable. Great Britain, smarting under a supposed insult to her flag, advanced claims founded upon neutral rights which she had never before consented to recognise. The Washington Cabinet was thus enabled to concede England's demands in deference to the very principle for which the United States had always contended.

(2) The claim advanced by the French—namely, that the district they occupy in Shanghai is not a settlement, but a concession, i.e. French territory—might have inconvenient consequences in the event of war.

coalition of Great Powers. She, too, has subjects settled in China, and their interests are in this matter identical with those of their Western fellow-residents. We may conclude, therefore, that she will readily acquiesce in any project calculated to guarantee their commercial privileges. But it must be a project in no respect opposed to the dictates of that friendship which it is this country's constant desire to maintain with her neighbour. Although dissimilarity of national characteristics and an apparent, though we trust temporary, divergence of political paths postpone any prospect of close combination between the two empires, Japanese statesmen have by no means lost sight of that prospect, nor will its influence be small in the present case. Since, however, as we have briefly indicated above, the principles which are likely to be adopted by Germany, the United States and America for the protection of neutrals, can only tend to China's benefit, Japan may endorse them with a free conscience. At the time when war between Russia and the Middle Kingdom was not improbable, we pointed out that, having regard to the preponderance of Russian influence and the facility with which Russian power could be brought to bear upon Japan, the latter would be acting unwisely did she strain any points in favour of China, or make any sacrifices for the sake of maintaining that form of "strict neutrality" prescribed by modern canons. But these prudential considerations lose much of their force in the present case. Acting in concert with Germany, America, and England, and knowing that the consequences of their action cannot be inconvenient to China, the Government of Japan has not much cause for anxiety on any score.

A HONGKONG LIBEL CASE.

A curious trial has just been concluded before the Supreme Court in Hongkong. Mr. FRASER-SMITH, the proprietor of the *Hongkong Daily Telegraph*, was charged with "publishing a false and defamatory libel" on Mr. J. MCNEIL PRICE, the Surveyor-General of the Colony. The article on which the charge was based set out by criticising a custom which prevails in the Colonial Secretary's Office of confining the advertisements inviting public tenders for local works to "the semi-privacy" of the *Government Gazette*. The writer suggested "by the private interest of some person or persons," and after declaring that "the tongue of public report does not scruple to assert that these contracts are 'kept dark,' manipulated and arranged to suit

the devices of certain officials," concluded thus:—

We are quite sure that "the honourable the Surveyor-General" could (and would, if requested to do so) give His Excellency a deal of valuable information on this subject. Mr. PRICE is reported to be a determined opponent of the jobbery which is said to prevail so extensively amongst the subordinate members of the Surveyor-General's department. The subordinate members alluded to do not scruple to retaliate by asserting *sub rosa* that the honourable member likes to monopolise all "the good things" to his own cheek.

Perhaps the truest description applicable to this species of writing is that it is a mischievous attempt to scatter scandal broadcast. To casual readers, however, the reputation of the Surveyor-General does not seem to be specially assailed. The resultant impression is that considerable jobbery and corruption prevail among the subordinates of his department, but that he himself is opposed to these abuses. The law, however, takes no cognizance of libels uttered against a body of men. Unless Mr. PRICE had instituted proceedings in his own name, the obnoxious article must have remained unchallenged. Neither alternative was pleasant, and we can sympathise with any official confronted by the necessity of choosing between the two.

The defendant's plea was not guilty. He did not plead justification, yet his line of defence throughout was directed to prove the truth of the assertions embodied in the article complained of. The first witness he called was the Surveyor-General himself. This gentleman's evidence was somewhat unusual in character. He declared that he never read the *Hongkong Telegraph*, but that he knew he had been systematically slandered in its columns for months past. In proof of these systematic slanders and as evidence of malice, several articles from the *Telegraph* were quoted by the plaintiff's counsel. None of them, however, dated farther back than February the 5th, 1883, whereas on the 8th of January the Surveyor-General addressed to the acting Colonial Secretary the following letter:—

Public Works Department,
8th January, 1883.

SIR,—I have the honour to transmit you the enclosed copy of a letter from the editor of the *Hongkong Telegraph* in reply to a request from me that he should discontinue sending his paper to this office.

I find that the *Hongkong Telegraph* is supplied to me under the authority of C. S. O. 1,724 of 1881, and I have therefore to request you, if you think it necessary, to be good enough to countermand the order for the paper.

Apart from the fact that the subscription to this scurrilous paper is a waste of public money, I have grave objections to allowing it inside my office on the grounds of decency and decorum, and I cannot but think that some responsibility attaches to the Government for the pecuniary support which it renders month after month to a convicted criminal in his abandoned career.—I have, &c.,

(Sd.) J. M. PRICE, Surveyor-General.

When and how the contents of this letter came to the knowledge of the defendant, there was no evidence to show, but they were certainly known to him before the trial. Their effect upon his disposition towards the Surveyor-General is not difficult to imagine. No man likes to be called a "convicted criminal," or to be accused of pursuing an "abandoned career," and

we do not see that the latter term properly describes the profession of a journalist, any more than the former is justified by the fact that the editor of the *Telegraph* once spent two months in prison for exceeding the bounds of legal criticism in commenting on the abilities of an itinerant actor. It cannot, of course, be contended that the Surveyor-General's letter was justified by any criticisms to which his public career had previously been subjected in the columns of the *Telegraph*, or that the editor of that journal, even supposing the contents of the letter were immediately disclosed to him, had warrant for the crusade he seems to have instituted against Mr. PRICE. But in whatever relation of cause and effect these circumstances may stand to one another, it is only fair to note that the editor of the *Telegraph* did not enjoy a monopoly of intemperance.

The most inexplicable part of this incident, however, is the fact that a letter written to the Colonial Secretary by the Surveyor-General on such a subject should have become public property at all. Nothing could less conduce to the interests of the Colonial Government's service, or reflect more injuriously on the reputation of its officials, than that the contents of despatches passing between the various departments should be repeated to those about whom they are written. This surely is a much more legitimate subject for criticism than the very improbable abuses described by the *Hongkong Telegraph*.

After this the defendant called his brother, and elicited from him a number of strange statements. The witness explained that the obnoxious article was written in consequence of information supplied by Mr. EDWARD ROSE, foreman of the Hongkong Waterworks, who had said that his prospects in connection with the Tytam Waterworks would be better did not "Mr. PRICE like to keep all the good things to his own cheek." Further, that the same Mr. ROSE had once "called on him (the witness) and asked him to interest himself by the paper to get certain outstanding accounts, due to contractors to that Department, paid;" had proposed an arrangement by which the witness should have a percentage on the amount of the accounts, and had introduced him to two or three of the contractors; that in consequence of this a paragraph was inserted in the *Telegraph*, with the result that the claims were immediately settled; and that the reason assigned for the delay by Mr. ROSE and the contractors was that the latter "could not afford to give a gratuity to the man in charge of the pay department." One of these contractors was then called, but it appeared that he had completely lost his memory. The only thing he could be sure of was that when he got work he did it. He did not remember whether he had had any conversation with the previous witness; did not remember where he had complained to Mr. ROSE about not being paid for his contracts; did not remember whether he had been kept waiting for payment, and, in short, found his memory too short to be of any value whatsoever in a court of law.

This was bad enough, but worse was to follow. For when Mr. ROSE was called, he denied point blank and in the most unequivocal terms every one of the statements and acts attributed to him. The defendant did not hesitate to charge this witness with deliberate perjury, and applied for time to produce evidence in proof of the charge, but the Judge, very rightly as it seems to us, refused the application on the ground that Mr. R. FRASER-SMITH, not Mr. ROSE, was on trial. The case was therefore concluded without further evidence, and the Jury decided, by four votes to three, that the defendant was not guilty.

The impression produced by a perusal of this trial is most painful. So far as the alleged libel is concerned, there is not much to be said. The defendant himself denied that he had penned it, or that he was in the Colony at the time of its publication, but was careful to explain that this denial did not involve disavowal. On the contrary, he said that "he quite agreed with everything in the paragraph except the very injudicious reference to what Mr. ROSE had told his brother," that is to say, the sentence, "The subordinate members of the Surveyor-General's department do not scruple to retaliate by asserting, *sub rosa*, that the honorable member likes to monopolise all the good things to his own cheek." Under these circumstances the jury had only to consider whether the article was defamatory and whether the defendant was responsible for it. As to the latter point, although the testimony was pretty clear that Mr. R. FRASER-SMITH did not write the paragraph himself, his responsibility as editor and proprietor of the *Telegraph* was indisputable; while as to the former, we fail completely to see that any other definition is applicable to the article. But the ways of juries are inscrutable. Some explanation of the wonderful verdict returned by these seven gentlemen of Hongkong may perhaps be found in the bewildering latitude given to the defendant—latitude which enabled him to confuse the issue by introducing matter that had no logical connection with his plea. The Judge's charge, however, ought to have removed all difficulties of this nature. His Lordship virtually told the jury that a verdict of "not guilty" would amount to a declaration that the defendant, as a public writer, was entitled to criticise a public officer in such a way and on the strength of such evidence. Yet their verdict was "not guilty." It is to be hoped that this analysis of a journalist's privileges is confined to that section of public opinion represented by the four gentlemen who constituted the majority of the Hongkong special jury.

Still more unsatisfactory is the imputation thrown upon a branch of the Colonial Executive. It is very difficult to believe that all the evidence given by the defendant's brother was false; yet, either the greater part of it was a pure fabrication, or the foreman of the Hongkong Waterworks perjured himself. The total collapse of the Chinese contractor's memory was also an unfortunate event—especially unfortunate for the fair-fame of the Surveyor-

General's Department. An attempt was made to show that the practice adopted in giving out contracts is pernicious, since the acceptance or rejection of tenders rests finally with the Governor alone, but we imagine that the working of this system is not likely to inspire the English public with much uneasiness. Little, however, as any one will be disposed to credit the malpractices attributed to the subordinates of the Surveyor-General's Department, there is reason to hope that the charge of perjury preferred in open Court against the Foreman of the Hongkong Water-works will not remain unrefuted, and that the proceedings in rebuttal may bring forward some less suggestive witness than the oblivious contractor, Mr. LUM TAM CHI.

TRANSLATIONS FROM NATIVE JOURNALS.

THE BENEVOLENT SOCIETY.

(Translated from the *Nichi Nichi Shimbun*.)

On the 7th instant, H.I.H. Komatsu-no-miya gave, as President of the above Society, an entertainment to the provincial Prefects now staying in the Capital. During the evening he addressed them as follows:—

Gentlemen—I feel the greatest pleasure in having invited you here to-day and being enabled to converse with you. That I have solicited your presence, is due to my desire to tender my hearty thanks for the services you rendered to the Benevolent Society during past years, and further to beseech renewed exertions to enlarge its operations. Its prospects are brilliant: its scope increases year after year: members and contributions are gradually augmenting. The object of the society is appreciated everywhere—a fact which shows the growth of public benevolence. Were it not for your exertions this result would not have been achieved. On this point, I desire to offer you my best thanks. As you are aware, our Society aims at rescuing human beings from suffering. We are anxious to establish communication with similar organizations in Europe and finally to join the Geneva Convention. In August last year, when war was imminent with Korea, we forwarded a petition to the Government asking for permission to despatch a detachment of nurses to the scene of operations in order to give assistance to enemy and friend alike, and thereby to repay a portion of the gratitude we owe to the nation. But fortunately for the welfare of both countries, the difficulty was settled without recourse to arms, and our services were not required. There is no telling, however, when this nation may be involved in a foreign war. We are therefore bound to extend the operation of this association and affiliate it to the Geneva alliance. Our work is very arduous, and speedy success cannot be looked for. But with mutual assistance and the earnest exertions of all the members, there should be no insurmountable difficulty. Her Imperial Majesty the Empress has been informed of the object of our organization, and has promised to contribute *yen* 300 yearly to its funds. Nothing should excite more hearty gratitude in our hearts than this gracious action of Her Majesty. Who would not be thereby urged to enlarge the sphere of the society. Simultaneously with the Imperial donation a sanitary ex-

hibition was established in Berlin under the auspices of the Empress Augusta. Our Government sent a commissioner thither. The two events have afforded us an opportunity of increasing the funds of the society and taking steps to join the Geneva Convention, our members having unanimously decided upon the proposal, and communicated with the Japanese commissioner in Berlin to investigate all the details connected with the treaty. Mr. Sano Tsunetami sent a letter to Mr. Siebold asking him to exert himself on behalf of the organization. Now, gentlemen, you are all men in a responsible position, being charged with the administration of the Government or enjoying high titles or social rank; and it is within your power to encourage good people in participation in our work. In Western countries, even the august Sovereigns themselves become members of philanthropic societies and their Ministers follow their example. During the wars between Russia and Turkey, and between Germany and France, the Empresses of the respective countries visited the hospitals and did everything in their power to allay the sufferings of the afflicted. That philanthropic societies do immense good to the countries that possess them, is demonstrated by such facts alone. Bearing this in mind, we sincerely hope that our society will do like good in this country and thereby accomplish the wish of Her Majesty. I earnestly request all gentlemen present to exert themselves on behalf of the association.

TRADE BETWEEN KOREA AND JAPAN.

(Translated from the *Fiji Shimpō*.)

On the 7th instant the Government issued Notification No. 40 to the effect that the trade between Japan and Korea should be conducted after the method of Western commerce in that country. It reads as follows:—"Notification No. 129, issued in October the 9th year of *Meiji* (1876), is revoked from the 1st of February of the 17th of *Meiji* (1884) and trade with Korea shall be carried on from that date, according to the rules under which foreign trade is conducted in Japan. Be it enacted, therefore, that Japanese vessels carrying on trade with Korea may load or discharge goods at the three ports of Idzughara, Tsushima, in Nagasaki Prefecture, Shimoseki, Nagato, Yamaguchi Prefecture, and Hakata, Chikuzen, in Fukuoka Prefecture, exclusively, besides at the five open ports. A fee of *yen* 1 will be levied upon any vessel of Japanese build on her departure, and a fee of *yen* 2 on her arrival.

By Imperial Order,

SANJO SAN'EYOSHI, Prime Minister.

MATSUKATA MASAYOSHI, Finance Minister.
7th December, 1883."

This Notification has a most important bearing upon the commerce between Japan and Korea. We shall, therefore, venture to express an opinion on the subject, hoping that our readers will afterwards enlighten us further. Our trade with Korea was originally in the hands of the Taishu merchants who raded to Pusan in the time of the Tokugawa régime and subsequently to the Restoration. In February of the ninth year of *Meiji* (1876), however, a treaty of friendship and commerce was concluded between the two nations; and subsequently the merchants of the Osaka and Kiushu districts went to Pusan in large numbers. Rapid communication by sea was then established. Thus the course of trade underwent a complete change.

In October of the said year, the Government enacted the following rules by Notification No. 129:—"It is hereby notified that henceforward the imports from, and exports to, Korea shall be entitled to the same privileges as domestic trade. When goods are exported the exporters shall apply to the Custom Houses at the treaty ports, or the ward office at any place where there is no Custom House, to have their invoices stamped, restoring the documents to the said offices, on the return of their vessels from Korea, with the signature of Japanese officers in Korea proving that the goods have been properly entered. Importers shall present, on arrival of the ships, invoices duly signed by Japanese officers to the Custom House or Ward offices before landing the goods."

Later on the ports of Wŏn-san and Inchŏn were opened to Japanese commerce, which since then rapidly augmented, now representing more than yen 4,000,000 per annum. Japanese residents in the treaty ports of Korea number more than 3,500. In fact, Korean trade has been of such a character as to increase the resources of Japan. Up to the present, Korean trade was conducted with the same privileges as internal commerce. It was not subject to any customs regulations. Japanese merchants could export goods from any port they liked and their ships could leave from and return to any part of the country. Vessels of Japanese build could go to Korea, so that steamers and sailing ships were not exclusively required. Even our fishing boats could go thither. No tax was imposed upon the exports and imports, nor was any kind of ship-duty levied. Indeed, there existed no difference whatever between this country's commerce with Korea and its domestic dealings. The system was nothing short of free trade. That Japanese who are regarded as devoid of courage to conduct foreign trade on foreign soil have embarked in transactions with Korea to the extent of more than yen 4,000,000 and have commerce which is worth more than yen 400,000 annually, is due to this liberal policy.

Human affairs are, however, exposed to frequent change. Korean trade affords the best example of this fact. Within hardly a hundred days, its aspect, changed by various forces from without and within, underwent a complete metamorphosis, as though a shower had suddenly fallen on a sultry summer day and chased away the tormenting heat. The Government issued the trade regulations recently enacted between this country and Korea on the 15th of October last. They were to come into operation in the beginning of November last, so that they must be now in full force. The portion of the rules that most affects Japanese traders in Korea is that which makes them pay tonnage dues of 125 *mon* (a little above *sen* 40) per ton for large vessels. When they are of a capacity below 500 tons, half of the said dues is payable; and for vessels of less than 50 tons, one quarter only. As regard the exports and imports, we find that, with the exception of coins, books, and agricultural and scientific instruments, duties of from five to thirty per cent. are leviable. This impost must have seriously interfered with the business of Japanese traders. Notification No. 40 now issued has imparted a purely foreign character to Korean trade. Although it does not mention the imposition of duty on imports from Korea, it is evident that such will be levied. Readers may remark that Korean trade is to be conducted after the method of Western commerce in so far as the rules of entry and clearance are concerned, but that no duty shall be imposed on imports from Korea. But we firmly believe that such cannot be the

case, as a little consideration of the practical state of affairs will show. Suppose Japanese merchants are not required to pay duty, while foreigners are required to pay it on imports from Korea, there would be a monopoly of Korean trade in the hands of Japanese, by whatever name it might be called. Such partiality cannot be assumed by this country. It is evident that future trade with Korea is to be conducted after the style of foreign commerce here. The Government appears to be aware of the difficulties which may overcome the Japanese traders, and consequently has authorized the ports of Idzuga-hara, Shimono-seki, and Hakata to be opened to Korean trade. Japanese ships loading and discharging in these ports are required to pay fees of one *yen* on the occasion of their departure for Korea, and two *yen* on their return. This measure will further encourage trade between Korea and Japan, yet it is not sufficient to save Japanese traders from the difficulties which may befall them after February next.

ORDINARY CRIMINAL COURT, TOKYO.

Before His Honor Iro, Judge.—THURSDAY,
November 29th, 1883.

Mr. Kikuchi, Assistant Public Prosecutor, prosecuted.

This case was for the prosecution of two of the Fukushima suspects, Kono and Aizawa, for libelling Mr. Mishima, ex-Governor of Fukushima-ken. It will be remembered that the two accused are under sentence to a period of imprisonment, having been already convicted of treason.

The Court sat at 11.20 a.m., when His Honour sent an intimation to the Counsel for the defence that it was time for him to attend. As he was engaged in a civil cause at the moment he did not appear, and the investigation proceeded without him. His Honour, according to the usual custom, made inquiry into the name, position, and age of the prisoners. Next the prosecutor explained to them the nature of the charge, which was chiefly based upon the manifesto distributed by them soon after their original proposals were opposed by the Governor, and upon the statement of Hanaka at the preliminary trial. (By this time, Mr. Urata Jihei, Counsel for the accused, had made his appearance in Court). His Honour addressed him as follows:—"I commenced the trial in your absence, as you did not respond to the intimation I sent you a short time ago.

Mr. Urata—I had no knowledge of the Court being opened to-day, until I arrived this morning in order to ask to copy the indictment. I have not yet finished transcribing it. Therefore, I am not ready to enter upon the defence; and I pray Your Honour to adjourn the hearing till to-morrow.

His Honour—I understand what you mean. Your assertion that you had no previous knowledge of the case being opened to-day might be rejected. Notice was duly issued, in conformity with established rules. But, as I do not desire to put you to inconvenience by depriving you of necessary information, I will adjourn the case till to-morrow.

FRIDAY, November 30th, 1883.

On the Court assembling this morning, His Honour directed the Clerk to read the depositions taken at the preliminary trial of Kono and Aizawa, if the accused desired those papers read.

Kono—I have not the least concern in the mani-

festo referred to in the statements. I was not consulted by anybody concerning its distribution; but the report that I intended to sacrifice Hanaka, one of my colleagues, demands further refutation at my hands. Information has reached me that the members of the Local Assembly of Fukushima, twenty-two men in all,—have been sentenced to penal servitude, and that all of them have appealed against the decision. I am thus obliged to state the facts of the case as plainly as possible. The publication of the manifesto was due to the corrupt administration of the Prefect, and to nothing else. Since Mr. Mishima was appointed Prefect of Fukushima, the local administration underwent a complete change, in utter contravention of the rules. He appointed a native of another prefecture to be chief district officer. In April last, when a special assembly was opened, he submitted many proposals for the consideration of the Assembly. They were all of such a nature as to anger the whole people of the prefecture, some eight hundred thousand souls, whom he held in great contempt. The Special Assembly was, however, closed by him after great difficulty. Following it, the Ordinary Assembly was opened. Again, the Prefect submitted intolerable proposals. The Speaker was ever at a loss to explain them, because of their being out of order. Dissensions were rendered rife, and the whole assembly was thrown into wild excitement. I, as Chairman of the meeting, did everything in my power to pacify the exasperated members. The majority of them, however, vetoed all the proposals. I came to the conclusion that the Prefect's arbitrary conduct was due to his ignorance of local customs and popular feeling; so I determined to inform him on these matters. Accordingly, I went to his house and asked to be allowed to see him on several occasions; but he refused to meet me on the pretexts of being sick, absent, too busy, and so forth. The public was eagerly waiting the result of the Assembly, and kept on impatiently writing to the local journals urging the immediate publication of the minutes, or calling upon the members to obtain information. The papers were suspended; and the reports could not be published. In consequence of this, it was agreed among the members to publish the minutes in pamphlet form. Aizawa was entrusted with the work, and went to a printing office to have the papers published. But the manager declined, owing, as he said, to lack of the necessary material. Then, another proposal was made, namely to publish them in another locality. This scheme also met with failure. Afterwards I did not know what became of the documents until I was informed that Hanaka had had them printed on his own responsibility. I remonstrated with him, remarking that his action was open to objection. The local Government was then employing many spies to find out what were my relations with Hanaka, but I did not concern myself about that as I had nothing to do with the matter. I was not implicated in it in the slightest degree. The members of the Local Assembly who are now imprisoned awaiting the decision on their appeal had also no hand in the publication of the report. The whole responsibility rests upon the shoulders of Hanaka. I beg merely to call the attention of Your Honour to the facts I have here mentioned.

On the Court resuming at 2 p.m.,

His Honour asked Aizawa, if he had anything to say.

Aizawa—I am willing to furnish further informations concerning the manifesto. Its proposed publication in pamphlet form was abandoned.

But Hanaka got it printed on his own responsibility. Nobody else was concerned in it. The cause of all the trouble was the arbitrary conduct of Mr. Mishima, who inaugurated every oppressive measure that one can imagine. He paid no heed to the resolutions of the Local Assembly, and proposed such works as tended to ruin the prefecture on account of their heavy cost. If he had carried out the proposals, however oppressive, with the sanction of the Local Assembly, his actions would not have been assailed by the people. But he completely ignored opinion and increased the expenditure of the Normal School, for which no proposal was submitted to the Assembly. He held its members in derision and contempt. On the 10th of April last a Special Assembly was convoked. On this occasion hostile discussions took place, and nothing could pacify the irritated members but the resignation of Mr. Mishima or the close of the Assembly. The latter alternative was resorted to. Shortly afterward, the Ordinary Assembly was called, when to the utter disgust of the members, the Speaker, who represented Mr. Mishima, failed to give satisfactory explanations on the proposals. Without proper knowledge of things, no one can enter upon the discussions. Accordingly, we solicited the attendance of the Prefect, who did not appear. About ten days were passed in this way, no business being done. The members were all angry, and opposed all proposals. I tried to quell their rage, and was assisted by Kono; but our efforts were of no avail. The Assembly Hall was then crowded by an immense number of spectators who clamored for the publication of the proceedings in pamphlet form. We communicated with the local newspaper office on the subject; but unfortunately, the journal having been suspended, the proprietors declined to undertake the job. Then the silk season commenced, and many of our colleagues were obliged to return to their homes to look after their magnaneries. The only members who remained in Fukushima, were Hanaka, Kariyado, and myself. In these circumstances, we were unable to publish any account of the proceedings. But to our surprise, Hanaka had had them printed in the form of a manifesto on his own account. I had no hand in the publication. The twenty-two members who are now imprisoned cannot be held responsible. I have, however, sent ten of the manifestoes to Kariyado, according to the request of Hanaka. This is all I wish to add to my deposition taken at the preliminary examination.

His Honour—Let us enter upon the discussion of the case.

Mr. Urata (Counsel for Kono)—I wish to know, first of all, whether the fact that the members of the Fukushima Assembly were imprisoned is to be taken as evidence, or whether the Prosecution has any other evidence.

His Honour—The Prosecutor has already explained the nature of the charge, and the depositions taken at the preliminary examination form the evidence. Any evidence that has not been produced in the Court is not allowed to be accepted.

Kono—The Prosecution bases our criminality on the manifesto. But it was published by Hanaka, and the twenty members of the Fukushima Assembly are not implicated in it. If the Prosecution asserts that they are implicated, it must adduce substantive evidence.

Prosecutor—Kono misunderstands me. I have never mentioned anything about the members of

the Fukushima Assembly. No evidence is, therefore, required.

Mr. Urata—Hanaka deposed in the preliminary examination that he had published the manifesto on his own responsibility. This clearly shows that no one else was implicated in it.

Prosecutor—The defendants assert that they were not implicated in it, and that there is nothing that shows their culpability. But the letter, bearing the name of Kono, is sufficient evidence that there existed such a mutual understanding or agreement between the parties. In criminal proceedings, we are not required to adduce counter-evidence every time as in civil cases, and it should be sufficient to furnish the Judge with one statement, so that he may form his opinion.

Mr. Urata—The letter in question was not written by Kono himself. That passed between Aizawa and Hanaka. Suppose there are three persons. A and C write between them that B is a thief. To take B for a thief at once on the mere strength of that testimony would be irrational. That the Prosecution should try to establish the implication of Kono by the letter alluded to, is exactly similar to this case and therefore illogical. If the statement of Hanaka is to be taken as evidence, it becomes an established fact that Hanaka is solely responsible for the distribution of the manifesto since he affirmed the fact. It is irrational for the prosecution to take the preliminary depositions as evidence. In fact, there is no testimony to show the implication of my clients in the matter.

Prosecutor—Different men have different opinions about evidence. Some may think that this testimony is not good, and others think it is good. I am fully convinced that the evidence in my hand is sufficient.

His Honour asked Kono if he had anything to say further.

Mr. Kono replied in the negative.

His Honour, calling upon Aizawa to speak, that accused said—The letter in question I sent to Kariyado with no other purpose than to encourage him in his political work. I do not see any reason why I should be punished.

Mr. Uyeno (Counsel for Aizawa)—In order to understand this case, it is necessary to comprehend what is meant by defamation of public functionaries. It is this: when a person fabricates any statement damaging the conduct of officers while they are entirely innocent, then the defamer is guilty of libel. Our Penal code has express provisions to this effect. Now the question arises, "Was Mr. Mishima's conduct entirely blameless or not?" I leave it to the Honorable Court to decide the question. As regards the manifesto, I find that it is a report compiled by an individual for private use and not for public circulation. It has no public-character at all. The man in question caused it to be printed in order to save the trouble of writing it. The depositions taken at the preliminary examination of Hanaka conclusively show that he is alone responsible for the matter. My client, Aizawa, had no hand in it. But if the prosecution assert that he is guilty, it must show cause. The letter upon which they base their argument, has nothing to do with this case, since its contents have no bearing whatever upon the alleged implication of the accused in the distribution of the manifesto. That Aizawa sent ten copies of the manifesto to Kariyado, is entirely his private affair. There is a wide difference between publishing a fabrication in newspapers which have public circulation and printing a report for

private use. There is nothing in this case that can prove the implication of the accused in the crime. I pray, therefore, that the Honorable Court will dismiss the case.

Prosecutor—The argument of Mr. Uyeno does not hold good in the present case. It is only applicable in discussing the adjudication of penalties. I will answer it when that subject comes under our consideration. That the accused had the same intention as Hanaka, is established by substantial evidence, such as that they distributed the manifesto among themselves.

His Honour asked all the parties if they had anything further to say.

All replied in the negative.

His Honour, having called upon the Prosecutor to consider the adjudication of penalties, that officer said—The accused should be punished according to Article 141 of the Criminal Code, which provides:—"Any offence, injury, or outrage, committed by gesture or words against a public officer in the exercise of his functions, or on account of his position or in his presence, shall be punished with imprisonment with hard labour for a period of from one month to one year, and a fine of from 5 to 50 yen—The penalties shall be the same, if the offence has not been committed in the presence of the functionary, but by means of the press or by public discourses." But as the accused are undergoing penal servitude, having been convicted of high treason in the Kōto-Ho-In, they are exempt from double punishment; because the law provides that, when crimes are simultaneously committed, the punishment shall be confined to the graver one.

Kono—As Mr. Uyeno pointed out, the manifesto was of a private character and contained no fabrication but mere truth. It cannot be held as implying any insult. In no way am I concerned in its publication, and I should be exempt from punishment.

Mr. Urata—It is beyond all doubt that Kono was not implicated in the affair, and even though he were implicated, he is not liable to be punished according to Article 141 of the Criminal Code. Public functionaries are liable to be assailed by people who have the right to expose injustice in high places. No one can be punished for checking the ill-doings of one man for the benefit of the whole community.

Aizawa—I contend that the manifesto contained nothing but the truth.

Mr. Uyeno—It is useless to prolong the case by going over the same ground, over and over again.

Prosecutor—The manifesto is of a public nature so long as it was printed to the number of more than one thousand with a view to general distribution.

Mr. Uyeno—Certainly, it is of a private character. Whether it was issued to the number of one thousand or more makes no difference. If it were fifty years ago, we should have looked upon the functionaries as different and higher than ourselves. But now that freedom pervades all society and everybody has the right to expose his wrongs, I fail to see how the accused could be punished, accordingly to Article 141 of the Criminal Code.

The Court rose at 4.30 p.m.

MONDAY, DECEMBER 3rd, 1883.

The Court delivered the following judgment:—
In the case of Kono Hironaka and Aizawa Neiken, the Court decides that the accused have acted in concert and distributed a manifesto purporting to contain a report of the proceedings

of the Local Assembly of Fukushima. It stated that since Mishima was appointed prefect of Fukushima, the local administration underwent a complete change; that he inaugurated every oppressive measure; and that by bribery was the only way to approach him. This statement is without any foundation; and the accused are liable to imprisonment for terms varying from one month to one year, and five to fifty yen fine. Nevertheless, as the accused are already imprisoned under conviction of high treason; and as the crime now proved against them is of less gravity than that for which they were previously convicted, no further sentence shall be pronounced upon them. This is in accord with Article 102 of the Criminal Code.

Ito Tsuji, Judge.
HARIMOTO KOKKI, Clerk of the Court.
—Choya Shimbun.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANWEN Esq., Judge.—Wednesday,
12th December, 1883.

J. E. CARTER V. J. J. GRAY AND J. J. GRAY V.
J. E. CARTER.

Mr. Carter claimed the sum of \$400.00 for services alleged to have been rendered during the construction of the schooner *Penelope*; and Mr. Gray, entered a counter claim for loss sustained through Mr. Carter's negligence.

JUDGMENT.

On the opening of the Court, His Honor decided in the above case, the evidence in which was concluded on the 4th instant. He said that in this cross-suit, after having carefully considered the evidence and the exhibits, he had made up his mind that neither party had made out his case so as to warrant him in giving judgment for one side or the other. The evidence of Carter showed that he was engaged to look after the construction of the ship, but there was no evidence of any contract that Carter should do a certain amount of work. He had a share in the concern and was to be the captain. On the other hand, though no neglect had been proved, it was probable that Carter had not bestowed all the attention that he might have done in the interest of the vessel. The petition of each party was dismissed without costs on either side. There remains, His Honor added, the agreement, which might come before him on some future occasion; but considering the circumstances and the old friendship of the litigants, this was eminently a case in which arbitration, and thus a friendly settlement, was advisable. His Honor concluded by remarking that his own good offices as arbitrator, or any other assistance that he could render toward such an adjustment as he recommended, were at the disposal of the disputants.

Before N. J. HANWEN Esq., Judge.—THURSDAY,
13th December, 1883.

JOHN EVANS V. J. J. GRAY.

This was a case in which plaintiff sued for \$175, and an allowance of \$2 per day from the 16th of November for detention. He stated in his petition that he was engaged as master of the *Penelope*, at monthly wages of \$50 and 2½ per cent on the net profits of the catch. He valued the goods on board at \$87,000.

Plaintiff stated that he claimed from defendant \$175 as 2½ per cent. of the catch of the schooner *Penelope* and \$2 a day from the 16th of Novem-

ber. The case was simply a matter whether or not there had been a misunderstanding. He was engaged in April last as master of the *Penelope* at \$50 a month and 2½ per cent. of the catch. He did not hear the articles read over, and it was only a month after that he found out that he had signed for net profits. The entire catch of skins did not cost them anything so they were all profit. He considered that there could be no objection on the part of the defendant to pay him the small amount of his commission. He received his wages. He took the schooner up to the North Pacific, and if his advice had been followed more skins would have been taken. His had been a most thankless task, one that he would never undertake again. He was under the impression that "net profit" meant the value of the whole catch.

His Honour, after reading the articles, said he did not know how plaintiff was to get over the fact that he had signed for net profits. Mr. Gray had no doubt sent the goods home, and an account would be rendered of them, after which plaintiff could claim his share. His Honor read "net profits" those of the voyage.

Mr. Gray observed to his Honor that he considered net profits the returns for the catch after wages, expenses, and lays had been paid.

A letter called for by Mr. Gray was put in. It was to the effect that he would pay plaintiff 2½ per cent. on the net profits after the returns came from England.

His Honour said he could not give plaintiff a judgment, as no one could tell what the skins might be worth. The hunters being on lay of course had an advance, as they had a share of the gross receipts. It was perhaps foolish of plaintiff to have entered into such an agreement; but he should not have signed without knowing what he was signing. His Honor would like it proved that the price of the skins had not been realized.

Mr. Gray remarked to his Honour that by the consent of the hunters he had sent the skins home to be disposed of. He had sent them through Messrs. Langfeldt and Mayers to their agents in London. There were 17 otter-skins, 84 fur-seals, 2,046 lb. walrus teeth and 145 cases of walrus oil, the total value of which he estimated roughly at \$6,000. He thought the cost of the expedition would be about as much as the catch would realize.

His Honour said that plaintiff would be entitled to go through all the ship's accounts, and the accounts from England, to ascertain what was due to him. Until returns were made from home, he could do nothing. Meanwhile, judgment was for defendant.

Before N. J. HANWEN Esq., Judge.—TUESDAY,
December 11th, 1883.

YOKIOKA SHOBBI V. ED. WHITTALL.

Mr. H. C. Litchfield appeared for the plaintiff, in whose interest Mr. Uchiyama Rossetsu was present to watch the interpretation. Mr. Kirkwood appeared for the defendant, Mr. Whittall, who instructed him personally during the trial.

The petition sets forth (1) that the plaintiff is a Japanese banker and merchant carrying on business in Tokyo; the defendant a foreign merchant in Yokohama: (2) on the 27th of August a sale was effected, by the defendant to the plaintiff, of a steamer (the *Jumbo*) for \$10,000, and 410 bales of cotton yarn and 2,200 pieces of grey shirtings for \$38,530, payable one-third in cash and the balance

in bills due six months from date: (3) the same day a contract was signed by Mr. Whittall to this effect, with a postscript also signed by him stating: "In the event of any one claiming the steamer, and I am unable to deliver her, I will return the \$10,000:" (4) on the 28th of August Mr. Whittall contracted in writing to sell to the plaintiff, described as a Japanese banker, 358 bales of cotton yarn (red flag), 1,050 piculs, for \$29,400; 60 bales of cotton yarn (tree), 180 piculs for \$4,950; and 2,200 pieces of grey shirtings for \$4,180—this whole second transaction representing a sum of \$38,530. The payments were to be made thus:—Cash \$6,177, and the balance in approved bills due in six months from date for \$32,353, carrying interest at the rate of 10 per cent. per annum: (5) on the 28th of August plaintiff paid defendant \$16,177, and lodged with him a fixed deposit note of the Nio Ginko, a Japanese Bank, situated at 14, Nichome, Kakigara-cho, Tokijo, for \$32,353: (6) the defendant applied \$10,000 of the cash payment to the payment for the steamer, which he attempted to deliver to the plaintiff, who could not, however, obtain possession, owing to a claim having been lodged against it: (7) \$6,177 was appropriated to part payment of the yarns and shirtings and received without objection and retained, together with the fixed deposit note, defendant giving an order upon his godown keeper for the delivery of the goods. Delivery of the yarn was then, however, and has ever since, been refused by the defendant, who would only deliver the 2,200 pieces of grey shirtings: (8) the defendant still retains the sum of \$16,177 and the deposit note, while the plaintiff, having fulfilled all conditions to which he consented, cannot obtain possession of steamer or yarns: (9) plaintiff has been deprived of the use of the steamer and any profits that would have accrued from her possession. The plaintiff then prays (1) for a refund of the \$10,000 paid for the steamer, with interest at the rate of ten per cent. per annum from the 28th of August: (2) for delivery of 410 bales of yarn: (3) for such damages as the Court may direct for the detention of the steamer and the yarn; and (4) for any other relief that the nature of the case may require.

The defendant's answer admits (1) the allegations in paragraphs 1, 2, 3, and 4 of the petition, except that the bills referred to in paragraph 2 were to be approved bills, bearing interest at the rate of ten per cent. per annum: (2) \$16,177 was paid defendant on August 28; but the other allegations of paragraph 5 are denied: (3) defendant admits having appropriated \$10,000 to the purchase of the steamer, which, however, has been taken delivery of by plaintiff or his agent, in whose control she has been for some time: (4) defendant admits having appropriated \$6,177 to the purchase of the goods referred to, and that he has only delivered 2,200 pieces of grey shirtings; but denies receiving, without objection, any deposit note or bill for the balance of the purchase-money. The only document offered to him was found to be unnegotiable, and was therefore disapproved by him. He delivered the shirtings because their value was less than \$6,177, but he refused and still refuses to deliver the balance of the goods against the bill or note offered, or any other that is not approved and negotiable. Meanwhile, defendant has been and is willing to deliver the goods on the terms agreed on, provided also plaintiff pays insurance and storage charges upon them from the date of the contract to the time of taking delivery: (6) defendant denies all allegations contained in the petition except such as are herein admitted.

Baba Keijiro was first called by Mr. Litchfield. Mr. Kirkwood asked that other witnesses be ordered out of Court. Granted.

Witness—I am the Manager of a printing office in Bente Dori and am acquainted with the plaintiff. On the 26th of August I was asked by the plaintiff to go to No. 4, Yokohama, and negotiate a contract with Mr. Whittall. A man called Tokura Kozaburo and Kuribara and myself went. I explained the terms of the contract proposed. The terms then proposed by defendant to plaintiff were:—Mr. Whittall had a steamer, shirtings, and yarns to the value of \$40,000, which should be purchased one third for cash and the remainder in deposit note of a Japanese Bank (the Nito Ginko). Tokura explained to Mr. Whittall that if he would agree to such a contract, the plaintiff would come the next day to ratify it. To this Whittall agreed, requesting plaintiff's attendance on the following morning. The form of the deposit note was produced during this preliminary conversation. (Deposit note produced, and recognized as being the form then produced. It had been subsequently sealed. The signatures were there.) The document purported that the sum should be deposited for six full months from the 27th of August. (A translation made by Mr. McClatchie was tendered by Mr. Kirkwood and accepted by Mr. Litchfield after it had been approved by Mr. Rossettsu.) I explained fully to Mr. Whittall the nature of the deposit. He made no objection to the security. Next day I visited him with the plaintiff, and again on the day after (the 28th of August,) on both of which occasions Whittall saw this deposit note. Tokura laid it on the table. Before the stamps were affixed Whittall drew up a contract. I interpreted it. Then this document was stamped and handed to Mr. Whittall. I recognize the contracts produced as having been then signed (A for yarns and shirtings, B for steamer. Papers put in.) In reply to my question why the two transactions were not mentioned in one contract, Whittall said that the goods belonged to a company and the ship was his own property. The addendum to the instrument, releasing the plaintiff from the contract for the vessel if objection to his taking charge were made, was inserted by defendant at our request. Both documents were signed the same day. The \$16,177 were paid by cheque on the same morning (the 28th) by the plaintiff. The goods were not delivered the same day, although we had been promised that delivery could be taken in the afternoon. Whittall held the deposit note, the purport of which had been already explained to him.

To Mr. Kirkwood (who requested that to save time the witness might be cross-examined in English)—My conversation with Mr. Whittall was in English. On the 26th Tokura alone came to me to ask me to go to Whittall's. My position at the Seishi Bunsha is under-manager. I go their every day, I take holidays on Sundays, except under pressure of work. I know one Izaya; but did not know him before this contract. He is an import and export broker. In reference to this business, I knew him as a customer of the plaintiff, desirous of buying the whole matters in this transaction. I am not sure about the yarns. Shimada Seishichi, of Tokiyo, was his principal, and paid \$10,000 for the ship some time in September. I have only visited the ship once—on the 27th of August. I do not know what Shimada paid for the shirtings. He is a big merchant in the export and import trade. Mr. Yukioka is President of the Bank, and does any business that is likely to bring profit. I didn't know anything about him prior to the 26th

of August, or of the Nito Ginko either. Everybody knows the First National Bank in Tokiyo and Yokohama, the Mitsui and Second National Banks also. I cannot say for the Fifteenth. (Witness mentioned several Banks whose notes he would take as cash, the First, and Second National, the Mitsui and Shokin Ginko. There was difficulty in making him understand the purport of the question. He was understood to mean that he would take any Bank paper of good repute.) The Nito Ginko is not a National Bank: it is a private one.

At noon Court adjourned till 2 p.m.

On the Court resuming,

His Honor addressed Mr. Litchfield on the subject of the learned Counsel having applied for a summons to issue during the course of the trial for the attendance of a witness. His Honor explained that the course was irregular, and the matter dropped.

The cross examination of the witness Keijiro was then proceeded with. He said:—I am not familiar with all the regulations of the National Banks. I do not know either of two persons (names mentioned by Mr. Kirkwood). I first met Yukioka Shobei on the 27th of August, when he came to my printing office. Tokura brought the draft of the contract. I had explained the purport in Mr. Whittall's office of the 26th. It was written in Japanese, I believe by Tokura. The two documents produced I see for the first time to-day. The broker's name was Kurihara Ichidei. On the 27th Kurihara, Yukioka, and myself went to Mr. Whittall's office, I explaining to the others what was not intelligible. We talked about the steamer principally; and went away without concluding a contract, arranging to come again next day. This was afternoon, the conversation being interesting having lasted till then. I think I saw contracts that had been written out by Mr. Whittall. There was some difference about the interest, which was ultimately fixed at ten per cent. (Witness was understood to say that he and his friends did not take away the draft contracts because they had that morning inspected the vessel which was incomplete, and they were unwilling to sign before the state-rooms were finished.) On consideration I think we did take away the contracts, but without their being signed. On the next day the papers were signed in Mr. Whittall's office. We agreed to the term "approved bill" being put in the contract, instead of "deposit note of the Nito Ginko," because we thought that the deposit note met all the conditions required. On the 28th we gave Mr. Whittall a cheque for \$16,177 and presented the document produced (the deposit note) which he received as good, handing the two godown orders. I do not know why Whittall, instead of giving clean godown orders, should have written on these "delivery against approved bills." I do not think it was written because he thought the bill was bad. Mr. Whittall did not explain in handing the orders that he had to make enquiry about the note before he approved it. Mr. Whittall did not ask if a stamp on the document was that of the Okurasho; nor did he say anything to the effect that if that stamp were on it he would probably approve it; but that he knew nothing about the Nito Ginko. In the afternoon he said that he would like better security before delivering the goods. I did not go in the afternoon. Coolies and carts were sent to take delivery of the goods. I do not know personally what goods were delivered, nor who signed the cheque for \$16,177. I do not remember that we sent out for the money from Whittall's office to the Shokin Ginko. There was something said about payment by cheque on the Second National Bank. I do not know what a letter that came in during our conversation to Mr. Whittall was about. Ichidei brought the cheque for the money. I do not know into whose godowns the goods were to be put if delivered; but I think they were to go to Tokiyo.

To Mr. Litchfield—The First National Bank issues three or four varieties of notes. I prefer such as are payable on demand. A deposit note not bearing interest is payable at any time. If I wanted a note redeemable at a certain date, say one month after sight, I would require one like that produced. Whittall did not say anything before the 28th about requiring another note. I had not known Ichidei before I saw him at Whittall's house.

Yukioki Shobei, the plaintiff, was next called.

At the request of his Counsel he was accommodated with a chair on account of age and infirmity. He said:—I am President of the Nito Bank, and do a general business. I have been a merchant for twenty-five years. I know the defendant. On the 27th of August of this year, I went to his office wishing to make a contract for the purchase of a steamer, yarns, and shirtings. I had heard that the articles were for sale through one Kurihara, who came to my house and told me. This was some days before I went to Mr. Whittall—about the 21st or 22nd. Kurihara went on the 27th with me to Mr. Whittall. Baba interpreted to me what followed: it was identical with what had been told me previously to the visit. On the 27th, not before, I saw the little steamer. The reason the purchase was not concluded that day was that the conversation about interest and the ship occupied a very long time. Mr. Shimada has taken delivery of the steamer and has not returned it. There has been a great deal of trouble about it. On the 27th of August when I went to Mr. Whittall's I took the deposit note produced, and took it away again as nothing was completed. As President of the Nito Ginko, I have power to issue such deposit notes with the sanction of other officers, and two of their signatures. This is signed by me as President, by the manager, and cashier. The steamer speculation was on my own account, not on behalf of the Bank. The \$16,177 was paid out of my own money. On the 28th Mr. Whittall expressed himself satisfied, as I understood, with the security I had to offer. He took this deposit note and my cheque for \$16,177. I stamped the note on the forenoon of the 28th at the request of Mr. Whittall, who then told me I could send for the goods at once. I only received the shirtings. The Nito Ginko was established in April, 1882, and is a registered Bank, still doing business, at Kakiyagachō, Tokiyo, a business quarter. At the time of the contract the price for yarns was about \$29 a picul in Tokiyo; it is now about \$25 or \$26.

Some conversation here ensued between the Bench and the Bar as to what could be construed by an "approved bill" to a Japanese merchant. There was difficulty, too, in the interpretation; but it was elicited from the witness that in Japanese business an equivalent of an English "bill of exchange" is clearly understood and in frequent use. Such a document as that produced is not transferable. It would not be transferable if it were issued by the First National Bank.

To Mr. Kirkwood—The money mentioned in the deposit-note is stated as having been deposited by Mr. Whittall. The depositor must consent to the conditions imposed by the document. (Some argument followed as to the compliance with the conditions of clause 5, and whether it was the custom of depositors to write their names and affix their seals on the counterfoil of the Bank books at each time of making deposit. The point raised appeared to be whether Mr. Whittall was a consenting party to the deposit, and whether he could withdraw the money in his own name). These notes must be paid in the manner described on the face, no matter whether a clause on the back says it may be payable in any currency. (In this case the term for "foreign money" has been written on the face over the term for "ordinary currency." The explanation was that dollars were implied). When I went to Whittall's on the 27th I wished to buy the goods and the steamer, at such a price as was named in the contract. I wanted the steamer for the transport of rice. I had not on the 27th already contracted to sell the steamer, nor did I before the 8th or 10th of September. Of the seals on the document (produced) one is my own and one that of the direction of the Bank. This paper is dated the 7th of September, and states that I have sold the steamer to Shimada in its present state. I think the sale was actually effected the previous day. I changed my intention of employing the vessel for rice, because there was no immediate business and Shimada wished to buy. The yarns I did not sell to Shimada: the shirtings I did at \$1.95 about the 5th or 6th of September. Ichidei took delivery of them. I did go to Mr. Whittall between the contract of the 28th of August and the 7th of September on the subject of the non-delivery of the yarns. I do not know anything of the delivery of the shirtings. I think the steamer was delivered to Shimada by Mr. Whittall about

the 10th. Since that time Shimada has paid wages and expenses. I did not buy any other steamer since I have been President of the Nito Ginko. It is not at all unusual for merchants to make such large transactions as that of mine with Mr. Whittall in one day. It is not particularly large. I have not negotiated a bigger one this year. The Nito Ginko allows from eight to ten per cent. interest on fixed deposit: the rate depends upon exchange. Eight per cent. per annum is not a large amount on a six months' deposit; but we have no fixed rate in our bank: it is matter of arrangement with the depositors. I did not actually pay the money into the Bank. I can deposit goods with the Bank and borrow money on security. The \$16,177 that I paid cash was money of my own that I had in use in the business.

Soon after 5 p.m. the Court adjourned till 10 a.m. next morning.

WEDNESDAY, 12th December, 1883.

The cross-examination of the plaintiff was resumed:—I asked the Bank to issue the deposit note in question. I am a director of the Nito Ginko. The note was put in as security against goods purchased from Mr. Whittall. The money was to be exchanged against goods. The directors have shares among themselves, and if the yarns had been promptly delivered the settlement would have been made. The matter was spoken about. As a private individual I should have to borrow the money from the Bank. As a matter of fact no actual deposit was made. When I came down on the 27th of August to see Mr. Whittall I did not actually bring the sixteen thousand dollars with me, but had the command of them. On the 28th I took a bill for the amount to Mr. Whittall. I had bought the bill, with the money I brought on the 28th, from Shimada Seisichi. I had arranged with him that my draft should be honored. I had a long draft in foreign characters addressed, I believe, to 62. Exceedingly early on the 28th I received the draft which I gave to Mr. Whittall. I took the bill in Tokiyo and handed it over down here, in Mr. Whittall's house. When I had handed over the draft, Mr. Whittall gave me instantly the godown orders (put in). I did not ask my interpreter to translate the documents to me. He merely told me that there were a certain number of bundles of goods to be delivered. There was no conversation, simply a transfer of documents. I do not understand English, but the interpreter told me that all was right. If I had not understood that the deposit note was accepted I should have taken it back. I intended to ask Shimada Seisichi, the Tokiyo broker, to take delivery of the shirtings, and had already instructed him to have them sent to his house in Tokiyo, there to be disposed of, but not to be retained by him as security. They, or the funds realized, if they were sold, were to be sent to the Bank, free from all charges. It was the intention to deal with the yarns in the same way. All this was arranged with Shimada previously to the 28th of August. I only asked him to sell the yarns. I know Mr. Iseya, but not intimately. The godown orders were handed to Shimada, as he was the person instructed to take delivery of the goods. He purchased the shirtings immediately on taking delivery of them, probably about the 30th. The actual arrangement (settlement) for the shirtings was made on the 5th of September. Where the goods were in the interval does not concern me, but Shimada only, to whom they were sold. I do not know that the whole lot of shirtings and yarns, if taken delivery of on the 28th of August, would have been instantly taken to the godown of a foreigner in Yokohama as security against the \$16,177 draft. No written contract passed between me and Shimada: the arrangement was verbal: receipts were given for the money. The two delivery orders were returned to me by Shimada recently. When I visited Whittall after the refusal to deliver the yarns a few days after the 28th, I only urged delivery; but did not tell him that I would try to get him better security. Mr. Whittall did not then hand me any letter saying that I might take until the 15th of September to bring approved security, and in the meanwhile he would not charge me for warehouse rent. I know something of Mr. Kato, of the Tono Bank; but I did not ask him or any one connected with his Bank to go to Mr. Whittall's to arrange better

security for me. I have an impression that Iseya was present when our arrangement was made for the purchase. He has no connection with this business. Shimada is alone concerned. (Counsel failed to shake witness's testimony on this point). The first transaction was between myself and Mr. Whittall; Iseya may have been in that gentleman's office with me, but I have no recollection of his going there with me or having any concern whatever in this affair. I first saw the steamer on the 27th; and then I thought of buying it for \$10,000, after having inspected it carefully. I did not offer a lower sum: but understood that the vessel should be delivered complete for that sum. Several fittings had to be added; but no date was fixed or mention made in any written contract. In exhibit E (referred to) I state that I have sold the ship to Shimada "in her present condition." Some slight fittings were put in after my purchase—cupboards and so on, but nothing very particular. I paid for them. The vessel is rather small for carrying rice. I thought she would do to ply to and from the central provinces; but was not good enough to go to Hakodate. I thought her a tolerably good bargain; and had had her inspected by some one of my establishment who knows something of vessels. I do not know when it was absolutely decided that she was not fit to go to Hakodate; but immediately after that negotiations commenced for her sale to Shimada. I think he bought her for traffic along the neighbouring coasts where no heavy seas would be encountered. Shimada paid \$10,000 for her in foreign dollars. It is not extraordinary that we, being Japanese, should have done the business in dollars, which we can always change. The money was paid in mixed paper, including cheques upon several banks.

To Mr. Litchfield—Probably Iseya may have acted for Shimada in Tokiyo and Yokohama for the sale of shirtings. I made my dealings with Shimada only.

Mr. Kirkwood asked that the plaintiff be instructed that he must not talk with the witnesses to be subsequently examined. This was granted; and Mr. Yokioka Shobei was requested to remain in Court.

Tokura Tozaburo—I am an official of the Nito Ginko, and have been since April last. In August I signed the deposit note, produced. In August Mr. Yokioka applied to the Bank verbally for a loan, explaining that he had transactions with Mr. Whittall and wanted security. On receiving the goods the plaintiff was to return the money to the Bank. It is not customary for Japanese Banks to guarantee money on such terms. (Some discussion here ensued as to the interpretation of a certain insertion in writing, not in print, on the back of the deposit note, Mr. Litchfield being under the impression that two of the characters read "Kigin" meaning "money" "currency," while the official translation had them "Kigen" meaning "due date." The latter was found to be the true reading, thus:—"Notwithstanding the before-going two clauses the deposit in this case shall not be paid before the due date or 'expiration of period' mentioned on the face of this note.") It was understood in this case that the goods should be instantly deposited with the Bank on their delivery by Mr. Whittall. By orders of the Bank I went with Yokioka Shobei to deposit the note for \$32,352. The note was handed to Mr. Whittall by Yokioka Shobei in my presence. I affixed the stamps before Mr. Whittall, when that gentleman had said that all was right. Before that I heard some conversation between the parties, to the effect that a ship, some yarns, and shirtings were to be sold; and Mr. Whittall accepted this note as all right. That closed the transaction. Two papers were given to Yokioka by Whittall for goods deposited in the godown. (The two godown orders in evidence produced and thought to be the same as those that passed.) As an officer of the Bank, I should not have parted with the deposit note unless I was convinced that the goods would be delivered. The note was actually exchanged for the godown orders. In the case of this document the money would never be given except to the principal named therein, and then only on expiry of the period mentioned. If the Bank had actually the goods in its possession it might, at its own convenience, discount the deposit-note, before it fell due. The pecuniary position of the Bank is cer-

tainly such that it could do so if it were willing. "There will probably be that amount in the Bank now." The Bank's capital is yet 100,000, and the concern is still doing a tolerable business. In Japanese banking there is a system of bills-of-exchange; but such bills are not current documents.

Adjourned till 2 p.m.

On the Court resuming, Higuchi Shiguro, a Kencho official, was called by Mr. Litchfield, to explain the system of shipping-registration. He said that, having only to do with the foreign department, he was unacquainted with the general run of the business. No application had been made by Shimada in relation to the steamer *Yumbeo*. Some slight application had been made by Iseya; but not as far as he knew for the removal of the boat from Benteu. Iseya had applied for the ship to be kept where she was.

Mr. Kirkwood then continued his cross-examination of Tokura Tozaburo who said—I first went to Mr. Whittall's on the 26th of August. It was not on a Sunday. I went because there was an agreement between Yokioka and the Bank, and I was ordered to see if the goods in question were in Whittall's godown. I went to hear if the agreement was actually concluded or not, and returned the same day, finding that the arrangement was in course of conclusion. I have no recollection of having seen the two papers produced. I came down also on the 27th and the 28th. On the 26th I came on behalf of the Bank, but did not examine the goods. I expected to get the steamer, the shirtings, and the yarns as security from Yokioka. On the 30th when the transaction was completed Mr. Whittall handed the papers to Yokioka, who deferred handing them to me until the goods should be delivered. As the transaction was between Whittall and Yokioka it was proper that the latter should hold the papers until the goods were delivered, when they would be handed over to the Bank. I was aware from conversation only that Yokioka had a bill for sixteen thousand dollars odd to pay Whittall. The bill was given by Shimada in Tokiyo upon Iseya in Yokohama. I think Yokioka Shobei brought down the money on the 27th in Bank-paper—cheques for dollars. I think the paper used the following day was not the same. As soon as delivery was taken from Mr. Whittall the things were to be removed to Tokiyo. This matter had been arranged between Yokioka and Shimada. I think the latter is away. I have not communicated with him since the 28th. Shimada was to arrange for the transport of the goods, in charge of which, if they had been delivered, I should have gone direct to Tokiyo. I do not know that carts were ready to convey them to a foreigner's godowns in Yokohama as security against \$16,000. I intended to take the goods up the same afternoon, as the transaction had been arranged in the morning. Three of us went to Whittall's in the afternoon. Yokioka had some conversation about the paper, but the goods were not delivered. The deposit-note remained with Mr. Whittall. I applied to Yokioka for its return.

His Honour here pointed out to Mr. Kirkwood that it was not this witness's business to demand the note back from Mr. Whittall, and wondered why it had happened that Counsel had not asked the plaintiff how it was that the latter had not demanded the note from Mr. Whittall—just the point, His Honour said, that should have been elucidated.

Witness—If the goods are not forthcoming, the Bank will not pay the thirty-two thousand dollars odd, represented by the deposit-note to Whittall. The steamer was not received by the Bank; and I do not know that it received the shirtings. It has received nothing whatever, and paid out nothing to Yokioka Shobei in regard of this transaction. If Mr. Whittall returns the note the Bank will sustain no loss; nor will it make any profit.

To Mr. Litchfield—The \$16,177 paid for the shirtings and the steamer was Yokioka's own money, not the Bank's. The Bank trusted Yokioka, and would have taken the yarns as security, though they were not of the full value of the deposit-note. Previous to the 26th of August I knew the proposed terms of the contract between Mr. Whittall and plaintiff. The Bank knew about these terms on the 25th.

Iseya Zenkichi, a dealer in foreign merchandise, deposed that he had acted as broker for the sale

of a steamer by Yokioka to Shimada, and thought the amount was paid in Tokiyo. Witness explained what he knew about the transfer of the steamer, which was nothing more than appeared from the evidence of other witnesses. He applied on behalf of Shimada at No. 4 (Mr. Whittall's) that the vessel be registered in the Kencho and the certificate handed to him. He did not know whether the registration had been effected, but thought, as Shimada bought it, this might have been done. In September witness made several applications to the Kencho for permission to move the steamer from the Bente Creek, on Shimada's behalf. Consent was given at the beginning of last month. He continued:—On behalf of Shimada I removed the *Jumbo* from Bente Creek, and moored her off the Moto Bente, Ishigawa. I think this was during the first ten days of last month. I went to Mr. Whittall's on the afternoon of the 28th of August. The money for the things bought by Yokioka had been sent in the morning. Early in the morning a messenger had come from Tokiyo stating that Yokioka desired the money and asking me to advance the amount. I obtained a loan that day of \$16,177 from Mr. Gillett, at No. 24. The money was repaid on the 30th of the same month, the accommodation being merely temporary. I have had many dealings with Mr. Gillett. On the 28th of August yarns were worth about \$31 in Tokiyo; they have fallen in price until now they may be worth \$29.75. Kinsatsu were then quoted at 114 to 118.6: this morning they were 111.5.

To Mr. Kirkwood—Mr. Gillett's loan to me was in the form of a cheque on a bank, at about 11 o'clock. I was told by the clerk that my signature was not required to it. It was arranged that the goods if received from Mr. Whittall should be given to Mr. Gillett as security. My first impression was that only yarns would be delivered: afterwards I heard of shirtings. Many carts were ready on the 28th to convey the goods from Mr. Whittall's to Mr. Gillett's. The yarns were not given over, but the shirtings were delivered. I handed the cheque to one Tokura at No. 4. Mr. Gillett, finding he did not get his yarns, waited over one day, and the money was returned to him. On the 29th he and I went to Tokiyo together to receive money. Night had already come and we had to wait until the following day. I received \$12,000. That was the balance after the shirtings had been pledged. I received the money from a Bank (I don't remember whether it was the First or Thirty-Third National) in satsu, and changed it into dollars in Yokohama. I had handed the \$16,000 in Whittall's office to Tokura. I believed in Yokioka's account. Yokioka repaid me after the matter was all settled.

At 4 p.m. the Court adjourned, by consent, until Friday, the 14th instant, at 10 a.m.

FRIDAY, December 14th, 1883.

On the opening of the Court, Mr. Litchfield, for the plaintiff, said that he had learned, subsequent to the adjournment on the 12th instant, that Shimada had become the *bona fide* owner of the *Jumbo*, although the sale had not been registered at the Kencho. He would, therefore, withdraw that part of the suit against Mr. Whittall which related to the steamer.

Mr. Kirkwood made an application for costs as regards that part of the proceedings.

His Honor suggested that it should be left to him to assess the costs thus claimed, and, Counsel agreeing to the proposition, the case proceeded.

The cross-examination of Iseya Zenkichi was resumed by Mr. Kirkwood—My clerk took Mr. Gillett's cheque. The signature on the back is not my own: it is neither mine nor my clerk's. The cheque is the one I received from Mr. Gillett. I spoke about the loan on the 27th of August. I said that I might probably wish to borrow twice about ten thousand dollars. No conversation took place about security. The loan that I then spoke about was for the same purpose as that for which I actually borrowed on the 28th. When I went to Tokiyo with Mr. Gillett I received \$12,000 from Shimada. I paid Mr. Gillett on the 30th, \$10,000 and \$3,000. It was on the 29th that the shirtings were pledged on a godown order received from Shimada. My banto took the goods from No. 4 (Mr. Whittall's) and delivered them at No. 24 (Mr. Gillett's). The actual delivery was on the 31st. I

believe that the shirtings were originally bought for something under \$4,000. I made up the full accounts with Gillett a few days later than our trip to Tokiyo. (Pressed by Counsel to say why he did not procure the whole balance on the occasion of his and Gillett's trip to Tokiyo witness repeated his statements). The balance due after my payments was about \$3,800. Yarns vary very much in price according to quality, from, say, cheapest \$25, to dearest \$31.75. These were the prices on the 29th of August. Prices vary according to the marks and quality. Before I could tell the value of 16-24 yarns I should have to inspect them.

To Mr. Litchfield—I proposed to Gillett that we should go to Tokiyo together. Mr. Gillett did not go with me to the place where I procured the money. The message on the morning of the 27th asking for money came from Shimada. Anyone holding such a godown order as that produced should be able to receive the goods there in mentioned. I cannot certainly say whether the godown orders (in exhibit) are those I received, as I am not familiar with foreign writing; but they resemble them closely. I received them from Shimada, and took them to No. 4 to receive the goods.

Shimada Seishichi—I am a dealer in yarns; and am on good terms with the plaintiff, Yokioka Shobei. On the 27th of August he spoke to me about an agreement that he had for the purchase of some yarns at No. 4. He asked me whether I would sell them for him. I did not at that time lend him any money. There was no special loan of money. I was asked for a bill and gave one for \$16,177 on Mr. Iseya in Yokohama. I had then money of Yokioka's in my possession. In the course of the next few days I received money from him on other transactions. On the 28th I asked Iseya to procure some dollars and hand them to Yokioka, which was done, Iseya borrowing, as I was told, the sum from No. 24. On the 29th, I repaid Iseya \$12,000, which I believe he paid to No. 24. The money I paid was my own. The transaction with Yokioka was then completed. I bought a steamer from Yokioka on the 5th of September for \$10,000, which sum I immediately paid. This had nothing to do with the \$16,000 transaction. Dollars were paid down. I have known the plaintiff since last year. He has a good reputation among his countrymen. He made his way from clerk to manager and at one time was possessed of considerable property; but has had losses and is not now considered a "warm" man. I cannot speak positively, but should think that, as he has to do with a Bank, he should be in a good position.

To Mr. Kirkwood—I am in the habit of making contracts with other Japanese in dollars, having two lines of transactions—silver and *Kinsatsu*. This contract happening to be made in dollars I paid in dollars, principally in paper. There was no special contract. The reason dollars were paid was that I had been told the original purchase was made in that value. The vessel was first offered to me on the 5th of September in Tokiyo, where also payment was made. The offer was made in the morning: payment was effected in the afternoon of the same day. I bought the steamer for my business with the central provinces. I made up my mind to buy directly it was offered to me. I thought it cheap. I inspected the steamer with another man on the 4th of September, I think. I then went merely to look at the boat, without intention of buying. It was later that the suggestion was made to me. I was at No. 4 on that day where I had been frequently since the 28th of August, and a visit to the boat being suggested by an acquaintance, I went on board. The ship is not yet ready for sea. Since I purchased her, very little work has been done to her, I do not know quite to what value, as Iseya looks after that. I intended at first to get her ready quickly; but it being explained to me that she was not quite suited for my trade with the central provinces I left the matter altogether in the hands of Iseya. I bought her on information I received. I never owned a steamer before; but members of my guild have. Yokioka first requested me to make arrangements for the payment of \$16,177 about the 23rd of August. On that day a clerk came from Yokioka and spoke about the probable purchase of yarns by that gentleman, and his possible want of money. The actual draft for the amount on Iseya in Yokohama was on the morning of the 28th. At that time Iseya had no

money of mine in his hands. I drew on him because the banks in Tokiyo did not open before noon. Iseya had no security from me. I intended to repay the money the same afternoon. I paid the next day, only, on account of matters which meanwhile arose between Yokioka and No. 4. I went down to Yokohama on the evening of the 28th of August. I had no other arrangement concerning the goods than that if they were delivered I was to sell them. Murataya was requested by Iseya to transport them from Yokohama to Tokiyo. Murataya has long looked after goods for me. I made no special request to him on this occasion, but suppose Iseya did on my behalf. I had not made any application before the 28th to Iseya for the \$16,177. It was a very sudden arrangement. Yokioka first spoke to me about the sum on the same day. Previous conversation had only related to the purchase of yarns. Yokioka brought me the money early in the morning in many cheques, but the banks not being open in Tokiyo, it was convenient to give an order on Yokohama. I thought if Iseya had not the money himself he could easily procure it. I first knew Mr. Whittall on the 29th or 30th of August. After that I met him frequently. On the 30th I paid Iseya in Tokiyo \$12,000 in foreign money. That is to say I confided *kinsatsu* to Iseya to change into dollars, and on his return I paid him from that money. When Yokioka paid me in cheques or dollars I converted them into *kinsatsu*. I cannot say exactly when, without reference to my books, I intended to bring the money to Yokohama in cheques from Yokioka.

Soon after noon the Court adjourned until 2 p.m. On resuming, the cross-examination of Shimada was continued. He said—I intended to go to Yokohama in the afternoon. I received a telegram from Tokiyo saying that there was some trouble between Yokioka and Whittall. I was asked to go, even if I had no money, as Iseya was anxious to see me. When I arrived that evening (the 28th) I first heard that Iseya had borrowed the money. On the 30th I paid Yokioka \$10,000. I had not returned till the evening of the 29th on account of trouble with the yarns. I purchased the shirtings on the 7th. I had paid Iseya \$20,000 on the 2nd of September; I only paid him \$10,000 at first because he said he was perfectly willing to take that amount. The full sum was to be \$16,177. The shirtings represented the balance. I received them about the 2nd or 3rd of September; but left them at No. 24 for about thirty days. I paid \$1.05 per piece for the shirtings after inspecting them at No. 24. I left them at No. 24 because it was there that Iseya had borrowed money.

To Mr. Litchfield—I purchased the ship for trade to the Central Provinces, after I had heard from Iseya that she was for sale. No one came specially to Tokiyo to inform me.

That was Mr. Litchfield's case.

Mr. Kirkwood, having briefly addressed the Court, outlining the scheme that the defence would take, called

Mr. F. da Roza, whose testimony, relating as it apparently would to collateral transactions, and not to the validity of the deposit note as an "approved bill," was reserved.

Mr. E. Whittall—I am the defendant in this case. I first saw Yokioka Shobei on the 27th of August. Tokura came with him, and Daba an interpreter, to my office. Several people came to see me about the steamer before the 27th, but I cannot say that these two people did. The two documents (produced and handed in) were delivered to me on the 28th. I had seen then on the 27th. They are in my own handwriting. Tokura handed them to me from a small bag that he had about him. The first document, a draft agreement for the sale of a steamer and 200 bales of yarn, was made in July. The Japanese mentioned in it was Kubota, who offered me \$10,000 for the steamer and never returned. On the 18th of August one Oyama Hachiuno came to me and wished to buy the steamer and 450 bales of yarn. He said he had learned the quantity from the comprador—the exact quantity I had. So of shirtings. (Witness here explained at some length that he found that the applicants knew better what quantities of shirtings he had in his godowns than he did himself. The remainder of his evidence was to the effect that, as regards the contract, instead of 2,000 pieces of shirtings there were 2,200. Instead of 63 bales of yarns, there should be sixty.

Instead of \$16,177 to satisfy him, it should be \$6,177. When Tokura came he asked where Kato of the Kono Bank was, and was told that that bank was only a branch of the Nito Bank, and that Yokioka Shobei was a much bigger man than Kato. On that day he wrote out the contracts, but did not sign them. The deposit note they put on his desk without comment. They took it away with them. He explained to the interpreter what he meant by approved bills: for instance he would be satisfied with the Okurasho's stamp. It was understood previously that he should have that guarantee. They produced no money. He did not than sign the contracts because the visitors wished to take them away and said they would call next day with the money. They came next day about nine o'clock, and put the bill on his desk. He asked what the Nito Bank was. Witness was not satisfied with the explanation of the address of the Bank, or the signatures, and asked whether a certain stamp was that of the Okurasho. Being answered in the negative, he said that he would inquire into the value of the security. He signed the contracts, but did not immediately deliver them. As the Japanese were waiting for some time, he asked what they were waiting for, and was told that they had sent to the Shokin Ginko for the money which would be paid in bank notes. He then directed his clerk, Mr. Engelhardt, to make out godown orders for delivery subject to approval of the bills. A letter came from Mr. Gillett in the meanwhile to which he replied, and a cheque arrived from Mr. Gillett, (handed in) for \$16,177 which Tokura endorsed in pencil and handed to him. He explained, after examining the deposit note and having had it translated, that the balance of the goods would be delivered when the deposit note had the stamp of the Okurasho. He gave a clean order for the delivery of the *Yumbo* at the same time. He sent his comrade to the leading Banks in Yokohama, and found that they would have nothing to do with the deposit note for \$32,000. He did not deliver the yarns. Mr. Walter, of the Hongkong and Shanghai Bank, sent word, on enquiry, that the Nito Bank was a small one, and witness declined to accept the note, and told Yokioka and Iseya so the next day. He offered it to them to take away. Yokioka said he was sorry, and would try to obtain better security. Shimada next day told him that he had bought the goods from Yokioka Shobei. Witness explained to him that he could not deliver the yarns, as he had not received enough money for them, but would deliver the shirtings for which he had been paid. He did so.

Mr. John Walter, Manager of the Hongkong and Shanghai Bank, remembered Mr. Whittall sending to enquire about such a note as that produced. Needless enquiries made by order of witness resulted in the answer from the leading Japanese Banks that no discount or even a small advance would be made on it. The Japanese Banks having the best reputation were Mitsui, Shokin Ginko, First and Second National, and (especially among the Japanese) the Nobles' Bank or Fifteenth National. What he understands by an "approved bill" is one that can be discounted at the market rate of interest.

Mr. Whittall's examination was resumed. He said that he refused Mr. Kato to advance any money on land being Japanese property. He had the yarns still and was ready to deliver them now against approved bills. He was never satisfied with the note offered him. As regards the *Yumbo*, he had permission to keep her in the creek for 90 days, and a short time before the expiry of the term he handed that permit to Shimada at the latter's request. Witness also made declaration of sale at the Consulate.

To Mr. Litchfield—Witness's order for the delivery of the steamer was an ordinary one addressed to the master in charge. Many Japanese came with Tokura on the 27th. The matter of the sale of the yarns was introduced to him by his draft of the contract being handed to him. It was taken from Tokura's little bag. Baba, the interpreter first spoke of Yokioka Shobei. (Witness in a tedious cross-examination was not shaken at all as regards his evidence in chief). He admitted having cashed Mr. Gillett's cheque for the \$16,177 an hour after having received it, and having subsequently asked that gentleman whether he was satisfied with

his securities. He received an affirmative answer, and remarked that they, the Japanese, had tried to do him, witness, in the eye; but he had done them.

To Mr. Kirkwood witness said that there was no reason why he should inform Mr. Gillett, or any one else whose cheque he took in the way of business, that he was about to present it for payment.

The Court adjourned at 4.45 p.m., until 10 a.m. next day.

SATURDAY, 15th December, 1883.

Ootsu Shoneyoshi was the first witness examined by Mr. Kirkwood to-day. He said:—I have passed my legal examination, and hold a proper certificate entitling me to practise as a barrister in Japanese Courts. The law regulating bills of exchange was promulgated on the 12th of December, 1882, under notification No. 57 of the Council of State.

Mr. Kirkwood read a translation of several clauses; and Mr. MacClatchie translated them from the Code verbally. Mr. Kirkwood's translation is substantially the same as Mr. MacClatchie's, and the provisions are apparently identical with those regulating the issue and transfer of English bills of exchange. The clauses referred to run as follows, according to Mr. Kirkwood's rendering, accepted by the Court:—

REGULATION FOR BILLS OF EXCHANGE AND PROMISSORY NOTES:—

2nd Clause—A bill of Exchange shall comply with the following conditions mentioned on its face, and bear the sign and seal of the drawer:—(1) the sum; (2) the date and place at which drawn; (3) the date and place of payment; (4) the name of the drawer; (5) the name of the payee; (6) the sum to be paid to the payee or having the right of ownership in the bill.

13th Clause—The ownership of a bill of exchange is transferred by endorsement.

14th Clause—Every endorsement shall bear the name of the endorsee, the date of the endorsement, the name of the endorser his place of residence and his seal.

15th Clause—Each endorser, together with the drawer, as well as all prior endorsers, are responsible to all subsequent endorsers, and to the holder of the bill for payment.

26th Clause—If the kind of money is mentioned on the bill the payment shall be made in that kind.

47th Clause—The ownership of notes that are not in accordance with the rules mentioned in the 1st and 4th section as well as the 43rd and 44th clauses cannot be transferred by endorsement.

To Mr. Litchfield—Bills of Exchange pass daily between Tokiyo and Yokohama. The Okurasho is a department for superintending the receipts and disbursements of the Japanese Government. It is positively no part of the Department's functions to guarantee bills of exchange.

To Mr. Kirkwood—National Banks must deposit a certain sum of money in the Okurasho, in exchange for which they receive bonds.

Mr. B. Gillett—I am a merchant, residing at No. 24, Yokohama. On the afternoon of the 27th of August last Iseya's banto came to me, and said that his employers might require a loan of about \$16,000 on the security of 450 bales of cotton yarn. I said that I thought the matter could be arranged, but I would let him know next morning. That day Iseya and his clerk both came at 11 o'clock, and I told them that I was prepared to advance them the sum they required on the security they offered, namely the 450 bales of cotton yarn. They left, and at half-past eleven the banto returned, and stated that Mr. Whittall would not deliver the goods without a letter from me. I wrote to Mr. Whittall to this effect:—

Dear Whittall—In consideration of your delivering 450 bales of yarn to Mr. Iseya, I undertake to hand you a cheque for \$16,177.

On the fly-leaf of the note I wrote:—

I hope the transaction is in accordance with your wishes. I explain the difference between the first allusion of the Japanese to 450 bales of yarns and their having only 410 bales to offer to fuller information obtained by them at the time the transaction was becoming definite. Mr. Whittall wrote to me to the effect that he did not know Mr. Iseya; but that they (the Japanese) were settling to take delivery of the goods. About twelve o'clock Iseya and his clerk came to my office and asked me for a cheque, which I gave them, for \$16,177, they remarking that they were to take delivery of the goods from Mr. Whittall's godown at one o'clock. I then went away to tiffin and returned shortly after one. In front of Mr. Whittall's godowns I saw a lot of trucks and Iseya's banto, whom I asked:—"Why

have you not begun to take delivery of the goods?" The reply was that Mr. Whittall's banto had not returned from tiffin, and that he had taken the key of the godowns with him. About five minutes later Mr. Whittall came along. He said:—"Well, Gillett, I've got your money: you'd better look after your securities. I have applied \$10,000 to the sale of the steamer, and \$4,000 to the sale of the shirtings which I will deliver. The remaining \$2,000 I retain against the contract for the yarns. These people are a pack of swindlers. They have been trying to do me in the eye for the last month; but now I have done them." I replied:—"Whittall, I have nothing to do with your steamer or your shirtings. I have only to deal with Mr. Iseya, to whom I have advanced money on the security of a quantity of yarns." This was on the 28th of August. At 3 o'clock that day Iseya and his banto returned to my office. They said that they were sorry that they had put me to any trouble, but that they would see that I did not lose anything. At 11 o'clock on the morning of the 29th Iseya came to me, and saying that he had not received money he expected from Tokiyo, asked me if I would accompany him thither. I replied that I would go certainly; would do anything to facilitate matters; and it was arranged that we should go up together that evening. We went by the six o'clock train; but did no business that evening. At eight on the following morning (the 30th) Iseya came to me and told me that he had \$10,000 for me. I said "all right." I was not very uneasy, though of course I desired the matter settled as early as possible. We returned to Yokohama by the quarter-past nine train; and when we arrived Iseya changed a quantity of *kinsatsen* he had with him into dollars and handed me \$10,000. On the 31st, 44 bales of shirtings came to my godown from him. On the 1st of September, on their account, I appropriated \$3,900, about their value, toward liquidating the balance due to me. The same day Iseya paid me \$2,000; and on the 3rd, I received from him \$217, thus cancelling my advance of \$16,177. When I gave Iseya the cheque at one on the 28th of August I saw some delivery orders. I did not then inspect them, as I was leaving the office. He laid them on my desk, and I think I subsequently returned them to him.

To Mr. Litchfield—I have known Iseya seven or eight years. In making this advance I had to make my own arrangements with the Bank.

Mr. Edward Engelhardt, bookkeeper to Mr. Whittall, recognised the delivery orders in exhibit. He wrote them himself before noon on the 28th of August by order of Mr. Whittall. He then instructed the godown-man to deliver nothing without the consent of Mr. Whittall or himself. People came for delivery about three o'clock. He sent the cheque to the Bank as is usual. By Mr. Whittall's order he stopped delivery of the goods.

Mr. Kirkwood called a Chinese comrade to testify to the fact of offering the deposit note for thirty-two thousand dollars odd.

His Honor remonstrated against evidence or interpretation in "pidgin English" but allowed Mr. Kirkwood to put his question. Nothing intelligible could be elicited from this witness, so a competent interpreter was sent for.

Mr. da Roza recollected seeing Yokioka Shobei in Mr. Whittall's office on the 30th of August. One or two days before, Iseya had visited him with one Ota; and Tokura asked him to go to Mr. Whittall's to persuade Whittall to take a certain note against a steamboat, some yarns, and shirtings. They offered him *yen* 500 to do so. Witness conversed with them, advising them to explain to him the whole business. They spoke of an agreement with Whittall for \$48,000, one-third cash: two-thirds in six months against a bill on a Japanese bank. They had paid \$16,000, and Mr. Whittall refused to deliver the goods. Tokura exhibited the contract which witness explained, they giving particulars of the establishment of the Nito Bank, a private bank with a nominal capital of *yen* 100,000. Only two or three shares had been sold, and there was no capital in reserve. Witness told them he could not in such case influence Mr. Whittall. They said the \$16,000 paid had been borrowed from a foreigner. If the cotton yarns could be procured, capital would be raised from a dealer in the interior, the \$16,000, would be at once refunded and the Bank would make enough money in six months to pay Mr. Whittall. Witness promptly

acquainted Mr. Whittall with the facts of the case; he had previously been acquainted with Ota. At Mr. Whittall's request he explained next day to the people concerned that their deposit-note was not worth the paper it was written on, and that goods could not be delivered against such security. They promised to try to get better security and return in two or three days. Mr. Whittall said he would allow than fifteen days during which time he would charge no godown rent. Mr. Shimada has since been to witness to ask him to sell the steamer, for which he would probably take seven or eight thousand dollars.

Nothing material was elicited in the cross-examination of Mr. da Rosa. Mr. Ota is a doctor.

Mr. Whittall's Chinese comrade, King San, testified through an interpreter that he had presented the deposit note at several Japanese Banks (the Mitsui and others) where he was told that it was valueless.

To Mr. Litchfield—Witness tried to sell the bill. He said "Dollar sinjo?" and was answered "Sinjo-nai!"

This closed Mr. Kirkwood's case.

The Court adjourned till half-past one.

In the afternoon, Counsel reviewed the evidence on both sides in behalf of their respective clients; and His Honour reserved judgment.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, DECEMBER 7TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongō, Tokyo, Japan.

REMARKS.

Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dashed line—represents velocity of wind.
Percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.

* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 18.0 miles per hour on Sunday at 2 p.m.

The highest reading of the barometer for the week was 30.185 inches on Thursday at 10 a.m., and the lowest was 29.872 inches on Monday at 9 p.m.

The highest temperature for the week was 57.3 on Monday, and the lowest was 25.1 on Friday. The maximum and minimum for the corresponding week of last year were 61.9 and 27.0 respectively.

The total quantity of rain for the week and that for the corresponding week of last year were both zero.

THE TOKIYO-YOKOHAMA RAILWAY.

It has been the practice of some local journals for a considerable time to notice, in the railway returns of the above line, all cases in which the current receipts were below those of the "corresponding week last year," no reference being made to returns which in any degree approached previous figures. As for many reasons such a method is manifestly fallacious and misleading, we give the following table, which exhibits the true progress and successful working of the line from its opening up to the present year:—

| YEAR WHEN JOHN JUNE. | PASSENGERS. YEN. | GOODS. YEN. | TOTAL. YEN. |
|-------------------------|---------------------|----------------|----------------|
| 1873 | 395,988 | — | 395,988 |
| 1874 | 403,327 | 24,590 | 427,917 |
| 1875 | 413,221 | 32,823 | 446,044 |
| 1876 | 379,555 | 28,219 | 407,774 |
| 1877 | 349,758 | 36,238 | 385,996 |
| 1878 | 357,064 | 43,568 | 400,632 |
| 1879 | 376,449 | 47,178 | 423,627 |
| 1880 | 428,018 | 53,533 | 481,551 |
| 1881 | 502,047 | 58,182 | 560,229 |
| 1882 | 515,927 | 52,994 | 568,921 |
| 1883 | 509,635 | 46,470 | 556,111 |

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 13th.

MORE TROOPS FOR TONQUIN.

Six thousand French troops have embarked at Marseilles for Tonquin.

London, December 9th.

FRANCE AND CHINA.

Negotiations continue between the Marquis Tseng and M. Ferry.

THE SYDNEY CONFERENCE.

The Sydney Conference has decided upon the formation of a Federal Council to deal with the common affairs of the Colonies.

London, December 11th.

FRANCE AND CHINA.

The Chamber of Deputies has passed a vote of confidence in the Ministry by a very large majority.

M. Ferry has announced that it is impossible, in the absence of a definite basis of agreement, to further suspend the advance on Bach-ninh.

London, December 13th.

THE AMERICAN TRADE DOLLAR.

Owing to the fall in silver, resolutions have been introduced into the House of Representatives (United States Congress) withdrawing the trade dollar.

REUTER'S TELEGRAMS.

[FROM THE HONGKONG "DAILY PRESS."]

London, 30th November.

The Emperor of Germany has telegraphed to the King of Spain, thanking him for the cordial reception accorded to the Imperial Prince at Madrid, and assuring him of his life-long friendship.

[FROM THE SAIGON "INDEPENDANT."]

Paris, 19th November.

Negotiations have been reopened with China. It is hoped that the attitude of the Chamber and of the extreme Left will induce China to moderate her demands.

Further bodies of African troops are being prepared for despatch.

The Colonial Budget for 1885 is under consideration. M. Felix Faure has introduced important reforms in it.

The Chamber appears disposed to vote the credits asked for by the Government for the Tonquin expedition. The majority of the Committee appointed to consider the matter is favourable.

Paris, 20th November.

The Tonquin credits will undoubtedly be voted.

The *Mytho* will embark two battalions of Chasseurs d'Afrique on the 24th.

M. Fallières succeeds M. Ferry.

SUNDAY CHURCH SERVICES.

Christ Church : 11 a.m. and 5.30 p.m.
Union Church : 11 a.m. and 8 p.m.
Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokujo : 11 a.m.

LATEST SHIPPING.

FREIGHTS.

There is no demand for sailing tonnage, and there are more steamers on the berth than will fill, there being no less than three vessels for New York via Suez Canal, the *Benvenue*, *Mosser*, and *Mark Lane*, the *Benlarig* having been withdrawn. For despatch in January the *Electra* is fixed for Havre and Hamburg.

REPORTS.

The American steamer *City of Rio de Janeiro*, Captain Robt. R. Searle, reports leaving Hongkong on the 3rd December, at 3.15 p.m. bound for Yokohama and San Francisco with very strong monsoon and a heavy head sea, through the Formosa Channel; thence to port moderate weather. Arrived at Yokohama on the 11th December, at 8 a.m.

The British bark *Sooloo*, Captain Baikie, from Nagasaki, reports having arrived at Yokohama on the morning of the 12th December, after a good passage of five days, and passed the British ship *Haddon Hall* on the 11th, between Cape Sagami and Vries Island, steering south.

The Japanese steamer *Hiogo Maru*, Captain R. N. Walker, reports leaving Kobe on the 13th December, at 4.45 a.m. with light variable winds and clear weather to Omisaki; thence to port easterly winds and thick rainy weather. Arrived at Yokohama on the 15th December, at 1.30 a.m.

LATEST COMMERCIAL.

IMPORTS.

During the past week our Market shows signs of recovery from late stagnation, and although buyers still offer very low prices, the outlook is more promising, and some business is reported but generally on a small scale. Fair sales of Velvets have been made, and low Satteens are enquired for. Metals are quiet, and prices slightly easier.

| White, No. 5 - | 4.50 to 4.75 |
| Brown Formosa - | 4.25 to 4.50 |

EXPORTS.

RAW SILK.

Our last was dated 7th instant, and we have a large business to report: Settlements by foreign firms amounting to over 900 piculs for the week.

The *Tanais*, which left on the 8th instant, took 898 bales; of which 200 were for England and the rest for France. The *City of Rio de Janeiro*, despatched yesterday morning, had 505 bales for the United States Markets. It was expected that she would have had much more, but the Japanese contingent fell off most unaccountably; and it would seem that the purchases (noted in our last as being for native account) remain unshipped. Whether they will be once more offered on this Market or shipped by a future opportunity remains to be seen. Quotations generally must be again advanced; holders are very strong, and in some cases refuse to sell at all, preferring to carry their Stocks over the turn of the year. Settlements have exceeded arrivals, and Stocks are reduced to 4,000 piculs. The bulk of the trade has been in Filature sorts, and of these "good to best" are scarce, and hard to find. News from the Markets of consumption is again rather better, and the whole tone of our Market is decidedly against buyers. A feature in the week's business has been the clearing out of nearly all the Sodai and coarse silks which were in stock ten days ago.

Hanks.—Again we have to note but a small business in these, and recorded Settlements do not much exceed 100 piculs. Sellers have again put up their prices, but few buyers apparently care to operate on the new platform. Stock of these descriptions is still 2,300 piculs, and although news from Europe reports a slight advance in prices there, it would not seem sufficient to warrant purchases here at present quotations. Among the few sales reported we observe Shimonita, \$495; Tomiyoka, \$495; Omama, \$475; Chichibu, \$460; Maibash, \$440; and it is doubtful if sellers would go on at these rates.

Filatures.—This and the following class have been specially sought for; and two-thirds of the total Settlements have taken place in them. Really best qualities are getting very scarce, and prices for all kinds above ordinary No. 2 must be advanced. The competition from native buyers has been a marked feature, and it is fully expected that some of the silk so disposed of will reappear later on, when reduced Stocks and higher prices may offer the speculator a chance of profit. In the list of business done we note a few parcels No. 1 in fine size at \$610 and \$600. A small parcel of Nikosha, 14/16 den., is held for \$610. Ordinary No. 1 has been done at \$590, but is now quoted at \$600. Best 1½ are now \$590. Best No. 2 are firm at \$580. In lower grades not much change.

Re-reels.—These have been in good demand, and would have been dealt in to a greater extent, but for the extreme pretensions of holders with regard to certain well-known chops. Thus, for a rather inferior parcel of "Tortoise," \$600 is asked. A good-sized lot of "Five Girl" and "Deer" chop have been taken together at \$570 and \$555 respectively, but the operation could not be repeated at the same price to-day. Ordinary to fair Shinshu Zarguri are worth \$530 to \$560.

Kakeda.—Not a large business in these, about 100 piculs, 2½ to 3, change hands at \$520; but the higher grades have been neglected, and at closing the extreme prices asked tend to prohibit business altogether. "Chocho" done a few days ago at \$575 is now held at \$600.

Oshu.—There has been a fair enquiry, and prices are higher, especially for fair to best Sendai. Hamatsuki have also been freely taken at something over last week's figures. Stock of these districts is run down to less than 200 piculs.

Sodai and Traysam Kinds.—The Market has been nearly cleared of these, and available Stock is now less than 50 piculs. *Sodai*, good, has brought \$440, with good medium at \$410. *Masuda*, \$400.

|------------------|-----------------|----------|----------|
| France and Italy | 12,689 | 8,410 | 3,725 |
| America | 6,697 | 5,225 | 2,576 |
| England | 1,240 | 2,554 | 1,869 |
| Total | 21,226 | 16,189 | 8,170 |

WASTE SILK.

There has been more doing this week, and recorded sales amount to 750 piculs. Buyers have been unable to obtain better terms especially on good kinds of Waste; and sellers as a rule have it all their own way. Stocks of all kinds are but 1,000 piculs, and some of this is withdrawn from the Market, at least for the present. Shipments continue to be freely made as per Export table given at foot. For the best descriptions of *Filature-Noshi*, and *Kibiso*, the demand exceeds the supply.

Pierced Cocoons.—A few small lots have been taken into godown for testing, but the price will depend on how they turn out. Arrivals come in very slowly, and the available Stock is not increased. At closing the sale of a parcel of light yield is reported, but the price has not yet been definitely fixed.

Noshi-ito.—Some few transactions at full rates in *Oshu* and *Filature* kinds. Some old contracts of *Joshu* are being slowly delivered; but quality from this province is rapidly falling off, and good assortment is not easily found even at an advance on recent prices.

Kibiso.—The chief business done has been in medium *Oshu* at \$80, *Joshu* at \$30 to \$50, with a large parcel *Samdanshu* at \$60. *Filatures* have been in request at former quotations, and we note a sale of *Utsunomiya* at \$120. A fair-sized lot of *Tokosha* has also been delivered under contract at \$115.

Mawata.—There has been some revival in the demand for this article, and about 75 piculs of Good Medium have found purchasers at from \$169 to \$171½. A large parcel good *Oshu* is offered at \$180.

Some few arrivals have come to hand. Present Stock 250 piculs.

Export Table Waste Silk to 14th Dec., 1883:—

| | SEASON 1883-84. | 1882-83. | 1881-82. |
|-----------------|-----------------|----------|----------|
| Waste Silk | 12,364 | 9,990 | 7,340 |
| Pierced Cocoons | 1,727 | 2,801 | 1,850 |
| | 14,091 | 12,791 | 9,690 |

Exchange.—Rates have advanced slightly, and native Bankers have again been competing for the purchase of private paper. All quotations may be raised, and now stand as follows:—London at 4 m/s. Credits, 3/9½; Documentary, 3/9½; New York 30 d/s., 91½; 60 d/s., 92; Paris 6 m/s., fcs. 4.82½. *Kinsatsu* have not fluctuated more than one per cent., closing at about 111 per \$100.

TEA.

The past week has been extremely quiet, only one or two buyers showing any disposition to operate. Total Settlements amount to about 595 piculs, consisting of the following grades:—Common 185, Good Common 70, Medium 35, Good Medium 130, Fine 145, and Finest 30 piculs. Prices are about the same as last advised, although some of the lower grades are rather firmer. Underrated are shipments from this port since last report:—The steamships *Gordon Castle* and *Venice* both sailed on the 5th instant, the former taking 8,272 lbs. Tea for New York, and the latter 227,976 lbs. Tea, viz.:—For New York 201,927 lbs. and for Canada 26,049 lbs. The cargo despatched by the steamship *City of Rio de Janeiro* on the 13th instant comprised 368,749 lbs. Tea from this port, viz.:—For New York 2,729 lbs., for Chicago 46,120 lbs., for California 283,743 lbs., and for Canada 36,157 lbs. The steamships *Mosier*, *Benvenue*, and *Mark Lane* are advertised for New York, via ports, at 40 shillings per ton of 40 cubic feet. The steamship *Benlarig* recently advertised for New York has been withdrawn. The next Pacific Mail steamer, for San Francisco, the *City of Tokio*, advertised to leave here on the 24th instant, takes Tea at 3 cents per lb. gross to New York and Canada and at \$12 per ton of 40 cubic feet for San Francisco.

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

E. P. & W. BALDWIN,

TIN PLATE AND SHEET IRON MANUFACTURERS.

Works:—Wilden, near Stourport; Swindon, near Dudley; Horsley Field, Wolverhampton, London Office:—4, Corbet Court, Gracechurch Street, E.C.

For the excellence of our Manufactures, we have received following AWARDS:—

Vienna Exhibition, 1873, Diploma of Merit.

South African Exhibition, 1877, Gold Medal.

Paris Exhibition, 1878, Gold Medal.*

Sydney Exhibition, 1879, First-class Diploma.

Melbourne Exhibition, 1881, First-class Award.

* The ONLY ONE awarded to any Tin Plate Manufacturer.

Sole Export Agent—BROOKER, DORE & Co., Corbet Court, London, E.C.

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 22ND, 1883.

BIRTH.

On the 6th instant, at No. 217, Bluff, the wife of Mr. D. J. SCOTT of a Son.

At No. 73, Bluff, Yokohama, December 16th, the wife of Wm. BARRIE, M.B.M.S.S. Co., of a Son.

DEATH.

On the 15th instant, at Shanghai, WILLIAM HENRY BERR GUBBINS, second son of the late Martin Richard Gubbins, Bengal Civil Service, aged 35 years.

At 6.30 a.m. on the 21st December, at No. 43, Yokohama, HORACE PAGDON, aged 41 years.

WEEKLY NOTES.

A SECTION of the foreign press in Japan and China has recently found a great deal to say about the supposed arbitrary proceedings of the Japanese Consul at Pusan (Korea). The Consul is reported to have forcibly closed the premises of a firm of Chinese store-keepers recently established within the limits of the Japanese settlement, and to have peremptorily ordered the owners to remove their goods and chattels without delay. Such an outrage offered

a happy chance to journalists whose apparent interpretation of their public duties is to manufacture a maximum of mischief out of a minimum of material. The public was informed that the Japanese openly claim to have a private arrangement with Korea by which no other foreign subjects are allowed to settle and trade at Pusan. It is scarcely necessary to say that no such claim has ever been advanced by the Japanese. We learn, on enquiry, that as yet an official report of the affair in question has not been received in Tokiyo, but in the meanwhile the explanation offered is simple and sufficient. The ground occupied by the Japanese at Pusan has been allotted to them under an arrangement by which they exercise complete municipal control there, and levy taxes for that purpose. It is obvious that the residence of other nationals within the same limits could not be permitted, unless they consented to subscribe not only to the police, but also to the fiscal, system obtaining there, and even with such consent, troublesome complications might arise. Reasons connected with these municipal arrangements were doubtless at the root of the action ascribed to the Japanese Consul at Pusan, though it remains to be seen how far rumour has exaggerated the facts. We find it stated in a Nagasaki journal, which, judging from its unvarying tone of hostility to Japan and partiality to China, appears to have constituted itself the latter's champion against the former, that the new treaties just concluded with Korea will without doubt, upset "any anomalous private, arrangements that may now exist" between that country and Japan. It is obvious that the new treaties can have no effect whatsoever on the arrangement we have described. It is an arrangement openly entered into by the Governments at Tokiyo and Seoul, having for its object the preservation of peace and good order among the Japanese settled at Pusan. The advent of other nationals under separate treaties need not, as a matter of right, effect the status of the Japanese settlers in any way, though as a matter of convenience and expediency it probably would.

THAT article of the Anglo-Korean treaty which concedes to British subjects the right of trade in the interior of the country has already been made the subject of journalistic remarks reflecting unfavourably on the apparent illiberality of the Japanese Government, which, after a quarter of a century's intercourse, withholds a similar privilege. That such a contrast should be drawn and

that the inference suggested should generally be discreditable to Japan, cannot be considered unreasonable. But the point deserves something more than a cursory examination. For the most part, it is true that restrictions upon international intercourse are due to imperfect civilization. Thus in Japan's case the limit originally set to the commercial privileges conceded by the treaties was to be interpreted as an evidence of self-distrust. When she was called on to open this port or remove that obstruction, she hesitated, doubtful of her own ability to control forces that had been in operation among her people for more than two centuries. For every failure to protect foreigners against outrage, the Government was required to pay a heavy indemnity, and sometimes to imperil its own existence by preferring the claims of aliens to the prejudices of its nationals. Under these circumstances it was natural that Japan should shrink from incurring responsibilities attended by such serious results. None the less it is quite certain that, since the Restoration, her statesmen's most earnest wish has always been to remove every restriction upon foreign intercourse, since no otherwise can they hope to obtain recognition of their country's fitting place among independent nations. There are people who profess to doubt this, maintaining that Japan's secret wish is to return to her former isolation and to get rid of foreigners altogether. We shall scarcely be thought discourteous if we say that such suspicions are not worthy of discussion. They are simply an illustration of the old couplet,

All seems infected that the infected spy,
As all looks yellow to the jaundiced eye.

Japan's aim is to be really regarded as an independent and civilized country. She wants to place her commercial relations with the outer world on the same footing as those of an European State; to permit strangers to come and go as they please, and travel and trade wherever they list in her territories without let or hindrance. But in removing all old fashioned restrictions, she looks to be herself treated in a similar spirit. She will never consent to extend to every part of the country that monstrous system of conflicting jurisdictions which, even within the narrow limits of the open ports, has shown itself so vexatious and impracticable. Foreign nations set up that system as a guarantee against the possible wrong-doing of a nation not yet fitted to associate with them on equal terms, and that the system should cease with the unfitness which justified it, is only fair and logical. Holding these views, it is not likely that the

Government will sanction any such partial and impolitic measure as that suggested by persons who advocate the issue of trading passports. For, in the first place, there is no need whatsoever of such passports so far as the Japanese themselves are concerned. They have no reason to discriminate between the foreigners with whom they will associate: the days are gone by when this was necessary. To impose any extraordinary conditions now upon persons wishing to extend their business transactions beyond the limits of the treaty ports, would be equivalent to declaring one of two things—either that the Japanese dare not yet trust themselves to carry on unconditional intercourse, or that they are unwilling to trust foreigners. Their dearest object—complete assimilation to the conditions of civilized independence—would be rather defeated than advanced by such a course. Further, appreciating fully the material advantages which would accrue to the country from the admission of foreign capital and enterprise, they are naturally averse to a make-shift that would tend to perpetuate existing conditions. The issue of trading passports comes under this category. The empty privilege of going into the interior and dealing directly with the producers, offers no solid attraction to capital or enterprise. It might help to free commerce from some of the unhealthy parasites that now impede its growth, but its direct benefits would be accessible only to persons residing at the treaty ports. It would, in short, be a palliative, not a remedy, and wise men do not devise palliatives for evils that must always be mischievous until they are eradicated. Before, then, comparing Japanese and Korean policy in these respects, it will be well to remember that the Government of this country does not refuse to grant trading passports because such a concession overtaxes its liberality, but because its aims are much larger. It is ready to remove everything resembling an obstacle to commercial and social intercourse; to extend to foreigners residing within its borders every privilege enjoyed by its own people, provided that other distinctions be levelled at the same time; or, at least, so far modified as to afford reasonable security for the maintenance of law and order.

Another length of five miles has been opened on the Tokiyo-Takahashi line, bringing the total mileage upon to traffic up to about 53 miles. The daily service upon the line now consists of three passenger and one luggage train, and the gross monthly earnings are thirty thousand yen, approximately. No energetic steps have yet been taken, so far as can be seen, to develop the goods traffic. The district between Tokiyo and Kumagaye, though very thickly populated, has few towns or villages of importance. The inhabitants are, for the most part, thriving farmers who live upon their land, and whose habit for generations has been to send their produce, on men's or horses' backs, by wretched roads, to Tokiyo or some other market little less distant. To such persons the advantage of getting their vegetables or other goods carried

by train does not appear very marked, especially when it is necessary to walk seven or eight miles to a railway station, as a preliminary measure. They will still persevere in their old fashioned ways until the benefits of railway traffic are brought home to them forcibly. The only method of accomplishing this is to establish a number of sidings, as well as short branches as feeders of the main line, and when efficient steps of this nature are taken, the resultant earnings cannot fail to be very large. It may be remembered that when the Tokiyo-Mayebashi line was projected three years ago, we published some statistics showing that the cost of the goods traffic alone between these places amounted annually to a million and a half (yen), and that the number of passengers averaged two and a half millions. There was, therefore, good reason to predict a prosperous future for a railway tapping these districts, and even in its semi-developed condition, the line opened a few months ago has fulfilled this prediction. The method of construction originally proposed was the so-called "American style" that is to say, a cheaper and less durable method than experience has proved to be really economical—though it is needless to say that this conception does injustice to American engineers, whose practice is identical with that of all other engineers, namely, to make the best possible line their funds will permit. Fortunately, however, the Japanese were better advised. The new line is not of an elaborate or costly nature, but it is by no means one of those "back-wood tracks" which consume all their earnings in repairs. At the rates of exchange ruling three years ago, experts calculated that a durable and serviceable road might be built between Tokiyo and Mayebashi at a cost of about forty-five thousand yen per mile, and it is stated that the actual expenditure has been well within this estimate. Assuming thirty-five thousand yen as a fair figure, and assigning half the gross takings to the working expenses' account, it appears that the line is already paying upwards of ten per cent. It will probably pay nearly twice as much when the whole length to Mayebashi is opened, and when the facilities for attracting goods traffic are properly developed.

Roughly speaking, the method of railway extension now proposed, and virtually adopted, by French financiers, is to devote the proceeds of prosperous lines to meet the deficits of those which are not yet self-supporting. The mere earnings of a railway will not bear to be mentioned in the same breath with the benefits it confers on the districts through which it runs. This consideration is prominent among the many which have induced modern economists to recommend that a railway's earnings ought, if possible, to be devoted, not to the enrichment of private speculators, but to the construction or support of other lines. There has been talk lately in this country of raising an internal loan of 25 millions and devoting the proceeds to railway construction, but we doubt whether the project was ever seriously entertained, and we

more than doubt whether it could be successfully carried out. Even supposing the money were procurable in that way, the withdrawal of so large a sum from the floating capital of the nation would inevitably produce a disastrous effect upon commerce. Foreign capital, on the other hand, could be easily and cheaply procured for such a purpose. The net earnings of the railways already opened in Japan are about eight hundred thousand yen per annum. If this sum were set aside as the interest and sinking fund of a foreign loan, ten million dollars might be obtained to-morrow, and devoted to supplying the country with some of the transport facilities it so sadly needs. In a very few years the principal could be repaid, and by pursuing this plan all the lines most needed might be constructed without entailing any sensible effort upon the nation. This is a subject which does not appear to require much demonstration.

At a meeting of the Hiyogo Municipal Council on the 12th instant, the representative of the Working Committee read the following letter:—

THE SUPERINTENDENT, MUNICIPAL COUNCIL.
SIR,—I beg to notify you that the privilege hitherto given to the Hiyogo Municipal Police to enter my premises and make inquiries about my servants is hereby withdrawn.

I would thank you to make the above known to the members of the force.

I have been obliged to take this step in consequence of the insolence and unwarrantable proceedings of one of the Municipal Police. The man in question hesitated to leave my premises this morning when ordered, and insisted on demanding the names of Japanese whom I told him were merchants transacting business with me.

I am, Sir, Your obedient servant,

J. BLACKMORE.

In commenting upon this communication, the representative of the Working Committee said that "the system of registering servants instituted by the Council had been very efficacious in preventing thefts," and "this was well recognised by the public, who willingly afforded the municipal police every facility for making the necessary enquiries." The President of the Council also remarked that "this was the first occasion any objection had been raised to a system which had undoubtedly effected a great deal of good." It is scarcely necessary to comment any further on the fact that in Kobe a municipal council of foreign residents deems it necessary to resort to a system which the Japanese authorities in Yokohama for more than seven years have vainly solicited foreign co-operation to inaugurate. There is, however, another interesting lesson to be learned from the letter of this recalcitrant citizen—namely, that in the model settlement of Kobe, where municipal affairs are conducted by the foreign residents themselves, the Council's ability to carry out any particular system depends upon the caprice of individual residents. Here we have a person named Blackmore coolly notifying the Superintendent of the Council that a function hitherto performed by the Hiyogo municipal police shall cease, and requesting that the fact be made known to the members of the force. Mr. Blackmore condescends, indeed, to give his reasons. A policeman offended him, by "hesitating to leave his premises when ordered," and by "insisting on

demanding the names of Japanese who," according to Mr. Blackmore, "were merchants transacting business with him." In short, one policeman annoyed him, and he unhesitatingly closed his doors to the whole force; "hereby withdrew their privilege and would thank the Superintendent to notify" the fact. It is obvious that Mr. Blackmore is just the sort of gentleman for whose special behoof laws are made. And this becomes still more evident when we learn that "the merchants transacting business" with him were, in all probability, Japanese subjects engaged in violating the laws of their country by his connivance. The *Hiyogo News* states that one of the illegal exchanges recently denounced in its columns is conducted on Mr. Blackmore's premises. Not unnaturally, therefore, he objected to domiciliary visits from the police. So long as his house was an asylum for law-breakers, the less it was frequented by the guardians of the law the better. The opportunities which this country offers to enterprise without capital are not yet fully recognised. A few more persons of Mr. Blackmore's stamp are needed to open the public's eyes.

It is said that the foreign residents of Osaka are preparing a memorial to the local Municipal Council with reference to the illegal exchanges which exist upon the premises of certain foreigners residing in the Settlement. This action is worthy of the gentlemen who are taking it. As the *Hiyogo News* justly says, it will show the Japanese "in what a wretched minority those foreigners are who seek to turn their extraterritorial privileges into cash." But while fully sympathising with, and applauding, this movement, we would ask our readers to consider what it means. Does it not mean that the presence of foreigners in Japan under existing conditions virtually invalidates the laws of the empire, even though they are laws prohibiting some business detrimental to the public welfare? The memorial of the Osaka residents will establish the fact that respectable foreigners have nothing in common with men who take advantage of their peculiar position in Japan to provide opportunities for law-breaking and immorality. But we venture to think that that fact was already established. What we are perplexed to discover is whether the power of the Government of this country to enforce just laws within its own territories must be held in abeyance until some flagrant abuse like the Osaka and Kobe exchanges excites a demonstration of foreign indignation. Have the treaties rendered everything, even to the laws of the land, dependent upon the caprice of individual foreigners? In commenting on these recent disgraces, English local journals called them a prostitution and an abuse of extraterritorial privileges. Extraterritoriality then confers on Englishmen the ability to violate, and assist Japanese subjects to violate, every law or regulation which Her Majesty's Consuls in Japan are not clothed with English legal authority to enforce. This is the English interpretation of the treaties, and its consequences are now before the public. Perhaps the adventurers who have

devised this pretty scheme for making money in Osaka and Kobe will feel the pricks of conscience, and turn from the error of their ways, when they find that their fellow-residents have taken the trouble to write a memorial on the subject. But beyond this somewhat remote possibility, we do not see what the memorial can effect. It will not confer upon the Consuls any new powers, neither will it bring the offenders within reach of Japanese law. It may, indeed, help to prove what reason and justice have already demonstrated over and over again, namely, that extraterritoriality, while exempting foreigners from Japanese jurisdiction, does not exempt them from the obligation of observing all Japanese laws which do not conflict with the provisions of the treaties. Were the keepers of these exchanges American citizens, they could be immediately restrained and adequately punished. But, up to the present, the Government of the United States stands alone in its method of interpreting a treaty of amity and commerce.

THE peculiar methods of Chinese administration are exemplified in a memorial from the Governor of Kiangsi and the Literary Chancellor of that province reporting the steps taken by them, in obedience to Imperial Decree, to put down the practice of female infanticide. That the Governor and the Literary Chancellor should be associated in a work which seems to concern the former only, is due to a wise recognition of the principle that no reforms can be successfully carried through unless the spirit to receive them exists among the people. With the view of fostering that spirit in the case under consideration, the educational officers were directed to compile and publish short essays on the subject, and to be specially instant in their exhortations at the examination seasons. But the action of the executive authorities does not appear to have been inspired by a similarly judicious instinct. The Governor reports, with evident pride, as the result of the system inaugurated by him, "that nearly every Department and District town has now its Foundling Hospital or Orphanage, for the receipt and maintenance of children that have been abandoned." It would thus seem that the plan approved by the authorities is to persuade the people to substitute abandonment for child-murder. This is certainly a very deliberate species of reform.

RESIDENTS of Tokiyo and Yokohama cannot fail to have noticed an extraordinary lurid appearance presented by the sky at sunset and sunrise during the past few weeks. The phenomenon was singularly distinct on the evening of the 20th and morning of the 21st instant, especially at the latter time, when the whole of the Eastern and a portion of the Northern horizon glowed, for fully an hour before dawn, with a rose and copper-coloured illumination. Phenomena of this nature are not unfrequently witnessed in Japan during the prevalence of those storms which succeed prematurely severe frosts, but we do not remember to have before observed anything so striking as the appearances of the

past few days. The following letter which we reproduce from the columns of the *North China Herald*, shows that similar phenomena have been noticed elsewhere, and offers some interesting hypotheses as to their causes:—

SIR,—You have asked me my opinion upon the case of the phenomena of light which everybody has been able to witness both morning and evening for the last two months. It is in fact since the first days of October that my attention has been attracted by the remarkably intense red colours with which the western sky has been arrayed after sunset, and you may remember that the first appearance of this beautiful phenomenon at Foochow led to the belief that it arose from some vast conflagration. Red was not the only colour which illuminated the atmosphere; the most diverse hues succeeded each other, as, generally speaking, in the order of spectral colours, red appears the first in the morning and disappears the last at night. This phenomenon was particularly remarkable in that the illumination of the sky in the morning began a considerable time before the ordinary moment of dawn, and in the evening lasted a long time after the normal twilight. Another peculiarity not less striking was that the sun, on rising and setting, presented a disc of dazzling whiteness; the sky nearest the horizon was of the same tint, while towards the zenith the firmament was lightly washed with purplish violet. These phenomena were visible every morning and evening, whatever may have been the atmospheric conditions, and it was not difficult to discern their persistence behind the thick curtain of clouds which so often veiled the firmament during the month of November.

The most obvious explanation that could be given of the phenomena of colour thus observed was to attribute them to the presence of watery vapours in the highest regions of the air; and in the frequent typhoons of the past autumn we had the mechanical agent by which these vapours would have been raised and transported a long distance. But the occurrences were too constant, too persistent, in spite of the changes of weather, and still more the whiteness of the sun's disc at the horizon presented too great a contrast to the intense colouring that had preceded its rise and followed its setting, to allow of this explanation being sustained.

Upon these intervals, the scientific journals of Europe (*Nature*, 11th and 18th October) informed me that absolutely similar phenomena had been observed since the middle of September in India, especially at Madras, and that popular credulity recognised in them prognostics of a famine; just as, in China, they are regarded as presaging war. The explanation of the phenomena given by the savants of the country was at first identical with the one just quoted; but soon it appeared insufficient, and they fell back upon the cinders proceeding from the great eruption in Java, which might have been carried along by the higher aerial currents. But the cinders thrown out in August will not explain what we have observed here in October and November; besides, even in India, the phenomenon continued to the end of October, according to letters which came from Calcutta by the last mail. Moreover, America herself participated in the spectacle; for, under date of the 2nd September, a letter appeared from Trinidad in *The Times* stating that during the evening it was generally believed that an immense conflagration was raging in the environs, so intense and wide-spread was the red colouring of the sky. Here, then, we have the same phenomenon showing itself either successively or more probably at the same time in three countries all far distant from one another—India, China, and the Gulf of Mexico; we may almost conclude that it was general, at least as regards the whole of a pretty large zone, and including the tropics.

Is it, then, not reasonable to seek outside our own globe for the cause of these strange occurrences? For, we can admit that the same atmospheric conditions are able to occur at the same time in places so far apart? So much the more as these conditions themselves do not seem to explain equally well all the phases of the phenomenon. But, if it is necessary to leave the earth in our quest, what are we likely to meet, in space, that can give rise to the facts that have been observed? Evidently it can scarcely be anything but masses of gaseous particles, perhaps even solid particles, sufficiently diffused not to sensibly obscure the light of day, but capable of reflecting, and dispersing, the solar light at pretty large angles, and finally intermixed with our own atmosphere in such a way as that the direct rays of the sun at the horizon, reaching us sifted and reflected a thousand times through a thick stratum of these particles, acquired a radiance as though of silver.

Again, I see nothing but the solar nebulosity known as the Zodiacal Light, or a mass of cosmic dust encountered by the earth in her revolution round the sun, that could present these conditions. By a cause entirely unknown to us, the solar nebulosity which at this time of year envelops our globe and extends to a considerable distance, might have experienced a sensible increase of density; and as its plane blends with that of the ecliptic, it is evidently in a zone in the neighbourhood of the equator that the maximum of the consequent phenomena should have been observed. The modifications in the solar nebulosity may depend upon the modifications occurring in the body of the sun, either on its surface or in its immense atmosphere. As regards the supposed meeting of the earth with a mass of cosmic dust, there is nothing more natural; such masses are by no means lacking in the universe; nebulæ are innumerable, and according to a most ingenious theory of the Italian astronomer Schiaparelli, a comet which has disappeared and ceased to exist for ever under that form, may be found again in all its component parts in the dust with which its former orbit is sown. One may thus form some idea of the magnitude

of the supposed mass which the earth would have had to pass through during these three months of September, October, and November—the strange phenomena observed in the evening and the morning, appear to have ceased with the beginning of December. We know that the earth in its revolution round the sun makes 29.5 kilometres a second, or 2,548,800 kilometres a day; if the duration of the phenomena was about eighty-eight days, the earth will have made 224,294,400 kilometres through this mass of cosmic dust, and this would be the extent of its densest portions. This again is a small thing compared with the dimensions of some nebulae. It is, no doubt, to an encounter of this sort that we must attribute the dry mist observed in 1783 in Europe, Africa, and America. This mist certainly possessed a feeble light of its own, for at midnight it distinctly illuminated objects more than 200 kilometres off. The mist of 1831, which excited so much public attention in the four quarters of the globe, had a strong resemblance to that of 1783, and was the cause of several of the phenomena observed during 1831, although this year, the cosmic dust in question, even allowing that it is the cause of what has been witnessed here in China, and also in India and America—has not been dense enough to partially obscure the sun, as was the case in the two former instances. We will say in conclusion, that from 1783 to 1831 is 48 years, from 1831 to 1883 52 years. These two numbers are sufficiently alike to justify us in asking whether these three phenomena may not be produced by one and the same cause which makes its appearance periodically, or nearly so.

These, Sir, are speculations on which I do not ask you to place too much faith. They are conjectures which no doubt have some probability, but they are conjectures notwithstanding, and it may be that the phenomenon is simpler than we think.

MARC DECHREVENS, S.J.

A CORRESPONDENT of the *North China Herald*, writing from Tientsin under date December the 3rd, says that, though the War Party is slightly in the ascendant for the moment, the last thing desired by the Court is war. The manifesto recently addressed to the various Powers, was, according to this writer, merely a concession to the wishes of Peng Yü-lin, one of the most prominent members of the War Party, but "the Empress will never consent to let the Manchurian funds be used for military operations." It must have become plain to China long ago that if French designs upon Tonquin are to be seriously resisted, the time for active measures will be well nigh past after the army of occupation has been strongly reinforced. The proceedings of the Peking Government bear but a very faint resemblance to what we should expect were the prospects of war really considered imminent. The programme evidently is to resist French aggression by secretly assisting the Black Flags with men and material, but to avoid any open declaration of war. And it must be confessed that up to the present the balance of success is on China's side. Bravely as they have fought, difficult forces, assisted by climate and topographical difficulties, have so crippled the action of the invaders that after a campaign of six months no visible impression has been produced on their task. Sontai is taken, but the Red River still represents the limit of French occupation, although the forces at the disposal of Admiral Courbet are now said to number nearly twenty-five thousand men. The worst feature of the business is the apparent want of unanimity among the civil and military authorities. Another change is announced; a change which argues ill for the prospects of peace—M. Tricou has succeeded Dr. Harmand as Civil Commissioner.

NOTES.

THE latest development of the Chinese question in California is the landing, or rather the failure

to land owing to the refusal by the Customs Authorities, of those Chinese who have left their country furnished with "traders' or 'students' certificates. The *Alla* of the 15th ult., referring to this subject, says:—Up to noon yesterday only seven out of the one hundred and sixty-seven of the Chinamen bearing Canton certificates had been allowed to land, and it is the opinion of Collector Sullivan that a majority of the "traders" and "students" now on the *City of Peking* would have to return to the Asiatic hive from whence they swarmed. The Collector is of the opinion that these trader and student certificates are being issued to any one who will pay the requisite fee. Prior to the arrival of the *Peking* nearly three hundred Chinese had landed on these Canton certificates, and the total number of "traders" and "students" arriving for the present month is only 207 short of the arrivals for November, 1880, when there was no restriction. This fact alone is sufficient to prove the fraudulent character of these alleged certificates. Surveyor Morton, who has charge of the landing of the Chinese, has earned the ill-will of the Chinese Consulate by refusing to accept the testimony offered, and states that he is prepared to go behind the returns, so to speak, to get at bottom facts, and when the man contradicts himself he will not pay any attention to affidavits. He resents the intimation that the Custom House is negligent in the matter. The only object is to do justice to all. Some of those on the *Peking* are probably entitled to land, but where there are any doubts the Courts must be invoked. It is the opinion of the Custom House people that when a ship-load of pseudo "students" and "traders" have been returned to China, the bottom will fall out of the certificate market in Canton.

THE aggregate contributions on behalf of the sufferers in Ischia had reached 3½ million francs at the date of our latest advices from Europe. We may assume that this represents the total amount of probable subscriptions. It is a very handsome amount, and the public, having shown itself so charitable, seems now to be growing naturally curious about the results achieved by its charity. Probably there never yet was an eleemosynary fund distributed in such a way as to satisfy alike its donors and its recipients. We are not surprised, therefore, to find that complaints begin to make themselves heard in the case of Ischia also. A letter addressed to the *Pungolo* of Naples sounded the first note. Its writer said:—"I went yesterday to visit Casamicciola. The steamer was full of strangers, mostly Germans. We were literally assailed by the whole population. The people asked for alms with tears in their eyes. Casamicciola is become the land of beggars." This communication immediately attracted the attention of the press. "How does it happen," the journals asked, "that, three months after the disaster, such a state of affairs exists, when the coffers of the Committee of Succour are overflowing with money? What has been done with this money? How is it employed, and why has it been impossible, up

to the present, to obtain any account of the nature and amounts of the sums distributed?" One newspaper says that experience seems to be thrown away on the authorities. They ought to have learned something from the fact that when the last catastrophe occurred in Ischia, the donations collected on the occasion of the previous earthquake, two years before, had not yet been entirely distributed. Alluding to this earthquake of 1881, an ex-naval officer writes thus:—"Six months after the first disaster there had been but 27 thousand francs distributed. One person and one only was charged with the distribution of the money collected. Besides the 27 thousand francs given in the form of relief, he had spent considerable sums on the construction of roads, the principal of which led to his own hotel." The writer then describes how a hundred thousand francs were given to found a hospital for the support of children who had lost their parents by the earthquake, though the total number of these children was nine; and how a family which had been utterly ruined by the catastrophe, and reduced from comparative opulence to beggary, had, with infinite pains, succeeded in obtaining succour to the extent of twelve francs in six months. It is not to be expected that everybody will be pleased with the methods of using the sums contributed on account of the sufferers by the last catastrophe, but a little more publicity as to those methods is to be desired, if only to silence the ever ready tribe of cavillers.

WE have frequently had occasion to remark upon the eccentricities of vernacular journals, and the latest case that has come under our notice is certainly one to the point. A few days ago we published a paragraph which stated that a man had been blown to pieces whilst engaged in firing a salute on board the U.S. frigate *Richmond* as the ship was entering Nagasaki Harbour. The *Jiji Shimpō* reproduces the item, but with a considerable variation. The vernacular journal gives it that Captain Skerrett was the man to whom the accident happened, and, as near as it can be translated, says, "he stood in front of the gun and was blown to pieces." It is scarcely necessary to say that by no possible contortion of our paragraph could it be made to read that the accident had happened to Captain Skerrett.

IN the U.S. Consular-General Court on Tuesday, before General Van Buren, Consul-General, Edward Valentine, a colored-man, formerly a watchman at the "Windsor House,"—the man who shot a Japanese jinrikisha driver some months ago,—was summoned for an assault upon one Esmond, a boatswain, recently discharged from a foreign vessel. In default of sufficient evidence to convict the accused, His Honour had no alternative but to discharge him, remarking at the same time severely upon the condition of the grog-shops in Honmura Road, where the alleged assault took place late at night the day before last.

LONDON seems to have been much and justly startled by the two explosions which took place in the underground railway on the night of the 30th of October. The first explosion occurred near Charing Cross Station. A few minutes after eight in the evening a number of passengers were waiting there for the purpose of proceeding to the Fisheries Exhibition which was to close the next day. The Great Western train had just left the Westminster platform, when a violent shock was felt, accompanied by a noise which is said to have resembled a discharge of artillery. The sound proceeded from the tunnel, on entering which it was found that though the rails were uninjured, the ballast had been disarranged, the signal telegraph wires thrown down, and part of the masonry cast in ruins on the permanent way. Fortunately, however, nobody was sufficiently near the spot to be injured. The other explosion was more disastrous. It occurred in the tunnel way of the Edgeware Road just beyond the Praed Street Station. A train, crowded with people returning from the Exhibition, had just entered the tunnel when there was a flash of brilliant white light, a loud report, and then sudden darkness, the gas lights from front to rear of the train being extinguished. The train, nevertheless, proceeded steadily ahead, although the permanent way was much injured, and it was only on reaching the Edgeware Road Station that the amount of the damage was ascertained. Six carriages were more or less shattered, the woodwork of the two last in the line being literally torn to pieces. Altogether about forty persons were wounded, the occupants, without exception, of the two rear carriages. A few were able to return home immediately, but twenty-eight were taken to St. Mary's Hospital, where four of the number were found to be seriously hurt, though none fatally. It was at first supposed that the explosions were caused by coal-gas, but an inspection of the meters showed that this could not have been, and experts soon decided that the mischief had been undoubtedly produced by dynamite or gun-cotton. The investigations subsequently held showed that the police had warned the railway officials three months previously against the probability of such outrages. Advices had been received from America, and precaution taken accordingly. Strangely enough, Michael Davitt was lecturing in St. James' Hall at the very time of the explosions. Amid deafening cheers he denounced Lord Salisbury, declaring that "private right in land was public robbery of the nation;" that "the battle must be fought in England, and fought it will be," with other similar clap-trap. Nobody doubts for a moment that the explosions were of Fenian origin, though the organ of the Home Rulers, the *Freeman's Journal*, protests against such a conclusion being hastily formed. The *United Ireland*, on the other hand (the National League organ), takes it for granted that the authors of the explosions are Irish agitators and plainly calls them "idiots." Three days after the outrage, London was again thrown into excitement by the issue of a *Pall Mall Gazette*

"extra," containing the statement, in leaded columns, that the authorities had received anonymous information of a design to blow up the train by which the Duke and Duchess of Connaught were to travel from London to Dover, on the night of November the 2nd; *en route* for India. In consequence of this, large bodies of police were summoned for duty at the Cannon Street, Charing Cross, and London Bridge stations, while gangs of plate-layers watched the entire railway track to Dover. It appears that the warning was given by means of an anonymous letter addressed to the Privy Council. Whether the letter was a hoax, or the conspirators were paralysed by the precautions adopted, the Duke and Duchess travelled safely to Dover. Meanwhile, a reward of £1,000 has been offered for information that will lead to the arrest of the Charing Cross and Praed Street Station scoundrels. In London it is said that men go about muttering curses against the Fenians as they did after the Mansion House explosion, though indeed it speaks much for the forbearance and good sense of the inhabitants of the metropolis that they have hitherto refrained from violent reprisals. Such senseless brutality as that betrayed by the affair of the underground railway—brutality dictated, as it must be, by a blind desire to cause sorrow and suffering—might well excite a less law-abiding population to terrible revenge.

THE telegraphic intelligence by the American mail which arrived on Thursday contains nothing that can be regarded as foreshadowing the terrible disaster which is said to have overtaken the army of Hicks Pasha in Egypt. From the columns of the *New York Herald*, however, we take the following, which will help to explain the position of affairs in the Soudan at the date of latest advices:—

Cairo, November 2nd, 1883.

No official confirmation of the reports of the defeat of El Mahdi, the False Prophet, with great slaughter of his army, by Hicks Pasha, has yet been received. The report is doubted by the military authorities, who calculate that Hicks Pasha and his army were seven days' march from El Obeid at the time of the alleged victory.

The position of General Hicks Pasha's forces is as yet uncertain. He started from his camp near Khar-toum for his final assault upon the False Prophet on September 8th. His force was a formidable one, comprising about 7,000 regular infantry, 400 cavalry—of which 100 were cuirassiers, the remainder Bashi Bazouks—one battery of Krupp guns, two batteries of mountain guns, and one battery of Nordenfeldts. He picked up in the neighborhood of Berair 1,600 regular infantry and some 1,000 native Bashi Bazouks (Arabs). This brought his total force up to 10,000 men of all arms, but he had to establish seven or eight posts between the Nile and El Obeid to keep up his line of communications. To garrison those posts required some 3,000 men, reducing the available fighting force to 7,000 men. Included in General Hicks' little army was the First Regiment of Egyptian Infantry—Arabi's old regiment. This regiment was the first to mutiny and fought against the British last year at Tel-el-Kebir.

El Obeid is the capital of Kordofan, to the west of the White Nile. The False Prophet advanced upon the town, which was garrisoned by 6,000 Egyptians in August, 1882, and after various manoeuvres in its vicinity made an attack on September 8, which was repulsed. A week later the place was again assaulted, but with disastrous results, nearly ten thousand of the False Prophet's adherents being reported slain. The siege of El Obeid was maintained, however, until December 8, when the enemy retired southward, but soon returned, and on January 15 last the place capitulated unconditionally to the False Prophet, and he took up his residence there. The Egyptian garrison

was compelled to surrender by famine. The garrison and inhabitants suffered great hardships previous to the surrender. They were reduced to eat gum and in some instances, they said, even the corpses of those that were killed. A hatful of grain after the capitulation was sold for \$100 and a large sackful of the same fetched \$2,400.

The garrison of 3,500 men on taking an oath on the Koran to remain faithful to the False Prophet were permitted to join his army, keeping their arms, and received \$2 a month pay. Six priests and nine sisters belonging to the Austrian mission were captured, together with sixty-two native converts. These were all kept in chains for three days and otherwise ill-treated. Finding that all attempts to make them renounce their religion were without avail, they were released and afterwards treated fairly. Besides getting possession of the town, the False Prophet secured a large amount of money. The sum of \$1,500,000 had been lodged in the treasury for the sake of security by different merchants. This, of course, was confiscated, and the victor further discovered a sum of \$1,000,000 outside the town buried in all sorts of unlikely places. Altogether he seems to have looted considerable over \$2,000,000, which was of great service in enabling him to prosecute his campaign against the Egyptians. Since the capture of El Obeid it has been the headquarters of the rebels.

As illustrating the bizarre pastimes to which gentlemen are betrayed by the possession of more money and leisure than they can readily dispose of, a story—said to be true—is told of certain English cavalry officers who, being confined to barracks by their military duties and having little predilection for literary pursuits, conceived the idea of inaugurating insect athletics in the mess-room. The arena was a hot plate and the athletes were maggots taken from a Stilton cheese. Placed in the middle of the plate, the maggots sometimes refused to do more than writhing themselves to death, but as a general rule, they made a straight line across country and often reached the edge of the uncomfortable circle without expiring. Each officer was allowed to choose his own maggot, and large sums of money changed hands over these exciting trials of speed. Such a pursuit does not bespeak a very high order of intellect, but the circumstances were exceptional, and cavalry officers are never suspected of much devotion to intellectual occupations. In Paris, however, one would imagine that sober citizens might find some more profitable way of spending their time than kite-flying. A kite, to be sure, is a most seductive plaything. There are very few of us who would not turn out on a breezy day to man the string of a six-footer, and even those who despise such a sport will acknowledge that there must be peculiar charms about an occupation which can hold entranced grave Chinese merchants even at a time of life when pigtail hats have to be eked out with a deal of false hair. Therefore we can sympathise somewhat with the good people of Paris when we read that the manufacture of monster kites has become a highly profitable occupation, and that as many francs are staked on the performances of these aerial rivals as upon the results of the races at Chantilly. It appears that one enormous kite gained heavy sums of money for its owner on the 24th of October by soaring straight up until its distance from the point of ascent was 2,500 metres. We shall not be surprised to be told that the prospect of a war with China, the paradise of kites, has something to do with the development of this

unwonted tendency among the Parisians. That would be a worthy sequel to the Uhlan uniform.

In the *Hiogo News'* epitomized report of the last meeting of the Kobe Municipal Council, we read as follows:—"Another matter which occupied some attention will, perhaps, but only until the circumstances are understood, cause general surprise. Most residents in the Settlement have found the system of registering their servants followed for the past couple of years so advantageous, that they will hardly credit any objection being raised to its operation. Such, however, is the case, for a letter from a resident to the Municipal Superintendent refusing admittance to the police was read at the meeting. It transpired during the discussion which ensued that Mr. Trotzig's correspondent is vigorously engaged in the reputable exchange business to which we have had occasion to refer recently. This, of course, affords a complete explanation of what might otherwise appear incomprehensible, for the Japanese who frequent these establishments have a wholesome dread of their proceedings becoming public." There is matter for reflection here. In the first place, it would appear that the system of registering Japanese in foreign employ has been in force in Kobe for the past two years, and that it has been found very advantageous. In Yokohama, on the contrary, the Japanese authorities, for eight or nine years, have been vainly seeking power to carry out a similar system. What can be the reason of this difference? Simply that since in the former place the responsibility of municipal government devolves upon the foreign residents, they are ready to avail themselves of every legitimate contrivance likely to assist the maintenance of law and order, whereas in Yokohama, since the responsibility of Government devolves upon the Japanese, a strong section of the foreign community is inspired by a disposition of obstruction rather than co-operation. The registration of our servants by the Japanese authorities ought not to involve any greater violation of household privileges here than in Kobe. Most residents of Yokohama can boast a *ménage* sufficiently respectable to endure without shame a monthly or bi-monthly visit from the police. There are some, indeed, who still profess to believe that Japanese constables are a band of political spies, under secret orders to observe, as accurately as possible, whether trader A eats porridge for breakfast or accountant B drinks "three star" brandy. To these persons domiciliary visits by a guardian of the peace suggest all sorts of dreadful contingencies, and one cannot contemplate without reluctance the prospect of submitting such venerable prejudices to a succession of monthly shocks. But their number, after all, is small, and if necessary there could be provided for them a separate settlement, where all visible exercise of authority might be restricted to nocturnal perambulations of watchmen after the good old Dogberry type. There would then remain to be dealt with only the variety of gentlemen represented by Mr. Trotzig's correspondent in Kobe—persons who have good and sufficient reasons of their own to abhor every-

thing resembling police surveillance. Among the privileges conferred on foreign residents by the treaties—privileges that have been won by most unselfish sacrifices of conscience and very remarkable diplomatic constancy—there is the unparalleled right of exemption from municipal regulations of every description. This right carries with it various chances, as, for example, the chance of making money by selling lottery tickets, an occupation strictly forbidden by Japanese laws; and the chance of making money by keeping gambling saloons, an occupation also forbidden by the same laws; and the chance of making money by opening one's doors to marginal speculators in *Kinsatsu*, rice, kerosene, and so forth, which speculations are also restricted by the same laws; and the chance of turning an honest penny by running private brothels, which chaste pursuit is also forbidden by the same laws. All these rights, we say, exist for foreign residents under the present system, and are exercised by the variety of gentlemen under consideration. Are we to suppose that the community's refusal to have their servants registered is dictated by a desire to protect such rights and to shield those that execute them? Surely not. But if not, how does it happen that a system which the foreign municipality of Kobe deems necessary to the preservation of order, and which the foreign residents of Kobe have found so advantageous in its working that they can scarcely credit the idea of anyone objecting to it—how does it happen, we say, that this system is regarded with abhorrence in Yokohama and every attempt to inaugurate it negated?

It is to be hoped that there is no mistake about the telegram which refers to the safety of Hicks Pasha. If the news be correct, it may be taken for granted that his army is with him, and that the message does not refer merely to Hicks Pasha himself. The news announcing the safety of Hicks Pasha is telegraphed from Dongola, by the Governor of that place, which is thus described:—Dongola, a town of Nubia, capital of a province of the same name. It is seated on the Nile, among mountains; 500 miles N. by W. of Senaar. It is called Marakah or New Dongola, and is increasing. Pop. probably 6,000; lat. 19. 7. N. long 29. 55. E. Old Dongola, once the capital, is now a miserable place. Its mosque is in a commanding situation. The country is celebrated for a fine breed of horses, and the inhabitants for their skill in horsemanship. The province now is a portion of the Egyptian Pasha's dominion. It was taken possession of by Mehemet Ali in 1822.

We have received from the Bureau of the Imperial Chinese Maritime Customs the quarterly returns of the trade of the nineteen treaty ports of China for the three months ending September, 1883. We collate the following statistics of the entries and clearances of Japanese vessels in the respective harbours. The Commissioner at Newchwang reports that of forty-six sailing-vessels entered, one was from Japan: of forty-eight steamers, one was from Japan. Of clear-

ances of fifty-four sailing-ships, four were for Japan. No steamer cleared for this country from that port. In Tientsin, of twenty-two sailing-vessels entered, one was from Japan: of ninety-nine steamers, one was from Japan. Of twenty-five sailing-ships cleared, three were for Japan. No steamer, thence cleared for this country. In Chefoo, of forty-eight sailing-vessels entered, seven were from Japan; of two hundred and twenty-nine steamers one was from Japan. Of forty-eight sailing-ships cleared, seven were for Japan and of two hundred and twenty-eight steamers, one was for this country. No Japanese ship visited Ichang, Hankow, Kiukiang, Wuhu, Chinkiang, Wenchow, Foochow, Tamsui, Takow, Canton, Kiungchow, or Pakhoi. In Shanghai, one hundred and eight sailing-vessels were entered, twenty-four of which were from Japan. Of the entries of four hundred and ninety-three steamers, fifty-nine were from this country. Of one hundred and six sailing-vessels cleared, twenty-four were for this country. Of four hundred and eighty-seven steamers cleared, fifty-five were for this country. At Amoy, four entries of seventy-one sailing-ships, four were from Japan. Of entries of one hundred and seventy-four steamers, three were from Japan. Of clearances of fifty-seven sailing-ships, seven were for Japan.

EXTENSIVE preparations, says the *Hongkong Daily Press*, are being made in Canton to resist the anticipated French invasion. Every house in the city has been marked with a little yellow placard to the effect that "in the ninth year, it (that is, its inhabitants) has been examined." This is probably synonymous with having been "squeezed," or made to pay a "war contribution." Every shop and house has also to furnish a watchman to guard the street in which it is situated; this may possibly be the commencement of a military force formed on the conscription system. At present the duty required from these budding Wellingtons is to patrol the street at night, and decrepit old men and little boys seem to be eligible for it. They are supplied by the local authorities with a sleeveless jacket similar to those worn over their clothing by Chinese at fires. The inscription simply states the street and ward of the city, to which the watchman, or rather perhaps "special constable," may belong. The principal object of this arrangement is doubtless the preservation of internal order and prevention of riots such as that which occurred on the 10th September last, when the *Hankow* wharf was burnt and so much damage done upon the foreign Settlement of Shamien.

THE Teheran correspondent of the *Daily News* telegraphs:—Kotchan reports state that the Russian Commissariat is buying large quantities of provisions and storing them in places east of Askhabad. The Russian forces among the Tekk Turcomans amounts to 10,500 men. A camp has been formed at Ashabad, and reinforcements are arriving. When the force numbers 15,000 men, it is believed that 10,000 will march under General Camaroff to Merv.

THE peculiar fashion of diplomacy inaugurated in the Orient by M. Tricou, which consists in playing the rôle of the gentleman at large, with no particular business in any particular place, finds an echo in the *Exposé* submitted to the Chamber by M. Challemeil-Lacour. Arrived at Shanghai, the special Envoy to China declared, as everybody knows, that nothing was farther from the purpose of his mission than to discuss Tonquinese affairs with the statesmen of the Middle Kingdom. The latter had no concern with anything appertaining to Annam, according to French notions. Finding his *vis-à-vis* in this mood, it was not surprising that Li Hung-chang failed to arrive at a basis of satisfactory understanding and ultimately took his departure for Peking. Conjectures then became rife as to whether the Envoy would follow the Viceroy, with the object of renewing his assurances that there was nothing to talk about. M. Tricou, however, remained in Shanghai, expecting, apparently, that some proposals would be made to him. The anticipation was a little hazardous. People are not generally expected to re-open the discussion of business with a man who has already disavowed all intention of discussing it. Still that was M. Tricou's idea, and the idea of his Government also, for the latter declare, in their *Exposé*, that after Li Hung-chang's departure, "no overture was made to M. Tricou," and that "it was consequently resolved to put an end to a mission which seemed no longer to have any object." In order, therefore, to re-establish the normal relations between the two countries, M. Patenôtre was appointed Minister of France in China, and the special Envoy would have returned but for the Canton riots. These supplied a convenient pretext for proceeding to Peking, on the chance of something turning up. "M. Tricou looked also," says the *Exposé*, "to find there, at the same time, an opportunity of placing himself directly *en rapport* with the members of the T'sung-li Yamên, and of contributing, perhaps, to the favorable issue of the negotiations which would follow the presentation of the French memorandum." He began to "contribute," immediately on his arrival, by announcing that he had come to the capital for no other purpose than to see the Great Wall. By way of incidental diversion, however, he let the Viceroy of Chihli have a passing glimpse of a programme which was in process of immediate preparation, namely, the massing of thirty thousand French troops on the banks of the Red River, and the postponement of all further respect for Chinese susceptibilities until the whole of Tonquin had passed comfortably under French protection. Li Hung-chang is an accommodating sort of politician. He seems to have entered thoroughly into the sport of wall-viewing and army-making, for the next thing we heard was that China could easily raise a force of half a million men in the districts adjoining the disputed territory. This was capping M. Tricou's thirty thousand with a vengeance—capping it so effectually that nothing remained but to revile all Chinamen as bouncers and deceivers. Then followed the special Envoy's remarkable telegraphic despatch, in which Li

Hung-chang was represented as disavowing the Marquis Tseng, and longing for the continued pleasure of M. Tricou's society in Peking. Herod was out-Heroded. Morose children, when they find themselves worsted in a sport, frequently have recourse to the expedient of throwing mud at their competitors. The T'sung-li Yamên, beaten in the game of brag, resorted to the vulgar device of giving M. Tricou the lie direct, and even the polished M. Ferry so far forgot himself as to retaliate in kind. Readers of Brett Harte's poetical narratives remember less about the moral obliquity of "truthful James" and Bill Nye, than about the dark ways and vain tricks of "the heathen Chinese," and we do not doubt that the story of the Tonquin negotiations will leave a similarly one-sided impression. At Peking, however, serious business seems to have been postponed for the sake of this thrasonic sport, and the *Exposé* submitted to the Chambers adroitly transfers the imputation of obstructiveness to Chinese shoulders by saying that, up to the date of latest advice, "the Tonquin question had not been entered upon by Prince Kung and the T'sung-li Yamên in their interviews with M. Tricou." Nothing is added, however, about the Envoy's designs upon the great wall or about the terrible things he predicted should China attempt to make herself heard. It would seem as though M. Tricou's chief business was to show China a genuine specimen of Chauvinism, and in this he succeeded admirably. But that his Government should blame the statesmen of the Middle Kingdom by implication for not conferring with a man who refused to be conferred with, is a diplomatic coup that takes us slightly by surprise.

THE bathos which poetasters can fathom, especially those who dive after Swinburne into the abyss whose bottom he at last has reached, emerging comparatively cleansed from the viler stains of mere sensualism, is well shown in the *Indian Review*, which, in a critique on "Anglo-Indian Verse," writes:—

We find also another set of verses entitled "A Song of Sound" in which the writer addresses some lady of his fancy after this fashion:—

Didst thou drink to the lees of the winepress? Thou gavest
Sweet guerdon of smiles to the hearts thou enlaved;
That tempest of sighs in the air—
Wilt thou answer it, sweet one, after thy fashion
With the crimson of hate and purple of passion?
Ah, love, with the rippling hair!

This is *Sound* indeed, "sound and fury, signifying nothing;" and when in the last stanza he asks:

Is it opium, or absinthe, or Bedlam unveils thee?

the majority of his readers would I think, on the whole decide in favour of Bedlam. The fact is that Swinburne, especially in his earlier manifestations, is a dangerous poet to imitate: his shores are covered with the bones of many a youthful versifier, who has been lured to poetical ruin by his Siren strains. Giving full play to a wild and sensuous imagination, Swinburne, in his younger days, took men's ears captive, almost in spite of themselves, with his wealth of language and wonderful harmonies of rhythm; but when weaker geniuses attempt to reproduce those passionate cadences, sheer nonsense is too often the result. Diluted Wordsworth or Tennyson is bad enough; but Swinburne-and-water is worst of all. Still, as has been already pointed out, our author can do a good deal better than this; and we may venture to address to him his own farewell words of consolation to the tearful one.

PÈRE DECHEVRENS, the chief of the Siccawei Observatory at Shanghai, writes as follows to

the *Mercury*:—"A comet was discovered by Mr. Brooks on the 2nd September; it had then the brilliancy of a star of the tenth magnitude—circular and tailless. Calculations show that it is identical with that known as Pons's Comet which appeared in 1812. The intensity of its radiance will continue to increase up to the middle of next January; but then, although it ought by rights to be three or four times more brilliant than in 1812, its luminosity will not exceed that of a star of the third magnitude, and will be far from rivalling the beautiful comets of recent years. With the assistance of a good binocular, it can be distinguished at the present time between six and 7 p.m., to the West-north-west, at about 45° of elevation, and 6° or 7° to the north of Wéga, the beautiful star of the constellation Lyra. In our telescope it appears without any tail to speak of, under the form of a dense nebulosity, nearly round, and having already a strong condensation in the centre. Its motion in the sky is sufficiently well marked."

A WRITER on the Chinese question, in a letter to the editor of the *Atlas* on the 16th ult., says:—"The manner of Chinese laborers landing in this country after their exclusion under the Restriction law lately passed is not surprising. My residence in China, back some twenty-six years ago up to a few years since, has given me an insight into the traits of that crafty people. The officials I have found always the most corrupt; and when an opportunity occurs to increase their income by nefarious practices, it is gladly taken advantage of. Every captain of an opium clipper knows well what benefit a few dollars would result in when given to the customs officials and others at the ports where foreign vessels were not allowed to enter. The Custom House at Canton has the usual avaricious officials who will luxuriate in clover with the monies derived from these creatures; and they will the more enjoy it, as they can thus torment the citizens of the United States by nicknaming them 'traders.' Very respectfully, H.L.B."

THE statistics of the Universal Postal Union for 1881 show that the United States ranks first in number of post offices, with 44,512; Great Britain takes second place with 14,918, Germany has 11,088 and France 6,158. Japan, with 5,094 offices, is far in advance of Russia, British India, Austria, Italy, and Spain. Switzerland has one post office to every 985 inhabitants, and the United States one to every 2,126. The United States conveyed the most postal cards, Germany next, and Great Britain and Austria in order. In respect to the number of letters and postal cards to each inhabitant the countries ranked as follows:—Great Britain, 38.7; the United States, 27.3; Switzerland, 19.9, and Germany, 15.8. The United States had 91,571 miles of railroad; Germany, 20,563; France, 16,822, and Russia, 14,439 miles. In number of newspapers conveyed in domestic mails the United States ranks first, with 852,180,792; Germany second, with 439,089,900; France third, with 320,188,636, and Great Britain fourth, 140,789,100. In gross

postal revenue Germany has 205,324,215 francs; the United States, 194,630,444 francs; Great Britain, 175,690,000 francs, and France, 152,968,569 francs. Great Britain, Germany and France had a net revenue in 1881 ranging from 68,525,100 francs to 19,900,440 francs, but the United States, Russia, and Japan had a deficiency in revenue in the same year ranging from 14,418,075 to 1,320,846 francs.

We remarked recently upon the safety and ease with which several passages have been made by sailing ships from New York to this port by taking the Australian route during the N.E. monsoon. Two vessels arrived on Thursday from New York, which further illustrate the advantages of this route during the period referred to, both ships having made fair passages with regard to time and experienced fine weather till approaching this coast. The weather they would have met in struggling up the China Sea can be well imagined through recent reports.

THIRTY-FIVE years ago calculations made in France showed that for every ten thousand cartridges fired in battle, one man was hit. The introduction of rifles, and especially of breech-loaders, has so far improved this proportion that out of every four hundred bullets one is now supposed to find its billet. A notable exception to this rule was furnished by the recent Egyptian campaign. The British military authorities calculated that on that occasion 999 shots were wasted out of every thousand. It is plain, therefore, that nothing would influence the results of a battle more than some device for preventing this waste of force. Such a device is said to have been contrived by a Russian. The details of the invention are not published, but the history of its fate has created quite a sensation. It appears that after repeated appeals to the Russian War Office, the inventor, M. Liatchok, at last obtained permission to submit his apparatus for official inspection. His friends subscribed the necessary funds and he repaired to St. Petersburg. According to his own story, he had scarcely taken the apparatus from its case, when one of the high specialists appointed to examine it, cried:—"I would give a good deal to an enemy who would consent to to embarrass himself with such a weight as that." Another raised the thing and said:—"A heavy affair this and doubtless very costly." The inventor replied that it weighed 14 lbs. and cost 10 francs. Another specialist objected that the support being fixed would soon be destroyed by the recoil, but it was pointed out to him that, so far from this being the case, one of the advantages specially claimed for the instrument was the mobility of its point of support. The Committee, however, had made up their minds, and the scheme was condemned as impracticable. M. Liatchok then addressed himself to the French and Austrian Governments successively, but failed to obtain any encouragement. At last he applied to Germany, and the immediate answer was a telegram inviting him to come at once to Berlin at the expense of the

Ministry of War. There the invention was highly approved, and the *Gazette de Moscou* says that the secret division of the Arsenal at Spandau has received orders to construct a number of machines after M. Liatchok's design. As might be expected, great indignation is expressed by the Russian journals at the folly of letting such an invention fall into foreign hands. It is even declared that one of the military experts who condemned the design is himself engaged in elaborating a piece of mechanism intended to serve a similar purpose.

Speaking of military inventions, the *Invalides Russe* says that Lieutenant Kondinoff has invented a portable apparatus for intercepting telegraphic and telephonic communications in time of war. The machine is contained in a little box and weighs only seven pounds. To make use of it, somebody finds his way to the enemy's line of telegraph, cuts the wires and connects them with the interior of the box. The result is that all messages passing the wires are reproduced on a slip of paper which can be deciphered at any staff office. It is truly an admirable spectacle to observe the infinite pains which the nations of the world give themselves to-day to devise means of deceiving and slaughtering each other.

Our readers will remember the letter recently addressed to the *Figaro* and translated by us with reference to the atrocities said to have been committed by the French troops at Hué. It appears that the writer was M. Viaud, a lieutenant on board the *Atalante* and a gentleman well-known in the literary world under the nom de plume of "Pierre Loti." He is the author of *Asiade*, *Le Mariage de Loli*, *Les Fleurs d'Ennuï*, &c. So soon as his name was definitely connected with the letter to the *Figaro*, the *Journal Officiel* announced his recall from active service, and the *Parlement* commented on his conduct in the following terms:—"It is unfortunately necessary to admit the possibility of acts such as those ascribed to our troops at Hué. That the sailors, exasperated by the death of Commandant Rivière, and by the tales, more or less fantastic, related about it, should have suffered themselves to be carried away by a desire of taking revenge on the Annamite soldiers who had nothing to do with the act, is a matter deplorable, blamable in the highest degree, but comprehensible. What is more difficult to understand is that there should be found an officer ready to make such savage scenes the subject of a literary narration, and a French journal, with a large foreign circulation, willing to publish that narration. Will there be any reason for astonishment if the *Figaro's* letter is translated and reproduced in London and Berlin, accompanied by commentaries which we can easily divine? Will there be anything astonishing if the Chinese Government, well posted, as we all know, in the contents of the European journals, become possessed of the letter and circulate it throughout the Orient, so that some day it shall serve as a pretext for terrible re-

prisals?" We may reply at once that there will be nothing surprising in all this. What is surprising is that any excuse for such atrocities should be found in the death of Commandant Rivière. That officer was killed in open fight: killed as all his enemies would have been killed had their ambuscade failed. If his body was decapitated, so too were many Annamites and Black Flags taken prisoners by the French. That soldiers should become dehumanized in the heat of battle is nothing new, but that their brutalities should be afterwards condoned on the ground that some of their number had met with the death they themselves were seeking to mete out to their opponents, is a novel species of sophistry.

Most persons are familiar with the story of the three pilgrims, an Irishman, an Englishman, and a Scotchman, who finding their stock of provisions reduced one evening to a loaf of bread, agreed that whoever dreamed the most remarkable dream that night should have the whole loaf. The following morning, the Englishman and the Scotchman told long stories of their dreams, but when it came to the Irishman's turn, they found that he had dreamed of eating the loaf and had actually consumed it in his dream. Something similar is said to have occurred recently in the Canton of Saint-Gall. Three peasants of the neighbourhood formed a society for the purpose of making money after a recipe of Albertus Magnus. They possessed thirty-two five-franc pieces, and having buried these under a tombstone in the churchyard of Saint-Fiden, they stripped themselves naked, took up their abode in a little hut near the cemetery, living only on bread and water, and repeating certain formulae every hour of the day and night for seven days. On the seventh evening their 160 francs should have been changed by the god "Hisis" into five millions, but one of the three, observing no symptoms of the transformation, fobbed the thirty-two pieces without waiting for the *dénouement*, and disappeared, not by sorcery.

THE developments of the Clovis-Hugues affair, allusion to which was made in these columns some time ago, present some features even stranger than the origin of the scandal. It will be remembered that a certain Madame Lenormand, anxious, so the story ran, to fix upon her husband a charge of inconstancy, accused him of improper relations with Madame Clovis-Hugues before her marriage. The latter is a lady of some reputation in France. Her husband, deputy for Marseilles, is a poet and writer of distinction. He has dedicated several of his works to "Ma Jeanne," as he loves to call his wife, and the lady seems to have well merited this devotion. She is described as a tall, handsome and resolute-looking brunette of about thirty-five, and it is said that once when her husband was imprisoned for writing violent attacks against the government, she used to visit him in his cell, carrying prohibited books in her skirts and packets of tobacco in her hair. She has two daughters, one called Marianne, a popu-

lar name for the Republic in France, and the other Mereille, the name of the heroine of her husband's finest poem, which is also dedicated to "Ma Jeanne, la grande, bien aimée." In short Madame Lenormand, or rather the secret police said to be in her employ, could scarcely have chosen a more unpromising field wherein to sow seeds of scandal than the Clovis-Hugues family. M. Clovis-Hugues has declared in the Chamber that "there is no justice in France," adding, "I know for certain that Madame Lenormand has paid 25,000 francs to an *agence privée* to obtain evidence, or, in other words, false witnesses against me. My wife and I are followed about hourly by private inquiry agents; but I say here, once for all, that if they overstep the bounds up to which modern French law permits them to outrage family life, I will blow out the brains of one of them, and so make an example." Previous to this impassioned address, delivered by the poet-deputy, "wild and unkempt as usual, leaning against the statue of Laocoon in the Salle des Pas Perdus," M. Clovis-Hugues had actually been going about trying to find a private detective named Vandal, whom he desired to shoot. This Vandal was formerly Chief of the Secret Police, and is now the head of a private agency, which is said to be connected with the Detective Bureau and has the reputation of having served a great many Parisian magnates under very peculiar circumstances. A certain Baron de la Pleize wrote to M. Clovis-Hugues to inform him that Madame Lenormand had taken Vandal also into her pay, and the Deputy lost no time in pursuing his new persecutor with a revolver. Coming home unsuccessful, he found that his wife had started off on her own account with another revolver, to shoot her slanderer Madame Lenormand. This was "Ma Jeanne's" second attempt against Madame L.'s life, and it would probably have succeeded but for a happy accident. Madame L.'s son, M. du Tillet, happened to be coming out of his mother's room when the lady with the revolver essayed to enter. There was a struggle. Madame Clovis-Hugues was overcome, and the gendarmes, arriving, took possession of her revolver and conducted her, with the utmost politeness, to the Commissaire de Police. There she made her declaration, avowing, in answer to the Commissaire's enquiry, that she had gone to Madame Lenormand's house "firmly resolved to kill her." When her amiable intentions had been duly placed on record, she was informed, with many apologies for her detention, that she might return home. Meanwhile M. Vandal says that he has not received any money from Madame Lenormand, and that he will "box the ears of any journalist who writes a word against him." What with blowing soap-bubbles, flying kites, and watching the developments of such cases as the above, Parisian society is not likely to suffer from ennui.

THE authorities in England are evidently impressed with the idea that the recent attitude of the Chinese, in the Crown Colony of Hongkong as well as at several of the treaty ports, has been such as to necessitate the strengthening of the

Hongkong Garrison. Our telegraphic news this morning announces the despatch of 900 troops for that purpose, which will nearly double the strength of the combatant portion of the garrison under Major-General Sargent's command. The corps at present stationed at Hongkong are the 2nd Batt. East Kent Regiment (3rd Buffs), and a battery of the Royal Artillery. There are also a few Engineers, principally detailed for Staff duties, and the remainder of the garrison is made up of small contingents for carrying out the duties of the Commissariat, Transport, and Ordnance Store Departments. The vessel mentioned in the telegram, the *Hankow*, is a steamer well known in Hongkong Harbour, and possesses such enormous space on her three decks that she can accommodate the 900 and all their belongings with ease. She is a screw steamer of 500 horse-power, belonging to Messrs. E. H. Watts & Co., of London, and was built at Low Walker, on the Tyne, by Messrs. Mitchell & Co., in 1873; of 2,594 tons, length 389 ft., 42 ft. beam, and 28 ft. 8 in. deep. She has made some fast passages between China and England, and coming from Australia once to load tea, brought into Hongkong Harbour the largest cargo of coals from Newcastle, N.S.W., that ever reached the place.

In another column will be found an article on "Strong Nations' Injustice," translated from the *Jiyu Shimbun*. The amusing part of it is the fact of the writer taking *an strictus* such a quaint piece of satire as the following in the *New York Nation*. "This will have to be amended this winter if it is intended to be really operative, and there is only one way to make it really operative, that is to authorize the summary slaughter of all Chinamen found within the country after a certain date, and then, to offer a reward for the heads of all Chinamen caught after another still later date. In no other way can our Christianity be saved from the debasing influence of these heathen." If there is a journal in the world that represents the force of morality and the hunting-down of iniquity—international or other—that print is probably the *New York Nation*; and it is rather surprising that an able Japanese writer should have misapprehended its drift in such a case as that before us.

A New York Exchange informs us that the same story comes from all the stock exchanges of the world, and the universal distrust is a striking illustration of the unification of the markets everywhere. There are special causes at work in some countries, but all are under the common cloud of commercial depression. In one important respect America is much better off than the continental countries. The credit of the government is unquestioned, and it is engaged in no foreign enterprises likely to involve it in trouble. Its 4½ per cent. bonds, therefore, sell at 115, while those of France are quoted at 108, Russians at 78; our 4's at 122, Austrians at 84, Hungarians at 77, Belgians at 105. Even British Consols sell relatively lower than U.S. bonds. In spite of the industrial

depression in England, its securities are much firmer than those of France, and considerable capital has gone from the latter to the former country to accept a lower rate of income than could be obtained at home because more confidence was felt in the investment. In addition to the strained relations of France with China and its prodigal expenditures, the recent conversion of the 5 per cent. rentes into 4½ per cents has complicated affairs. The former holders of the "fives" think that the terms of refunding were unjust to them, and they are charged with the purpose of embarrassing the financial operations of the government in the coming fiscal year. They aver that M. Tirard was in league with speculators for a decline, and so adopted the most objectionable plan of refunding. Leading securities in France have fallen to prices at which they yield a larger income than corresponding ones in the United States. This is an anomaly. Yet there are more sellers than buyers, and the Paris Bourse is a quiet place.

WE (*Daily Press*) hear the prospect of War between China and France is making its influence felt on the stream of emigration to Singapore. Recruiting is going on briskly in Canton, the pay offered the men being \$8 per month, in consequence of which the coolies all "wanchee do that soldier pidgiu" instead of going to Singapore to seek their fortunes.

MR. W. G. Astor, the newly-appointed British Consul at this port, arrived from Kobe in the steamship *Radnorshire* on Thursday morning last, and was duly installed in office yesterday. That foreign residents of this port in general, and British residents in particular, are for various reasons to be congratulated upon the appointment of so competent and popular an official as Mr. Astor, will, we venture to assert, not even be questioned; and we take this early opportunity of heartily welcoming him to Nagasaki again.—*Nagasaki Express*, Dec. 15.

WE find the following shipping report in *Mitchell's Maritime Register*, which is interesting, as showing the extent of the vast quantities of pumice stone ejected from the Krakatoa volcano on the 26th and 27th August:—"Liverpool, 19th October, 8.5 p.m.—Master of *Cleomene* at Calcutta, September 15th, in letter reports:—I followed track-chart, and have no accidents to report, but we had a very narrow escape on September 1, in lat. 5 S. and long. 86 E.; we were struck by lightning and about four feet was struck off our fore royal masthead, but no other damage was done. At same time we were passing through immense fields of pumice stone, which extended from 450 to 460 miles, and over 1,100 miles from the Island of Java, from which, no doubt, it was ejected in some volcanic eruption."

THE *Hongkong Daily Press* Canton correspondent, writing on the 6th December, gives an account of a disturbance, which plainly shows the temper of the populace in that city:—"On

the afternoon of the 4th inst. the Mission Chapel lately established in Chew Yam street, in the Western Suburb, Near Dr. Kerr's Hospital, was the scene of a somewhat serious disturbance. A native catechist was preaching, and took for his subject the folly of ancestral worship. Some of his hearers took offence at his remarks, and strongly expressed their disapprobation. The excitement increased and ended in the smashing up of all the furniture in the chapel. No personal injuries seem to have been inflicted. On the following day soldiers were sent to the place by the authorities to prevent any renewal of the disturbance."

THE *Nagasaki Express* of Dec. 15, says:—The British steamer *Will-o'-the-Wisp*, Captain Porrett, arrived from England *via* Singapore on Saturday morning last, after experiencing very heavy weather since leaving the latter port. The *Will-o'-the-Wisp* is a small, smart-looking steamer of the following dimensions:—length, 130 ft.; breadth, 22 ft.; depth, 10 ft.; gross tonnage, 285; nett tonnage, 165. She was built in Hull, England, on the most approved principles, and is in every respect well found and fitted. She was taken into the Government dock on Tuesday last, and after cleaning and painting she came out again on Thursday. She is now taking in bunker coal, and will shortly proceed to Yokohama, where she is owned, and for which port she has a cargo of general merchandise on board.

LATEST advices from Shanghai inform us that the Russian cruiser *Opritchnik* arrived there on the 9th from Foochow. The British ironclad *Audacious* left Nagasaki on the 2nd inst. bound for the South. The German frigate *Leipzig* arrived at Nagasaki from Chefoo on the 4th inst. and left again on the 6th for Hongkong *via* Amoy. The French corvette *Volta* arrived at Nagasaki on the 6th inst. from Yokohama. The British man-of-war *Esper* left Shanghai on the 10th for Chinkiang where she is expected to winter. The German gunboat *Alta* left Hongkong for Canton on the 4th instant. The British man-of-war *Sapphire* arrived at Nagasaki from Chefoo on the 6th inst. having left the latter port on the 2nd inst. A large barque-rigged man-of-war arrived on the 10th at the Red Buoy; she is said to be the *Audacious*.

THE Indo-China steamer *Wing-sang* the latest addition to the fleet of steamships trading in Chinese and Indian waters, arrived on the 25th ult. at Hongkong. She is a vessel which any master feel proud to command. The *Wing-sang* was built at Aberdeen by the well known firm of Hall, Russell & Co. Her dimensions are:—Length (between perpendiculars), 295 feet; breadth of beam, 40 feet; and when fully loaded she draws 20 feet (mean). The engines are of the usual high and low pressure character, but all the latest appliances in the way of steam windlasses, steering gear and so on, have been fitted on her. Apart from the usual steering apparatus, she has a double-screw rudder aft for cases of emergency. On the trial trip the *Wing-*

sang made the good average of 12½ knots per hour, drawing at the time 15 feet. She is almost keelless, being provided with rolling chocks; she carries eight boats, and has one of the long bridges so much in favour at home now for the protection they afford to the engine rooms. As to accommodation, there is room for fifteen first-class passengers; the saloon and cabins are very prettily fitted up with maple and walnut, and there is a good piano. The lavatories and bath-rooms all show the same indications of attention to foreigners' requirements, while for the native passengers, removable cabins, sufficient to accommodate 800 people comfortably, are on board. The *Wing-sang* had a good trip out, but at Port Said something went wrong with the paint put on her there, and it has blistered off, rendering it likely that she will be scraped here and repainted. The *Tae Sing*, a sister ship, is due here in about a month.—*China Mail*.

AMONGST the latest to undergo the operation of being "interviewed" by newspaper reporters in America is Hanlan, the rowing man. He was on his way to San Francisco, and at Chicago was "interviewed" to the following effect:—"I have rowed sixty races, and out of that number I have been defeated in four." "To what do you attribute your success as an oarsman?" "Well, I scarcely know whether it was born in me, or whether I achieved as near perfection as possible by constant and hard practice. I am the strongest oarsman in the world. In my boat I do not uselessly expend an ounce of strength. I utilize all that I have. I owe my success partly also, perhaps, to having hit upon a winning stroke. I presume that in the stroke lies a great part of my superiority. It is a thing which cannot be governed by mathematical calculation, but is more the result of accident or inborn knack, I scarcely know which." The champion is a plain-looking young man with a handsome physique, medium size and well educated. He said he had leased his hotel in Toronto, and that he would devote the next couple of years to rowing entirely. "I go to San Francisco," he said, "with George M. Lee to give an exhibition in the regatta which comes off there on the 29th instant. Mr. Lee rows an exhibition race with Stevenson, the best man on the slope. I shall remain in San Francisco about three weeks, and then go to Sydney, Australia. I want to stay there one year and come back by way of England." He said he expected to row with Trickett and Laycock in Australia, but could not say definitely, as he would not row unless he was in form. The oarsmen carry with them to Australia two American boats, weighing twenty-five pounds, of Mexican cedar. Hanlan said he regarded the American boats as the best.

"Who carried New York?" This is a question which there ought not to be a particle of trouble in answering, although (says the *Alta*) some of our contemporaries talk as if there could be more than one opinion. It is undeniable that the Democrats carried the State, and the latest estimates fix their majority at 15,000. That the Republicans

elected one man on their ticket, because his opponent was scratched to the extent of 30,000 votes, gives them no reasonable grounds to claim that the State election went in their favor. Neither is it any more to the point to claim the State because the Legislature has a Republican majority. The State is districted so favorably to the Republicans that they do not need to have a majority of the popular vote to get control of the Legislature. Nevertheless, it is perfectly true that the Democratic majority is so small as to be a cause for disappointment; instead of 15,090, it should have been 30,000 or 40,000; and probably would have been but for factional fights. But the falling-off in the Democratic majority is exaggerated by setting up in comparison with the 15,000, received this year, the nearly 200,000 received by Governor Cleveland last year. The election of 1882 was not much of a test, because it is admitted that the internal dissensions of the Republicans prevented them from polling a vote which was a fair index of their strength. But be that as it may, it is not true that the Democratic majority last year was anything like 200,000 on the whole ticket. On Congressman-at-large the Democratic plurality was 109,000, and on Chief Justice of the Court of Appeals it was but 73,400. If from the latter figures we subtract the vote for the Greenback and Prohibition candidates, it leaves the Democrats a clear majority of only 46,000, and that in an off year for the Republicans. This is the "offset" kind of a year for the Democrats, and yet they get 15,000 plurality.

PROFESSOR MILNE left here yesterday in the Mitsui Bishi Mail steamship *Nagoya Maru*, for Nagasaki, where he will institute an underground observatory in the Takasima Mines. The objects sought to be determined are various, and amongst other paraphernalia, instruments will be placed to discover if the seismic phenomena observed "at grass" are coincident with and of similar intensity to those at various levels in the mine. This observatory will be unique, no other similar establishment being in existence in any country.

AMONGST the passengers who left in the Mitsui Bishi mail steamer *Genkai Maru*, on Saturday for Nagasaki, was Admiral Davis, U.S.N., who proceeds to that port to hoist his flag on the frigate *Richmond*. Admiral Davis was in Japan as a midshipman with Commodore Perry's expedition.

WE regret to have to record a fatal accident which has occurred on the United States' frigate *Richmond*, Captain Skerrett. The vessel left here on the 4th inst. for Kobe and Nagasaki, and whilst entering the latter port on Thursday morning last fired the usual salute, during which a man was blown to pieces.

ABOUT thirty-six houses were destroyed in a fire which occurred on the night of the 17th instant, at Tachibana-cho, Tokijo. Exaggerated reports of the extent of the disaster were current in Yokohama. We are happy to learn that they are without foundation.

THE JAPANESE LIBERALS.

WHAT is represented by Japanese Liberalism and who are its representatives? These are questions which foreigners find much difficulty in answering. Nor is their perplexity surprising, since added to the almost insuperable obstacles that beset any outsider's attempts to become familiar with the politics of an Oriental State, there is of necessity in this country more than common vagueness about the scope and purpose of political creeds. The average Englishman has but a hazy notion of the meaning of Radicalism. In general he regards it as a synonym for Republicanism, whereas, in truth, the latter is but an accident of the former. The extension of the franchise, the equitable distribution of political power, and the abolition of all traces of ecclesiastical privileges, are ends which may be attained just as well with a King at the head of the State as with a President. In England, however, as in all lands where thought is free and progressive, party platforms are not only changeable but interchangeable. The Conservatism of to-day has been truly described as the Liberalism of twenty, and the Radicalism of thirty, years ago. In every party there is a clique of speculative reformers whose doctrines represent, not the faith of the main body of their associates, but the tenets that faith is destined to embody at some future stage of its history. Hence it is that the general public often mistakes the aspirations of these theorists for the practical purpose of their party, and finds itself unable, at any given period, accurately to define the limits of either Conservative or Radical designs. This uncertainty is doubly apparent in Japan. Political science is comparatively new to the nation. To the majority of its students it is still a mere science, not a means of evolving practical doctrines that can be immediately expressed in legislation. Thus in the foremost ranks of the Liberals may be found men whose reading is wholly untempered by experience, and who would unhesitatingly apply to society as it exists, the ideal methods which HERBERT SPENCER hopes some day may be possible; while side by side with these utopian progressists are others who appear to see only the practical aspects of politics, and who separate Western moral doctrines from Western daily doings with a distinctness that does larger credit to their judgment than to their faith.

Among the principles enunciated by this latter class of so-called Liberal politicians, there is one that has gradually received

very emphatic expression. It is the principle that might is right. There is little need, we presume, to consider such a doctrine as a point of moral philosophy. Even those that hold it admit frankly that it runs counter to all the better instincts of humanity. But there are two facts which the Japanese, being, for the rest, open-eyed enough, cannot fail to recognise. The first is that the most civilized nations of the world appear to place most reliance upon brute force; the second, that the treatment Japan receives at the hands of Western nations has hitherto been regulated entirely by her ability or inability to command better terms.

Europe spends, to-day, a thousand million dollars annually on military armaments and keeps three and a half million men constantly engaged in military duties. As an open avowal of mutual distrust, these figures are conclusive. It is obvious that nobody places the smallest reliance on moral principles, which are nevertheless daily receiving wider recognition. There are no longer any Goths, Saracens, or Huns to swoop down on peaceful peoples and carry their women away from blood-drenched homesteads to lives of worse than slavery. There are only Christian nations, punctilious disciples of "soft-handed Charity," that virtue by which "neither angel nor man can come in danger."

No wonder, then, that the Japanese, seeing all this, fear to stand defenceless among so many armed men. More especially since they have actually experienced, and are daily experiencing, the disadvantages of weakness. Say what we please, the so-called "treaty rights" claimed by foreigners in this country, would not be conceded by any State strong enough to refuse them. It may be for Japan's advantage that her tariff should be regulated by strangers; it may be for her convenience that foreigners living in her territory should be exempted from her laws and jurisdiction. But it is absolutely certain that, were she strong enough to insist upon managing her own affairs and compelling every one within her borders to respect her laws, the power to exercise these natural rights would long ago have been restored to her. When, therefore, we find the Liberals maintaining, as they have lately maintained through the columns of their organ, the *Jiyu Shimbun*, that the first business of this empire is to arm itself, to build forts and buy ships, we are obliged to confess frankly that the doctrine is seemingly justified by circumstances. In the abstract there is no reason why Japan should be wiser than the rest of the world,

or more ready to trust other nations than they obviously trust each other. But there is one point which the Liberals seem to have lost sight of, and that is, that all nations are not similarly situated. There are some countries so fortunate as to be naturally in a position to hold aloof from the military mania of their neighbours. Such a country is the United States. No nation in the world could afford to spend more upon an army and a navy. No nation in the world spends less. The consequence is that the people of the United States, left entirely free to develop the wonderful resources of their land, are rapidly attaining a degree of opulence and civilization beyond all experience and expectation. Japan's case is similar, so far as her military necessities are concerned. She has absolutely nothing to apprehend in the form of foreign aggression. It was not always so with her. In the days of her seclusion, when as yet Western nations had no interest in her independence, Russia was a danger to her. Not that Russia can be fairly suspected of having harboured any definitely aggressive designs against Japan; but simply that Russians, like Englishmen, and no more than Englishmen, have a tendency to carry their country's flag wherever there is room to plant it, and consider themselves, in a manner, entitled to carry it wherever civilization would benefit by the process. These, however, are things of the past. Neither in the present, not in the future so far as human eye can see, has Japan anything to fear from Russia. One possible enemy she has—China, with whom she would fain be on the best possible terms, but from whom the direction her civilization has taken inevitably separates her. For China's sake we should be sorry to regard the separation as permanent. But even if it should continue for years to come; even if China should persist in turning away her face from Western ways, and in nursing her foolish umbrage against a neighbour that "has chosen the better part," what then? Japan must have little faith in her newly adopted creeds if she has any fear of such an opponent. To an assailant, China's *vis inertia* may be formidable; as an assailant, she does not merit a second thought. In the day when she will be able seriously to think of sending an army to invade Japan, she will have forgotten to be angry with the latter for forestalling her in the paths she will then be following herself.

The Liberal organ professes to discern danger for Japan in the complications pending between China and France. In

the event of war, Japan might be unable, says the *Yiyu Shimbun*, to perform her duties as a strict neutral. If French ships insisted upon entering her ports to coal or repair, she would not be strong enough to keep them out. This is a mere chimera. Even supposing—which is in the highest degree improbable—that France resorted to any such violent measures, Japan would incur no responsibility thereby. How far China could consistently appeal to Western systems of international law in defining the treatment she has a right to expect, as a belligerent, at the hands of Japan, as a neutral, we need not stop to enquire. It is sufficient to say that nothing more could be demanded of this country than a reasonable care for the maintenance of neutrality.

In fine, from whatever direction this question be considered, only one conclusion is possible. If Japan elects to follow the Liberal programme in the matter of armaments, she will be deliberately flouting the advantages which nature has conferred on her. She has nothing to apprehend except her own extravagance. That she should raise an internal loan to build railways or make roads, would, we believe, be a financial blunder; that she should apply the proceeds of such a loan to erecting forts and purchasing men-of-war, would be simply disastrous. It were absurd to ask her to trust foreign nations or to take a lesson from their methods of trusting each other. But we do recommend the leaders of the Liberals to sit down and honestly draw up a list of the uses their forts or ships are likely to serve. On such a list only one item would endure a moment's scrutiny—namely, the purpose of compelling a revision of the treaties on the basis of Japan's complete independence. But that revision will come without an appeal to force; while, on the other hand, the reckless and impatient course recommended by the *Yiyu Shimbun* is the surest way to defer it.

FRANCE AND CHINA.

THE contents of the memorandum submitted to the French Chambers at their meeting in October will probably have the effect of considerably modifying public opinion with regard to the questions at issue between France and China. Broadly speaking, the claim of the Middle Kingdom divides itself into two counts, of which one is based upon particular, the other upon general, considerations. The former has reference to China's so-called "rights of suzerainty" over Annam; the latter to her

rights to be heard as an independent State in all matters that concern her frontiers.

With her pretensions as a suzerain it is difficult to deal gravely. Western ideas of the nature of the relations which justify that term are so different from Eastern that no common platform of discussion exists. It is tolerably certain that up to the beginning of the fifteenth century Annam was a vassal, if not a province, of China. Subsequent to that date, however, though the political connection was not actually severed, it carried with it no practical evidences of dependency; while, on the other hand, the first occasion of French interference, was a revolt which defied China's perfunctory efforts to re-establish the *statu quo ante*. That a State's obligations are not destroyed by a change of government or a revolution, is a well recognised principle of international law, but the justice of its application becomes very questionable when that change involves consequences so momentous as those which overtook Annam in 1783 and 1862. China's capricious method of ignoring those consequences at the time, and yet attempting to interfere with their sequel in 1883, is a variety of statecraft that could not be safely recognised by serious governments. In a word, this old fashioned title of suzerain once accorded to the Middle Kingdom by its neighbours, is a relic of conditions which have long ceased to exist, and deserves no more respect at France's hand in Annam, than it has received at England's in Burmah and Siam. Its preservation, in every respect prejudicial from the humanitarian point of view, could not fail to induce grave complications, sooner or later, in the Orient.

Very different is the case with regard to the second count of China's claim. It must have been as well known in Peking as it was in Paris, that one of the problems of the day in 1867, was to open up commercial intercourse with the Western provinces of China. This design, not the mere acquisition of territory in Tonquin, was at the root of French operations, first on the Meikong and afterwards on the Red River. The right of a foreign Power to establish exclusive control over a river furnishing the only or most convenient outlet for an inland State, is justly open to opposition by that State. So strongly defined is this doctrine by modern international law that even the possession of the territory through which the lower parts of such a river run is not regarded as conferring a title superior to the natural justice of the inland State's claims. That the Red River constitutes the most convenient, if not the only, outlet

for China's Western provinces, is a fact established by French explorers, and, from this point of view, nobody will be disposed to deny that the proceedings of the French in Tonquin had a vital interest for China. Not less plainly does it follow that France's original attempts to ignore the Middle Kingdom altogether, and wholly to exclude it from the discussion of Tonquin's destiny, were distinct violations of the law of nations. It would appear, however, from the memorandum submitted to the Chambers, that France did not long persist in this attitude. M. CHALLEMEL-LACOUR virtually abandoned it in the propositions he formulated on September the 15th. For in the first place, he signified his Government's willingness to combine with China in establishing a neutral zone on the latter's southern frontier; and in the next, he stipulated that the Red River should be opened from Manhoa downwards to foreign commerce. This stipulation improved the prospect which China had most reason to consider, since the opening of the river to foreign commerce would convert it into a triveable water-way for the produce of her western provinces, whereas, under existing circumstances, whatever facilities of communication it naturally offered, were rendered useless by the presence of the Black Flags.

On the other side, it may, of course, be contended that the compulsory opening of Man-hoa, a town lying actually within Chinese territory, was an unjustifiable demand. But this is a mere point of detail. The Cabinet at Peking knew well that France would never insist on such a concession.

With a neutral zone between herself and foreign territory, and with the navigation of the Red River assured to the flags of all nations, China's further claims to oppose French designs in Annam assume very shadowy proportions. On October the 16th, her demands amounted briefly to this:—that if the condition of anarchy and brigandage which existed on the banks of the Red River under Annamite rule could not be perpetuated, she would adopt the alternative of annexing the whole of Tonquin, annexation to carry with it the entire and exclusive right of action on the Red River. She avowed, indeed, some polite regret for "this necessity of encroaching upon the territory of her vassal after having respected it for two centuries." But it was not an inconveniently obtrusive regret. If an act of national larceny had to be committed, she would commit it herself rather than let France reap the benefit.

Annam's claims counted for nothing in the business.

There is reason to believe that these extravagant demands have undergone considerable modification. Probably they were originally framed with an ample margin for contingences. China could not but see that to enforce them would be to leave France no alternative but war, and that, certainly, is a prospect the Peking Government can scarcely like to contemplate. We need not stop to consider here what were the motives of so much boldness. It is enough to note that according to the showing of the memorandum laid before the Chambers two months ago, the obstacles to a peaceful settlement were created by China not France, and that the credit of any forbearance subsequently displayed belongs to the latter.

THE CRUELTY OF FEET-BINDING.

NOT long ago news reached us that a missionary body in China had passed a resolution closing the doors of their schools to children whose feet had been subjected to the cramping process. It seemed at once a harsh and short-sighted resolution, since its immediate effect would be to punish the unfortunate children for a deformity which had already cost them cruel agonies, and since there was little hope that the fear of sacrificing some educational advantages would exercise any practical influence upon people who pay no attention, in this particular instance, to the example and wishes of their rulers. For in China the only persons who utterly eschew the inhuman habit of foot-binding on principle are the members of the Imperial family. No small-footed women are to be found among these, and the Imperial dislike of the practice is carried so far that the precincts of the Palace may not be trodden by feet of an unnatural shape. Against a prejudice which all this is powerless to cure, and which the great Emperor KANG-HI found so strong that he dared not meddle with it by legislation, what could the feeble protest of a few missionaries' accomplish? Not much perhaps. It was not easy, indeed, to avoid an apprehension that the only result of the missionaries' resolution would be to empty their schools and add the impossibility of procuring education to a misfortune for which the children were not answerable. But we cannot forget that for years and years the missionaries have been preaching against the terrible cruelty of this practice, or that they have to choose between continuing a campaign of fruitless words and

adopting some practical means of enforcing their protest. Whether or no they have chosen wisely, everyone must feel that the difficulties of the position offer a marked contrast to the readiness with which this last attempt to overcome them has been criticised. But though the missionaries may be comparatively helpless to grapple with the evil, and though the Chinese Government may feel its tenure of power so insecure that to legislate with the object of saving the female children of the nation from torture and deformity would be to provoke a rebellion, there is an authority not only strong enough to protect many thousands of human beings against this brutal ill-usage, but also bound by all the principles of civilization to interfere. The island of Hongkong is British territory, and its 150 thousand Chinese inhabitants are British subjects. Obligated to grapple there with social problems of an unusual character, the English authorities have from time to time shown themselves happily indifferent to conventionalities. Sixteen years ago they shocked the good people of Exeter Hall by licensing gambling-houses; giving the world an opportunity of crying shame upon a civilized Government so untrue to the doctrines it professed that it could sell to its subjects the right of practising a most demoralizing vice. Yet to those who really understood the condition of the Colony in 1867, it seemed beyond all doubt that, by the issue of gambling licenses alone could a remedy be found for evils which had passed beyond the reach of ordinary control. The Colonial Office, indeed, could never be persuaded to view the matter in this light, or to comprehend that wise men sometimes voluntarily accept the lesser of two inevitable evils. But before the scruples of the Colonial Office shaped themselves into a peremptory veto, the gambling-houses had been brought under complete control and the object of the licenses attained. Other shocks, however, were in store for the humanitarians. Malefactors were flogged in public at the whipping-post, and hardened criminals had a brand put on the lobes of their ears, a distinction which they took most unkindly: not that their nerves were shocked by the operation of tattooing a tiny device in their flesh, but because they found it exceedingly inconvenient to be shadowed by a policeman whenever they attempted to revisit the scenes of their misdeeds. Recalling, to-day, all the indignant protests these various abnormal ordinances evoked, we observe a singular instance of the inconsistency of public opinion. For, in this

very island of Hongkong, where gentle-folks were horrified at the notion of levying fines on the devotees of "Fan-tan" that their haunts might cease to be the asylums of pirates and assassins, and soft-hearted philanthropists winced to think that brutalized malefactors were flogged or marked; in this very island, we say, from year's end to year's end, every hour and every minute of the day and night, the air is filled with the screams of tortured babies, while men and women go about their business self-contented and unconcerned. There is no exaggeration in this language. Those who have carefully watched all the processes of foot-binding, and noted its effects, declare that since the world began there never was invented a device that inflicts keener and crueller suffering. Were the subjects of any civilized government in the universe to treat their cats or rats as the subjects of the British Government in Hongkong treat their female children, public opinion would be shocked into a vehement and effectual protest. Yet, so far as we can see, public opinion in Hongkong is quite silent on the subject, if we except an earnest remonstrance from "Banian" in the columns of the *Daily Press*. Doubtless there is a great deal to be said on the other side: as, for example, that reforms to be lasting must not anticipate the mood to receive them, and that any arbitrary attempt to correct such a long established custom would probably have the effect of driving away the respectable portion of the native population from Hongkong. Upon such a question it would be presumptuous to express any opinion, but we do feel justified in saying that whether by radical or partial methods, some official action ought to be taken. Quite recently the police records of the Colony contained a case which excited no little horror and indignation. It was found that part of a Chinese undertaker's business was to let sick children—girls of course—to be left to die among the coffins in his store, and that days of neglected suffering were sometimes passed in this miserable place. This was a Chinese habit, and Chinamen thought no harm of it. Their creed was that when a child's malady became plainly mortal, the sooner it ceased to be a burden to the living, the better. English law, however, was not slow to assert itself in this instance, and English people congratulated themselves that such inhumanity would not again be practised in their midst. Yet no comparison is possible between the additional suffering thus imposed upon the dying children and the harrowing tortures to which female babies

are systematically subjected. In the former case the little patients would probably have lost the power of appreciating pain, or would at least be insensible to neglect, whereas the tortures of foot-binding have to be borne day after day by children of an age when pain is most keenly felt and the strength to endure it as yet wholly wanting. The subject almost precludes discussion. There are many strange things in this world of ours, but few, if any, stranger than the apathetic attitude of a highly civilized government toward this most revolting barbarism, and that, too, a government which, as pointed out above, has shown not unfrequently that it does not shrink from exceptional legislation under exceptional circumstances. The measure of deference we exhibit towards Oriental customs which interfere with our own convenience or prosperity is scarcely large enough to explain our respect for an abuse which, by processes of the most pitiless cruelty, converts half the inhabitants of an empire into life-long cripples; neither is it a comfortable reflection that while we bombard cities and sink ships to secure the permanence of a trade in yarns and shirtings, we cannot afford so much as an Order in Council or a diplomatic protest to save a multitude of children from extreme brutality.

THE ANGLO-KOREAN TREATY.

THE skeleton draft of the Anglo-Korean treaty published by the *North China Herald* is not of a sufficiently accurate nature to justify detailed comment. Speaking inferentially, the terms obtained from Korea may be regarded as the limit of the concessions she can be induced to grant at present. The character of the official by whom British interests were represented, places that question beyond the reach of doubt.

And, indeed, from a foreign stand-point the conditions embodied in the document leave little to be desired. Three ports and one town are opened, definitely, and the capital, conditionally; a reasonable tariff is fixed, and the right to trade and travel in the interior is conceded. More than this could not have been asked at the outset.

Here it may be well to note that the contrast between this treaty and that concluded by Admiral WILLES ought not to be taken as a strict measure of their negotiators' respective dexterity. Even in the short interval that separated the Admiral's visit from Sir HARRY PARKES' mission, Korea had undergone important changes.

When the first treaties were concluded, the country was still trembling from the shock of a rebellion avowedly directed against the pro-foreign party; the reins of Government were virtually in China's hands, and the terms upon which intercourse with the outer world should be commenced, were dictated by a Chinese Viceroy. Since then, the Government of the peninsula has felt itself strong enough to openly avow a more liberal policy and to send an embassy to a Western country, while the perils that threaten her own security forbid China to persist in asserting her influence over her so-called vassal. Admiral WILLES was suddenly called on to undertake a duty for which he was in no respect prepared, under circumstances of considerable difficulty. An official better versed in the technicalities of treaty-drafting might have accomplished something more consistent with mercantile requirements, but we doubt whether any official, however supported, following so closely on the American Envoy, whose treaty was drafted by Korea's nominal suzerain, could have obtained terms nearly as liberal as those now secured by Sir HARRY PARKES. Of treaty making it is eminently true that to the pioneers falls the labour without the honour, and it is a simple point of justice to note that but for the initiative taken by America last year, we should not now be in a position to extol the achievements of our own negotiators. Foreigners in the East would have been surprised to learn that Sir HARRY PARKES had put his hand to any document embodying conditions unfavorable to his countrymen; but at the same time we cannot forget that the negotiations now brought to a successful conclusion, were conducted with the utmost deliberation. During many months Mr. W. G. ASTON, a gentleman eminently qualified for the task, both by official experience and linguistic attainments, was in direct communication with the Korean authorities and Her Majesty's Legation, and we can scarcely doubt that had such assistance preceded previous attempts, the difference between the result and that now attained would only have been proportionate to the difference in Korea's ability to be liberal.

Not the least interesting and important feature in this treaty is the fact that the supposed relations between China and Korea are completely ignored. The SHUFELDT and WILLES treaties were concluded under circumstances, and followed by events, which distinctly tended to confirm and establish China's claim of suzerainty. The new English and German

treaties virtually invalidate that claim, since they were concluded without reference to the Middle Kingdom, and the nature of the engagements they embody are not within the competence of a vassal or dependant to assume without such reference. The resolute action said to have been taken by Sir HARRY PARKES in this respect cannot be too highly commended. China's romantic and unpractical pretensions are a constant source of peril to the peace of the Orient. They involve responsibilities which she is neither able nor willing to accept, and provoke external interference which she is sufficiently ill-judged to resent.

We may dismiss the tariff appended to the treaty by observing that it does not appreciably differ from the Japanese tariff which was arranged five months ago and came into force on the 1st of November. Neither, indeed, does it conflict with the provisions of the SHUFELDT treaty. The mind of the commercial public appears to have been unnecessarily perturbed about the American negotiator's conditions. It did not follow that because an inferior and superior limit of rates was fixed, all the duties must approximate to the latter. We apprehend that people would have been little less discontented though the SHUFELDT treaty's maximum rate had been, not thirty, but twenty per cent., which latter is the figure actually embodied in the new English tariff. One notable difference exists between the Japanese tariff and that of Sir HARRY PARKES. According to the former, foreign wines pay a duty of twenty-five per cent., while foreign (and Japanese) spirits pay thirty per cent. These figures are reduced by the English tariff to ten and twenty per cent. respectively. The reduction will be welcomed by consumers of such beverages, but we cannot see that it is justified by any economic or moral principle.

The article relating to extraterritorial jurisdiction is epitomized in terms too vague to permit comment. In a country where the criminal codes and methods of criminal procedure have not yet been assimilated to those of civilized nations, it is unavoidable that the persons and property of strangers should be safeguarded by exceptional provisions. But experience has amply pointed out the serious defects that disfigure the provisions hitherto enacted with this object. When Western Governments deprive an Eastern State of its judicial functions, it is their imperative duty to provide an efficient substitute. This duty has been systematically neglected in the past by some of the great, and all the small, Powers whose

nationals enjoy extraterritorial privileges in China and Japan. England has now given a written guarantee for the peace and good-order of her subjects while residing in Korea. She will doubtless adopt efficient measures to fulfil her guarantee. But can the same be predicted of the countries that will follow her treaty-making example and claim all the privileges accorded to her? It may be objected that this is none of England's business: that she is liable for her own short-comings only. The objection would be valid could it be shown that Korea had full knowledge of the responsibilities attaching to the exercise of extraterritorial jurisdiction. But she has not, and cannot have, any such knowledge. She enters into these covenants in all good faith herself, and with entire reliance on the good faith of her *vis-à-vis*. Upon the latter, therefore, whether England or Germany, devolves the plain duty of providing that the privileges obtained through her instrumentality for all Western nations shall not be openly abused. Than Sir HARRY PARKES, no official in the universe has better reason to be conversant with the miscarriages of law and justice, as well as the international bickerings and recriminations, that have resulted from the imperfect wording of extraterritorial clauses in previous treaties. We do not venture to suppose that the failure of the epitomized Korean treaty to provide against these contingencies will be found to disfigure the complete document.

We look in vain throughout the various articles for any definition of British subjects' responsibilities towards Korean laws. If this vexed question has been left unsettled, the omission cannot fail to prove a fatal stumbling block to the progress of foreign intercourse with the peninsula. One provision there is, indeed, which constitutes a most commendable addition to previous conventions, and which will go far to correct the consequences of the above, omission. "British subjects will be amenable, in the Settlements or elsewhere, to such Municipal, Police, and other, Regulations as may be agreed on by the authorities of the two countries." This is a partial recognition of the American doctrine that extraterritoriality does not carry with it exemption from the laws of the land, except in so far as those laws conflict with treaty provisions. But the question arises, how are these "Municipal, Police, and other, Regulations" to be enforced outside the Settlements? Are offences committed by foreigners trading in the interior to be indictable in the Settlements only, and if so, what provision, if any, is made for the

relief or indemnification of native suitors who may have to travel hundreds of miles to prosecute an offender? These are questions which the treaty in its published form does not answer.

With regard to the privilege of trade and travel in the interior, it will of course be generally welcomed. Korea has so few attractions to offer foreign merchants that, from a material point of view, she does wisely to be as liberal as possible. She is also the best judge of her own present ability to assume such an obligation as the protection of foreigners outside the limits of the treaty ports. Looking at the events of her recent history, it seems very doubtful whether she has not over-rated her strength, and whether it would not have been more judicious on her part, as well as more politic on that of the other high contracting parties, to defer, until some fixed date—a year or more after the treaties had come into force—the exercise of a privilege which, if prematurely taken advantage of, may only lead to unpleasant complications.

MODERN AEROSTATICS.

Just one century has passed away since the famous brothers Montgolfier made the first balloon ascension on record, and yet we are hardly very much farther advanced in aerostatics to-day than were the aeronauts of 1783. Numberless experiments have been made and many societies founded for the purpose of studying the problem of aerial navigation, but the results of all these attempts, however laudable they may be in the abstract, have been of comparatively little practical value. Of recent years, and especially since the discovery of the electromotor, a new impetus has been given to aerostatic research, so that the probability of ultimate success seems less questionable than it did a decade ago. Taking the rapid advance in technical science into consideration, aerial navigation is apparently only a question of time. So many totally unlooked for discoveries have been made that one cannot help feeling that "something will turn up" shortly, which will completely revolutionize aerostatic science and result in the conquest of the air.

The importance of the balloon for military and engineering purposes was brought prominently before the attention of the public in the Franco-Prussian war of 1870-71. Since that time many societies have been formed in France, Germany, and Russia for the sole purpose of increasing the facility of the application of aerostatics to the military art; and as these societies number not a few of the highest scientific authorities among their members, we may not unreasonably expect the most interesting and important results as the outcome of their investigations. At Auteuil an *atelier aérostatique* has been lately established, and similar institutions are in course of erection elsewhere.

L'Illustration and *Ueber Land und Meer*

have recently devoted considerable space to the discussion of the problem, instigated by the experiments of M. Tissandier and Dr. Wölfert. It appears that there are two plans which have suggested themselves to scientific experiment-alists: one being to supply the ordinary gas-balloon with steering gear and a propelling power of sufficient force to keep it motionless in the face of a stiff breeze; while the other idea is to construct a machine modelled on the lines of that excellent aerial navigator, the bird, and to furnish it with a gas or electromotor strong enough to raise it from the ground and guide it through the air. The upholders of the former plan have to combat chiefly with the wind, which necessarily exerts great force upon so large a resisting body as a balloon; those of the latter contend with the seemingly insurmountable difficulty of constructing a machine light enough to rise in the air with the sole help of the motor. Public experiments have so far invariably been made in connection with the balloon, while the self-supporting aerial ship exists as yet only in models. Twenty years ago, the idea embodied in the recent experiments was suggested by a French scientist, and the screw-propelled balloon of Bowdler in 1874 (which, though unsuccessful, was highly commended), proved that 'a screw with a vertical axis can raise or depress a balloon, thereby saving gas and ballast.' Dr. Wölfert's aerial car, the first public trial of which took place in last June, was constructed on this principle, but unfortunately without success. In the first place the aeronaut discarded all other motive power but that which he could supply himself by revolving the shafts of two small fan-shaped screws. His balloon was shaped somewhat like a huge Bologna sausage, in order to oppose less resistance to the wind. Two large, light stanchions ran the whole length of the balloon, acting as a sort of 'spine,' and materially strengthening the silken hull. The car was made of rattan, the disproportionately large canvass rudder being attached to one end, while a three-bladed screw was fastened to either side and worked by hand. Whether the screws were too small or the operator too weak, is not known: at all events, Dr. Wölfert was unable to steer his grotesque looking craft against the wind.

M. Tissandier's balloon, which made its first ascent at Paris on the 8th of October, resembles that of Dr. Wölfert, with the exception that either end is pointed, giving it the appearance of a huge spindle. Its dimensions are 28 metres in length by 9.20 metres in diameter at the widest part. The time-honoured rope-trappings of the ordinary balloon are ingeniously replaced by broad hempen ribands, sewn fast to the inflated spindle with geometrical precision. The trappings of the car are fastened to two lateral beams, of a light, flexible wood, which follow the outline of the balloon. The car is built of bamboo staves, held firmly in position by india rubber bands. The rudder is elevated several feet above, and connected with, the car, but altogether smaller than that adopted by Dr. Wölfert. A powerful electromotor revolves the screw, which is at once

simple and powerful, for M. Tissandier has spared neither time nor labour in order to render it as effective as possible. Before putting the screw in motion the aeronaut ascended several hundred metres, in order to test the force of the wind. Upon starting the motor it was found perfectly competent to keep the balloon motionless in the face of a strong West wind, and the aeronaut crossed and recrossed the aerial current and ascended and descended without throwing out ballast. The one drawback was that the violent vibrations of the screw gave the whole balloon a rotatory movement which considerably neutralised the effect of the steering apparatus. After the wind had slightly subsided, M. Tissandier directed his course towards Croisy-sûr-Seine, where he shortly arrived in perfect safety. The defects of this machine are, as *L'Illustration* hopefully remarks, easily remedied; but although M. Tissandier's final success may not be far distant, we doubt whether a machine constructed as his is can be applied to any very practical purpose. At the same time it is assuredly a step in the right direction, and marks a new era in the development of aerostatics.

From the sublime to the ridiculous is often but a step. In connection with the above we quote a paragraph from the *North China Daily News* :—

A copy of the following document, addressed "To the Rulers of Nations, Explorers of the Earth, and Inhabitants (sic) of the Globe," has been sent to us. We reprint it *verbatim et literatim* :—

I announce to you that I have discovered the secret of navigating the air in a balloon against the wind.

I have not yet put in practice my great discovery because the means are still wanting; but long study and repeated experiments have assured me of a successful result and that in a short time men will be able to navigate round the world in a balloon.

Now this being in many respects a delicate subject as the peace and tranquillity of the world might be endangered by the aeronaut carrying arms and bombs across the confines of even the most powerful states and so exciting general uneasiness, it may be readily imagined that, desirous as I am that my invention be beneficial to the world and not hurtful, I cannot divulge my secret till I learn the views and intentions of the different governments and so avoid all unnecessary susceptibility and the possible effusion of blood and treasure to the utter destruction of all peace and security.

If then my invention be thought worthy of your approbation, I wait a reply before publishing my secret.

FRANCESCO MASTRODOMENICO.

Signor Mastrodomenico does not say from whom he expects a reply, or from how many people. If he waits until all the crowned heads and all the "inhabitants" of the world acknowledge the receipt of his manifesto, we fear that his discovery will continue a secret for this millennium at least. The enterprising Mastrodomenico is also in possession of a famous scheme for making everybody rich and saving two hundred thousand million francs per annum. If the potentates of the Universe will only act upon his views the world, he says, will soon become "an Earthly Paradise and posterity may bless and revere our memory—in hopes of receiving a favourable answer."

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Asiatic Society of Japan was held at the Theological Hall, 17, Tsukiji, on Wednesday, December 12th, the Vice-President for Tokio in the Chair.

The minutes of the last Tokio Meeting, having been published in both the daily and weekly editions of the *Japan Mail*, were taken as read.

The CORRESPONDING SECRETARY stated that in the room of Mr. Cox, resigned, Dr. Knott had been elected Recording Secretary for Tokio.

The CHAIRMAN announced that the Council had received a further instalment of Mr. H. Pryer's catalogue of the Lepidoptera of Japan, which from its purely technical nature would be received as read.

Mr. KORSCHOLT then read his paper on "The Water Supply of Tokio." He first referred to a previous paper on this subject submitted by Mr. Atkinson (read Nov. 24, 1877) whose analyses had established that the river waters brought into Tokio were greatly deteriorated by passage through wooden pipes, and that most of the surface waters were dangerous and some exceptionally bad. Of the 29 waters analysed by Mr. Atkinson, three only were satisfactory drinking waters. By separating Mr. Atkinson's waters into two groups, high ground and low ground waters, Mr. Korscholt was led to the startling result that the high ground water of Tokio is twice as impure as the low ground water. The obvious explanation is that the low ground wells really reach a lower level though they may not be so deep; and hence it was concluded that below Tokio there is pure water rising upwards in the soil. At moderate depths, depending upon the nature of the soil, this pure under ground water will be more or less mixed with actual surface water; but yet it will be possible to obtain pure water anywhere in Tokio by driving a shaft down deep enough. This depth need never exceed 250 feet, while usually a very moderate depth of from 60 to 100 feet will suffice. Throughout the city there are certainly many hundreds of such artesian wells, especially in Asakusa-ku, Shitaya-ku, and Kiyobashi-ku, and to a limited extent in Shiba-ku, Kanda-ku, Nihonbashi-ku, and Kojimachi-ku. After detailing the analyses of 78 different well waters from different parts of Tokio, the author proceeded to enquire as to the source of this abundant supply of pure water constantly oozing up through the soil. The existence of certain overflow wells not far distant from wells which did not overflow seemed to preclude the idea that this underground water should be referred to the mountain ranges to the west and north. The only other possible source is the low table-land lying between and beyond the Sumidagawa and Tamagawa. Through the loose red soil of unstratified tufa which forms this plain the water will freely sink. Some of it, no doubt, rises again through the pond and river beds—a fact which explains the remarkable increase of volume of the Kandagawa, notwithstanding the constant drawing off for irrigation purpose. The paper ended with estimates as to the expense of giving Tokio thoroughly good water supply by pumping this underground water up through iron pipes to suitable reservoirs. Not only would the water thus obtained be admirable drinking water; but the constancy of its supply would make possible the erection of large manufacturing in and around the city.

Dr. DIVERS, in emphasising some of the points brought out in the paper, took occasion to draw the attention of members to the great practical importance of accurate chemical analysis. Much of the analysis which the paper contained had been done by Japanese students under Mr. Korscholt's direction.

After replying to some questions, put by Mr. DU BOIS and Mr. ANERMAN,

Mr. KORSCHOLT submitted another paper on the analysis of certain saline springs. The work had been undertaken with the hope of finding evidence for the existence of rock-salt; but, so far, the results had been negative.

The CHAIRMAN, in conveying the thanks of the Society to the author, remarked that the importance of the subject, technical though in many respects it was, was fully attested by the large audience which had gathered to hear the papers.

The meeting was then adjourned.

CHRIST CHURCH.

The services yesterday were rendered especially interesting by the presence and first public appearance of the newly-arrived Bishop of the English Church in Japan, the Right Reverend Arthur Wm. Poole, D.D.

A very large congregation assembled for the morning service, which was read by the Rev. E. Champneys Irwine, M.A., our Chaplain. The lessons and epistle were read by the Rev. T. Warren, of Osaka. The Choir were present in full force to welcome the Bishop, and at a very short notice had prepared a beautiful service under the able direction of Mr. Griffin.

The Anthem "It is high time to awake out of sleep," was listened to with great attention. The various parts were finely rendered, and the force of the striking words was well brought out by such a rendering. The Bishop took for his text Ephesians iii., 14 and 15: "The Father, of whom the whole family in heaven and earth is named." He dwelt first upon the beauty of the human family relationship, its tenderness and joys. He then adduced a powerful illustration from the rudimentary organs found in different species of the animal world, showing that undeveloped fingers had been recognized in the horse's hoof, which found their prototype in the true fingers of man's marvellous hand. Many similar cases in the animal world were known to exist, and the preacher argued that it was just to assume from analogy that human family ties, venerable and strong as they were, were after all but rudimentary types of something greater. Their great antitype was found, as revelation showed, in the mystery of the Eternal Father and the Son. Bound up in families, in tribes, in nations, named from the progenitors of each, the race itself derives its Fatherhood, as do the tribes of Heaven, from the Father of all. Vistas of thought opened up here where the contemplation was lost in the distant glory of the Eternal. The Bishop then went on to speak of the latest scion of the Christian Church springing up as it were, amid the autumnal civilization and modes of life of Japan. Three marked epochs, as an able writer, who not himself biased by Christianity, had said, might be traced in the history of all the early Christian Churches. First, the period of development of morality, then the epoch of controversy with scepticism and heathen philosophy, and thirdly the consolidation of dogmas. It was propable that at present the native Christian Church in Japan was but in the first of these stages. The preacher then alluded to the foreign residents, their absence from many of the powerful restraining influences of the mother countries, and the temptations by which they were surrounded. Knowing and feeling these things, how much the more should their interest and sympathy go forth to the native Christians, surrounded as they were with all the vices of heathenism, and loaded with the accumulated errors of centuries. For the missionaries, too, discouraged often by the inevitable but trying environment of a heathen world, he asked the sympathy and prayers of all who valued the noble possessions of the Christian. Finally, he asked the same for himself, Bishop Pastor of his Church, but also missionary of the gospel to this nation, which, though yet only awaking to a dim knowledge of its lineage, is one of those named of Him from whom every family in Heaven and Earth is named.

At evening service the Church was again full, and the whole strength of the choir was available.

The beautiful Anthem, "What are these arrayed in white robes?" having been sung with great expression and feeling, the Bishop proceeded with the Confirmation, having previously delivered a most valuable and pointed address to the candidates. The Bishop gave as the heads of his discourse, and as watchwords to those just about to enter upon the solemn duties of the Christian campaign, three words from the fourth Chapter of Hebrews. The command to *fear*, not servilely, but lest we fail of the promise: to *labour*, which is needful to obtain spiritual food as well as bodily sustenance, and to come with boldness to Him who is not only touched with the feeling of our infirmities, having felt them, but is also seated on the throne of omnipotence. The Hymn "Onward Christian Soldiers" was sung, when the Bishop had laid his hand on the head of each of those who knelt to receive his blessing, and its stirring strains touched more hearts than those of our young people who have thus made open profession of their faith. The offertories during the day amounted to nearly \$80.

SOCIAL GATHERING IN YOKOHAMA.

A dinner was given last evening at the Grand Hotel, by the President of the Yokohama Judicial Courts, Judge Hasegawa Takashi, to the Foreign Consular Corps, and a few friends, among whom were the Governor of Kanagawa Ken and the Superintendent of Customs, thirty persons in all being present.

Mr. E. DE BAVIER, who sat at the right of the President, addressed the company as follows:—Amongst the manifestations of civil and political progress in Japan none deserves more attention than the administration of justice. Instead of the confused and many bye-laws, which formed part of the legislation of the country, or of penal regulations amongst which the *Harakiri* subsisted up to our own time, we find public Courts constituted on modern principles applying codes of laws which answer all demands of modern civilisation. Thus the mercurial rapidity with which Japan is marching on the road of progress has achieved as great wonders in this as in other fields. This, however, is not by any means the result of foreign influence alone. We all know that Japanese civilisation is much older and quite as mature and refined as that of Western countries, and whilst admitting the existence of pure bye-laws in Japan some of which were unreasonable, we must not forget, that Japan had codified laws long before she ever came into contact with foreigners. Indeed, the first codified Japanese law book was published in the year 702, an authentic interpretation of which forms part of the teaching at the Tokio University to-day. If between that date and modern time we have not heard of much alteration in the legislation, this is mainly due to the establishment of the feudal system following the foundation of the Shogunate, which gave birth to ever so many different systems of legislation of which it is difficult to speak generally. One of the first convictions arrived at with the restoration of the Mikado was that the diversity of legislation in the various parts of the country must be amended, also that the rules of law transmitted from the feudal age must be modified and improved, and the result was the great labor bestowed on the codification of the new civil and penal laws. These codes of laws are by no means, as many suppose, a mere copy from foreign laws, they are based, es-

pecially as regards penal law, on the first Japanese Code just referred to, and embody most of the old laws with some modifications and improvements; thus the material used for the compilation of the new codes must be considered as mostly native. These codes are the product of Japanese civilisation, they are not abstrusely speculative, or mechanically copied, but historically developed laws tempered by foreign contact. If we look on the subject in this light we must admit that the opinion held by some that a long time will be needed before Japanese judges are fully competent to apply the new codes is exaggerated, as the laws which they are called upon to apply are already well naturalised on Japanese soil, and are by no means foreign to the moral ideas. This fact will explain the efficiency of judges, of whom otherwise it would be difficult to conceive that they could have so quickly and successfully adapted themselves to modern legislation. Amongst these judges, you will agree with me, that Mr. Hasegawa Takashi occupies a prominent position. During the comparatively short time of his tenure of office, Mr. Hasegawa has already succeeded in making himself a name for the soundness and impartiality of his judgments, while the urbanity of his manners as a gentleman, has won him many friends. I propose the health of Mr. Hasegawa, hoping that we may long keep him amongst us for the benefit of his country and of foreigners.

Mr. HASEGAWA TAKASHI, who replied, spoke in the English language, and said:—Gentlemen, while thanking you for your honored presence here this evening, I wish to reply, briefly, to the very kind remarks of Mr. Bavier. Mr. Bavier, just now spoke with reference to the reformation made in our, the Japanese, law, and said that the efficiency of Japanese judges to adapt themselves to modern legislation is explained by the fact of our new laws being founded on those in use in olden times. Now, I consider those remarks unprecedented in talent, and I admire his high and clear opinions. Such remarks are, I assure you, a source of the greatest pleasure to the people of this country. Mr. Bavier also remarked that I have already succeeded in making myself a name for the soundness and impartiality of my judgments. Such a name, if made, is really more than I expected, and I can only ascribe it to your kind assistance. Thanking you all for your kind and friendly feelings, I drink to your very good healths.

THE BRITISH TREATY WITH COREA.

The following particulars of the Treaty between Great Britain and Corea, which was signed at Seoul on the 26th ultimo, are published in the *N.C. Daily News* of the 5th instant:—

Art. I.—Provides for Peace and Amity, and for the exercise of good offices in case of these being required by one or other of the contracting powers.

Art. II.—Provides for Diplomatic and Consular representation.

Art. III.—Secures to the British Authorities exclusive jurisdiction in all cases, civil or criminal, brought against British subjects in Corea, either by the Korean Government or Korean subjects, or by any British or other foreign subject or citizen. Any complaints involving a penalty or confiscation for breach of the Treaty or of the Regulations annexed thereto will also be decided by the British Authorities.

Art. IV.—Opens the ports of Chemulpo (Jenchuan), Wonsan (Gensan), and Pusan (Fusan), the City of Hanyang (Seoul) and the town of Yanghwachin to British trade. Choice may be made of another port in the neighbourhood of Pusan and of another town in the neighbourhood of Yanghwachin if those two places should be found unsuitable; but the right to open commercial establishments in Hanyang (the capital) is subject to surrender if the Chinese Government should relinquish that right. At each of the places named, British subjects may rent or purchase land or houses, and may erect dwellings, warehouses, and factories. The sites for the foreign Settlements are to be selected and laid out by the Korean Government in conjunction with the competent Foreign Authorities, and will be managed by a Council the constitution of which will be determined in the same way. British subjects will have full liberty to travel and trade in the interior of the country, and will be amenable in the settlements or elsewhere to such Municipal Police and other Regulations as may be agreed on by the authorities of the two countries.

Art. V.—Gives British subjects the right to import into any Korean open port from any foreign port or any Korean open port all kinds of merchandise (excepting prohibited goods); and to export the same to any Korean open port, or to any foreign port. It provides for drawbacks on foreign goods, and for the refund of duty on Korean produce when proved to have been conveyed to a Korean open port. All goods that have once paid the duty of the tariff may be transported to any Korean open port free of duty, or may be conveyed into the interior free of any additional tax, excise, or transit duty whatsoever. Tonnage dues are to be paid at the rate of 30 cents per ton, a single payment being good for four months; and the whole of the dues so collected are to be appropriated to the construction of lighthouses, beacons, etc., and to the improvement of the anchorages at, and the approaches to, the open ports.

Art. VI.—Relates to smuggling at non-opened ports, the penalty being confiscation of the smuggled goods, as well as the forfeiture of twice their value.

Art. VII.—Details the course to be followed in case of shipwreck, or when a British vessel is stranded on the Korean Coast. All salvaged cargo or property is to be carefully protected, and the wants of the shipwrecked persons are to be fully provided for.

Art. VIII.—Relates to ships of war. They may visit any Korean port, may store supplies at the open ports, and may make surveys of the Coasts.

Art. IX.—Sanctions the employment of Korean subjects by British subjects in any lawful capacity.

Art. X.—Is the favoured nation clause, and secures to the British Government and subjects all privileges that have been or may hereafter be granted by the Korean Government to the Government or subjects of any other Power.

Art. XI.—Provides for the revision of the treaty and tariff by mutual consent in ten years.

Art. XII.—Provides that any dispute as to the meaning of the treaty shall be determined by the English text.

The Regulations of Trade annexed to the treaty define the course of procedure in relation, firstly, to the entrance and clearance of vessels; secondly, to the landing and shipping of cargo and the payment of duties; and, thirdly, to the protection of the revenue.

The Import Tariff in its classified form is arranged under six headings:—

Class 1, duty free goods, contains agricultural implements, books, bullion, coins, models, packing materials, plants, samples, scientific instruments, travellers' baggage, &c.

Class 2, being goods subject to an *ad valorem* duty of five per cent., comprises various raw materials, together with grain, seeds, beans and pulse, flour and meal, hides and skins, horns and hoofs, kerosene and mineral oils; metals in pig, sheet, bar, &c.; oil cake, and all manures, drugs and medicines, yarns of all kind, and all unenumerated articles, raw or unmanufactured.

Class 3.—The goods under this head, which are to pay 7½ per cent. *ad valorem*, form the most important class of the tariff. They consist of cotton manufactures of all kinds; cotton and woollen, and cotton and silk mixtures; woollen manufactures of all kinds, and woollen and silk mixtures; linen, or linen mixed with cotton, wool or silk; grass cloth, and all textiles in hemp, jute, &c.; clothing or wearing apparel of all sorts, ordinary carpeting, chemicals, dyes, colours and paints, leather; window glass, plain or coloured; metals in pipe, tube, or wire; steel, tin-plates, nickel, white copper or other valuable metals; hardware, cutlery, machinery, porcelain, paper, soap, sugar—all qualities, tea, raw silk, and some silk manufactures, soft woods and timber, and all unenumerated articles partly manufactured.

Class 4. comprises goods liable to a duty of ten per cent., and consists of beer and foreign wines, superior carpeting, certain silk manufactures, and clothing made wholly of silk; clocks and watches, in silver; glassware, furniture, leather manufactures, fancy paper, plated ware, pictures, hard woods, various articles of superior make, and all unenumerated articles completely manufactured.

Class 5. consists of goods liable to twenty per cent. duty. These are articles of luxury, such as amber, coral, jade, ivory, birds' nests, tortoise shell, embroideries, furs, musk, jewellery, precious stones, velvet, watches in gold or gilt, fire-arms, tobacco, spirits and liqueurs, &c.

Class 6. being prohibited goods, consists of adulterated drugs or medicines, arms and munitions of war (except when imported under permit), counterfeit coins, and opium (except medicinal opium).

All native produce, except the free list, consisting of refined gold and silver, bullion, gold and silver coins, plants, samples, and travellers' luggage, will pay an *ad valorem* duty of five per cent. The exportation of red ginseng is prohibited.

The above *ad valorem* tariff is to be converted into specific rates as soon as possible by the authorities of the two countries.

Duties may be paid in Mexican dollars or Japanese silver yen.

TRANSLATIONS FROM NATIVE JOURNALS.

THE DIFFICULTIES OF THE GOVERNMENT.

(Translated from the *Fiyu Shimbun*.)

The erection of Government buildings and public gardens, encouragement of transport, agriculture, and direct trade, extension of the military organization, establishment of the Nippon Bank, reform of the Specie Banks, opening of competitive exhibitions of painting, arts, marine and other

produce, reclamation of waste lands in Hokkaido and Oku-u, opening of gold, silver, copper, and coal mines, protection of sugar and cotton cultivations, aid to *shisoku*, furtherance of education and sanitary arrangements, repairs to wharves and construction of railways and telegraphs—all these are undertakings that entail heavy outlays by the Government. If detailed accounts were prepared and if we compared them with the amount of our revenue, we should be astonished to find that the Government could bear the burden; although during the last three or four years, the revenue has steadily increased, now amounting to more than yen 75,000,000. Apart from the question of precipitancy or tardiness with which these undertakings are executed, we find, on consideration, that they are all of the utmost importance and demand serious attention on the part of the Government, which is already involved in many difficulties.

We hear that the Government contemplates extending railways by raising a domestic loan of yen 25,000,000. This report has been published in many journals, and is the main topic of discussion among the companies which have relations with the authorities. It must, therefore have some foundation. Some of our contemporaries have already expressed their views on the subject, one in favor of the project and another against it. Believing, as we do, that the matter is decided, we will offer a few remarks. Now-a-days the railway is the principal means of communication in every civilized nation. Consequently it is incumbent upon Governments to construct them, since road making is within the legitimate sphere of the duty of Governments. It is opposed to all reason to assert that though the Government is bound to construct roads, it is abusing its duty to make railways. For this reason, we included the construction of railways among the difficulties of the Government. No one will, we believe, raise objection on this point. The importance of connecting Kiyoto with Tokiyo, is well recognized. Not only will the railway between the two cities afford facilities for transport, improve trade, and encourage industry, but it will prove to be of immense value for the defence of the country in case of foreign war. Therefore, we have no reason to condemn the construction of the Tokiyo-Kiyoto line.

The raising of a new domestic loan in these days when the taxes are increased to the aggravation of the populace, forms another subject. We cannot approve it, even though it be raised for the construction of railways; because the outlay can be defrayed from other sources. We refrain, however, from discussing the advantages and disadvantages attendant upon the domestic loan, but its appropriation demands consideration on our part. We desire to see it applied on the works that are of most pressing nature, and the Government must have decided which work to commence first. In our opinion, the most important of all works is coast defence. We have had occasion to urge the speedy construction of forts around the coast. There is no nation in Europe and America that has neglected the fortification of its coasts as our country has. It is surrounded by sea on all sides, but there is not a single fort that affords defence against the incursion of an enemy's ships. The Bay of Yedo is exposed to the attack of foes. So are the ports of Kobe and Osaka. Hokkaido, whilst exposed to the immediate aggression of Russians, has no military protection. The Riukiu Islands have also no man-of-war or a soldier to protect the inhabitants. This is inconsistent with the fact that the Government abolished the Riukiu clan in

spite of the objection of the Chinese Government. In fact, Japan has no Navy worthy of the name. Ships that can engage in warfare, are four or five. In a word, the whole empire is exposed to the rapacious incursion and plunder of foreign enemies. The matter is of such an important nature that the Government—even though it be obliged to abandon all other enterprises—must attend to it. We earnestly desire that the new loan to be raised shall be applied to the erection of forts.

The Chinese maxim, "You must not forget war while peace prevails," was the fundamental principle that moved our ablest men. We must be equally prepared for civil and military pursuits. A Western proverb also says:—"To be armed beforehand, is the best means to avoid war." This most forcibly applies to the case of our country. We are placed in a peculiar position. Brilliant, as the career of the empire has been since the present Government was established; yet, in fact, the apprehension of foreign aggression and resentment of foreign insult, were the causes that stirred the spirit of able men and led to the present achievement. This spirit was then styled *Joi* (expulsion of barbarians). On careful analysis, we find that, it was the desire to maintain the independence of the country. This expression was not used at the time when the Dutchmen and Chinese alone held tralad relations with us. It originated with the arrival of the American fleet. The Chinese and Dutch were amenable to the Japanese law. Consequently the popular feeling was not directed against them. But the Americans forced themselves upon us by the power of their heavy artillery. This provoked the whole nation and gave rise to the term "*Joi*." Even the Imperial edict issued in the early days of the Restoration was not free from this spirit, for it contained such words as these:—"His Majesty desires to stand on an equal footing with foreign nations" or "extend the Imperial power over foreign countries by the aid of his Ancestors." Since then, sixteen years have elapsed, but the treaty which was signed under the united coercion of England, France, Russia, and America, remains in the same condition as before. The stain of extra-territoriality has not yet been washed off. The foreign settlements in the treaty ports and at Osaka and Tokiyo appear as though they were definitely conceded to foreigners by the Government. Foreigners are only amenable to their own laws. Even the territorial law sanctioned by Imperial decree, is not binding upon them. The foreigners in the employment of the Japanese Government also claim exemption from the law. In that way is Japan humiliated and subjected to ignominy. Is this because our claim is not just and is unreasonable? No. Our claim is just and certainly reasonable. Yet we cannot do away with the stain, because we have no sufficient military force. It is the first duty of the Government to enlarge the Army and Navy, and thereby to secure the dignity and peace to the nation. At present, there is a menacing danger to the country, and if effective measures are not taken now, all the plans hitherto adopted will be frustrated. Observers may remark that Liberalism does not aim at improving the country by means of arms. But there is a wide distinction between moral and practical politics. We are constrained to guard against the incursion of any invader. We believe there is nobody foolish enough to leave his property at the mercy of thieves. If even this country produces a great minister of liberal views, in the 23rd year of Meiji, when a National Assembly comes into existence, he will not be able to adjust

domestic and foreign policy without a sufficient military force at his command. Foreign powers are watching for a chance to carry out their aggressive designs. We are informed that a certain Russian officer belonging to the General Staff Office suggested to the Russian Government an attack on Japan. Should a war break out between China and France, our country will suffer most severely, even though Russia and America do not combine with France, or even though England and Germany do not assist China. The moment hostilities commence, the Government must either proclaim neutrality or combine with either one of the parties. But, considering the condition of our Navy, we are unable to maintain neutrality or to combine with either one of the parties. Supposing we declare neutrality, let us ask whether our Navy is strong enough to make the belligerents observe our orders. If the French squadron enter our ports for coaling, provisioning, or water, can we prevent them? No! we are unable to do so. The authorities must be seriously concerned about this question. There is no country on the earth that has so much neglected fortifying its coast as has Japan. It is only reasonable that we should be subjected to European aggression and evoke contempt from the Chinese. An old proverb says that unless a nation has a reserve of force for three years, it is not a nation. What shall we do, then, in case of an emergency? The fortification of the coast and enlargement of the Navy, are the most important of all works. The erection of Government buildings, public gardens, and opening of competitive exhibitions are nothing as compared with the above works.

We regret that the country is utterly destitute of means of defence. The sooner the work is commenced the better, since it requires at least ten years to complete our scheme of fortification. It is to be hoped that the new loan may be appropriated to the extension of our military organization.

A STRONG NATION'S INJUSTICE.

(Translated from the *Jiyu Shimbun*.)

Unsupportable as its theory and reason are, the Western proverb "might is right" which is identical with our "*anata no go-muri wa go-mottomo*" (literally, your obstinacy is quite right!) we must condemn it as a thing that ought not to exist in this civilized nineteenth century of which we boast. Reflection upon the state of affairs, however, shows that, in matters of great importance such as international intercourse, and of minor importance such as the relation between the prosperous and unfortunate classes, the above doctrine predominates. The powerful nations of Europe and America adopt an egotistic and avaricious policy towards Japan, China, and Turkey—a sugar-plum policy. This may be justifiable to a certain extent in the case of Germany or Russia where politics mean militarism. But that the people of Great Britain and the United States, where opinions of equality and freedom are supposed to prevail, should adopt a policy towards Orientals more oppressive than that of Germany or Russia, causes us as much regret as indignation.

America has prohibited the immigration of Chinese laborers—a prohibition revolting to any sense of justice. Americans hate the Chinese because the latter are frugal and work for low wages, driving white men out of the field of competition. They have striven hard to force Chinese settlers away, and have made their residence a political question.

The year before last, Congress passed a law prohibiting the entry of Chinese laborers, and President Arthur himself, yielding to vulgar prejudice, sanctioned the measure. This is a glaring example of the protectionist principle; nay, it almost amounts to closing the country against Chinese workmen. Whether or no this is reasonable, requires no investigation; but a few examples of its injustice may be instructive to the public. Lately, when Chinese living in Hongkong—therefore British subjects—went to America, the Court of Massachusetts decided that, as the Chinese of Hongkong are British subjects, the Chinese Restriction Act is inoperative against them. On the other hand, a Californian Court delivered judgment that the spirit of the Act being to prohibit the immigration of Chinese labourers, the law is applicable to Chinese from Hongkong so long as they are Mongolians, no matter where their place of residence. According to this decision, Chinese labourers cannot enter the United States of America. This is iniquitous. Another instance is still more remarkable. In Boston, the master of a British sailing vessel refused to discharge a Chinese sailor for fear of violating the law. The man applied to the Boston Court for a writ of *habeas corpus*. The Court rejected the application on the ground that a Chinese sailor is a Chinese "labourer," and that the master was justified in detaining the man on board the ship. The *New York Nation* bitterly complains of the law being eluded, and says that Chinese are freely smuggled into the United States by way of British Columbia, and suggests a most atrocious plan as the only efficacious one to put a stop to the evil. It is as follows:—"This will have to be amended this winter if it is intended to be really operative, and there is only one way to make it really operative, that is to authorize the summary slaughter of all Chinamen found within the country after a certain date, and then to offer a reward for the heads of all Chinamen caught after another still later date. In no other way can our Christianity be saved from the debasing influence of these heathen." We do not of course believe that the American Government will adopt such a plan. But that such a journal should—even as the mere opinion of a writer—urge such a plan publicly, has struck us with astonishment. Such unjust laws and decisions are a disgrace to a Republican Government which professes perfect freedom and the equality of all men. It was this very same Government that abolished slavery at a vast expenditure of money and blood; and now it advocates injustice. American opinion of freedom and equality must henceforward be received with reserve. Since the people of the Eastern and Western worlds came into mutual contact, every country meets alternately with injury and benefit. Europeans and Americans trading in the ports of China or Japan, do not bring benefit solely. Immigration of Chinese laborers into America may have many objectionable features and may import vice into American soil. The Chinese Government cannot put a stop to the importation of opium under the British flag to the terrible prejudice of the Chinese people. On the other hand, the American Government has carried protectionist principles to the extent of prohibiting the entry of the Mongolian race into its territories. And, not satisfied with this harsh measure, Americans still clamour for the expulsion of the Celestials by the most murderous measures. What a world of injustice and of violence! Careful analysis of the Chinese Immigration Restriction Act proves that it means closure of the ports and the expulsion of barbarians (*Foi*). Ah! What a great difference! Thirty years ago, Americans summoned us, with their heavy artillery, to break down the walls of our isolation; and now they choose to close their doors against Chinese labourers. Do they believe, then, that strength is reason? We cannot tell them that unreason is right.

THE DANGER TO JAPANESE SILK MANUFACTURERS.

The following is translated from the *Jiyu Shimpo*, where it appears in the form of a letter to the Editor, over the signature "A Cloth Dealer":—

The depression of business is widespread throughout the country. The fall in value of all commodities is unusual. This is especially the case with silk-fabrics. The other day, I read with great interest an article in your paper treating of the depreciation in the value of raw silk. But manufactured silk is still cheaper than the raw. Cheap as raw silk is, yet it fetches \$500 per bale in Yokohama. But, supposing 5 *yen* worth of raw silk to be manufactured according to any pattern, woven, and dyed at some cost, it will not fetch more than *yen* 4; while in the original state, it fetches what it is worth. Thus, both labor and capital are wasted. The demand for silk-fabrics has greatly diminished; and, consequently, dealers cannot dispose of a single article. On the other hand, the manufacturers can no longer bear the strain upon them, and are discharging their workmen. The looms are all idle. The most fortunate have sold their places and declared themselves bankrupt. Similarly with clothiers. This state of things cannot be permanent, but we cannot tell with any degree of certainty when the revival may come. In my opinion, it will not arrive soon.

It is plain that, as the looms have been nearly all stopped, goods will get scarce at some time, and then exactly the opposite of the present low prices will prevail. Deluded by this brilliant prospect, the already ruined manufacturers or clothiers will desire to start afresh. But alas! for want of capital they will not be able to commence; or even though they could secure financial aid, they will not be able to regain their former prosperity. Suppose the clever merchants of England or France should avail themselves of this opportunity and import silk fabrics specially made for the use of Japanese! Already, we have proof of this in the importation of crapes. In this way, the foreign and Japanese manufacturers will be brought into competition. Although freight, import duty, and commission may increase the price, yet as silk goods are of great value, however small in quantity—exactly the opposite of coals, rice, or wheat, which occupy much room and are subject to high charges for carriage—the said charges do not enhance the price after all. In addition to this, the import duty is only 5 per cent., the increase on goods worth, say, *yen* 10 will not be more than *sen* 50. This should not prove at all a serious obstacle to trade. Moreover, foreign manufacturers have large capital available at low interest, and more skill than Japanese manufacturers. Thus, armed with capital and experience, if they enter into competition with Japanese, there is no reason why they should not succeed. If they think it unsafe to establish factories to be worked rentily by foreign hands, they can employ the most skilled Japanese labor at the lowest wages. Some people may remark that, if competition is so easy for foreigners, why did they not commence long ago. Because, simply, they have had no opportunity before the present. That they can succeed at this moment, we can prove by referring to the exportation of *gomame* (dried sprats) to China. Seven or eight years ago, when famine was reported in that nation, that edible commenced to be exported; and since then a good business has been done in it. Hence, if foreign silk manufacturers once enter into competition with Japanese they will not be easily defeated. The present is the best opportunity for foreign manufacturers to wrest the trade from Japanese.

TOKIO SHISHIN SAIBANSHO.

Before NAKAMIKADO Esq., Judge.—SATURDAY,
15th December, 1883.

J. J. GARGAN v. KONO SUKEJIRO.

This was a claim for payment of the penalty stipulated for between the parties for non-execution of the contract and of the balance—yen 207.43—due to the plaintiff on account of the two lots of machinery taken delivery of by defendant.

The petition of the plaintiff runs as follows:—
TOKIO SHISHIN SAIBANSHO.

J. J. Gargan, American citizen, living at No. 57, Bluff, Yokohama, plaintiff, and Kono Sukejiro, Japanese subject, doing business at Honjoku, Kikugawacho Nichome, No. 25, Tokio, as timber merchant, defendant.

The petition of J. J. Gargan, the above-named plaintiff, against Kono Sukejiro, the above-named defendant to this honorable Court sheweth as follows:—

1.—That by virtue of a certain contract (Exh. No. 1) entered into between the defendant and the plaintiff on the 4th day of May, 1883, the said defendant agreed to build for the said plaintiff two houses with material and in the manner stipulated in the said contract.

2.—That the defendant agreed to build the said houses at the price of yen 24.50 per tsubo, this price including and labor.

3.—That it was agreed between the parties that the said two houses were to be finished within 40 days from the 6th day of May, 1883, rainy days excepted, that is to say, that the said two houses were to be completed on the 15th June, 1883.

4.—That it was agreed between the parties that if the said two houses were completed before the expiration of the said 40 days the plaintiff was to pay to the defendant \$1 per day for each day wanting of said 40 days.

5.—That on the other hand the defendant agreed to pay the plaintiff \$1 per day for each day over and above the said 40 days until the completion of the said buildings.

6.—That the defendant has failed to carry out his contract, and that the said buildings still remain unfinished, thus entitling the plaintiff to claim from the defendant the sum of \$1 per day, commencing from the 16th day of June, 1883, up to the eventual completion of the said buildings, with the exception of such days which the defendant can prove as having been rainy days during the period from the 6th day to the 15th day of June, 1883.

7.—That it was further agreed by the above said contract, that the defendant should take over as part-payment against the material and labor required in the building of the said two houses a certain lot of machinery belonging to the said plaintiff and valued by the parties to be worth yen 828.

8.—That the plaintiff on the 25th day of April, 1883, some days before the contract had been written out, but under the clauses of the same, delivered to the defendant two lathes valued at \$60, or yen 82.80, as per Exhibit No. 2, and received in return wood to the value of yen 79.17, leaving a balance due him on this transaction of yen 3.63.

9.—That on the 25th day of May, 1883, the defendant with the assistance of some men took from the plaintiff by force 5 pieces of machinery valued at \$235, or yen 324.30, against which he had delivered wood to the amount of yen 120.50 only, leaving a balance due to the plaintiff on this transaction of yen 203.80.

10.—That the defendant, having contracted to take over the said machinery, the plaintiff has lost his chance of selling the same elsewhere, as also the interest on the price of the same during this time.

The plaintiff therefore prays this Honorable Court:—
1.—That the defendant may be ordered to pay to the plaintiff \$1 per day for breach of contract, commencing from the 16th day of June, 1883, or such date as may be fixed as the date on which the two houses should have been completed, according to the rainy days during contract time.

2.—That the defendant may be ordered to pay to the plaintiff yen 207.43 balance due the plaintiff out of the 2 lots of machinery received by the defendant.

3.—That the defendant may be ordered to take delivery of the balance of the machinery left on the plaintiff's hands through the breach of contract on the part of the defendant and pay for the same as agreed.

4.—That the defendant may be ordered to pay to the plaintiff legal interest on the sum of yen 207.43 and on the sum of yen 420.90 (the latter being the value of the machinery still in the plaintiff's possession) commencing from the 16th day of June, 1883, or such other date as may be fixed as the date on which the contract should have been completed up to the date of final settlement, and that the plaintiff may have such further or other relief as the nature of the case may require and as to this honorable Court may seem fit.

Dated this 6th day of August, 1883.

To IKEDA YAICHI, Esq., President of the Tokio Shishin Saibansho.

After hearing several pleadings, the Court gave the following decision:—

J. J. Gargan, an American citizen, No. 57, Bluff, Yokohama, plaintiff, *versus*, Takano Sukejiro (Heimin), No. 25, Kikugawa-cho Nichome, Honjo-ku, Tokijo, defendant.

The Court, on hearing the above case, in which

the plaintiff claims damages and repayment of the over-balance of machinery, decides as follows:—

1.—That the defendant states that he was prevented from executing the contract as per Exhibit No. 1, on account of the plaintiff having preferred a groundless charge against him, in consequence of which he has been detained in Yokohama Keiza, Saibansho (Criminal Court) since the 19th June, 1883: But owing to the want of evidence to show that he took steps to execute the contract during the interval of twenty-six days between the day he was detained and the day (May 23rd) on which he delivered timbers to the plaintiff, his plea is untenable. Again, the contention that he communicated to the plaintiff on the 24th of September to repudiate the contract, is not proved by any fact. The Court, therefore, decide that the defendant neglected fulfilling the contract. 2.—That the defendant asserts that on the 23rd of May, 1883, he forwarded the timbers to the Kiyodo Mono Ageba (the creek side allotted for landing of cargo) according to the contract. He further says the plaintiff, however, refused to hand over the machinery unless the timbers were conveyed to the site of the building. Accordingly, he was compelled to send the timbers worth 120 yen and 50 sen to the site and received five pieces of machinery equivalent in value to the timber; and that the plaintiff asserted that the said five pieces of machinery were worth 325 yen and 68 sen and charged him (defendant) with having fraudulently carried away the machinery, while the remaining timbers were not delivered. Further the defendant asserts that as shown in the end of Article 11 of Exhibit No. 3 A, and the last clause of exhibit No. 3 B, the timber and machinery were to be exchanged at equal value at the creek side from time to time; that he forwarded the timber, valued at 120 yen and 50 sen and received the forfeited pieces of machinery in return; and that as there is no reason why the plaintiff should hand over machinery worth more than the timber, his (plaintiff's) statement is unreasonable. The original contract (Exhibit No. 1 A) dated 4th May, 1883, however, says that the materials should be sent to the building site, &c., and further on the same contract says that the machinery shall be handed over to Takano Sukejiro after the timber was conveyed to No. 52, Bluff. The provisional contract (Exhibit No. 1 B) dated the 10th April, 1883, says that seven-tenths of the timbers shall be sent to the Bluff, &c., &c. For this reason, the statement as embodied in the Exhibit No. 3 that the machinery should be exchanged for timbers at the creek side cannot be interpreted otherwise than that the timbers should be handed over to the plaintiff according to the price* ruling at the time of the arrival of timber at the creek side. But it cannot be interpreted as showing the time of the arrival of the timber at the creek side. Therefore, the contention of the defendant is void. The defendant is unable to, and did not estimate the value of the machinery he received from the plaintiff on the 23rd of May, 1883, when the contract was entered upon. He stated previously that he knew not what and how the machinery made up \$660. This being the case, unless the defendant establishes the fact that the machinery he received is worth 120 yen and 50 sen, his contention that it is not worth 120 yen and 50 sen is untenable.

3.—That the plaintiff claims, according to the contract, the penalty amounting to \$145 at the rate of \$1 per day for 145 days from the 16th of June till the 8th of November, exclusive of for 40 days from the 6th of May till the 15th of June that have been allowed for completion of the building. The said penalty was stipulated for compensating the damage that may accrue to the plaintiff through the non-execution of the contract. But in the absence of evidence to show that the plaintiff sustained such damage, he is not entitled to it. He demands that the defendant should be compelled to take delivery of the remaining pieces of machinery. But the contract does not provide for the sale of the machinery; and as it was to be handed over to the defendant in part payment for building house—as though a man contracted to pay for goods in paper money or silver as the case demands—the plaintiff cannot compel the defendant to take delivery of the machinery, unless he should

let the defendant undertake the work in future. For the foregoing reasons, the Court orders that the defendant shall pay to the plaintiff the sum of 207 yen and 43 sen, the balance for the machinery; storage from the 16th of June, 1883, at the rate of 7 yen and 50 sen, and insurance at 6 yen per month. The defendant to bear the costs, the expenses for witness's attendance and translation.

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN Esq., Judge.—SATURDAY,
December 22nd, 1883.

YOKIOKA SHOBEI v. ED. WHITTALL.

Mr. Litchfield for plaintiff, Mr. Kirkwood for defendant.

This case, the evidence in which was concluded on the 15th instant, was called on to-day for delivery of

JUDGMENT.

After reviewing the evidence and pleadings, His Honor observed:—The conclusion that I come to, therefore, is that, although the defendant might, after having signed the contracts for the sale of the steamer and the merchandize, have said, "It is a condition precedent of my carrying out this contract that you should hand me approved bills for \$32,000," he cannot, after taking what was a most substantial part of the consideration, viz., \$16,000 in cash, still insist on this as a condition precedent to his handing over the yarns. He would be clearly entitled to his cross-action against the present plaintiff for the alleged breach of the contract by the non-delivery to the present defendant of "approved bills." As however, there is no cross-action, I cannot deal with this, and I must leave the parties to take such action as they may be advised. There will, therefore, be judgment for the plaintiff upon the second prayer of his petition with costs—against which latter the defendant will be entitled to set off \$300 as costs of that portion of the petition which was abandoned during the course of the suit. There will also be an enquiry which may be before me in Chambers as to what damages the plaintiff has suffered by the wrongful detention of the yarns.

The Civil Code is completed and would have been issued but for the return from Europe of H.E. Ito. He has made important suggestions in connection with it, and consequently it has been modified. Its enforcement is looked forward to with great interest.

Branches of the Nagasaki Custom House have been established at Idzughara, Hakata, and Shimonoseki.

A few years ago, the Marine Produce Office of the Agricultural and Commercial Department, procured Hiroshima oysters and laid them down to breed in Kanagawa Harbour. They have multiplied with wonderful rapidity, and are of excellent quality.

According to the returns prepared by the Water Police, 24 steamers, 45 sailing vessels, and 1,237 junks entered Shinagawa Bay during last month. The passengers numbered only fifty-five. The merchandize imported was:—rice, 83,666 bags; cereals, 33,354 bags; sake and shoyu (sauce), 81,550 casks; salt and miso, 248,061 casks; kerosene oil, 5,880 cases; firewood and charcoal, 126,372 kin; coal, 7,608,706 kin; dry goods, 3,285 pieces; sugar, 7,322 bags; tea, 66 boxes; tobacco leaves, 2,058 bags; dried fish, 1,684 pieces; and fresh fish, 239,855.—*Hochi Shimbu.*

* Among Japanese merchants. With them the goods are often purchased on board ship and landed at the expense of the purchasers. This is known by the name of *kaihi-maba* (creek side price) or *Okunaba* (floating price).—Translator J.M.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, DECEMBER 14TH, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongô, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
—represents velocity of wind.
—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 36.0 miles per hour on Tuesday at 10 a.m.
The highest reading of the barometer for the week was 30.125 inches on Sunday at 11 p.m., and the lowest was 29.554 inches on Saturday at 3 p.m.
The highest temperature for the week was 55.8 on Thursday, and the lowest was 25.2 on Thursday. The maximum and minimum for the corresponding week of last year were 59.9 and 24.8 respectively.
The total quantity of rain for the week was .337 inches, against .119 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30,* 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

The Trains LEAVE TOKIO (Shinbashi) at 7.30, 8.45, 10.00,* 10.45, and 11.30 a.m., and 1.00, 2.30, 4.00,* 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

Those marked with (*) run through without stopping at Tsurumi, Kawasaki, and Omori Stations. Those with (†) are the same as above with the exception of stopping at Kawasaki Station.

UYENO-KUMAGAI RAILWAY.

The Trains leave UYENO at 7 and 11.30 a.m. and 4 p.m., and HONJO at 6.30 and 11 a.m. and 3.30 p.m.

The Fares are:—Special-class (Separate Compartment), yen 2.35; First-class, yen 1.40; Third-class, sen 70.

YOKOSUKA STEAMERS.

The Yokosuka steamers leave the English Hatoba daily at 8.15 and 10.45 a.m., and 12.30, 3.00, and 4.15 p.m.; and leave Yokosuka at 7.00 and 9.45 a.m., 12.15 m., and 2.00 and 4.00 p.m.

Roman Catholic Church : 8 and 9.30 a.m.
English Church, No. 12, Sakaicho, Shiba, Tokiyo : 11 a.m.

LATEST SHIPPING.

FREIGHTS.

Chartering business continues on the smallest scale, the berth for all destinations being well filled with both steam and sailing tonnage. The *Benlarig*, withdrawn last week from New York berth, is now on for London, and the *Electra* is advertised for Havre and Hamburg to sail at the end of the present month, while the *Benvenue*, *Mosser*, and *Mark Lane* are laid on for New York, with quick despatch. The British bark *Sagitta* is still loading at Kobe for Havre and London, the British bark *Cross Hill* is promised departure in January for New York, via Kobe, and the American ship *Hercules* is advertised for same destination with a prompt sailing date.

ARRIVALS.

Koweki Maru, Japanese steamer, 63, Omura, 17th December.—Yokkaichi 12th December, General.—Kowyekisha.

Mikuni Maru, Japanese steamer, 412, Taneda, 17th December.—Shimizu, 15th December, General.—Seiriussha.

Shidzuoka Maru, Japanese steamer, 334, Nakai, 17th December.—Shimizu 15th December, General.—Seiriussha.

Kengi Maru, Japanese steamer, 236, Masuda, 18th December.—Yokkaichi 14th December, General.—Kowyekisha.

Ada, British schooner, 85, Hardy, 2nd December.—Guam, General.—Captain.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Koweki Maru*, from Yokkaichi:—12 Japanese.

Per Japanese steamer *Kengi Maru*, from Yokkaichi:—25 Japanese.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—General T. B. Van Buren, Mr. and Mrs. Hellyer and child, Professor Mayet, Messrs. Takezoe and servant, Albert Stopford, H. Robertson, C. F. Vallin, Fujioka, Hashimoto, Ooba, Higashi, Nakamura, Tanabe, Inouye, and Watanabe in cabin; and 3 Chinese and 138 Japanese in steerage.

Per Japanese steamer *Okame Maru*, from Handa:—17 Japanese.

Per Russian steamer *Kamtchatka*, from Kobe:—Mr. Griffiths and 5 Japanese in cabin; and 22 Japanese in steerage.

Per Japanese steamer *Seirio Maru*, from Yokkaichi:—80 Japanese.

Per Japanese steamer *Takasago Maru*, from Hakodate via Oginohama:—Mr. Klein and 3 Japanese in cabin; and 116 Japanese in steerage.

Per British steamer *Benlarig*, from Kobe:—13 Japanese in steerage.

Per Japanese steamer *Kairio Maru*, from Handa:—34 Japanese.

Per Japanese steamer *Onoura Maru*, from Fukuda:—20 Japanese.

Per American steamer *City of Tokio*, from Hongkong:—Mr. C. Nickels in cabin; and 1 Chinese in steerage. For San Francisco: Rev. and Mrs. F. Masters and child in cabin; and 125 Chinese in steerage.

Per British steamer *Pembrokeshire*, from London via Hongkong:—Dr. and Mrs. Kato.

Per Japanese steamer *Niigata Maru*, from Kobe:—Messrs. J. Walter, R. Kirby, Takezawa, Suzuki, Kawasaki, Nakai, and Yamaki in cabin; and 82 Japanese in steerage.

Per Japanese steamer *Taganoura Maru*, from Yokkaichi:—120 Japanese.

Per Japanese steamer *Kosuge Maru*, from Hakodate:—Mr. F. Bowden and 61 Japanese.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—Mr. and Mrs. Lowson and 2 servants, Mr. and Mrs. Abel, child, and amah, Messrs. W. H. Willoughby, Nakawara and friend, and Achong in cabin; and 6 Chinese and 12 Japanese in steerage.

DEPARTED.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—His Excellency Inouye, Governor Tanabe, Admiral Davis, U.S.N., Lieut. James, Mr. and Mrs. J. A. De Forrest, and 3 children, Mr. and Mrs. J. F. Jones, Mrs. Bisbee, family and nurse, Mrs. F. Koshima, Mrs. N. Koshima, Mrs. Edwards, Miss S. Koshima, Dr. J. M. Mathewson, Messrs. R. Kirby, Blum, John Stoddard, Hon. L. Greville, G. Wauchope, Uyeda, Oki, Mori, Kitamura, Matsumoto, Shun, K. Inouye, Ban, Ishikawa, Shima, Iijima, Numa, and Akabane in cabin.

Per British bark *Lady Bowen*, for Victoria, B.C.: Mr. and Mrs. Ribberjelke, Rev. J. Goble, and Miss Goble in cabin; and 3 Europeans in steerage.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Governor Nishimura, Governor Senda, Mr. and Mrs. Nomura, Mr. and Mrs. Takagi, Mrs. Kildoye, Mrs. Imai and child, Miss Boulton, Rev. Warren, Professor J. Milne, Captain F. Creighton, Lieutenant W. Strugan, R.N., Dr. Sibbald, Messrs. Chamberlain, C. W. Phipps, T. B. Wheeler, Comstock, Barnes, H. Sibbald, F. Dubois, T. Iwakura, Isobe, Usagiya, J. Yoshikawa, S. Yanaga, and B. Takagi in cabin.

CARGOES.

Per Japanese steamer *Genkai Maru*, for Shanghai and ports:—Treasure, \$169,480.00.

Per Japanese steamer *Nagoya Maru*, from Shanghai and ports:—Treasure, \$1,000.00; yam 102,436.

Per Japanese steamer *Nagoya Maru*, for Shanghai and ports:—Treasure, \$700.00.

Per British steamer *Zambesi*, from Hongkong via Nagasaki and Kobe:—Through Cargo, 2,261 packages; Treasure, 48 boxes; Local Cargo, 938 packages; Sugar, 1,063 packages; Beef, 40 sides; Beef, 8 baskets.

REPORTS.

The American steamer *City of Tokio*, Captain H. C. Dearborn, reports leaving Hongkong on the 14th December, at 3.15 p.m. with variable winds and fine weather throughout the passage. Arrived at Yokohama on the 20th December, at 7 p.m. Time, 6 days and 3 hours.

The Japanese steamer *Niigata Maru*, Captain John C. Hubbard, reports leaving Kobe on the 19th December, at 5.10 p.m. with light variable airs and overcast to Omaisaki; thence to port strong westerly gale, heavy sea, and fine clear weather. Arrived at Yokohama on the 21st December, at 6 a.m.

LATEST COMMERCIAL.

IMPORTS.

During the past week business has continued on but a small scale for Yarns and Shirtings, and the few sales made show a decline on our last nominal quotations, other Piece Goods are generally easier, but Indigo Shirtings and Turkey Reds show a slight improvement, whilst Velvets are enquired for at an advance of 25 to 40 cents for common qualities and a less marked advance for best chops. Metals show no improvement, and Bar Iron is quoted lower but no business doing.

COTTON YARNS.

| | PER PICUL. |
|---------------------------------|------------------|

| White, No. 5 | 4.60 to 4.75 |
| Brown Formosa | 4.25 to 4.30 |

EXPORTS.

RAW SILK.

Since our last issue of 14th instant there has been less doing in this Market. Settlements not reaching more than 450 piculs, or say half the total of the previous week. The *Khiva* which left on the morning of the 15th instant, took 927 bales; of these 164 were destined for London and the re-

mainder for the Continent. Prices are well maintained for all descriptions: holders are firm, and for some classes the demand exceeds the supply. Stocks are reduced by native shipments and purchases to 3,750 piculs as per table at foot. Business has been done in *Hank* sorts at full rates and *Oshu* kinds have been currently sold at about recent quotations. The Stock of the last mentioned is for the moment practically exhausted.

Hanks.—There has been some demand for these, although but little has really been done. The few transactions noted have shown a rise of fully \$30 above the lowest point touched last month. Stocks have slightly increased, but the advance asked seems to prevent general buying. Among the recorded sales we find *Shinshu*, \$480; *Omama*, \$485; *Tomiyoka*, \$480; *Hachoji*, \$450.

Filatures.—There have been many enquires for good silks of this class, but available parcels are few. A large parcel of "*Hida*" sent back by a foreign hong is reported sold to a native shipper. *Koshu* sorts are fairly plentiful, but *Shinshu* kinds are scarce and well maintained. Indeed, some holders refuse to part with desirable parcels at any price until after New Year, counting on a higher Market then. In fine size little has been done, and prices are nominally unchanged. In coarse sizes last week's rates are on the whole well maintained, with here and there a transaction at a fractional reduction. For some *Filatures* prohibitive prices are wanted, while others are for the present withdrawn altogether.

Re-reels.—There has not been much done in these, and prices have been rather irregular. The parcel of "*Tortoise*" noticed in our last is reported to have changed hands at \$390. Some reelers, wishing to return home for the "*Shogatsu*," have made concessions to clear off some small holdings, but transactions do not amount to very much in all.

Kakidas.—A small business during the week. There are still enquires for decent silk ranging from No. 2 to No. 3, at old prices, while the better kinds are more or less neglected. Quotations are nominally the same, but holders are more inclined to talk about business, especially for sorts grading better than No. 2.

Oshu.—The chief business has been in this class, the remaining Stock having been cleared off by one or two buyers. Both *Sendai* and *Hamatsuki* have been in request: it is even reported that contracts "to arrive from the interior" have been entered into.

Taysam Kinds.—Some small purchases on basis of *Shinada* \$420 and *Nagahama* \$380. The Stock is reduced to a minimum.

QUOTATIONS.

| | |
|---------------------------------|--------------|
| Hanks—No. 1 | \$300 to 510 |
| Hanks—No. 2 (Shinshu) | 490 to 500 |

Export Tables Raw Silk to 21st Dec., 1883:—

| | 1883-84. | 1882-83. | 1881-82. |
|------------------|----------|----------|----------|
| France and Italy | 13,452 | 8,449 | 3,725 |
| America | 6,697 | 5,225 | 2,576 |
| England | 2,004 | 2,595 | 1,597 |
| Total | 22,153 | 16,269 | 8,198 |

WASTE SILK.

Business in this branch has also fallen off, and the Settlements are returned as about 400 piculs. The same conditions seem to be existing as when we last wrote, the best descriptions of *Noshi* and

Kibiso being wanted. The chief transactions have been in *Mawata*, including a large parcel sent back by one hong and immediately taken up by another. Stocks of various classes at date are estimated as per table given below.

Pierced Cocoons.—The parcel of light yield noticed in our last, is understood to be going forward as a consignment through a foreign firm but on native account. Besides this transaction nothing has been done, and the Stock actually in Yokohama is virtually nil.

Noshi-ito.—The principal business has been done in *Joshu* sorts, ranging from \$90 to \$82½ according to quality. Nothing done in *Filature* kinds or in the lower grades of *Joshu*. Some few *Oshu* and *Bushu* reported at \$142½ and \$107½ respectively.

Kibiso.—Not much done in this during the week. *Filature* kinds are currently sold, as they come in from the interior, but they do not arrive very freely. In *Hank* sorts the bulk of Stock is low, undesirable stuff, and does not tempt buyers.

Mawata.—A sudden run upon this article has much reduced the available Stock. Good *Oshu* has been done at \$172½. For Best \$180 is asked, but most likely an offer of \$175 would bring about business.

QUOTATIONS.

| | |
|--------------------------------|-------------|
| Pierced Cocoons—Medium to Fair | \$90 to 100 |
| Noshi-ito—Filature, Best | 150 |
| Noshi-ito—Filature, Good | 130 |
| Noshi-ito—Filature, Medium | 110 |
| Noshi-ito—Oshu, Good to Best | 140 to 145 |
| Noshi-ito—Shinshu, Best | 110 |
| Noshi-ito—Shinshu, Good | 100 |
| Noshi-ito—Shinshu, Medium | 90 |
| Noshi-ito—Joshu, Best | 100 to 105 |
| Noshi-ito—Joshu, Good | 87½ |
| Noshi-ito—Joshu, Ordinary | 75 |
| Kibiso—Filature, Best selected | 115 to 120 |
| Kibiso—Filature, Seconds | 110 to 105 |
| Kibiso—Oshu, Good | 95 to 90 |
| Kibiso—Shinshu, Best | 70 |
| Kibiso—Shinshu, Seconds | 50 to 60 |
| Kibiso—Joshu, Fair to Common | 50 to 30 |
| Kibiso—Hachoji, Medium to Low | 30 to 15 |
| Kibiso—Neri, Good to Common | 30 to 12½ |
| Mawata—Good to Best | 170 to 180 |

Export Table Waste Silk to 21st Dec., 1883:—

| | 1883-84. | 1882-83. | 1881-82. |
|-----------------|----------|----------|----------|
| Waste Silk | 13,547 | 9,990 | 7,864 |
| Pierced Cocoons | 1,777 | 2,561 | 1,850 |
| Total | 15,324 | 12,551 | 9,714 |

Exchange.—Rates have been steady during the week; even native Bankers asking some slight advance. We leave rates nominally unchanged, yet decidedly strong; quoting, London 4 m/s., Credits, 3/9½; Documents, 3/9½; New York 30 d/s., 91½; 60 d/s., 92; Paris 6 m/s., fcs. 4.82. *Kin-satsu* have again gradually appreciated, and close about 109½ per \$100.

Estimated Silk Stock 21st Dec., 1883:—

| | RAW. | PICULS. | WASTE. | PICULS. |
|---------------------|-------|---------|-----------------|---------|
| Hanks | 9,400 | | Pierced Cocoons | 50 |
| Filature & Re-reels | 800 | | Noshi-ito | 200 |
| Kakidas | 500 | | Kibiso | 600 |
| Sendai & Hamatsuki | 10 | | Mawata | 150 |
| Taysam Kinds | 40 | | | |
| Total piculs | 3,750 | | Total piculs | 1,000 |

TEA.

There has been a steady demand throughout the past week for all grades of Tea on offer, and the aggregate Settlements show an increase on the previous interval, but scarcely amount to half those for the corresponding period last season. Nearly all the buying was confined to one firm. Settlements amount to about 1,400 piculs, and comprise the following grades:—Common 65, Good Common 125, Medium 450, Good Medium 330, Fine 200, and Finest 230 piculs. Teas in Stock in Yokohama are estimated about 2,700 piculs, and consist principally of grades below Good Medium. Total Settlements to date are 150,856 piculs, against 156,670 piculs for the same period last year. Prices are a shade higher than those quoted below. No shipments of Tea to the United States or Canada have been made since our last weekly report.

QUOTATIONS.

| | |
|-------------|--------------|
| Common | \$10 & under |
| Good Common | 12 to 14 |
| Medium | 16 to 18 |

"FAIS CE QUE DOIS: ADVIENNE QUE POURRA!"

NOTICE TO CORRESPONDENTS.

No notice will be taken of anonymous correspondence. Whatever is intended for insertion in the "JAPAN WEEKLY MAIL," must be authenticated by the name and address of the writer, not for publication, but as a guarantee of good faith. It is particularly requested that all letters on business be addressed to the MANAGER, and Cheques be made payable to same; and that literary contributions be addressed to the EDITOR.

YOKOHAMA: SATURDAY, DECEMBER 29TH, 1883.

DEATH.

At Tokijo, on the night of December 27th, Tokouno Rioké. The funeral will leave the Insatsu Kioyoku at One p.m. on Sunday.

WEEKLY NOTES.

ATTENTION is drawn by some of the continental journals to the remarkable difference between the conduct of the International Conference of Socialists at Paris and that of the Congress of Liberals recently held at Leeds. Any attempt to compare English Liberals with European Socialists appears, at first sight, a little shocking, but the object of the comparison in this case is by no means to bring discredit on the former. It is pointed out that in England the deputies of five hundred Liberal Associations assembled with a perfectly definite and limited purpose, and discussed peacefully, methodically, and clearly, the articles of an eminently practical programme; whereas at Paris, the delegates from different countries lost themselves in a labyrinth of questions, ill presented, little studied, and without any practical object; a hearing was refused to anyone who did not formulate a programme subversive of all social order, and representatives of the same country abused each other in the grossest terms. Having regard to the very

different conditions under which the two Conferences met, the Leeds Liberals might well have been expected to show more political sagacity and practicality than the Paris Socialists, of whom it may safely be said that a majority are not in a position to define their own wishes. But even for a Socialistic gathering the scenes of the 30th of October were singularly disgraceful. The incident of M. Costa, delegate of the Roman workmen and member of the Italian Parliament, attracted most attention. The Spanish delegate having concluded his address, the President, M. Joffrin, announced that M. Costa would translate it into French for the benefit of the Conference. No sooner, however, did M. Costa make his appearance than a violent tumult arose in the body of the hall. The voices of the Speaker and the President alike were lost in shouts of "traitor! robber of Cipriani!" &c. Nobody seemed to know very well what was the matter, until an individual with stentorian lungs succeeded in making audible above the uproar an accusation that Costa had betrayed his party by taking an oath of allegiance to the King of Italy when he entered Parliament. One would imagine that such a wild charge would have been dismissed without comment. On the contrary, M. Costa defended himself against it, and to our thinking his defence was not the least shameful part of the business. He assured the Assembly that his oath of allegiance was not serious: that it had been taken under duress, and that he had submitted to the necessity in the same way as he was obliged to submit to many other laws of which he hoped to see his country disembarassed hereafter. By this time the loudest of his accusers had been violently expelled, and the good humour of the meeting was somewhat restored by the peroration of M. Costa's speech in which he vehemently denounced all "monarchies commanded by Prussian Colonels." The only part taken in the disturbance by the English delegates was to applaud stoutly the expulsion of the agitators. Subsequently, however, they addressed the Conference, through an interpreter, in the following practical fashion:—"We regret this incident. We beg this Assembly to observe that we have not come from England to Paris to wash the dirty linen of Italian politicians. We propose that the Costa incident be declared finally disposed of."

THE speech made by M. Ferry before the Chamber of Deputies on October the 31st—a speech which was followed by a vote of confidence in

his Ministry—imparts to the Tonquin imbroglio a more hopeless complexion than it has yet borne. The President of the Council unfolded to his hearers, and received their approbation of, a scheme of ambition that points to much larger results than the occupation of the delta of the Red River. He told them that however important for France may be the duty of concentrating her forces in Europe, she has to remember that she is the second naval power of the world, and that it is the business of the Government "to consider the future of that grand democracy, of labour, of industry, and of commerce, whose guardian the Republic is." He drew attention to the avidity with which nations, careful of providing for themselves commercial outlets, seek access to the unexplored regions of Africa and of Asia, and particularly of the immense empire of China. That huge multitude of 400 millions must be "conquered by European productions," and this conviction made the speaker "admire the foresight and profound instinct which had pushed his country towards the mouth of the Red River." To forbid the Republic to have a colonial policy would, he declared, be "detestable and anti-French." He then went on to discuss the military operations in Tonquin and the Bourée Convention, and having read to the Chamber the now celebrated despatch of M. Tricou—which, as may be supposed, created a profound impression—he proceeded to explain that if France found herself confronted, not by China, but by some European Power, there might be cause for disquietude. China, however, had a peculiar method of proceeding. Her habit was to protest perpetually and to submit perpetually. Thus for four centuries she had been protesting against the presence of the Portuguese in Macao, yet they were there still, and she was still protesting. *Vis-à-vis* England and Japan she was in a similar position, yet her good relations with both countries continued, just as they did then with France. To put an end to this suspense and come to a satisfactory arrangement with China, it was necessary that the statesmen of the Middle Kingdom should be confronted by deeds accomplished—by the establishment of French garrisons at Son-tai and Bac-ninh. The *élite* of the Chinese nation, the men at the head of the Government, were politicians of enlightened and wise views. But they were in the minority. Constantly struggling against a host of anti-foreign prejudices, they dared not consent to the "establishment of Europeans in Chinese territory" until their Asiatic good sense was constrained to bow before facts.

Therefore it was necessary to obtain a firm footing in Tonquin: to take Son-tai, and Bac-ninh. "Once there, nobody should drive the French out." The President concluded with these words:—"Perhaps our policy will not lead to a solution of the Tonquinese question to-day or to-morrow. Colonial enterprises are long businesses. Some delay may be necessary before we gather the fruits of the great establishment that we desire to found. Recall the debates which took place, half a century ago, about Africa. The Government was adjured to abandon Africa which could only cost us blood and treasure. Well, I ask you whether this Africa, which has cost us so much blood, which has added so much glory to the military crown of our army, I ask you if it is not the strength, the glory, the honour, the future of our country?—(Cheers.) When, then, we undertake to found a colonial empire, let us learn to arm ourselves with patience and *sang-froid*. Let us tell ourselves that we work for our children; that as good fathers we make, for future generations, an investment which the passage of years can only augment."—(Loud cheers.)

These words make it no longer possible to doubt that Tonquin has become for France a question of national *amour propre*. It is too late for her to recede now, even if she would. Before this vote of confidence and the unequivocal declaration of policy that preceded it, there was always a hope that France might confine herself to the territory she had already occupied, and come to terms with China on the basis of the Bourée Treaty. But that hope no longer exists. The Ferry Cabinet has pledged itself to an almost unlimited programme of conquest in Annam. We believe that such an open declaration of a policy so sweepingly aggressive was never before made by an European Government and endorsed by an European Parliament. It is generally said of Englishmen that to cry out against a neighbour's acquisitiveness ill becomes them. We frankly admit the charge. England's conduct towards Oriental peoples disqualifies her to sit in judgment upon any other nation. But in the majority of cases England has been unable to help herself. Individual enterprise marked out routes which the country subsequently could not choose but follow. With France the case is different. Her Government openly pledges itself to a career of aggression and conquest; unequivocally announces its intention of "founding a great establishment" abroad, and of making a valuable investment for posterity by appropriating the territories, and forcibly tapping the resources, of Eastern nations. Which of the two proceedings is the less blameworthy we do not profess to judge, but France's method has this inconvenience, that it cannot fail to arouse powerful opposition. Whatever may be said about China's romantic claims of suzerainty over this country or that, there can be no second opinion as to her right to oppose the programme now definitively announced by the French President of Council. France goes to Tonquin, not to form a settlement in the delta

of the Red River, but to gain access to the Western Provinces of the Middle Kingdom. Everybody knew already that this was her ultimate object, but no one dreamed that her Government would openly avow it. In the face of M. Ferry's declaration and the Chamber's vote of confidence, China cannot remain inactive, be her diplomatic habits what they may. The President of the Council professes to believe that the leading Chinese statesmen would not really object to see Frenchmen settled on the borders of the Middle Kingdom, or to any other conjuncture likely to promote the extension of their country's foreign intercourse. If the attitude of France under her present Ministry is to be governed by this creed, it is difficult to see how war can be avoided.

It is but a short time since the peace-loving public congratulated itself on M. Challemlacour's surrender of the portfolio of Foreign Affairs, and already people are beginning to ask whether the only chance of avoiding war does not consist in replacing M. Jules Ferry and his colleagues by men of a more circumspect and less ambitious stamp. The triumph which the Ministry has gained over the Radicals will be dearly bought if it costs a struggle with China. But France cannot afford another Ministerial crisis, so that she is reduced to a choice of very palpable evils. Meanwhile, the Government, fortified by the vote of confidence it has received, seems to think no longer of masking the full dimensions of its programme. The twelfth army corps is to be mobilized for service in the East, a step which points to action of a nature very different from the half-hearted measures hitherto taken to complete the occupation of Tonquin. The composition of a French army corps is as follows:—

| | | |
|-----------------|--------------------------------------|--------|
| Cavalry..... | 3 Regiments, or 14 Squadrons | 3224 |
| Artillery | 3 Regiments, or 35 Batteries | 1,494 |
| Infantry | 10 Regiments, or 56 Battalions | 5,079 |
| Chasseurs | 1 Battalion | 20,256 |
| Engineers | 1 Battalion | 174 |
| | | 1,531 |
| Total | | 34,334 |

It is scarcely likely that such a force as this is destined to be sent to Cochin-China, but the mere fact of its mobilization shows that the French people have almost resigned themselves to a prospect which a few months ago they would not consent to contemplate.

THE Clovis-Hugues scandal, to which we have alluded more than once, has entered a new phase. Our readers will remember that the last attempt to defame Madame Clovis-Hugues was attributed to an agent of secret police named Vandal, whom the originator of the trouble, Madame Lenormand, was supposed to have bribed with a sum of twenty-five thousand francs. This information was imparted to M. Clovis-Hugues by the Baron de la Plesse; and Vandal, whose denials were most vehement, waited on that gentleman to demand his authority. Meanwhile, the Baron had discovered that he, in his turn, was the victim of a deception. One of his old school-fellows, M. Jules Denis, had practiced upon his credulity by trumping up the story against Vandal. Under these circumstances, the

Baron willingly acceded to Vandal's request and wrote a letter to M. Clovis-Hugues retracting all the accusations against the agent of police. Not content with this, Vandal begged the Baron to accompany him to the Chamber of Deputies for the purpose of offering personal explanations to M. Clovis-Hugues. The two accordingly went to the Palais Bourbon and interviewed M. Clovis-Hugues, who had not yet recovered from the excitement caused by his wife's attempt to shoot Madame Lenormand. On learning that he was the victim of a new deception, the Deputy for Marseilles lost all self-command, and, springing upon the Baron, gave him two terrific blows, crying, "this is the first time I have had the honor to box a Baron's ears." We shall not be surprised to learn that the whole of this scandal which has caused so much commotion in Paris, is the result of an attempt to extort money under false pretences, and that Madame Lenormand, Madame Clovis-Hugues, and the Agents of Secret Police are all equally innocent of the charges they have been deceived into bringing against each other.

MR. EARNEST SATOW's numerous friends in Japan will be glad, though not surprised, to learn that he has completed his course of legal studies with much distinction, having passed first by more than 50 marks at his final examination. Another laurel is thus added to the numerous distinctions won by law students from the Japanese and Chinese branches of H.M.'s Consular Service.

NOTES.

THE result of planting operations in the Government cinchona plantations in Bengal during 1882-83 shown a total of 50,000 trees less than in the returns of 1881-82, which is attributed to the uprooting of a large number of hybrid varieties, and about 160,000 red bark trees. The total number of cinchona trees of all sorts at the close of the year was 4,711,168, and the crop was the largest yet harvested, amounting to 396,980 pounds of dry bark. The whole of the produce was made over to the factory, except about 41,800 pounds of bark which, at the request of the Secretary of State, was sent to London to be there converted into various forms of febrifuge, and returned to this country for trial by the Medical Department. The revenue derived from the sale of febrifuge, seed, plants, and bark amounted to Rs. 1,52,807, leaving a profit of Rs. 66,284 which is equal to a dividend of 6½ per cent. on the capital. The cost of an equal quantity of quinine at Rs. 96 per pound would have been Rs. 4,01,328, whereas the febrifuge used cost £68,988, leaving a saving to the Government and the public of Rs. 32,340.

A "TELEGRAPHIC SPARK" from Washington to San Francisco says that the members of the Korean Embassy were greatly mortified over an item in a Washington newspaper stating that they had been so lavish in their expenditure of money in America that they would be obliged to borrow money enough to get home with.

Who can doubt that some future historical novelist will find in the Court of the Emperor William of Germany and its remarkable entourage materials such as Dumas found in the Court where Richelieu and Mazarin ruled? To writers of this class details such as those furnished by a recent essayist in the *Nouvelle Revue* will prove invaluable. Speaking of the society which immediately surrounds the Emperor, he says that it is an assemblage of eccentricities. The Court of the great monarch to-day conveys the impression of a collection of old-fashioned furniture taken out of a museum. One can always count upon finding there the same persons in the same places. On a gala evening, when the sovereign may be seen advancing preceded by quite a cortège of decrepit grandees and followed by persons whom art has helped in some sort to repair the irreparable ravages of time, one cannot choose but admire a King who has worn out two generations and yet remained himself fresh and robust all the while. Physical decrepitude, however, is nothing. One could pardon that in "the old chargers of the parade ground" who surround the Emperor. But it does convey a somewhat painful impression to see all these favorites, who take advantage, not of the affection, but of the goodness of their sovereign, to obtain from him all sorts of favours, this one a title, that a decoration, and who believe that they have the right to keep away every one that comes in their way, with their haughtiness and their arrogant fashion of watching over the monarch as though he belonged to them. The Emperor himself takes no note of these little contrivances. He likes always to keep about him his old servants, and though he does not seem deeply touched if death removes them, he cannot bear to separate from them so long as they retain any vestige of validity. Thus the Count Puckler remains always at the head of the Imperial Household, and the Count Perpoucher continues Court Marshal, though the former is all but blind and the latter in a state of decrepitude baffling description. The writer in the *Nouvelle Revue* then describes the military establishment of the old Kaiser and the surroundings of the Empress, arriving at last at Prince Bismarck, whom he describes as *cette vivante synthèse de l'unité allemande, nature multiple, curieux mélange de Machiavel et de Richelieu*. Few politicians have more enemies, and no one has been able to get rid of them with greater ease. He gets rid with equal ease even of his friends when they embarrass him. Count d'Armin, M. Dellbrück, Count Stollberg, Count Eulenburg, his former *collaborateurs*, have been successively removed or crushed by his dexterity. Turn by turn on good terms with all parties, he makes use of each to weaken the other. His conduct towards the Emperor is singular. Affecting always the greatest respect for the old Sovereign, he nevertheless adopts a species of autocratic pose towards him. He knows perfectly how to set vibrating the sensitive cords of a heart inspired by a love for Prussia so earnest that any sacrifice is possible to it. "When one sees them side by side,

the tall figure of the Chancellor dominating that of his master by more than a head, one involuntarily asks oneself which is the ruler of the other, and which deserves more of his country, the man who has effaced himself for her sake, or the man who has only made her great to crush her with his own weight." As for the Empress Augusta, she has never liked the Chancellor. Formerly she even went so far as to intrigue against him, but soon experience taught her that it was not well to trifle with so rude an adversary. At present there is an armed neutrality between the two enemies. Not being able to destroy one another, they preserve an attitude of mutual observation, ready to resume hostilities at the least provocation. Meanwhile all this hatred accumulated about him, all these imprecations directed against him, have produced a certain influence on M. de Bismarck. They have rendered him a misanthrope, or at least made him take a dislike to the world and prefer solitude. He lives a hermit's life, shut up within the four walls of his palace, hidden from all eyes, whether of friends or of enemies, only showing himself now and then to the Parliament, or to some one of whom he has need to obtain information. Then he becomes amiable, chatty, *bon enfant*, well skilled to fascinate those who do not know him or divine his purpose. With the exception of these rare occasions no one sees the Chancellor. Yearly he retires more and more into the bosom of his family, which, for the rest, surrounds him with the tenderest affection. His wife is a good and brave lady, not over polished in her manners, but endowed with a kind heart and much wit, though without finesse. She regards her husband with a tenderness as true as it is deep; is not puffed up by his position; is benevolent though brusque, kind to everybody, and not more moved by the enmity of some than she is deceived by the professed friendship of others. She has two sons and a daughter. The eldest son, Count Herbert de Bismarck, has been greatly talked of in consequence of his relations with a lady celebrated for her beauty. The part he played in this affair was not creditable, and showed him to be an egoist, not less cruel than weak. He is said to be a very vain person, exceedingly proud of his position as son of the Chancellor, and morally as small as his father is great. In society, however, he is flattered and bowed down to by a multitude of persons who accredit him with an influence he does not at all possess. His brother, a graver and more thoughtful man, has greater solidity of character. He possesses considerable powers of application and is a politician by conviction, but the world has decided that he will never become anything greater than a good official. In features and physique he resembles his father, and in disposition, his mother, always excepting a certain ferocity in his antipathies, which he inherits from the Schœnhausen blood. The daughter, Mlle. Marie de Bismarck, after seeing the man she loved die, married Count de Rantzau, adviser to the Ministry of Foreign Affairs. She is her father's favorite, and resembles him in the vigour of her intelligence and the nature of her wit, while her husband,

like her father, is a skilful judge of character, and much given to criticise it. One of the most terrible traits of Prince Bismarck's disposition is his power of divining at a glance the weaknesses of those with whom he comes in contact. He is at once a sceptic and a cynic, whose strength of mind is incalculable.

Mr. HONG BENG KAW has delivered a lecture in Shanghai on the "Domestic life of the Chinese." The *Mercury* observes that "Mr. Kaw has never previously attempted to lecture, and the result of his want of experience was that he immediately wandered from his subject, and gave us his opinions disjointedly about foreigners' behaviour to, and in, China. It was long before he got to the subject, and then he made some very interesting remarks, which we are sure the audience would have been glad to hear more of. Amongst them, he gave an account of how what we may call a Chinese fine lady employed her time. She got up very late; took three hours to dress, two hours to smoke, and passed the rest of her time in gambling. On the other hand, the dutiful ladies of a large household ought to, and do, get up very much betimes in the morning and do their devoirs to the head of the household of at least a dozen daughters-in-law, daughters, and sons. The duties of the youngest male of the family were to light three incense altars in the morning, one to Heaven, one to Earth, and the third to * * * , and again in the evening. Mr. Kaw, soon after he had got into these interesting topics, seemed exhausted and told the audience that he had made a mess of it. He remarked privately that he ought to have written out what he wanted to say. Mr. Kaw has been for four years in the Edinburgh University, and is a young man of remarkable intelligence; we are sure he must have something very interesting to tell us from his experience of two such remarkable diverse evolutions of civilization as those of the black-haired sons of Han and the West."

An American trade circular, on Louisiana rice culture, calls attention to the ever increasing consumption of rice as a staple article of food. Its cheapness, ease and variety of preparation, and immunity from adulteration, has won for it in America the same high regard and popularity which has long attended its use in the "Old World." The rapid development of the country, by magnificent railway systems, has afforded unsurpassed transportation facilities to many points which a few years ago were dependent on precarious water routes, or on the slow and expensive method of "teaming" or wagon trains. These facts, together with the increasing population, have combined to give the product a larger consumptive demand, which, notwithstanding the greatly increased production, cannot be supplied without the addition of heavy importations of foreign kinds. A previous circular, issued on October 12th, 1880, says:—"For several years past, by reason of the galling, grinding, evil times which have fallen upon the country, merchants in every line have overstepped their

proper trade bounds and have succeeded in doing little more than demoralizing the smaller customers, and totally destroying, or greatly reducing the profit which should have accrued to wholesale or larger dealers. In many cases the fault has been that of an intermediate broker over-zealous for business."

In this connection the question of price is interesting. The New Orleans annotator remarks that the influence of the "First New" rice, which as a rule commands a fancy figure—and is, in a certain way, the official introduction to the new crop—was entirely dissipated by the offering of parcels of so-called new (really "stubble" or "volunteer" rice) as early as June 30th. These were unfit for market, and the only effect was to limit the old crop and create an enquiry for the new which could not be supplied. No further receipts of moment came to hand until fully six weeks later (August 15th), when the market regularly opened at 6½ at 7c for good to prime, or ½c to ¾c below the closing rates for "old" crop. From this point prices gradually declined to 5½ at 6½ in September; 5½ at 6c in October; 5½ at 5½ in November and 5½ at 5½ in December. This was the lowest point reached. After the "turn of the year" prices gradually hardened, and in latter part of February good to prime was worth 5½ to 6½. These quotations continued in force with but trifling variations, the greatest fluctuation being ½c decline in May, which was recovered and prices were maintained until the close of the crop.

In Louisiana, as in Japan, it was a bad year for speculators,—for, taking the experience of a single season as a guide (the season of 1881-'82, when the scarcity of all grades of rice, both domestic and foreign, caused at the opening of the crop an immense demand at high prices), and ignoring the changed condition of foreign competing markets, as well as the ample supply at home centres, they, the speculators, stocked themselves heavily at the outset, paying higher prices for the "rough" than the cleaned article would warrant, hoping that the future course of the market would enable them to realize a handsome profit on their ventures. The offerings were mainly held by them, and as the market for clean at no time justified the speculation, they were loth to part with their goods, and fed out supplies as needed; hence the large quantity marketed was disposed of without the usual accumulations of cleaned stock in November and March. As there was no advance sufficient to pay cost of carriage (storage, interest, waste, etc.), and having paid more than the goods were worth at the outset, the speculators in rough lost heavily; but the planters who received from 20 per cent. to 30 per cent. more than the rough was actually worth, when compared with the market value of the cleaned product, were highly gratified with the results of their season's work.

In *John Swinton's Paper* something is said regarding daily journalism in the great cities

of the United States which has much truth and point in spite of the exaggeration incident to the writer's pronounced point of view. He says that one looks in vain over the daily papers of New York city, upon which so many presumably intelligent men are employed, for any information regarding the actual social movements of the times. Those papers, he says, "give us chronicles of crime, records of sports and amusements, displays of Wall-street debauchery, the deeds of political gamblers of both parties, news of the sloggers and the police, 'society' twaddle, army and navy intelligence, sketches of accidents and incidents, Washington gossip, muck-heaps without end and daily boluses of stilted 'editorial.' Look in them for the real things of the times in New York—the struggle for life, the battle of industry and of the community with corporate or moneyed power, the invasions of public right, the alarming changes that are being wrought in society, the monstrous death-rate of the city, and the spread of all sorts of abominations that were once unknown here. Look for the warnings they ought to give, the things they ought to tell, the 'editorials' they ought to write in the interest of their readers. Where is the sound of the trumpet? where the voice of the watchmen on the walls of the press? The worst feature of the whole business is that the obnoxious and dangerous things of the times have reached their present threatening growth under that which the press is in the habit of calling its 'watchful eye.' Worse still, if possible, they have reached that growth with the assistance of the chief daily papers of the city."

THE *Alla* of the 10th ult. says:—A ridiculous story comes over the wires, via Chicago, to the effect that the Democrats of New Orleans are inducing Chinamen to make declaration of intention to become citizens, in order that they may become voters. It appears that the law of Louisiana makes a declaration of intention sufficient qualification for voting, and it is said that the Democrats hope, by getting these Chinese votes, to "make an impression on the ballot-box." But the Democrats of New Orleans do not need to resort to such means to "make an impression on the ballot-box," inasmuch as they control the city by a majority of more than three to one, while the State is Democratic by 30,000. The Chinese story is a self-evident hoax.

On the afternoon of the 14th instant, says the *Hongkong Daily Press*, an outrage which is happily of a kind of very rare occurrence was perpetrated by a Chinese servant upon his mistress. Mrs. Fincham, wife of Mr. H. G. Fincham, D.A.C.G.O., whose residence is in Richmond Terrace, Bonham Road, was attacked in a most brutal manner by her boy, and beside being savagely maltreated, was robbed of jewellery to the amount of about \$300. The boy in question had not been employed in the house long, and was only acting as a substitute for the regular boy. A few days since a pencil case, or some other small article was missed, and this boy was accused of stealing it. Mrs. Fincham had

accused him yesterday, and not long after the accusation was made, she was alone in her room, when the prisoner entered and fastened the door behind him. Mrs. Fincham was surprised at his conduct, and asked what he was doing, and was immediately attacked by the ruffian with the greatest violence. She was knocked down at once and robbed of what jewellery she had about her, after which the wretch cruelly beat her on the face and head with a heavy bangle which he used like a knuckle duster, and otherwise ill-treated her until she became unconscious. He then took everything that was of value within easy reach and went quickly off, having a good long time to get out of the way before any alarm was raised or the outrage discovered. As soon as the discovery was made the police were at once communicated with, and all possible steps were taken to apprehend the miscreant, but up to last night he was still at large, and there were some fears that he had escaped to Macao, from whence he is believed to hail. Before going he went to a sweetheart of his in a brothel and gave her some money to induce her to go with him, and the police got upon the scent there not long after he left. It is to be hoped that the man may be caught and made a severe example of, for this is a kind of offence of a most intolerable character.

WHAT are the ages of the oldest ships in active service? It would be worth while to have a record of a few instances. The record might commence with two samples of very old vessels—one of them almost a centenarian, and the other, over six-score years old. The former is the smack *Janet*, of Greenock, which is now 99 years old, having been built at that port in the year 1784. A few weeks ago she was to be seen on the north-west coast of Scotland, engaged in the herring fishery, and, according to report, her appearance seems to indicate that she may last another term of 99 years. The other example of old age is the smack *John & Samuel*, 37 tons register. She arrived at Greenock about the end of September, for Belfast, with a cargo of old iron. Her record states that she was built in London, as far back as the year 1763, so that she is now 121 years old. A good deal of the original material is still left in her hull. To have lasted for such a length of time she must have been built of well-seasoned timber. Originally employed in the revenue service, the *John & Samuel* is now owned by Mr. Hull, Great Patrick street, Belfast.

THAT unlucky compound, No. 16, was again visited by fire on Christmas Day, when between eight and nine o'clock the out-buildings belonging to the corner house, occupied by Mr. Balmès as a saddlery-store, caught fire, which soon communicated to the main building, the flames ultimately spreading to Mr. Harding's house. Both buildings were destroyed. The wind was blowing strongly from the South-east, and sparks, wafted on to the roof of Mr. Douglas's new photographic establishment on the Bund, speedily rendered that house a bonfire. At half-past ten all danger to the neighboring houses was over.

Messrs. Domoney say their establishment was undoubtedly saved through the efforts of Mr. Hegt with his hand-engines.

THE scheme now under consideration in France for forming a combination between the Government and the railway companies, is a very interesting illustration of modern political economy, and deserves a moment's attention, especially in Japan, where public enterprise is beginning to turn so energetically in the direction of this class of speculation. The total mileages open in 1860, 1869, and 1880 were 9,152, 16,465 and 25,000 kilometres respectively, and the average receipts (gross) per kilometre for the same periods were 44,208, 41,480 and 40,000 francs. This falling off in the returns is attributable to the fact that the majority of the lines constructed during the past twelve years, have not proved half as profitable as their predecessors. There are, in short, now open fully four thousand kilometres of lines built within the past eight years, the gross receipts of which do not average six thousand francs a kilometre, and which, consequently, do not pay working expenses. Yet these lines are said to be more favorably circumstanced than the generality of those in process of construction or projected at present. Competent judges declare that the receipts of the twelve thousand kilometres which it is now proposed to add to the 29,000 already open, will not be more than from four to five thousand francs a kilometre, while the working expenses will be at least 6,500 francs, and the cost of construction will average about 200,000 francs per kilometre. Dealing with totals, we may say that there will be required for the building of these projected twelve thousand kilometres a sum of about twenty-four hundred million francs, which sum, allowing 4½ per cent. by way of interest and sinking fund, represents an annuity of 115 million francs, approximately. According to the arrangement which it is in contemplation to make between the State and the companies, the latter would defray about 29 millions of this annual amount, and the former would have to defray the remaining 81 millions. Further, the total working expenses would be about 78 millions annually, while the gross takings, during the first four or five years, could scarcely exceed 57 millions, so that the loss on this account would be upwards of 20 millions annually. This loss, according to the contemplated scheme, is to be charged to the capital account for a certain number of years. The actual annual loss will therefore be represented by the interest on the sums which the companies must borrow to meet current expenses. After ten years—when the lines will just begin to be self-supporting—the sums thus borrowed cannot be less than 150 millions, carrying about six millions interest. Thus the companies will then have to find 35 millions annually (interest on cost of construction and sums borrowed) and the State 86 millions, making 121 millions in all. Against the annual outlay which the companies and the State will thus be required to make on account of the new lines, it is proposed to set the

surplus receipts of the old. A comparison of the returns for the latter since 1860 shows that the average annual increase in the gross takings is 30 million francs. In ten years it will be absorbed by additional working expenses (it is calculated that an increase in the actual traffic of 50 per cent. only adds 30 per cent. to the gross receipts); while about 83 millions will be required to pay the interest of the sums expended on the improvement, reconstruction, &c., of the lines during these ten years. This would leave 82 millions to meet the above outlay of 121 millions. In other words, if the proposed scheme is carried out—if a combination is made between the State and the companies with the condition that the surplus receipts on the old and profitable lines be devoted to meet the loss on the new and unprofitable until the latter, in their turn, begin to be self-supporting—the tax upon the public funds will not cease at the end of ten years, as sanguine financiers calculate, but will probably continue for more than fifteen. Under these circumstances, as might be expected, arithmeticians are beginning to recommend that this bold scheme be reduced to more reasonable proportions.

THE following note appears in the *St. James's Gazette*:—Major-General Mesny, of the Chinese Imperial Army, who has been imparting his views on the Franco-Chinese difficulty to correspondents in Hongkong, is known to us in England chiefly from the fact that it was he who accompanied the late Captain Gill in his voyage up the Yangtze to the borders of Tibet. When Mr. Colborne Baber parted company from Captain Gill at Ch'ung-king there seemed a likelihood that expedition might prove a failure. But, fortunately for our knowledge of the 'River of Golden Sand,' General Mesny turned up; and his experience and knowledge of the country enabled the party to get safely through to Rangoon. Except Mr. Baber there is no European who has a greater knowledge of western China than the Jerseyman, and General Mesny has the advantages over the Chinese Secretary of Legation that he dresses as a Chinaman, and boasts of a *queue* of his own growing—not the frowsy article tagged on to a cap which ordinary wandering Europeans protect themselves with. The General is known as a man of great ability and untiring energy. His sudden appearance in the south from the borders of Yün-nan and Ssu-ch'uen, therefore, bodes ill for the French, if they persist in pushing China to extremities. General Mesny is but one out of many foreign military men in the Chinese Imperial service. His friends will be amused to observe how he has imposed upon the credulity of the American correspondent. The horrible tale of how the Black Flags eat their slain enemies is quite in the General's best vein. We may expect more startling information if he remains long in the neighbourhood of Hongkong."

THERE have been published in Paris two books whose contents offer a curious contrast. One

is by Doctor Leneveu, a scientist of great reputation, and an ardent advocate of vivisection. His work is spoken of by the reviewers in the highest terms. It describes minutely the practical results which have been attained by vivisection, and the contributions its practice has made to the progress of science, as well as to the welfare and relief of humanity. Among these results are mentioned the discovery of the circulation of the blood; of the action of poisons; of the functions of the brain; of the method of animal ingraftment; of vaccination, and so forth. The other book is by a gentleman who has made the habits of the rabbit a study, and who finds as much to say for that despised animal as has ever been said for bees or ants. According to him the rabbit has strong artistic propensities, and is keenly sensible of the charms of nature and of beautiful scenery. "It may be seen," says the author, "searching for elevated sites whence its view embraces a vast extent of country. There it makes its little toilette; there it loses itself in charmed contemplation of the heavens and the horizon. The spectacle of rural beauty inspires it with a mental satisfaction, which seems even to exercise an influence on its health and fecundity. So true is all this that if the soil of the warren or the hutch is flat, there ought to be constructed there a little hill whereon the rabbits can breathe the free air and survey the prospect at their ease." We are further told that the rabbit's love of aromatic plants is not inspired by the palate, but by a desire to feast its eyes and nose on their charms. As for the morals of the little burrower, it is declared that filial piety animates the whole tribe, and that however numerous a furry patriarch's family may become, their obedience to the head of the hole is unchanging. One little trait of rabbit morality remains to be explained—namely, the father's propensity to slaughter his offspring, and the mother's consequent anxiety to keep him at a distance when the little ones are taking their nourishment. This murderous instinct, we are told, is simply an excess of conjugal affection. The male kills the young ones to save the female the trouble of bringing them up. In proof of this we are assured that the father becomes the most affectionate of parents so soon as the baby rabbits are weaned. He caresses them tenderly between his paws, licks them, polishes their coats, and bestows upon them long glances of affection. After this, how will the vivisectionists be able to justify the pains they inflict upon these affectionate and æsthetic quadrupeds? Probably they will have assurance enough to reply that the best thing which can be recorded of the rabbit is the facilities it has afforded to anatomical experimentalists.

THE Philadelphia *Times* says that the best seal-skins come from the Antarctic waters. New York receives the bulk of American skins, which are shipped to various ports. London is the great centre of the fur trade of the world. In America the sea-bear of the north has the most valuable skin. Since 1862 over 500,000

have been killed on Behring Island alone. In 1867 there were 27,500 sea-bears killed; in 1871 there was a very large decrease, only 3,641 being killed. There were 26,960 killed in 1876, and in 1880 the number killed was 48,504, a large increase. Sea-otter fur is about as expensive as any, and some 48,000 skins are used yearly. Over 100,000 martin or Russian sable skins are annually used. Only about 2,000 silver foxes are caught every year, and about 6,500 blue foxes. Other fox skins are used more or less. About 600 tiger skins are used yearly, over 11,000 wild cat skins, and a very large trade is being carried on in house-cat skins; about 350,000 skunk and 42,000 monkey skins are utilized annually. The trade in ermine skins is falling off, as is also the trade in chin-chilla. About 3,000,000 South American nutrias are killed every year, and a very large business is carried on in musk-rat skins; about 15,000 each of American bear and buffalo skins were used last year. There are also used each year about 3,000,000 lamb, 5,000,000 rabbit, 6,000,000 squirrel, and 600,000 filch skins; also 195,000 European hamster, and nearly 5,000,000 European and Asiatic hares.

THE *Shanghai Mercury* of the 3rd of December says that the following steamers belonging to the China Merchants' Company are at present engaged in carrying troops for Canton:—"The steamship *Fushun* left yesterday for Canton; the steamship *Yungching* leaves to-night for Kwachow (near Chinkiang). The steamship *Poochi*, steamship *Yehsin*, and steamship *Leeyuen*, leave in a day or two for the South. Each of these steamers convey on an average some 800 soldiers."

UNDER the title "The Black-Sea Pirates," an extraordinary story is told by the journals of Odessa. It appears that public attention has recently been directed to the daring exploits of a band of sea-robbers who infest the environs of Kertch and Sebastopol. At first all the efforts of the Russian police failed to discover the authors of these outrages, but they were at last able to learn that the band was organized by the British Consul at Kertch with the intention, say some, of destroying the Russian fleet in the Black Sea, but, according to others, purely for purposes of plunder. However, this may be, it is asserted that the Consul, warned by a spy that a visit from the Russian detectives was imminent, decamped in all haste and made his way by a sailing vessel to Odessa, whence he hoped to be able to reach England. He was disguised so as to be quite unrecognisable, and would doubtless have effected his escape without difficulty, had not his arrival at Odessa been simultaneous with that of a telegram which threw the police into a state of exceptional activity. Descents were made upon all the hotels and lodging houses, but in the meanwhile the Consul had placed himself in a box covered with straw matting and been forwarded as "glass with care" to Constantinople, whither he was shortly afterwards followed by his family.

The Russian Government is reported to have telegraphed to its Embassy at Constantinople instructions to demand the surrender of the fugitive by the British authorities, and failing the latter's compliance, the ambassador, M. de Nélidoff, is to address himself to the Porte with a view to obtaining the Consul's extradition. How much truth this strange narrative comprises, we are of course unable to say, but it is recounted with all semblance of belief by a journal called the *Phare du Bosphore*.

WE read that the International Labor Conference at Paris is attracting widespread attention. Delegates from the English trades unions are honored participants, and an address was adopted at the opening extending the sympathy of the conference to working men of all countries, and recording its protest against wars. Henry Broadhurst, M.P., was elected honorary president. He called on the conference to be practical in its acts and suggestions, and said that English trades unions are progressing and will support their continental brethren. French speakers urged the workmen not to abandon politics, the only means for struggling against capital. International legislation was suggested for the protection of children. An extremist advised the employment of force, but foreign delegates dissented. They doubted that universal legislation was feasible owing to international competition. They preferred the lawful progress of a revolution by successive reforms, enabling workmen on enter Parliament and thus assist in making the laws. A resolution was adopted which laid down that the principal end to be pursued was to limit the hours of labor and thus render supportable the position of the workmen of all nations. The speakers urged the French working men to devote more attention to business and less to politics, and to organize trades unions. Resolutions were also adopted looking to the prevention of competition in the matter of wages by emigrating, trades unionists going abroad to obtain work.

A BERLIN, correspondent of *Bradstreet's* writing under date October 9, says:—"The introduction of Russian petroleum into Germany is apparently on the increase. During the week from the 15th to the 22nd of September 5,026 barrels, mostly on account for Berlin dealers, were imported from St. Petersburg to Stettin, the well-known port on the Baltic, and there are expected several more ship-loads in the course of the autumn. The petroleum was in American barrels, with the mark of 'Nobel Brothers.' The production of oil at Baku, on the Caspian, in 1882, was six times as large it was eight years previously, the gain from year to year having been as follows:—

| BARRELS. | | BARRELS. | |
|-----------|-----------|-----------|------------------------|
| 1875..... | 850,000 | 1879..... | 3,000,000 to 4,000,000 |
| 1876..... | 1,400,000 | 1880..... | 181 |
| 1877..... | 2,000,000 | 1881..... | 182 |
| 1878..... | 2,500,000 | 1882..... | 5,000,000 |

The Nobel Brothers, Baku refiners and shippers, may be called the Standard Oil Company of the Caspian, in that, beginning at Balakhani, six miles from Baku, in 1875, they now practi-

cally monopolize the shipping and refining of petroleum from that region. There are now 375 wells at Balakhani, as against two in 1875, and the yield is so abundant that the correspondent of the *Morning Post* says "the oil is flowing 300 feet high, at the rate of 2,000,000 gallons per diem, forming a huge black fountain visible in the clear atmosphere for many miles around." There are 60 miles of pipe line, twenty iron steamers, 200 to 250 feet long, each running up to the mouth of the Volga, and 60 or 70 steamers on the river, besides 10 large sea-going steamers—all engaged by the firm in their oil traffic, besides the steamers, etc., of others. Nobel Brothers are said to employ over 7,000 persons. The total annual production of oil in the United States may be called at the present rate perhaps 26,000,000 to 28,000,000 barrels, or about five and a half times only what the Baku wells produced last year. An American capitalist at Baku is reported to be arranging to lay a pipe-line from Baku to Batoum, 540 miles west, across the isthmus to the Black sea. As yet American oil is going abroad rapidly and in unprecedented quantities. This demand makes a better price for it here than it could otherwise retain. Decreasing supplies at home must also eventually tend to raise the price; but, on the other hand, if met by a vigorous competition for sales in Europe, the opposite effect may be produced. The "exhaustion theory," as applied to the Pennsylvania wells, has few believers. The prospects for ultimate and serious competition in eastern Markets speak for themselves.

MR. JOHN MORLEY's speech, opening the Liberal Conference at Leeds, was in many respects a significant utterance. It indicated plainly enough that a new political force has entered upon an active existence in England, and that henceforth the course of political action will be determined, not by the small group of men composing the executive committee of the House of Commons, but by the wider constituency whom they, in theory, represent. Mr. Morley made a strong plea for organization, saying that it should be recognized that there would be a great peril in democratic institutions if for great solid parties small groups were substituted, and if, instead of union upon points of substantial agreement, there should be a splitting up on points of minute difference. There was, he said, no question as to the desirability of parliamentary reform in the abstract. Upon that there was substantial agreement. The present system under which the exercise of the franchise by workmen in certain cities of the kingdom were surrounded with difficulties and obstacles, and they themselves allowed only one-thirtieth or one-fortieth of the voting power of some voter living in the west of England, was a juggle and a mockery of representation which the radicals were resolved to bring to an end. The meaning of the great gathering over which he presided was, he said, that the men of the associations—the men who won the elections of 1880—felt, as a matter not of formula but of inmost conviction, that the

arbitrary exclusion of large sections of intelligent and industrious men from the political power they desired to have was an anomaly, a blot, and a danger, which it was not wise to retain longer in the political life of the country.

THE pacific telegram, received by Reuter announcing that the Committee of the Chamber of Deputies have recommended an amicable arrangement with China, but at the same time reinforcements for Tongking, looks like a deplorable instance of negotiating foreign affairs by Parliamentary Committees. In the first place, the Chinese will look upon the French forces as part of the game of bluff, at which they are playing themselves, and so they will be all the more difficult to deal with. The result will probably be, that in order to come to an amicable arrangement with China, France will have to retreat before the Chinese threats, and surrender the opening of the Trade Route through Tongking. It may be quite true that France would gain less by the route than other civilized nations, but the abandonment of the policy the Republican Government have made so much fuss about would be a vacillating proceeding that must eventually discredit Republican government itself, as being unfit to deal with foreign affairs; particularly with Orientals, who require firmness above all things in dealing with them. If the action of the Deputies' Committee leads to a retreat before a Chinese threat, we may look forward to further troubles with the Government of China. The obstructiveness they displayed last year will of course return, and, fortified by her purchases of vessels like the *Ting Yuen*, she will be encouraged by her own display of force to resort to any steps that can embarrass foreign traders. She will renew her determined efforts to prevent the spread of Western notions of progress, until at last England will be unable to stand it any longer, and have to "force China's hand" (as Marquess Tseng phrased dealing with Chinese obstruction) herself. China's arrogance will be intensified by the recognition of her claims to universal sovereignty. At any rate, she will be encouraged to think that the dissensions of European nations will be her safeguard. In the meantime many people in Shanghai and the Treaty Ports will be delighted that the so much dreaded war will be avoided. Very few people thought there was going to be any war, however. We trust we may be mistaken in supposing that the French mean to abandon their operations in Tongking. Perhaps all they mean to say is that they wish to be on amicable terms with China, whilst pursuing them. It really rests with China to be amicable or not, if France pursues the policy so long announced; for the Committee does not recommend the reversal of it.—*Shanghai Mercury*.

THE Trustees of the Clyde Navigation have just done a most commendable act. Their jurisdiction terminates opposite Newark Castle, at Port Glasgow, and then begins that of the Clyde Lighthouses Trustees. For several years the last-

named body have had certain dangerous portions of the Firth of Clyde indicated by means of gas-lit buoys, that is to say, by means of buoys on which a jet of gas is kept constantly burning, day and night, the method adopted being that known as Pintsch's patent lighting system; and in order to supply their wants they have had erected at Port-Glasgow an establishment for the manufacture of the gas from crude petroleum, for compressing and storing the same, and for transferring it to receivers on board a small steamer specially built for their service, and appropriately named the *Torch*. The commendable act just done by the Clyde Trust is that of following the example set them by the Lighthouse Trust, improving the navigability of the channel between Newark Castle and Dumbarton. Notwithstanding the amount of dredging which has been done in recent years in the middle and lower reaches of the river proper, there have been of late many instances of vessels getting aground in the fairway, or while endeavoring to continue in it. It is nothing unusual for heavily laden Atlantic steamers, vessels of 3,000, 4,000, or 5,000 tons, becoming grounded; and by way of rendering such occurrences very much less frequent, the Clyde Trustees have just laid down no fewer than six gas-lighted buoys on Pintsch's system, the uppermost of them being opposite Dumbarton, and the lowermost opposite Newark Castle. From the experience already gained and the improvement made in the navigation, there is no good reason why the channel down to Port Glasgow should not eventually assume the appearance of a well-lighted street in a large town. Shipowners, merchants, and the Clyde Trust treasury, would all reap an advantage by the change.

ADMIRAL PENG YÜ-LIN, Imperial Commissioner for the Defence of the Southern Frontier of China, has suddenly become one of the most prominent figures in the Middle Kingdom. He is a man of considerable age, having occupied responsible positions in the Chinese Navy for thirty years past, and commanded the naval forces of five provinces since 1862. He suffers, however, from a complaint described as "loss of blood," which affliction is, perhaps, fortunate for his country seeing that, despite his anæmic condition, his truculent proclivities are so strongly marked as to be decidedly dangerous. Some time ago his malady became so serious that he petitioned the Throne to be relieved of the cares of office, but though his application received a favorable answer, the imminent prospect of trouble with France induced him to remain at his post. One of the symptoms of his sickness is an access of dizziness, and it was under the influence, we presume, of this vertigo that he published in Canton, three weeks ago, a remarkable proclamation, assuring foreigners that the Emperor desired to treat them all like one family, but, at the same time, recommending them to remove their goods and chattels without delay, since China could not be responsible for their safety

in the event of war with France. When the modicum of blood that remains to him descended from his brain and began to circulate in its normal channels, the Admiral repudiated the authorship of this proclamation, and sought to quell the indignation its issue had excited, but some unreasonable persons declined to accept his disclaimer and insisted upon regarding the contents of the document as a correct expression of his views. However this may be, no doubt attaches to the authenticity of a memorial which the veteran warrior submitted to the Throne some months ago, and which seems to have been the cause of the Emperor's secret decree directing that assistance should be given to the Black Flags in their struggle with the French. The memorialist does not disguise his indignation against the Barbarians and their forgetfulness to be reverent towards "the Sacred Dynasty whose benevolence and justice are so complete." He thinks that the spirit of aggression, of brow-beating and harassing, of taking an ell if they are given an inch, must be innate in the French, and he declares that all his countrymen are determined to avenge China's wrongs "with hair on end and eye-lashes bristling." That there is a scarcity of regular troops does not give him the least concern, for the "heaven-born instinct to fight" is within the breasts of Chinamen, and so persuaded are the people of the necessity of doing battle that their unanimity will make them "as strong as a city wall." Then this bloodless Admiral goes on to give some very practical advice. He recommends that instead of marching troops from a long distance to Kwangtung, men and material should be obtained on the spot, and explains that in pursuance of this plan he has already taken steps for raising volunteers and assembling them at Canton. His ideas of French achievements in Annam are not very exalted, for he says that, according to certain foreign newspapers, Liu Jung-fu, chief of the Black Flags, has gained repeated victories, and from this he argues that the invaders of Tonquin must be far inferior to the Russians in strength and resources. His scheme is that while the Chinese forces in Kwangtung stand on the defensive, "secret instructions should be given to the Viceroy of Yün-kwei and the Fu-tai of Kwang-si each to appoint valiant generals to head some thousands of soldiers, who will, in conjunction with Liu Jung-fu, harass the French and attack them when least prepared all along from the Red River to Saigon." That this advice was acted upon, we know from the secret decree recently published in the columns of the *North China Herald*, and though Liu and the allied generals have not yet recovered possession of the "lairs and caves" occupied by the French, they have given the "barbarians" a good deal of trouble. A postscript to this same memorial suggests the advisability of issuing a circular note to all the Foreign Powers having treaties with China, in order to rouse them to the necessity of preventing a war which will lead to the interruption of commercial relations. This advice, also, has, we know, been

followed, so that, on the whole, Admiral Pêng Yü-lin may be regarded as the leading spirit in China at present. Divested of the absurd phraseology which an old-fashioned etiquette compels him to employ, his counsels are singularly shrewd and vigorous, and if not troubled with "dizziness" at inopportune moments, he may yet have the pleasure of directing a great many "hair-on-end-and-eye-lash-bristling" braves against the "caves and lairs" of the irreverent barbarians.

In a late issue of the *Napa Reporter* we find the following note:—The Hon. Eli T. Sheppard was in town recently on his way to San Francisco. He has just got through grape picking, and reports a two-thirds crop, owing to the hot spell in the early part of the season; still this shortage is more than offset by the superior quality of the wine made. Mr. Sheppard's place is located in the Glen Ellen district, in the upper part of Sonoma valley, one of the most beautiful and fertile spots of Sonoma county. In addition to the large estate which he recently purchased and now occupies, Mr. Sheppard has just purchased the well-known farm of Col. G. W. Whitman, adjoining. This latter place comprises 300 acres, one hundred of which are in bearing vines. Among other substantial improvements is a fine wine cellar with a capacity of 60,000 gallons, and a distillery all complete. It is one of the very best improved and most favourably located pieces of property in that section, and the average annual income of the place since 1880 has been \$10,000. The property sold last year for \$45,000, and we understand Mr. Sheppard paid something near that figure for it. He will remove his family to his new purchase and occupy that as his residence in the future.

THE *Albion* says:—A brochure entitled "The Truth about Tonquin" will shortly be published in London and Leipzig, based upon the letters recently contributed to the *Times* by their Tonquin correspondent Mr. A. R. Colquhoun, the well-known traveller. "La Verité sur le Tonquin" might be a valuable contribution towards the discussion of French colonial policy which is to take place next week in the French Chamber, but it is not likely to find a French publisher.

THE effects of the seventeen conflicting jurisdictions that impart such a charmingly variegated aspect to the history of legal procedure in Yokohama, are beginning to be observable in directions not hitherto contemplated. We have seen how successfully they paralyze the exercise of municipal law, and we have had numerous examples of the fatal obstacles they oppose to anything in the shape of enterprise or reform. But it seems now that they are not unlikely to change the whole character of commercial dealings. There is an old saying of Lucan, "*nulla manus belli, mutato iudice, pura est*," of which this community is rapidly learning the truth. So vitally important has it become to

keep a case in the Court of one's own nationality, that people are no longer particular as to the nature of the preliminary steps they take to secure that result. If a merchant lends money to some Japanese shipbuilders, he must not think of suing them, in the event of default, before their own tribunals. His proper plan is to seize the ship, without troubling himself to obtain a warrant, and let the Japanese take action in a foreign Court for the recovery of their sometime property. If a number of gentlemen of various nationalities have chattels which they desire to remove from one building to another, they must not run the risk of being deprived, for a twelvemonth, of the use of their property, while Monsieur this, or Herr that, or Signor the other, puts a variety of legal obstacles in the way of the removal. The proper plan, in such a contingency, is to carry the chattels away under cover of darkness, and let who will proceed to dispute the result. Again, if Japanese tradesmen come to buy goods from an Englishman, and the latter suspects that they want to "do him in the eye," he must not send them away, lest he lose the business altogether; neither must he think of invoking the aid of a Japanese tribunal. His best device is to behave as though he had no suspicions until the Japanese pay whatever ready money the transaction requires. He can then retain possession of a thousand or two as security against fraudulent contingencies, and let the Japanese seek their remedy in an English Court. There may be moralists who will deprecate these arbitrary proceedings, but self-protection is the first rule of life. We have high warrant for the belief that under certain circumstances men may be "a law unto themselves," and though this community is not reduced to the condition of the people who, acting upon that principle, were "beaten with few stripes," it will not be extravagant to say that the lawlessness of the Scriptural heathen was not much worse than the profusion and confusion of our laws in Yokohama.

We sincerely congratulate the supporters of extraterritoriality on the comfortable assurance the Anglo-Korean Treaty appears to afford them that the policy of Western Governments with regard to jurisdiction over their subjects residing in the East has undergone no change. These good folks seem to have become cruelly apprehensive lest their rulers should be overtaken by "a moment of vacillation or indifference," and in that unguarded interval surrender privileges without which "life in the Orient would be unbearable." Still, it must be confessed, a feeling of astounded helplessness creeps over us at the aspect of this wonderful conservative crassness, which, after so many dissertations and so much experience, has not yet learned to distinguish between extraterritoriality under conditions such as those presented by Korea to-day, and extraterritoriality, with all its flagrant abuses, under conditions such as those that exist now in Japan. No one, even among the Japanese themselves, has ever yet been found to deny that extraterritoriality was indispensable in the early days of

foreign intercourse with this country. It is still indispensable in China, where no attempts have yet been made to reform semi-barbarous laws and legal processes, and it is still indispensable in Korea, where things are at least equally bad. But what has all this to do with Japan? It is very wonderful that even the most defective reasoning powers can find a momentary resting place among such patent subterfuges. What should we think of a man who, in reply to an assertion that pap ceases to be suitable aliment for some constitutions after a certain age, pointed with triumph, as a distinct proof of the contrary, to a nurse feeding a baby with that preparation? We have often commented on the straw-clutching helplessness to which the men who advocate the policy of totally ignoring Japanese progress are reduced, but this last example takes us somewhat by surprise. Perhaps it is on the whole better and safer that persons so careless, or so incapable, of discriminating between right and wrong, should be left to enjoy the imperfect intercourse to which alone the systems they extol are fitted.

THE revised regulations for conscription were issued yesterday by Imperial Order and under the signatures of the Prime Minister and War and Marine Ministers. According to the new rules, every male of the population is eligible for military service from seventeen to forty years of age. The service is divided into two classes, Active and Reserve. The former is again subdivided into Men with the Colours and Active Army Reserve. Each man has to serve three years with the Colours, four with the Active Reserve, and five with the ordinary Reserve. Altogether, the whole period amounts to twelve years. Even those who are temporarily exempted from service, are to be enlisted in the National Army. But men who have been punished for major crimes, are disqualified. The conscripts who have the diploma of the Government Schools, except the common school, and who have distinguished themselves by proficiency in training and good behaviour, are to be relieved of the term in that branch. They will, however, be retained in all other services. Those registered in the Active Army Reserve, are to be called out once a year. Deformed persons only are exempted from any service. The elder sons or heirs, who have fathers aged above sixty, and the heads of family, are temporarily exempt, but in case of war or of a deficiency in the number of the conscripts required, they will be compelled to enter the army. Graduates of the government schools, priests, workmen employed in the military and naval departments, persons who are sick, and those who are studying in foreign countries, also those who are undergoing a criminal prosecution and have their civil rights temporarily suspended, will be relieved of service until such time as may hereafter be determined upon. School teachers, members of the Metropolitan and Prefectural Assemblies, and physicians practicing and in possession of diplomas from the Government medical colleges, Government officers above the *Hannin* class,

and chief of ward officers, will not be required to be reviewed, whether they are registered in the Active, or ordinary, Reserve, but if they are wanted in war time their attendance must be sanctioned by the Council of State. Malingerers or persons who otherwise attempt to escape the conscription by fraudulent means, are punishable with a fine of from *yen* 3 to *yen* 30, or imprisonment from one month to one year. The fee for exemption has been abolished.

THE PRINCE OF WALES has been advanced to the degree of Mark Master Mason. The meeting was necessarily exclusive, the attendance being limited to Past Grand Masters, the Deputy Grand Master, Provincial Grand Masters, Grand Officers of the year, and Deputy Provincial Grand Masters. A meeting of emergency of the Grand Lodge of the Mark Master Masons of England and Wales and the Colonies and dependencies of the British Crown was convened at the hall, Golden-square, by special dispensation from Lord Henniker, the Grand Mark Master, for the special purpose of advancing the Prince of Wales to the degree of a Mark Master Mason, and thereafter installing him as Master of a Mark Mason lodge. The Grand Lodge was opened by Lord Henniker, assisted by Lord Wolsley, Grand Senior Warden, and Brother A. H. Henniker-Major, Grand Junior Warden. The ceremony of advancing the Prince of Wales was performed by his Royal Highness the Duke of Albany. A Mark Master's Lodge was afterwards opened by the Grand Mark Master, Brother W. W. B. Beech, Past Grand Master, occupying the Senior Warden's chair; and Brother C. F. Matier, Past Grand Warden, that of the Junior Warden. His Royal Highness was presented to the Grand Mark Master by Brother Binckes, Grand Mark Secretary, and installed by Lord Henniker as Master of a Mark Masters' Lodge. The Earl of Kintore, Deputy Grand Master, was unavoidably absent, but amongst the other distinguished Masons present were the Rev. Canon Portal (Past Grand Master), Sir Francis Burdett (Provincial Grand Master), Brother John Watson (Provincial Grand Master), General Brownrigg (Past Grand Warden), Colonel Shadwell H. Clark, (Grand Secretary), and Captain N. Philips.

A PERSON signing himself J. S. Danielsen, master of the British Schooner *Catharine Marden*, has addressed a letter to a Shanghai journal with reference to some injustice which he thinks he suffered at the hands of Mr. Acting Consul Hall, of Nagasaki. The gist of Mr. Danielsen's story is that five Japanese sailors having complained to the Acting Consul of the quality of the rice supplied to them on board the *Catharine Marden* and of the treatment they received from the master, succeeded in getting Mr. Hall to believe their story and to order that they should be discharged from the ship. It does not seem to strike this worthy mariner that the complainants may possibly have had right on their side, though he admits that the rice was shipped at Chefoo without any inspection, and that he had

"slapped one or two of the men with his open hand." Evidently what rankles most in Mr. Danielsen's mind was that the Acting Consul ventured to give him some advice about the management of his crew, and that the Japanese sailors "had the impudence to say he did not know how to navigate the ship." Whether all this was as undeserved as Mr. Danielsen would persuade the public, we are not in a position to determine, but it is at any rate certain that the schooner *Catharine Marden*, under her present master, is not an attractive vessel to seamen. The five Japanese who replaced those so unreasonably befriended by the Acting Consul, commenced operations by going ashore at Nagasaki on a "jamboree," whatever that may mean, and cleared out of the ship altogether at Shanghai "the first opportunity they had of going ashore." Appearances are decidedly against Mr. J. A. Danielsen, and he has not at all improved his position by addressing to a Shanghai journal complaints against a British official at Nagasaki. We trust that there are not many English masters of ships who would adopt such a course, or many English newspapers which would assist them to pursue it.

GENERAL JOHN CLEVELAND WHEELER, one of the oldest officers in the Indian Army, died on the 1st of November at Bangalore. The deceased, who was of the advanced age of 93 at the time of his death, entered the army so far back as the 29th September, 1808. He had, therefore, been a soldier for no less a time than 75 years, and what is more remarkable, the greater portion of his service was spent in India. He is stated to have come out to India when he was 16 years old, and he only revisited his native country once, and that visit was paid when he attained the rank of captain, just sixty years since. A military career, which extended from the famous Peninsular campaign to the Egyptian war, and from the early victories of Wellington to those of Roberts and Wolsley, could not fail to have been an eventful one, and doubtless the old warrior could have furnished many interesting reminiscences of men and times long since passed away.—*Times of India*.

THE population of the Indian Empire—according to the last census, is 253,891,821, of whom 187,973,450, are Hindoos and 50,121,585 Mahomedans. The total number of British-born subjects in India is only 88,544, of whom 76,456 are males and 12,088 are females. But of these 88,544, 56,656, are soldiers, which only leaves just 20,000 British-born males out of military employ. It should, however, be remembered that a considerable proportion of the European population of India have been born in the country, the total number of British-born and "other Europeans" amounting to 142,612. Of these 6,400 were born in European countries other than the United Kingdom. For instance, among the Europeans there are 180 Belgians, 126 Danes, 1,013 Frenchmen, 1,170 Germans, 246 Austrians, 195 Greeks, 79 Dutch, 788 Ital-

ians, 106 Maltese, 358 Norwegians, 147 Portuguese, 204 Russians, 87 Spaniards, 87 Swiss, 355 European Turks, and 773 unspecified Europeans.

MR. VEREY, an engineer, of Dover, has been appointed by the International Association of the Upper Congo to take charge of an expedition to convey a steamer to Stanley Pool, Central Africa. In the spring of next year he will accompany Mr. Stanley upon a long expedition into hitherto unexplored regions in that continent. Mr. Verey will leave England shortly in order to make himself acquainted with the soundings of the Congo for a considerable distance from the mouth of the river previous to the arrival of the steamer, which will have to be taken to pieces and carried 500 miles through forests.

AN American paper says:—In Rhode Island the farmers are building wire fences, and the New York dudes who go to that State to chase anise-seed bags behind a pack of foxhounds are greatly concerned, as they have no notion of breaking their precious necks by jumping fences which their horses cannot see in the excitement of a gallop. The wire fence has its merits.

It is rumoured (says the *Penang Times*) that the Perak Government is threatened with an attack by two Chinese Secret Societies, who are making preparations to revenge the burning of the villages by the Police in the late disturbance at the above place. The Perak Government has been warned of the intention.

A LARGE fire occurred at a village near Fujiyeda early yesterday morning, in the course of which the telegraph lines connecting Yokohama with Kobe were destroyed for a considerable distance. Communication was, however, maintained by the Kōfukaidō route until the main Tōkaidō line was repaired in the afternoon.

THE English mail of the 16th ult., which is coming up from Hongkong in the *Owari Maru*, left that port on the 22nd instant (Saturday last). The *Owari Maru* is described as a fine new steamer; she belongs to the Union Steam Navigation Company.

THE British ship *Ben Nevis*, which took her departure yesterday morning for Nagasaki, beat down the bay for several hours, but had ultimately to return to the anchorage and is now lying windbound.

THE O. and O. steamship *Oceanic*, for this port, left San Francisco on the 22nd December.

THE new French Secretary of Legation, M. Grinet, arrived yesterday in the *Volga*.

AMONGST the passengers by the American mail for Europe we note the name of Mr. Pelikan.

THE Bund lot No. 14 was sold by Mr. Cope at auction on Saturday last for \$11,500.

Nature says that the Russian Geographical Society is taking an active part in the International Congress which is to be convoked by the United States for the unification of the meridian. Delegates from the Academy of Sciences and from the Russian ministries of war, and posts and telegraphs, will constitute a committee at St. Petersburg, and the conclusions of this committee will be supported at Washington by one or more Russian delegates.

MINT DIRECTOR BUCHARD, in his report for the last fiscal year, estimates the total gold, silver and paper circulation of thirty-eight countries at \$9,878,000,000, of which 38.8 per cent. is paper, 33.5 per cent. gold, and 27.7 per cent. silver. It can be seen from this that any general attempt to do away with silver as a circulating medium, or to deprive it of the legal tender qualities which make it a regulator of prices, must be a dangerous experiment to make, because it would be attended with the gravest financial consequences.—*Alta*.

A UNIQUE municipal anniversary (says a home paper) will be celebrated in the coming year by the city of Winchester, the occasion being the seven hundredth anniversary of the election of a mayor under the charter of Henry II., who gave that city the privilege of a mayor at its head before it was enjoyed by the city of London, its then rival in metropolitical dignity.

A "DEAL" AND A "SHUFFLE."

THE judgment delivered in H.B.M.'s Court for Japan on the 22nd instant was probably forecast by a majority of the public. The circumstances of the case were simple. On the 28th of August, Mr. YUKIOKA, president of a private bank called the *Nito Ginko*, an institution established in Tokiyo last year with a nominal capital of 100,000 *yen*, and, as yet, only one or two shareholders, called on Mr. EDWARD WHITTALL, an English merchant of Yokohama, and contracted for the purchase of certain goods, then in the possession of the latter. The total value of the goods was \$48,530, and the terms of payment were one third in cash and the balance in six months' bills bearing interest at 10 per cent. The former amount, viz., \$16,177, was immediately handed to Mr. WHITTALL by Mr. YUKIOKA, and by way of fulfilling the latter condition a deposit-note of the *Nito Ginko* was tendered and received. Mr. WHITTALL then handed to Mr. YUKIOKA a clean order for the delivery of a portion of the goods—a small steamer, valued at \$10,000—and an order for the delivery of the remainder "against approved bills." These documents the Japanese purchaser took in good faith, knowing nothing and having received no distinct intima-

mation of the proviso recorded on the second. When, however, he attempted to obtain the goods, a part only was delivered, so that the relative positions of the parties to the contract stood as follows:—Mr. WHITTALL had received from Mr. YUKIOKA a document promising payment of \$32,352 in six months, together with a sum of \$16,177 in cash; while Mr. YUKIOKA had received from Mr. WHITTALL goods to the value of \$14,180. Under these circumstances, the Japanese merchant, claiming to have fulfilled his part of the bargain, sued the Englishman for delivery of the remaining goods and for payment of such damages as the Court might direct; but the Englishman, though professing willingness to deliver the merchandise on the stipulated terms, denied that those terms had been satisfied, since the deposit-note of the *Nito Ginko* was not negotiable paper.

It will be seen at once that this defence, if admitted, would constitute a most mischievous innovation in commercial practice. It would be equivalent to asserting that a merchant is at liberty to carry out only just so much of a contract as he finds convenient. Mr. WHITTALL had accepted a cash payment, representing one third of the total cost of the merchandise in question, simultaneously with a so-called deposit-note for the balance. The note, according to his own admission, was not shown to him for the first time when the contract was signed. It had been submitted for examination—"laid on his desk"—the day before, but he apparently failed to examine it. Before finally receiving it, however, he seems to have asked some questions, amongst others whether a stamp which the document bore was that of the Finance Department. He might as well have looked for the MIKADO'S autograph on a Mitsu Bishi bill of lading. Being, as was natural, answered in the negative, he said—though his evidence on this point is not corroborated by any of the Japanese who were present—that he should enquire into the value of the security. Then, having signed the contract, he handed to Mr. YUKIOKA documents which professed to be godown orders for the delivery of the merchandise. Thus, according to his own admission, up to the very moment of signing the contract and receiving a large cash payment, he had taken no steps to assure himself of the nature of the security offered, although ample opportunity of doing so had been afforded. His only proper and straightforward course, under the circumstances, would have been to defer the receipt of the cash payment until the nature of the deposit-note had

been distinctly ascertained. Instead of this, he took the note; locked it up in his desk, with some uncertain expression of distrust; received the cheque for \$16,177; cashed it "within an hour;" gave his customers go-down orders, on the strength of which they made all their preparations to take delivery of the goods; at the same time privately instructed his godown keepers to deliver nothing without the direct sanction of himself or his book-keeper; and finally, having convinced himself that the deposit-note was not negotiable, and that the contract could not be carried out in its integrity, proceeded to carry out such portions of it as suited his own convenience by delivering goods to the value of nearly \$2,000 less than the cash he had received. Such commercial methods could not be endorsed by any civilized tribunal. H.B.M.'s Court decided that Mr. WHITTALL must deliver the balance of the goods and pay such damages as might be subsequently decided for breach of contract.

The reasons which induced an English merchant of reputation and experience to adopt this irregular and arbitrary course are not far to seek. Mr. WHITTALL, to use his own language, believed that he was dealing with "a pack of scoundrels" whose object was to "do him in the eye." He accordingly took measures to perform a similar operation on their optic. And indeed, looking at the affair by the light of the wisdom that follows the event, his estimate has a strong semblance of justification. The value of a deposit-note depends, in the first place, on the solvency of the bank that issues it. Whether the *Nito Ginko* satisfies this condition, there was naturally some difficulty in ascertaining. The evidence given at the trial did, however, show distinctly that the issue of deposit-notes by the *Nito Ginko* is not necessarily preceded by any deposit of money. The President has power to issue them, with the sanction of other officers and two of their signatures. He exercised that power so well that, in the case under consideration, he issued a deposit-note for \$32,352 in Mr. WHITTALL'S favour without the troublesome preliminary of lodging any coin in the bank. Then, with regard to the sum of \$16,177 which he was obliged to pay in cash, his method of proceeding was, at best, devious. On the morning of the day when the transaction was nominally completed, he brought to a fellow-merchant, SHIMADA, in Tokiyo, a number of cheques. It being too early to cash these, SHIMADA gave an order on one ISEYA, in Yokohama, thinking that "if

ISEYA had not the money himself, he could easily procure it." It happened, strangely enough, that ISEYA did not have the money, but did have the ability to procure it. He went to an English merchant, Mr. GILLET, in Yokohama, and obtained a loan of \$16,177, pledging, as security, a portion of the very goods which the borrowed dollars were intended to purchase! By a little clever manœuvring it was contrived that the lender should give a cheque before receiving the security, so that, had the arrangements matured, the Japanese, having obtained from Mr. WHITTALL \$48,000 worth of goods with \$16,000 borrowed from Mr. GILLET, might have repaid the latter and remained in possession of merchandise valued at \$32,000, while their liability would have been represented by a deposit-note issued by themselves and not representing any money deposit. It reads like a pretty scheme, but that Mr. WHITTALL had any valid reason to count it a scheme, there is little, if anything, to show. Never having met, or had any transactions with, Mr. YUKIOKA before, he was scarcely justified in regarding that gentleman as an unit of a pack of swindlers, except on the general principle which obtains among a small section of the Yokohama community that all Japanese are swindlers. Seeing also that Mr. YUKIOKA first heard of the goods in question on August the 21st; opened negotiations for their purchase on August the 27th, and concluded the purchase on August the 28th, there was scarcely sufficient warrant for Mr. WHITTALL's assertion that "they"—i.e. the "pack of swindlers"—"had been trying to do him in the eye for a month." This trifling hyperbole is doubtless referable to that peculiar phase of commercial exultation with which the Bible has made us familiar in the buyer that said "it is naught," and of which Mr. WHITTALL may well have experienced an access when he found that, having realized the full price of the goods delivered, he still remained in possession of nearly \$2,000 for which he had delivered nothing, but which he could hold as a sort of general security against further essays of the swindling pack. Apart, however, from the tenets of the comprehensive creed above alluded to as prevalent in parts of Yokohama, we fail to see why Mr. WHITTALL fancied himself the object of a fraudulent transaction. He neglected the one piece of testimony which would have enabled him to determine the character of the proposed business, since he took no steps to ascertain the value of YUKIOKA'S deposit-note until after he had

received a large cash payment from the latter and signed the contract. If he believed, when he concluded the bargain, that an attempt to swindle him was on foot, his conduct in receiving YUKIOKA'S cash was absolutely indefensible, since he must have known that he could not fulfil the contract. If he did not believe this, his subsequent assertions were as unjustifiable as his readiness to exchange goods against paper of which he knew nothing was unaccountable. True, the immediate upshot of the business was that he got rid of the *Jumbo*, an elephantine source of trouble, and appropriated a good round sum of his customer's money by way of guarantee against dishonest contingencies. But reputation far outweighs these paltry results, and, for the rest, this diamond-cut-diamond variety of commerce is not calculated to remedy the evil conditions from which it springs.

LOCAL CRITICISM.

WE do not remember to have noticed a more amusing illustration of the spirit that animates English local critics of Japan, and of the peculiar methods they employ, than that afforded by the columns of indignant protest which the Danish Consul-General's remarks at a recent dinner in Yokohama have evoked. Mr. E. DE BAVIER—who, we may observe, is the Senior Consul and one of the oldest foreign residents in this settlement—being called on to propose, in the name of the Foreign Consular Corps, the health of the President of the Yokohama Judicial Courts, spoke in terms displaying, as those who have studied the history of Japanese legislation will readily admit, very exceptional familiarity with his subject. He began by pointing out, and congratulating Japan on, the successful efforts she has made during the past fifteen years to unify and amend her laws, and said that the outcome of those efforts is "public Courts, constituted on modern principles, applying codes of laws which answer all demands of modern civilization." He then went on to show that the remarkable progress exhibited by the country in these respects is not entirely attributable to foreign contact, but that the germs of a sound legislative spirit are to be found in the earliest recorded Japanese code, which was published more than eleven hundred years ago. Thus, though the uniform development of legislative reform was im-

peded by the innumerable local subdivisions of authority under the feudal system, the principles of sound law and of its just administration were never wanting, and the evidences of their existence were to be found in the rapidity with which the nation had adapted itself to the new codes, and the judicature to their administration. Having regard to all these things, the Senior Consul found exaggeration in "the opinion held by some that a long time will be needed before Japanese Judges are competent to apply the new codes." Whether or no they are already competent, he did not venture to assert, but confined himself to educing, from the above historical facts, an explanation of the apparent ease that has characterized Japan's universal application of highly civilized laws.

In the abstract these remarks are moderate and circumspect, while the historical references they contain are perfectly correct. But they are flagrantly blameworthy in one respect: they imply that something good can come out of Japan. Foreign officials who publicly admit anything of that sort, are betraying the high trust reposed in them. In order to cultivate relations of friendship and mutual confidence with the Japanese, it is essential to show that we despise and distrust them. This axiom of civilized intercourse being admitted, the Senior Consul's observations will be found to embody dangerous matter. Placed under the microscope of local criticism, they assume proportions of a startling character, and are at once seen to be "indiscreet and improper." It is quite intolerable that "the spokesman of the Consular representatives of Great Britain, Germany, France, the United States, and all other great Powers in treaty relations with Japan, should, virtually in their name, declare the *raison d'être* of the extraterritorial clauses in the treaties to have ceased, and the condition which exempts foreigners from Japanese jurisdiction to be no longer tenable." Many persons will be puzzled to put such a sweeping interpretation upon the Senior Consul's speech, but then we must remember that extraterritoriality being in a very precarious condition, its guardians have to shield it with the utmost care against everything resembling adverse opinion. The wearing anxieties of their task to some extent account for their readiness to be thrown into a state of unreasoning perturbation by an after-dinner speech, as well as for their prone-

ness to suspect everybody of designs against the privileges to which they cling with so much tenacity and so little discrimination. This, too, will explain the recklessness of their reasoning when, being themselves absolutely ignorant of the language of Japan and the ideographs of China, they ask the world to discredit the Senior Consul's legal and historical information because he cannot decipher square characters or converse in more elaborate forms of speech than those supplied by Yokohama "pidgin." Nobody will find it worth his while to be annoyed by these exhibitions of pot-and-kettle logic, or to censure the Consul-General's critics because they resort to their old familiar device of putting into their adversary's mouth the statements they desire to combat. Mr. DE BAVIER did not say that "the Courts of Japan and the Judges presiding over them answer all demands of modern civilization." He applied that complimentary description to the codes only, and if his estimate was erroneous, he at all events erred in company with several of the most distinguished jurists in Europe. He has already proved that he is a gentleman who possesses the courage of his opinions. Whatever may be said of the motives that inspired his opposition to the combination of Japanese merchants known as the *Ito-gwaisha*, the resolute and unflinching nature of that opposition justify us in concluding that his proclivities count for nothing in his present attitude. He will not be much disturbed by the shower of stilted censure and sneering abuse his expression of opinion has elicited, though this exhibition will help him, as well as others, to estimate the justice and magnanimity of writers who profess to interpret foreign sentiment in Japan. Perhaps he has never before been "called on to explain himself without loss of time." If not, we trust the disturbing effect of the summons will not be very serious. Several persons in Yokohama are in a chronic condition of being required to stand forth at once and answer sundry grave charges; or to choose between immediate recantation and perpetual condemnation; or to stand convicted by their silence; or to emphatically disavow certain innuendoes; or to strike some other imposing moral attitude. But somehow they never respond to these challenges and exhortations, and we expect that the Consul-General for Denmark will follow their example.

HISTORY OF JAPANESE PENAL LEGISLATION.

BY SADATAKE KOKA.

(Translated from the German of *Oesterreichische Monatschrift für den Orient.*)

I.

It is a mistake to suppose that the new penal laws of the empire of Japan, which came into force on the 1st of January, 1882, are the first codified penal legislation of this island. It is in reality the fourth code in the history of Japanese penal legislation. The first, which was published in the year 702 A.D. can scarcely have been strictly carried out; but the second and third, both of which were introduced under the present Emperor since the fall of the feudal system, are in every respect penal codes. The new penal law, thus the fourth codification, is simply a continuation of its predecessors, and is neither the outcome of theoretical speculation nor a mere copy of foreign codes. The lengthened interval between the first and second codes produced also its share of penal laws, which, though not codified, were from time to time enacted by the authorities and publicly proclaimed. The chief reason why, for so long a time after the first legislation, no further codification was undertaken is to be found in the political circumstances of the country.

The first penal code, which, along with other laws, Government organization, regulations for armies, prisons, Government educational institutions, etc., was published in the year 702 A.D., and which along with the rest bore the common name of *Taihorei*, was without doubt fully made known to officials and nobles, but whether it was ever properly presented to the people is not so certain, although it was by no means a secret law. Aside from the fact that the law was far in advance of the people of that time, the Government was not strong enough to enforce its will in all parts of the land; the difficulties of communication must also have hindered the proclamation of Imperial edicts in distant parts. Under these circumstances, the above mentioned *Taihorei* could not have been published in all parts of the land nor enforced in every point.

Nevertheless, this penal law exerted a great influence upon the administration of justice, not only of that time but also of after years. It is still extant as the first codified law; and even to-day the authentic interpretation of the same under the name of *Rio-no-gige* is still very widely read (*Rio-no-gige* is prescribed in the curriculum of the Tokio University as an obligatory study for jurists). No one can mistake the connection between this code and the second codification although they are sundered by nearly 1,200 years of time.

No great change was made in the administration of justice for a long time after the codification of the first Penal law. The political condition of the country also does not seem to have undergone much change, although there must have been advance in population, wealth, and in cul-

ture generally. As a result of the difficulty of communication and the weakness of the central government, every division of the country was almost independent of the control of the latter, although they always used to recognize the supreme authority of the Emperor. No further attempt was therefore made to introduce into these different independent states a uniform Imperial penal law.

About the year 1185 a second central government was established in Kamakura (in the neighbourhood of the present port of Yokohama), which indeed recognized the authority of the Emperor, but which centralized in itself all real governmental powers, with the exception of the bestowment of most of the public honors, so that the Emperor's power gradually diminished and eventually dwindled to a mere shadow. Under this second usurped government, it is certainly true that the whole country became more consolidated than ever before, but the seeds of the feudal system had been sown. When this power, in the year 1600, passed into the hands of the Tokugawa family, whose head is known to Europeans as the Taikun or temporal sovereign, the feudal system was already fully developed. Although the Taikun was so powerful that all the lords of the land, numbering over 300, trembled before him, he seldom enforced his own will outside of his own immediate possessions, and thus ordinary legislation and the control of the people remained in the hands of the respective provincial chiefs. The result was that in different parts of the land different systems of administration were developed, so that it is very difficult to give a general description of them.

The semi-independence of the different provinces in the feudal system must also be distinguished from the independence of the older days, for by means of the feudal system each separate provincial division acquired a sort of State character within the greater Imperial State, while in the older times the independence of the provinces must have arisen from autonomy for want of national legislation by the Central Government.

Many foreigners appear to think that criminals in Japan were formerly punished by mere caprice. That is not quite correct. Even in the times of the feudal system the Daimiyo generally published their laws. New regulations, especially those that directly related to the officials, were posted up in certain fixed places (called *Fuda-no-tsushir*) of their respective territories, on placards (called *Taka-fuda*, &c.), or were communicated to certain local officials, who then were responsible for making them known to the members of the district. In every province certain so-called *Go-katto*,—prohibitions or orders which were issued partly by the Taikun mostly through the Daimiyo, and partly by the latter himself—were publicly recognized. Besides these there were many judicial usages, which apparently punished according to custom, but which in reality either originated in the first penal code, or having been once published were afterwards forgotten.

But I must not be misunderstood here, as though I denied the existence of administration of justice according to mere inherited custom, which was sometimes reasonable and sometimes irrational. Along with these judicial customs the feudal system brought along with it certain penal regulations completely military in character and which were very severe, often barbarous. (The well-known *hara-kiri* belongs to this category.) But these applied almost exclusively to knights and higher vassals.

Apart also from the first penal law, the penalties were often ill-defined and were left entirely to the opinion of the judge: the threatenings of the law were often couched in terms such as these: "certain to be held responsible," "will be severely punished," etc. The recognition of the inviolability of judicial rules was only conditional, for in practice judicial regulations were held secondary to moral considerations. There can be no doubt that the subordination of judicial laws to moral considerations was very prejudicial to the preservation of justice; at the same time one cannot overlook the fact that this free and easy acceptance of judicial regulations must have assisted materially in the introduction of a new system of judicial procedure.

Judges seem also to have punished frequently from considerations of expediency. "Punish one and frighten a thousand," was publicly proclaimed by some judges. It is also undeniable that the Daimiyo sometimes punished their subjects capriciously, and even without judicial procedure. Those Daimiyo, however, whose capricious and unjust rule gave rise to sedition in their respective provinces, were generally called to account by the Taikun, and often lost their inheritance by being compelled to retire in favour of a relative; sometimes the whole family was deprived of a part or of the whole of their possessions, which were then confiscated; in extreme cases such tyrannical Daimiyo were even condemned to commit *hara kiri*. This held good still more in the case of judges. Those judges who allowed themselves to be bribed, or, from private reasons, knowingly punished the accused unjustly, were either degraded from office, or condemned to exile or infamy, and even to death, so soon as their misdeeds were made known to their lords. From this it will be evident that, in spite of abuse and imperfection in the administration of justice, mere caprice could not have played so great a rôle as some foreigners seem to suppose.

Nevertheless, I must confess that in the former administration of justice there were many defects. If one takes into consideration the fact that the land was divided up into so many small, mutually independent states, and as a result criminals could easily find a refuge, and that the system of criminal police was very imperfect, it is no wonder that many offenders were left unpunished. As the judges, and other officials were not very independent, they often had not sufficient courage to prosecute energetically friends and relations of the Daimiyo and other influential persons. Moreover, his own confession was considered an essential condition to the punishment of a criminal. This well-meant,

but practically bad, principle naturally resulted in the system of torture. Publicity of adjudication was also unknown, as indeed all participation of the subject in public affairs stood in complete contradiction to the conception of the political law of that time.

At the time, a little before the middle of the present century, that Europeans once more began to visit this Island Empire, the power of the Taikun was decaying. But the last blow was dealt by the visit of the Europeans. The negotiations and treaties which he made in the name of the Japanese Empire, were completely in opposition to public opinion, not only because he acted in so frivolous and pusillanimous a manner, but because he had concluded these most important treaties without the consent of the Emperor, which was contrary to Japanese political law. It began to be evident also that it was necessary to form one compact powerful State. At the head of this party of unification were many powerful Daimiyo who supported the Emperor. In the year 1868, the second central government and the feudal system—I mean the Taikun and the chief of the Tokugawa family—were overthrown after a short revolution; the Emperor was restored to his full powers, or rather he was elevated thereto, for he had never before possessed so great power. In July, 1869, all the Daimiyo presented the Emperor a petition praying for permission to retire from the control of their inherited possessions in favour of the Emperor, so that he might form one compact and powerful nation. The Emperor granted this unanimous prayer of the provincial lords. They were at first merely transformed into Imperial officials, and controlled for a time the government of their respective provinces; at the same time various changes and improvements were made in the same. In the year 1871 all the Daimiyo were entirely released from these functions and called to the Imperial city of Tokiyo, to reside there as a Japanese nobility *in perpetuo*. The organization and other regulations of the provincial governments were completely reconstructed and little by little, energetically improved. The former retainers, who are still recognized as of gentle blood (*Shizoku*), had also lost all right and obligation to military service. The new regulation enforcing universal military duty was introduced in the year 1873. Thus the old feudal state, which had flourished for seven hundred years, vanished, and in its place arose the present consolidated Government of the Imperial Japanese nation.

II.

When the Taikun was removed and the Emperor restored to power, it soon became evident that the difference of administration of justice in different parts of the land was not only opposed to the harmony of the State, but also a great hindrance to the political and social development of the people; that the judicial regulations handed down from feudal times needed considerable improvement and modification; in a word that one of the greatest needs of the land was the introduction of one national penal system for the whole empire. The result was

the codification of the second Japanese penal law. At the end of the year 1870 this second Japanese penal code was published under the name of *Shin-ritsu-korei* (new penal law), which was doubtless modelled after the first code (*Tui-horei*) and must have had incorporated in it most of the penal regulations which had descended from feudal times with various modifications and improvements.

The New Penal Code, or *Shin-ritsu-korei*, recognized five kinds of penalties:—1. Light flogging, from 10 to 50 blows. 2. Severe flogging, from 60 to 100. 3. Penitentiary for from 1 to 3 years. 4. Exile and penitentiary in Yezo from 1 to 2 years (with the obligation to remain there after the penalty had been undergone). 5. Death, which was usually executed by hanging and beheading, and in certain legally defined cases the head was exposed for three days in addition. (This last form of the execution of the death penalty was abolished long ago.) The privileges of the *Samurai* are recognized in the application of these penalties. 1. Partial seclusion from the outer world. 2. Total seclusion. 3. Imprisonment in one's own house. 4. Military service in Yezo. 5. *Harakiri*. The females of the *Samurai* class were to a great extent included in the category of minors, aged persons, deaf mutes, &c., so far as penalties were concerned. For the rest we need not here go into the details of this Code.

As this second Penal Code was codified at the time of the transition from the feudal to the present consolidated system of Government, it could not of course be a permanent law. Any law, however excellent at the time of its codification, requires reconstruction so soon as the political and social conditions of the land undergo important change. Intercourse with foreign lands, and the consciousness of consolidation of national interests, called forth the energetic efforts of both government and people, which have given a new aspect to the conditions of the country in every respect, and indeed in many things a rather changeful one. Even in the year 1873, it began to be evident to the government and the public that the penal code of 1870 (*Shin-ritsu-korei*) was too far behind the times: although the interval since its enactment was so short, the obsolete ideas and regulations of the second code could no longer satisfy the popular demand. Thus it came to pass that in May of the same year (1873) the Government was impelled to issue a third codified Penal Law under the name of *Kaiti-ritsuri* (Revised Penal Law).

In this revised penal code are many evidences of the influence of modern civilization. The Imperial introduction informs us that this Code of laws was "founded upon the old forms of national justice, harmonized with the penal laws of other lands." Moreover, this revised penal code was by no means an independent one, for the former code—the *Shin-ritsu-korei*—remained still in force. With the exception of a few new regulations, the revised penal code contained explanations, supplements, and improvements, in different paragraphs of the second code—

generally in the interest of moderation and reasonableness, as well as of clearness—those parts which were left untouched remained in force as before.

The provisions of the revised code were therefore much more moderate and rational than those of the second. Penal servitude for from ten days to ten years with different gradations was substituted for flogging, banishment, &c., and occasionally life-long penal servitude occurs. In certain cases imprisonment was inflicted. The code recognized still three kinds of death penalty, the most severe of which (with subsequent exposure of the head) was shortly afterwards abolished; but the category of crimes incurring the death penalty was greatly curtailed, and various forms of former death penalties were exchanged for Penal servitude for life. The former strictly moral conception of criminal justice, was already giving way before the more correct conception of strictly judicial penal administration.

III.

No Code of laws can for any length of time meet the circumstances of a people which speeds along the way of improvement at a mercurial rate. The details of the revised Penal Code were therefore necessarily improved and supplemented from time to time, until under the influence of this current of reform the Government was once more impelled, in the year 1880 to issue a new penal law and a suitable Code of Criminal Procedure, under the simple names *Keiho*, Penal Law, and *Yisaiho*, Criminal Procedure.

As the French translation of these two codes has been published by the Government and is of course accessible to the European world, and as the two codes have been well discussed by an Austrian jurist, Dr. S. Mayer, Professor of Penal Law in Vienna (my teacher), I do not think it necessary to reproduce the contents of these laws. The general review of the legal development, and a few needful explanations which are not to be found in the above mentioned translation, nor in Dr. Mayer's disquisitions, seem, however, to call for a little fuller discussion.

The objection raised by some foreigners, that this threefold codification of criminal laws within the short space of fifteen years deserves the reproach of fickleness, is quite unfounded, for penal legislation must harmonize with the circumstances of a people. Whenever these circumstances have become so thoroughly altered as has been the case with Japan, a new penal law becomes a necessity. To retain a recent law, simply because it is recent, in face of the fact that the condition of the people has radically changed, would be as irrational as to reject an old law simply because it has been in force so long although the circumstances of the people remain the same.

On the other hand, it would rather be inexplicable that during these remarkable fifteen years, only three and no more revised codes were issued, if it is not borne in mind that between the different codifications various shorter laws were issued, which from time to time modified, improved, removed, or supplemented old details

and regulations that had fallen behind the times. And this very interval was particularly rich in the production of those laws which relate to the constitution of Courts, procedure, the position of judges, State prosecution, advocacy, police and prison organization, &c. With every new regulation the administration of justice became more secure and more complete. The Courts have long been divided into three grades, the right of appeal always being recognized. The independence of the judge was recognized; the functions and duties of the public prosecutor were clearly defined; advocates were subjected to public examinations. The criminal police was perfectly organized, and prison organization became no less perfect. The old principle requiring the confession of the criminal before the infliction of any penalty, had been long ago exchanged for the modern principle of evidence procedure. The use of torture for the extraction of confession, which ever since the restoration of the Emperor was less and less resorted to, was eventually, in accordance with the new principle, not only strictly forbidden, but had grown obsolete. In fact, for the last five years at least, torture has been absolutely—I say absolutely—abolished in Japan.

In short, most of the regulations of the present Penal Code and Code of Criminal Procedure, were in practical force in Japanese administration of justice before the introduction of the said codification. The new Codes have however made important advances in two particulars,—(1) the recognition of perfect publicity of Courts, and the permissibility of advocates in penal procedure (in civil matters they were admitted long ago). (2) In that the judge is to presuppose the innocence of the accused. But even in these two points the foreign laws have not been simply copied as some foreigners seem to affirm. Public opinion, particularly the newspapers and magazines which number over one hundred and which are mostly inclined to the side of opposition, advocated the acceptance of the new principles of penal justice, and they did much to prepare the people so that they gladly welcomed the two Codes as soon as they were issued. What these Codes have borrowed from the French Codes are principally forms of expression—what I might call from a literary standpoint, translation, style—and the division into paragraphs, sections &c., &c. The materials of both Codes were mostly either indigenous or had already become well naturalized. It is a mistake to suppose that the Japanese have simply “swallowed” foreign Codes whole. The *Keiho* and the *Yisaiho* are really Japanese legislation, but nevertheless they are the developed laws of modern civilization.

With the fall of the feudal system, and the introduction of general military service, the former *samurai* (of whom there are 400,000 males) had indeed lost their ancient occupation, but as they had been educated from youth up not only in athletic and military arts, but also in history, literature, moral and political philosophy, etc., and were therefore somewhat prepared for the duties of statesmanship, they now sought the new

occupation of officials, officers, judges, advocates, authors, editors, &c., &c.

Foreign languages had been studied somewhat. Towards the end of the feudal times there were many people who could translate Dutch books. But with the overthrow of the feudal system increased intercourse with Europeans, particularly with the English, Americans, and French, occasioned an energetic study of English and French books. Thousands of English and French books, particularly on social-juristic subjects, were translated into Japanese and widely circulated.

Hundreds of law schools were established under the direction of judges, advocates, authors, etc., both in Tokio and in the provincial towns. The Ministry of Justice had also founded a law school under its own direct supervision in the city of Tokio, where at first instruction was imparted in French but now for a long time only in Japanese. These schools have already graduated a large number of students. Above all, however, the University of Tokio has a law faculty, under whose instruction, besides the Encyclopedia of Jurisprudence, Philosophy of Law, Popular Rights, English Constitutional Law, etc., Japanese law (the old and new with practical instruction), the French Law (Penal and Civil Codes), and English Law (the greatest importance is laid on the study of English Law), are made obligatory subjects in the curriculum which covers a course of four years. Since the year 1878 many students have graduated and received the title of *Hogakushi* (Dr. jur.)

Moreover the efforts after enlargement and improvement of juristic culture were just as marked amongst the older jurists. In the department of the Minister of Justice and in different high Courts it was customary to have several European jurists appointed for counsel and consultation. It soon became usual that these jurists, at the desire of the Judges and the higher police officials, explained the modern principles of justice and gave the letter of the law in their respective countries. These lectures were generally interpreted for the hearers on the spot, but afterwards carefully translated and printed, and were not only distributed among the members of the bar, but often published for the benefit of the general public. Judges, advocates, teachers of law, etc., often formed themselves into legal societies, which met weekly or monthly for the discussion and explanation of legal questions and principles of jurisprudence.

And there was no lack of law publications. Different juristic publications were issued by law schools, law clubs, individual advocates, and authors, and the daily newspapers even, were chiefly filled with politico-legal matter. They busied themselves with the popularization of European conceptions of law, and criticized themselves the condition of justice in Japan. The newspapers had perhaps the greatest material (in contradistinction to the legislative) influence on the development of Japanese law.

I have already mentioned the fact that English and French Law books, original editions (and

such books are imported perhaps a thousand fold more than is supposed in Europe), as well as translations of the same, have been widely circulated among the people. In the so-called public "lecture-meetings," which have come into vogue within the last eight years, and along with the newspapers have exerted on immense influence, legal questions are mostly discussed.

I need not here emphasize the fact that the Government, as well as rich parents, have sent many young people to Europe (mostly to England, America, and France) in order to study the legal sciences there, and that many of these students after completing their studies returned to their own land.

My chief object, in conclusion, has been to show that the Penal Code and the Code of Criminal Procedure now in force are neither the result of abstract speculation nor a mechanical transcript, but the outcome of historically developed legislation. The second (*Shinritsu-korei*), and third (*Kaitai-ritsurei*) penal codes, with other supplementary smaller legislative productions, must not be taken alone or piece-meal, but must be studied as a whole and in their actual relationship to the latest Criminal Codes (*Keiho* and *Jisaiho*). If one looks at the matter in this light, the connection between the different codes becomes very plain. All those recent laws were nothing more nor less than a preparation for the two Codes of Penal legislation now in force in Japan.

THE CHRISTMAS SERVICE AT CHRIST-CHURCH.

On Tuesday morning the Church was crowded, and presented a scene that brought a home Christmas vividly back to the recollection. The ancient English, or rather British, custom, of decking with evergreens had been most tastefully carried out by the ladies of the congregation; and their work had been helped by gifts of flowers and berries from various neighbours. Over the beautiful carved screen, which separates the chancel from the nave, appeared in letters wrought in golden chrysanthemum the words from Charles Wesley's noble hymn,

Born to raise the sons of earth,
Born to give them second birth.

At the Western end of the Church, over the organ, were two lines from one, still living, who gives the truest utterance to the Spirit of the Age,

Ring out the darkness of the land,
Ring in the Christ that is to be.

The service opened with a carol by Dr. Monk, "Christus Natus Hodie!" Its joyful freshness at once aroused the souls of the worshippers. The *Te Deum*, one of the most ancient hymns of the Church, was sung to music by Stephens, the character of which well accorded with the occasion. The Anthem chosen for the day was one which demanded all the ability of our painstaking organist, Mr. J. T. Griffin, and every effort of the Choir. It is a fine composition by Dr. S. S. Wesley, beginning with the words, "Blessed be the Lord God of Israel!" and our singers rendered it so well that the prophetic words "unto us a Child is born!" and following sentences were deeply impressed upon the auditors. The Hymn *Adeste Fideles!* was very sweetly sung to the air so widely known, though

the name of him who composed it is lost. Though dead to fame himself his melody still speaks to us.

The service was read by our Chaplain, the Rev. E. Champneys Irvine, who took for his subject the secret of the power of Christ. All great men had points of resemblance to Christ; and the vast influence of the greatest of them was not to be denied. But as the ages rolled on was there any one of them whose empire over the minds of men seemed to wax and not to wane? Fiery ardour reached its height in the great desert iconoclast, Mohammed. Inspired with his zeal, and blindly devoted to his creed, his warriors took the dormant world by storm. The belief "that through unbelievers' souls lies the directest path to heaven" still holds together millions of men. But Mohammed's life and teaching will bear no comparison even with lesser lights than Christ. Far wider and more lasting was the power of Buddha. His life, too, touched that of Christ in one most striking attribute. He was unselfish and devoted. Pitying the misery and sorrow of mankind, he gave up his regal state and went amongst the poor. And there was given unto him dominion and power over a third part of Earth's hosts. Nevertheless, his kingdom is not that that shall not pass away. Less wide, but deeper far than any of these is the influence of him whom even Plato called Master. Liberator of the mind from the vanity of the sophist, he was obedient to the law of his country, even unto death. If the love of truth and of friends alone could have healed the world, Socrates would now be worshipped. But no, a life higher than his, and a still sublimer death were yet to come. It is of that life we speak to-day. It was eminently simple. His boyhood was unobtrusive, a pattern boyhood, one brilliant flash alone breaks its silence. His manhood, was kindly, brave, and gentle. He furnishes wine for the poor man's feast and dines with humble men. He attends the village church on Sunday and strolls through the fields with his companions. No Sabbatarian He: no formalist. With Him benevolence is everything: religiosity nothing. But with all this liberality He is as pure as a child. A little child is with Him the chosen type of Christendom. Man reverences Him, and with reason. Woman leans upon Him, and finds the strength she needs in him. The child trusts Him, and He is worthy of that trust. Wonderful as is the mystery of His immaculate birth, still more is His stainless life a ceaseless marvel. Only this is clear, that if we hope to follow Him in His heavenward flight we must attain a purity as perfect as that of a little child.

At the close of the service a beautiful anthem, "As pants the Hart," an arrangement from Spohr, was sung with great feeling and expression. The offertory amounted to \$250.

CHRISTMAS AT THE FOREIGN SUNDAY SCHOOL.

The season of Christmas has come again, and with it the usual Sunday School festivities at the various churches and schools, foreign and native. These, owing to their number, have to be distributed over several days in advance of the usual Christmas Eve. For example, the Native Sunday School at the Sumi-yoshi Kwaicho held its celebration of Christmas on the evening of the 21st; and the Foreign Sunday School of the Union Church on the evening of the 22nd. The Schools at 120, Bluff, and 212, Bluff, held theirs respectively on the afternoons and evenings of the 24th and 25th inst.

Besides these, a number of smaller Sunday Schools have had, or are to have their festivals.

The Foreign Sunday School festival has of late years become confined to the actual scholars in attendance at the Sunday School, and while it has lost much of the old time popularity it enjoyed on the part of all classes of the community both foreign and native when it used to be held in the theatre, with a Christmas Tree and a St. Nicholas, still what has been lost in popularity has been more than compensated for by the good order and decorum manifested by the scholars, and by their very superior singing and recitation exercises. These latter would do credit to any Sunday School in more favored lands and localities than a seaport town of the Far East. Few beside parents of the scholars and friends of the School attend these enjoyable exercises. At 4 p.m. the scholars to the number of 70 or 80 marched into the Church from the lecture-room, singing a lively song, led by the organ and a choir of young ladies, consisting of the elder scholars in the School. The Church itself was decorated with Scripture inscriptions on the side walls, and over the arch above the platform, in evergreen letters, while the platform was ornamented with stands of ferns, and the table in front showed a large pile of beautifully bound books and toys; and at the sides of the table were boxes of fruit, candies and cakes, in cornucopias, and paper bags ready for distribution. Prayer was offered up by Rev. Mr. Garst, followed by singing, by the entire school, of the second hymn on the programme, "Christmas time has come again." This was followed by the reading of the Report of the Superintendent of the School, A. J. Wilkin, Esq. He reported an average attendance of 55 each Sabbath during the year, and 18 yen 12 sen as the amount of the children's contributions to support a child in one of the Mission Schools. This was a considerable falling off from previous years. He reported the Library to be in excellent order, under the care of Mr. Charles Sale, and that a number of new books were soon to be added to it. They had joined the Sunday School Union of London, and by the annual payment of a small sum they would be entitled to receive some valuable new books yearly. They had also introduced a new Hymn Book, entitled, "Children's Worship," which was meeting with acceptance. He followed his report with some bright and cheery remarks concerning the appearance of the scholars, and of how Christmas time takes us all back to the days of childhood. He looked forward also to the time when the children there assembled would be scattered throughout the various home lands. He thought some of them might become daring navigators, or Christian discoverers, as Livingstone in the "Dark Continent of Africa." The Superintendent's Report was followed by a Recitation by 15 members of the Infant Class, and that again by singing by the entire school of Hymn No. 3 on the programme, a "Christmas Carol." This was followed by a recitation by Master Fred. Sale, entitled, "Three Copecks"—A Russian child's written prayer dropped into the alms' box at Church for that amount of money to keep his little orphan sister from starvation, and which by the interested services of the good priest led to a collection of 2,000 roubles for the little petitioner's benefit. Subdued applause greeted this speaker from his appreciative school-mates. A short address was then given by the Rev. Jas. H. Ballagh, on "How Christ came into the world; how he was announced; how he was received; who first saw him; and what were some

of the results of his coming to children and to all men." This address which was attentively listened to by even the youngest of the children, was followed by a recitation entitled, "The search of the Sages," by Miss Lizzie Levy, whose creditable effort won applause from her auditors. Then followed a song by ten of the larger scholars, boys and girls, who gained applause from all. A recitation by Miss Emma Bridgens, entitled "Piccola"—a little Italian girl's Christmas, was interesting and its delivery excellent, winning very hearty commendation. Then followed an exercise of responsive reading of Psalms by three divisions of the school, and the closing hymn, "To the Lord Jesus Christ be the glory." The religious and literary part of the exercises thus concluded, the distribution of gifts to the scholars, and of fruits, cakes, nuts, and sweets, followed. As the little ones trudged out, their arms laden with good things, to the Infant Class Room, where their wraps had been left, no more happy, quiet, orderly, and better behaved class of children could have been seen. Their admirable behaviour is in no small degree owing, according to the Superintendent's testimony, to Miss C. E. Ballagh, once a pupil in the school, who besides the care of the Infant Class, and presiding at the organ, had the care of training all who took part in the exercises. Many other teachers in the School have been also pupils in the same, and so this Sunday School may be said to have become indigenous to Japan. We must not forget to mention that much of the good done in this Sunday School is due to the efforts of its zealous and kindly Superintendent, Mr. A. J. Wilkin, whose name is connected with every good work in Yokohama. The simple festival which gave so much pleasure to a host of youngsters cost the modest sum of \$50, collected by offertory at the Union Church, to which the Sunday School is affiliated.

JAPANESE IN KOREA.

When H.E. Takezoye, Minister to Söul, called at Pusan en route to Japan, the Committee of the Chamber of Commerce visited him and the following conversation ensued:—

HIS EXCELLENCY—The most important question pending, is the residence of Europeans in Japanese settlements. Mr. Aston, English Consul, spoke to me on the subject while I was in Söul and desired that English people should be allowed to live in the Japanese settlements. But I did not give him any definite answer. I should like to know what you think of the matter.

COMMITTEE—Mr. Aston came to this place and selected the Saka-no-shita (down-the-hill) for the English settlement. On that occasion, we expressed a strong opinion that the establishment of an English settlement there would endanger our interest. All the goods conveyed hither are brought through the Fusan Road, that is, the Saka-no-shita, and the occupation of that part by the British represents our throats being grasped by them. Japanese trade must suffer considerably. It would, therefore, be rather advantageous for us to live together with the English and to have with them an equal share of benefit and loss.

H.E.—In case you live together with foreigners, municipal rules for the maintenance of good order and comfort of this place must necessarily undergo some change. Thus, you would meet with trouble.

COM.—But trade interest is of far greater importance than the change of municipal rules.

We will adopt such rules as were fixed by the Consuls of foreign nations. And, as we are convinced that it would conduce to our interest to live together with foreigners, we earnestly hope that Your Excellency will exert yourself to make our interest coincident with that of foreigners.

H.E.—What do you think of allotting a portion of the settlement to them?

COM.—To make a division of the settlement, is a secondary affair that we may adopt instead of the first plan. If we do not actually live together with foreigners, we must adopt it. In this case, we have a claim which naturally occurs to us. That the settlement should have attained to its present state of importance is entirely due to Japanese exertions. If, therefore, a portion of it is to be allotted to foreigners, we demand that the Korean Government shall pay such a proportion as will compensate our labour for the last two hundred years or make special provision to reduce our land-tax for a certain number of years. We are unfortunate on this point.

H.E.—I believe that the Korean Government will not be so illiberal as to refuse this claim. Supposing we adopt this plan, what portion of the settlement will you give to foreigners?

COM.—In that case, we will give them the Western corner. But that portion being not such as even we like, they are certain to object to it. We should divide the convenient spot into two parts, taking the Riuwosan (Dragon's Tail Hill) as the centre. We will occupy the east and north and give them all south of Sakuragawa (Cherry River).

COM.—Is it true that the Korean Government entered into a contract with Chinese merchants in Söul to prevent free trade? and that Mr. Mölendorff is responsible for it?

H.E.—That report is groundless. The Korean Government recently established an office named Keisho-Kiyoku (bureau for giving protection to trade), but as they have not enough money to give protection, there is no danger of trade being tampered with.—*Mainichi Shimbun.*

IN H.B.M. COURT FOR JAPAN.

Before N. J. HANNEN Esq., Judge.—SATURDAY, 22nd December, 1883.

YOKIOKA SHORBI V. ED. WHITTALL.

This was a claim for the refund of \$10,000 said to be the purchase money for the steamer *Yumbo*, which had not been delivered to the plaintiff, and an action for the delivery of 410 bales of yarn, said to have been purchased from the defendant.

Mr. Litchfield appeared for the plaintiff, and Mr. Kirkwood for the defendant.

JUDGMENT.

After stating the pleadings, Mr. Hannen continued:—

In the view that I take of the case a great deal of the evidence and cross-examination was unnecessary. The most important points which were either admitted or proved were, that the two contracts were entered into on the same day, that they really formed one transaction, that the portion of the price for the objects brought which was to be paid in ready money, was so paid, that for the balance a deposit note of the Nito Bank was given, and that delivery of 410 bales of yarns, part of the objects purchased was refused. Counsel for the plaintiff argued that

upon the evidence the Court should find that the deposit note had been accepted in lieu of the approved bills mentioned in the contract, and further that there had been a waiver of this condition of the contract. On the other hand, Counsel for the defendant argued that the evidence showed that the deposit note had never been accepted in lieu of the approved bills and as to the waiver, he contended, as I understood him, that the point could not be raised upon the pleadings as they stand. The argument that waiver of a condition precedent should be pleaded by the plaintiff is entirely contrary to all rules of pleading, old and new. According to the old system the plaintiff alleged performance generally of all conditions precedent, the defendant specified the particular one, the non-performance of which he relied on as exonerating him from the performance of the contract, and issue was joined. Here the general allegation of the performance of all conditions has been made, and we may gather from the answer that the condition precedent relied on by the defendant is the non-payment of the balance of the purchase-money by means of an "approved bill." Under these pleadings it is manifestly quite fair to the defendant, and in accordance with all rules of pleading, to argue that although the delivery to the defendant of approved bills may have been at one time a condition precedent to the defendant's delivering the yarns, yet his conduct has been such as to preclude him from raising that defence, or shortly, that he has waived this condition precedent. The point then may in my opinion be properly raised upon these pleadings, and I am further of opinion that it is fatal to the defendant's case. The general principle is a tolerably well-known one and I am somewhat astonished that, after I had warned the defendant's Counsel that it seemed to me his great difficulty, he should not have pointed out in what way this case could be taken out of it. The principle is this: Where one party to a contract has had a substantial part of the consideration, he cannot set up the non-performance of a condition precedent as a defence. This is shown by the judgment of Chief Baron Pollock in *Graves v. Legge*, 23 L. J. Ex. 228, also by *Ellen v. Topp*, 20 L. J. Ex. 241. The judgment of Baron Bramwell (now Lord Bramwell) in *White v. Beeton*, 30 L. J. Ex. 373, shows very clearly the reason and reasonableness of this rule. The principle has been followed in a later case, *Carter v. Scargill*, L. R. Q. B. 564. The conclusion that I come to therefore is, that although the defendant might after having signed the contracts for the sale of the steamer and the merchandise have said it is a condition precedent of my carrying out this contract that you should hand me approved bills for \$32,000, he cannot after having taken what was a most substantial part of the consideration, viz., \$16,000, in cash, still insist on this as a condition precedent to his handing over the yarns. He would be clearly entitled to his cross-action against the present plaintiff for alleged breach of the contract by the non-delivery to him of approved bills. As, however, there is no cross-action, I cannot deal with this, and I must leave the parties to take such action as they may be advised. There will, therefore, be judgment for the plaintiff upon the second prayer of his petition, with costs, against which latter the defendant will be entitled to set off \$500 as assessed costs of that portion of the petition which was abandoned during the course of the suit. There will also be an enquiry, as to what damages the plaintiff has suffered by the wrongful detention of the goods.

LATEST TELEGRAMS.

[REUTER "SPECIAL" TO "JAPAN MAIL."]

London, December 23rd.

ABYSSINIA.

King John of Abyssinia is massing troops and menacing Massowah.

EXTENSION OF THE COUNTY FRANCHISE.

Mr. Gladstone, in reply to a deputation, announced the introduction of a Bill to extend the county franchise.

London, December 24th.

THE SONTAY AFFAIR.

The French Press is exultant over the capture of Sontay, deprecating mediation and recommending that hostilities be continued until the whole of the delta of the Red River is cleared of the enemy.

London, December 26th.

The fortification of Suakim has been completed.

[FROM THE "HONGKONG DAILY PRESS."]

London, 15th December.

A SUPPLEMENTARY CREDIT FOR THE TONQUIN EXPEDITION.

Monsieur Ferry, the French Premier, has asked the Chamber for a supplementary credit of twenty million francs for Tonquin.

[FROM THE SAIGON "INDEPENDANT."]

Paris, 26th November.

THE TONQUIN AFFAIR.

The Committee of the Chamber appointed to examine the Tonquin credit project has called M. Bourée, and will hear him to-morrow.

Paris, 28th November.

It is stated that in consequence of the declaration of the Marquis Tseng relative to the advance on Bac-ninh, the Government will mobilise the twelfth corps d'armée and send it to Tonquin.

Orders have been given at the ports to press forward the departure of the African troops, which comprise a battalion of Zouaves and a squadron of Chasseurs.

Important charters are said to have been concluded at Havre by the naval authorities for the transport of war matériel.

The regulations for Public Loan Bonds for industrial purposes and for Exchange Bills (*Okurasho Shoken*) will be issued in January next. The bills consist of five kinds, viz: yen 100; yen 500; yen 1,000; yen 5,000; and yen 10,000. The proposed new loan bonds are to be issued to the amount of yen 20,000,000. In consequence of this, the prices of the old bonds have begun to fall.

The Yokohama Bourse is deserted, the number of people in attendance being only ten, including boys. Street bargains are, however, carried on with unabated vigour. They amount to more than yen 1,500,000. But as these bargains are simple private agreements, they are broken whenever violent fluctuations occur. The arrest of gamblers the other day caused an uneasy feeling among operators. *Tamato Soba* (sleeve bargains, so called from the brokers putting their hands into the sleeves, and grasping the fingers of others, each manipulation meaning from one to ten thousand dollars worth of business) prevails. The police have attempted to prohibit the practice.

METEOROLOGICAL REPORT.

FOR WEEK BEGINNING FRIDAY, DECEMBER 21ST, 1883.

Observatory of Daigaku, Moto-Fujicho, Hongk, Tokiyo, Japan.

REMARKS.
Heavy line represents barometer.
Light continuous line—maximum and minimum thermometers.
Dotted line—percentage of humidity.

The barometer is reduced to the freezing point and to the level of the sea.
* Rain in inches. † Direction of Wind. ‡ Weather.
Maximum velocity of wind 34.6 miles per hour on Friday at 4 p.m.

The highest reading of the barometer for the week was 30.346 inches on Saturday at 10 a.m., and the lowest was 29.768 inches on Monday at 3 p.m.
The highest temperature for the week was 60.7 on Monday, and the lowest was 34.8 on Sunday. The maximum and minimum for the week of last year were 52.0 and 35.3 respectively.
The total amount of rain for the week was .001 inches, against .341 inches for the corresponding week of last year.

TIME TABLES.

YOKOHAMA-TOKIO RAILWAY.

The Trains LEAVE YOKOHAMA Station at 7.30, 8.45, 9.30, 10.15, and 11.30 a.m., and 1.00, 2.30, 4.00, 5.00, 6.15, 8.00, 9.15, and 10.30† p.m.

LATEST COMMERCIAL.

IMPORTS.

During the past week there is no improvement to note in Yarns and Shirtings, and business continues on but a small scale, and prices weak. Piece Goods generally are fairly enquired for, and Velvets, with small Stocks, show a further advance. All Metals are quiet, and prices easier.

EXPORTS.

RAW SILK.

Since our last issue of this day week the usual Christmas holidays have intervened, and the amount of business passing has been restricted. Settlements are returned as 300 piculs, and the last two days have witnessed more enquiry especially for Filature kinds. The *Mensaleh*, which left here on the morning of the 22nd, took a shipment of 1,117 bales, of these 307 were for England and 810 for Continental ports. (A good portion of this cargo was on native account). The P.M. steamer *City*

of Tokio, which sailed 2 p.m. instant, took the small quantity of 159 bales, all for New York.

Prices are, on the whole, well maintained for all descriptions: occasionally a small parcel may be picked up at an advantageous price, the seller wanting money for the end of the year: but, as a rule, holders are strong in their determination to wait until after the New Year holidays. Arrivals have come in rather more freely, and Stocks are now about 4,100 piculs of all descriptions.

Hanks.—There has been something done in these at last week's prices, but the total amount settled is but small. Stocks are again heavier, and Japanese seem inclined to be conservative in their ideas, looking for more business after the turn of the year. We notice sales of Good Medium Joshi at \$470 to 472½, with good Hachoji at \$450.

Filatures.—At the beginning of the week good chops were much enquired for, and the scarcity of these caused but little business to be done. The U.S. mail took but 159 bales, including Filatures, Re-reels, and Kakedas. Recently there has been more disposition to operate in such qualities as are to be found in Stock, and some considerable parcels have been sent into godown for inspection. Among the reported sales we observe Nihonmatsu, \$635; Rokosha, \$615; Nanshinsha, \$610; Kaimeshu, \$600; with other good Shinshu sorts at \$595 to \$590. Medium Koshu and Mino filatures have been done at \$570 to \$580 according to quality.

Re-reels.—But little actually done in these, a small parcel "Five Girl" is reported settled at \$575. For good Medium Shinshu re-reels \$550 to \$560 is wanted, while *Yechigo* have been bought at \$550 and common *Zaguri* down to \$520.

Kakedas.—More business in these than for some time past: a good delivery of "Sano-musume" has been sent in at \$605, \$570, and \$530, respectively for firsts, seconds, and thirds. The chief demand has again run on sorts costing \$530 to \$540; several buyers are in the Market for these descriptions, and for the moment desirable parcels are scarce. The higher grades are still neglected, and prices given below for anything above No. 2 are more or less nominal.

Oshu.—Small daily doings in Sendai and Hamatsuki without any material change in quotations. The available Stock is very small, and but moderate supplies are expected for the present. Best Sendai still commands \$500.

Taysam Kinds.—Small purchases continue to be made on basis of *Nagahawa*, \$390; *Nambu*, \$385. Of *Sodai* kinds no Stock at present.

QUOTATIONS.

WASTE SILK.

In spite of the holiday season, there has been a fair daily business in Waste; Settlements for the seven days reaching fully 600 piculs. Best *Noshi* and *Kibiso* are still wanted, the Market has been almost cleared of *Mawata*; and even Medium to low *Kibiso* has had its turn at last. Arrivals from the country have not kept pace with Settlements, and the Stock list shows a falling-off both in quality and quantity.

Pierced Cocoons.—There has been absolutely no movement in these beyond the arrival of a few piculs Medium to Fair from the interior: at present these have not been sampled, and no sales have been made during the week. Further supplies are not expected in any quantity, although the Export to date is far below that of last season.

Noshi-ito.—Again the chief business has been in *Joshi* assorted, at from \$82½ to \$85 per picul. Some fine *Joshi* at \$107½, with Filature at \$130, and good *Bushu* at \$105, complete the list.

Kibiso.—More than half the total Settlements have been in this class, and the purchases made range from Filature kinds at \$115, down to *Hachoji* \$21, and *Neri* at \$12. Low grade Wastes have been rather freely dealt in at \$30 to \$40 for ordinary *Joshi*.

Mawata.—The run has continued and the Market is nearly cleared. The top price paid for some *Oshu* district, extra quality, has been \$195, tailing off to \$175 according to grade.

QUOTATIONS.

| | \$90 to 100 |
|--------------------------------|-------------|
| Pierced Cocoons—Medium to Fair | 150 |
| Noshi-ito—Filature, Best | 130 |
| Noshi-ito—Filature, Good | 110 |
| Noshi-ito—Filature, Medium | 140 to 145 |
| Noshi-ito—Oshu, Good to Best | 110 |
| Noshi-ito—Shinshu, Best | 100 |
| Noshi-ito—Shinshu, Good | 90 |
| Noshi-ito—Shinshu, Medium | 100 to 105 |
| Noshi-ito—Joshi, Best | 87½ |
| Noshi-ito—Joshi, Good | 75 |
| Noshi-ito—Joshi, Ordinary | 115 to 120 |

| | PICULS. | PICULS. | PICULS. |
| Waste Silk | 13,941 | 11,858 | 8,952 |
| Pierced Cocoons | 1,933 | 3,065 | 2,500 |
| | 15,874 | 14,923 | 11,512 |

Exchange.—Rates have not fluctuated much since the 21st instant. Banks have been closed during the holidays, and quotations may be called: London 4 m/s., Credits, 3/8; Documents, 3/9½; New York 30 d/s., 91½; 60 d/s., 92½; Paris 6 m/s., fcs. 4.83. *Kinsatsu* have been steadily maintained on the same level, and close at 109½ to 110 per \$100.

Estimated Silk Stock 28th Dec., 1883:—

| | RAW. | PICULS. | WASTE. | PICULS. |
|---------------------|-------|---------|-----------------|---------|
| Hanks | 2,000 | | Pierced Cocoons | 70 |
| Filature & Re-reels | 1,200 | | Noshi-ito | 250 |
| Kakeda | 500 | | Kibiso | 510 |
| Sendai & Hamatsuki | 300 | | Mawata | 70 |
| Taysam Kinds | 100 | | | |
| Total piculs | 4,100 | | Total piculs | 900 |

TEA.

The business since our last report has been so trifling that but little remarks upon our Tea Market. The aggregate Settlements reach only about 385 piculs, the bulk of which comprise Teas grading from Fine to Finest kinds, while Medium and Good Medium sorts have been almost neglected. The Market closes quiet, and quotations remain nominally as before. The *City* of Tokio, sailed for San Francisco on the 24th instant, took 144,711 lbs. Tea from Yokohama, viz.:—For New York, 5,008 lbs.; for Chicago, 2,120 lbs.; for California, 115,563 lbs.; and for Canada 22,020 lbs.

QUOTATIONS.

|-------------|--------------|
| Common | 12 to 14 |
| Good Common | 16 to 18 |
| Medium | 19 to 21 |
| Good Medium | Nominal |
| Fine | |

THE GREATEST WONDER OF MODERN TIMES.

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoman Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as possessing unmistakable purgative properties they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a tea-spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining "stock."

Sold by all Chemists and Medicine Vendors throughout the World.

May 1st, 1883.

J. & E. ATKINSON'S PERFUMERY,
celebrated for nearly a century past, is of the very best English manufacture. For its purity and great excellence it has obtained Nine Prize Medals, including London, Vienna, Philadelphia, ONLY GOLD MEDAL—PARIS, 1878, TWO SILVER MEDALS AND "FIRST ORDER OF MERIT," MELBOURNE, 1881.
